THE newspapers have contained various notices lately of the prospective formation of a Commercial Union of Central Europe. In fact, the hope that some such union will come into being after a while rests upon the purpose of securing the profits for some of the Central European States, which would otherwise go to larger commercial districts, such as the United States. This combination does not, however, necessarily involve any aggressive political program. The object of the union is neither a Continental barrier, nor a differential treatment of North America, nor a tariff union of the states concerned. A combination of Europe, including England, with a defensive tariff directed especially against America, has often been suggested of late.

Count Schwerin, chairman of the German Agrarian Council and Agrarian leader in the German Reichstag, presented a proposition at the International Agrarian Congress held in Rome a few months since, for a Continental barrier of the sort, which should draw a tariff line at the same time against America and England, the British Colonies and Eastern Asia. He based his motion upon the fact that the conditions of production for farm produce as well as for other industries, were more favorable outside of Europe than in Europe. The inequality of the natural conditions, said he, for the production of wheat between the Central European States and America is very great, and the same is the case for the production of iron and iron ware, in consequence of the favorable proximity

of huge treasures of coal and ore. Similar inequalities in the natural conditions of production of silk and silk materials appear when India and Japan are compared with France and Italy. Count Schwerin pressed the point that the International Agrarian Congress, meeting every two or three years, had often expressed itself in favor of a closer commercial union of European countries in the form of a European or Central European Tariff Union.

Nevertheless Count Schwerin met with no success in his proposition at Rome. It was not rejected formally, but any action thereon was postponed to the next Agrarian Congress.

The proposition of a distinguished Austrian captain of industry is closely allied to that of Count Schwerin. He lately said:

"A tariff ought to be laid at the European sea-line, one which, possibly, with some slight alterations, we might propose instead of the present tariff, while the European States among themselves should not, if possible, go too far away from the present *status quo* of tariff tax."

Here, too, there is no protection of Europe against England, but an inclusion of England frankly in the common tariff protection chiefly against America.

This position is not that of the Central European Commercial Union.

Spokesmen of the Central European Commercial Union have long since made plain in their proposals their opposition to this plan. It does not wish to impose a differential tax upon America, but to establish reciprocity with America, and possibly a proportionate tax against America which will bring nations to the same footing, whether they are in Europe or outside thereof. The Central European Commercial Union admits the value of the principle of reciprocity, not surrendering the principle of the most favored nations; but it attempts to combine protection and reciprocity with the other, just as America itself does.

But, as between the Central European states themselves, the Central European Commercial Union desires a tariff union, a Central European tariff agreement. The project of a Tariff Union has been a most prominent question of the past. It led the way in the discussion of the hegemony of Austria and Prussia, when Austria declared that it desired the tariff union in the interest of its political position in Germany; while Prussia declined it, and achieved its purpose when, by the war of 1866, it forced its position upon Austria. The project of a German-Austrian Tariff Union, however, was revived later when the new German Empire and Austro-Hungary became politically allied. It is a favorite project with Germans residing in Austria, but, nevertheless, it has as little vitality today, tho upon other grounds, as ever.

Political and commercial reasons are opposed to it. The principal political reason is this, that as the German Empire developed from the German Tariff Union, so it is feared that a German-Austrian Tariff Union would be the first step toward a political union of these countries, which is desired neither in Germany nor in Austro-Hungary. On commercial grounds this project is condemned because great industries have been built up in Austria on the basis of tariff taxation, the conditions are far less favorable for production than in Germany, so that there would be danger in the decreasing of the tariff.

The Central European Commercial Union has thus nothing to do with the project of a Central European or German-Austrian Tariff Union. It smply seeks to bring the Central European states into harmony by means of agreements which shall deal with the various provinces of commercial politics and settle commercial differences of the Central European states. It aims at the unifying of the legal systems of Central European countries to reduce the formalities of export and import; instead of double guards at the boundaries, to agree upon a single one wherever possible, having the functionaries of one state serve also for the other; and to have tariff courts for the adjudication of tariff cases. In a word, it is striving for a "Commercial Cartel of the Central European States," first of all of Germany and Austro-Hungary.

As is apparent, the Union holds itself just as far from misty or Utopian ends as it disavows the advocacy of a commercial war against any country. But what it purposes under all circumstances

is to fit the Central European states in a higher degree to carry on the defensive struggle which is more or less forced upon them. No one will deny to the Central European States the right to strengthen their own commercial position, and the further right to procure for themselves some of the advantages of an enlarging commercial territory.

The significance of a country as a commercial factor is measured by the number and consumptive power of its inhabitants. There is no country in Europe that can cope with the United States of America in this direction. The income and consumption per capita of inhabitants of Germany cannot be much more than half as great as in the United States of America. This valuation rests on the basis of comparative wages, for the testing of which the estimate of national income must also be considered. In Austro-Hungary this is only two-thirds as great as in Germany. Mulhall estimates the annual income per capita in the United States at $195, in Germany at $110.50, in Austro-Hungary at $61.25. The German Empire with its 57,000,000 of inhabitants as compared with the United States of America with its 79,000,000 shows the proportion of national income to be that of 6.7 to 16, and the consumptive power of the 47,000,000 inhabitants of Austro-Hungary is indicated when compared with the 16 of North America and the 6.7 of Germany by the figures 3.5. Germany and Austro-Hungary together under these conditions show a commercial power indicated by the figure 10 as compared with the 16 of the United States.

Germany, and especially Austro-Hungary, will strengthen their commercial position if they develop trade between themselves and a third state according to the preceding understanding.

To bring about an agreement of this kind is one of the various tasks of the Union. This undertaking is to be twofold: within and without. Within, the object is the mutual advancement of the industries and agriculture of each side, so that a better division of labor than has hitherto existed between the two empires will be brought about; without, the object is to strengthen the position of those thus allied chiefly by securing commercial treaties of reciprocity.

As to the first of these points, doubtless one of the chief sources of the dominance of the industry of the United States over the industries of European countries is the tremendous internal market which they control, a market indicated above by the figures 16, as compared with the internal market of Germany, which is only 6.7, and in Austro-Hungary 3.5 (Austria about 2 2-6, Hungary 1 1-6). This tremendous unified commercial field makes possible huge manufacturing trusts, standard types, the division of labor, the application of machinery on a far larger scale than in Germany or Austro-Hungary; and this advantage may, as has been stated, be more significant than all the others which American industry enjoys over that of Europe. One of the chief tasks of European commercial politics must be to gain at least a part of this advantage for itself. Tariff agreements of several states are one means, if they lead up to the states opening their doors wide on both sides for a part of their products, where hitherto they have opposed one another in their commercial treaties. These harmonized tariff agreements will also aid in strengthening the position of each of the states concerned in commerce with other nations, so that they will be able to obtain better terms for their industries and agricultural products than when alone.

This strengthening of the politico-commercial position, which as a matter of course brings about an indisputable combination, while undertaken simply in their own interest, will nevertheless prove valuable as compared with other states, which stand outside of the Union —*i. e.*, those which have not formed treaties of a politico-commercial character in the sense explained above. Even if the Union in general accomplished nothing, the interest of the Central European states is plainly indicated to lie in the direction of securing a combination such as has been explained.

These, then, are some of the essential purposes of the Central European Commercial Union, at least as I see them. Besides, it keeps in view and cares for that large number of questions lying outside of the realm of commercial politics. But these questions are of slight interest to American readers.

BERLIN, GERMANY.

A Washerwoman

[The following article comes to us through a friend who vouches for its genuineness in all respects. The author's false sense of shame prevents her from even letting us know her name.—EDITOR.]

WHEN I was twenty-four years old my father died, leaving me, to my great surprise, penniless. There had always been enough for comfortable living, but at father's death creditors took everything—even our cozy little home.

I lived for a few months with an uncle and helped my aunt with the childen, but aunt was continually stretching the household funds in an ineffectual effort to make ends meet, and I was most unhappy.

One night as I sat on the bed staring at my stockings, which were well nigh beyond repair, I determined to seek a position. Ask uncle for money I could not, yet there were things I must have. I went the very next day and entered my name in every large store in the city, but I met no encouragement when I acknowledged my inexperience. I watched the advertisements and answered many, but no one wanted a green hand. After three weeks I told my aunt and uncle what I was doing. Aunt was dismayed, but uncle approved.

"I know a man in Sach's," he said; "I will speak to him."

As a result of this notice came in less than a week that I was to report for service the following Monday—five days. I stood on my feet six hours the day the notice came and increased every day thereafter. My feet had the toothache terribly, but with perseverance and hot salt baths I had them fairly seasoned by Monday morning.

I will not here take time to relate my eleven weeks' experience in the store. The position was confining and tiresome, but I have no great complaints to make. I could have schooled myself to the endurance, perhaps the enjoyment, of it.

The trouble lay in the meager wages—four dollars and a half per week. Had I been able to have boarded at home this would have carried me through very well. I could have paid aunt three dollars a week for my board, had a good home, appetizing food and one dollar and a half for clothes and incidentals. But the car fare to and fro—sixteen cents a day—forbade this, and, knowing the state of uncle's finances, I would not eat his food without paying for it. So I sought board near the store. First I paid three dollars a week for accommodation in a big dingy house, with a room-mate, but I found this unendurable. I had always been accustomed to the privacy of my own room and at the end of the first week took a tiny room next the roof alone, paying three dollars and a half for the same with board. There was no heat in this room and I really suffered from the cold, while the table was appalling. The next week I moved, getting a better room but a table even more distressing. It is useless to detail my further experiments. I had all my life been accustomed to active duties, with plenty of outdoor exercise; had had a good home table, with privilege of preparing dishes to suit myself when regular fare palled. I was now confined for ten hours a day in a crowded, confused store and spent my other waking hours stretched out resting my back and feet. Of course, appetite was poor, and the cheap boarding house food was quite impossible. I spent the dollar that remained after paying for my board in luncheons, and my stockings!

I was told at the store that, as a rule, it took years of faithful service to get a raise, and I was sure that I should die meanwhile. I began to look for other employment, but oh, the dreary search! No one wanted a poor, inexperienced tenderfoot. At last one Sunday my eyes fell upon the ads for housemaids. How many there were! I thought a few moments, dressed myself plainly and sallied forth. I avoided all places where more than one maid was kept, for I knew two would mean a room-mate, but I answered seven ads for general housework. Every one of the seven would have taken me on my face without a word of reference as to character or ability, but I continued

on my way until I found what seemed ideal—a clean, tidy, little house with a family of two—mother and son. The lady was gentle and refined, but something of an invalid. She liked my looks and engaged me on the spot, altho I refused to wash. She promised to have a woman come in for half a day to wash if I would do the ironing, and pay me four dollars a week.

The prospect was alluring. I sent my resignation to the store and moved to Mrs. Holmes' the next morning.

Now, as far as the work went I knew my business. I had been housekeeper at home for many years, and had for short periods been without a servant, but the steady continuity of my duties now overwhelmed me. My feet had been seasoned to ten hours a day, but here fourteen and fifteen were required, with but little Sunday rest. The long continuance of the work was in some degree due to my inexperience, but even when I became wonted and trained to my duties there was no hour from six a.m. to ten p.m. wholly my own for rest. The hot, sweaty kitchen work made me long for a daily bath, but, of course, the bathroom was denied me; and after carrying water up two flights of stairs to my room and preparing for a bath the door bell was sure to ring. Then I would scramble into my clothes and carry the water down again. It was simply vexation of spirit, and I soon ceased to bathe with any regularity.

I had secured the much coveted privilege of cooking what I liked, but I found that hearty meals eaten hurriedly played havoc with my digestion and murdered my appetite. Soon nothing tempted me but dainties, and I usually gobbled them while sitting on the back step to cool off.

I had money in plenty; had bought not only stockings, but shoes, gloves, etc., and was saving up a little sum for emergencies. One Thursday afternoon after about three months of this I went to call upon a friend. She was packing for a summer trip and my heart grew sick at the thought of *my* prospects.

"*I* want to get away," I said, "I want just a breath of vacation."

"Can't you have it?" she asked.

I shook my head. "Mr. Holmes takes his mother away for two weeks, but I'm to stay and care for the house and dog."

"That will give you a good rest."

"Oh, I suppose so, but then it will all begin again, and—and—I can't see any of my friends. I'm ashamed to tell them where I am." Now, this was the worst of it. I had many dear friends from whom I was drifting because I could not receive them in my kitchen. I meant to be brave, but when my friend looked at me sympathetically and said, "I wish I could help you," I broke down and wept like a baby. She put her arms about me and we were having a good cry when in came the washerwoman with her arms full of freshly ironed clothes.

It seems she had heard part of our conversation and she spoke up.

"Beg pardon, but if I might be so bold I was looking for some one to help me, and if the young lady would care to try—"

We were both shocked out of our sentimentalities.

"Oh, no," said my friend, "Nan could not undertake such hard work as washing."

"I should think not," said I. "I am nearly dead as it is."

"But washing by the day is much easier than a housework place," insisted Mrs. Wheelen, "and I would start you in easy."

"It is quite out of the question," I said, decidedly, and Mrs. Wheelen went out, evidently feeling hurt.

When I thought about it I concluded that I had not received her offer in quite the right spirit and, asking her address from my friend, went around to explain. But Mrs. Wheelen did the explaining. She placed me in the only comfortable chair her tiny room afforded, and, standing before me, talked more plain, sensible English than I had heard for many a day. "Have you a few dollars saved up?" she demanded at last.

"I have. Some twenty or thirty."

"Then get you a nice room in a good house and come to work with me next week. I'll get you one dollar and a half a day and board. You need not work Saturday or Sunday. I'll start you in easy and you needn't tell your friends what you're doing if you don't want to."

I was bewildered.

"One dollar and a half a day for five

days, seven dollars a week and board. Do you mean it?"

"Sure; and Saturday and Sunday for your own."

"And I can have a nice room in a first-class house? Why, of course, I'll come."

I looked at *her* room questioningly.

"*I* can't live in a good way because of the children, but if you've only yourself to care for—"

I nodded and thanked her heartily.

I had a bad quarter of an hour with Mrs. Holmes that night, but I was determined and she finally consented that I find some one to take my place. It was a hard job, but I initiated a fairly good girl into the situation Saturday morning, and Saturday night was installed in a cozy little room in a good house, where meals were optional.

Oh, how good it was! And what a delight to use the bath! A pleasant parlor and a piano were at my service, and as I sat playing softly Sunday evening in the dim light of the banquet lamp tears of comfort and content dropped on the keys.

Monday night I cried from a different reason: my back was nearly broken; but a bathtub of hot salt water comforted me somewhat and Mrs. Wheelen was easy with me.

I am working steadily now and do not find it very disagreeable. I do not enjoy washing, but nearly all of my work is ironing, and I take considerable pleasure in that part of it now that I have time to do it well. In my housework days I had to hurry so that ironing was a great trial to me, but now that no cooking, door bell, or other interruptions occur, and I have time to do each piece perfectly, I find something artistic in the beauty that heat brings to a limp, homely rag.

Both Mrs. Wheelen and I wash on Monday at one place, Tuesday I iron and she goes to another place to wash, Wednesday I iron at the second place and she does a small washing and ironing at a third, Thursday and Friday we both wash and iron at a fourth, which is a boarding house. These places Mrs. Wheelen had when I joined her. In bad weather we are sometimes forced to work on Saturday, either one or both of us, but I have lost only two days in this way.

My hands are not as pretty as they used to be, but I keep them in fair condition by wearing gloves whenever I step out of doors, and also at night.

There is one other matter of which I speak with reluctance: I am living under false colors.

The first Saturday at this boarding house when I came down late to breakfast one of the boarders looked up surprised.

"You don't work Saturday? I suppose you teach."

I was annoyed and thought her a bit impudent, so I merely bowed. The next Sunday I spent with my aunt. When I told her that I had a new situation where I did not have to work Saturday or Sunday she asked, "What is it?"

"Guess," said I.

"Teaching," she replied, and I sat dumfounded that she should draw the same inference.

"So I hit it the first time," she laughed. "Where?"

But I had a thought. Why not let her think I taught? If she knew what I was doing she would be greatly grieved, so I said, "You are too smart," and gave no details.

But I had started in the lie and its possibilities tempted me. By the time uncle came in I was ready to explain that I had several special and backward pupils and was getting very fair pay. If they had questioned the matter they would have known that I was not competent to teach, but aunt was only intent that I should come to board with them. This I had intended to do, but I dared not now for fear the lie would out.

So I am yet boarding in town and receiving my friends in the pretty boarding house parlor. I have every Sunday an invitation to go somewhere. I have been this summer to week-end parties at the shore and mountains and in the country. I have both time and money for trolley rides and the theater. I have good, appetizing food both at my places and the boarding house—and time to eat it properly. The work is not the pleasantest in the world, but I can recommend it to other unskilled hands. The pay is good—equal to ten dollars a week without board—the hours are definite, and one is entirely free from working surroundings out of hours. The vigorous labor makes muscle and digests food, and a pleasant

Saturday and Sunday are always ahead of one.

I do not at present see my way out of the duplicity of my life. In allowing my friend to publish this article I have had to insist that she alter the circumstances entirely so as to protect me. It is a sort of Jekyll and Hyde existence that is very annoying, and I earnestly advise others who may try it to avoid living a lie.

Genius and Solitude

BY HENRY T. FINCK

AUTHOR OF "PRIMITIVE LOVE AND LOVE STORIES," "SONGS AND SONG WRITERS" ETC.

THERE is perhaps no trait of genius which common mortals find it so difficult to understand and sympathize with as the love of solitude. True, it is becoming more and more customary for all who can afford it to leave the crowded city in summer; but the vast majority go to places where hundreds or thousands of others congregate, and where they can spend most of their time in conversation with fellow mortals. On the other hand, it does not follow by any means that love of seclusion in itself proves genius, or that all men of genius have this trait; but most of them have it, the greatest in the most pronounced form. Biography furnishes many instances, and to these, two new ones have lately been added by the publication of Wagner's letters to Frau Mathilde Wesendonk, and the first volume of the life of Tchaikovsky by his brother Modest—two books which will doubtless ere long be issued in English versions.

Richard Wagner's aversion to social or professional intercourse has been dwelt on by some of his biographers. He detested cities, looking on them as noisy places of torture, where it was difficult to avoid visitors; and this aversion increased as years went by. Venice was an exception; he found that city comparatively quiet and soothing to the nerves. Yet, as he writes in a letter dated September 3d, 1858, "my sojourn here has unfortunately been discovered; however, I have given peremptory orders to admit no one." He took his meals in restaurants at hours when they were deserted, and felt grateful because the Austrian officers who recognized him had the good manners to respect his obvious desire to be left alone.

"My mouth I open only to Ritter, who is sufficiently taciturn not to bother me." "Strange, that I never feel the least desire for company."

Such sentences abound in these confidential letters to the woman who had shown a deeper sympathy with his moods than any of his other friends. Here are a few more:

"I always feel it to be a useless and entirely resultless proceeding to converse with any one." "The chances of gain for me through social intimacy are so slim that I gladly dispense with them on all sides." "Nothing agrees with me like solitude." "I am never unkind, but incredibly indifferent." "My intercourse with mankind has become almost entirely epistolary." "At last, in my forty-sixth year, I understand that solitude is my only consolation, and that henceforth I must be alone."

All this may seem the extreme of unsociability, but Tchaikovsky could give points on this matter even to Wagner. Between these two composers there were, indeed, not a few points of resemblance. Both write their most confidential letters to women (Tchaikovsky to Mme. von Meck, a millionaire widow who gave him an annuity of 6,000 rubles on condition that he should never seek to make her acquaintance); both had a great talent for spending money when they had it or could borrow it of their friends or publishers; both had little use for contemporary composers; both were comparatively indifferent to other arts

beside their own (Wagner lived in Paris a year without seeing the Louvre gallery, and Tchaikovsky had to be taught by his brother to appreciate the art treasures of Italy); both were great admirers of Schopenhauer, and both were more or less misanthropic, and enthusiastic seekers of solitude. On this last point Tchaikovsky's letters to Mme. von Meck and to his brothers are characteristically —sometimes amusingly—eloquent.

Perhaps he never went so far as Wagner in his detestation of cities. He was attached to St. Petersburg, and subsequently to Moscow. Foreign cities were apt to be an acquired taste—or, rather, a matter of mood. He liked or disliked them according to his momentary feelings. The first time he visited Venice he wrote to his brother that if he were obliged to stay there five days he would hang himself. The other Italian cities fared no better. In Florence he wrote that nobody anywhere could be as much bored as he was there; "In Naples it came to pass that I wept bitter tears every day from longing for home and my dear ones. . . . Rome I hate, Naples also, the devil take it!" Some years later he takes all this back. He receives "indelible impressions" at Rome, and finds Venice "an enchanting city. Every day I discover new beauties in it." "I have actually fallen in love with Venice and purpose to return there after my brother's departure."

Still, country life was more to his taste, as a regular diet. His predilection for it began when he was a boy, and during the last years of his life he was known as "the Hermit of Klin," because it was near this village that he lived in his beloved seclusion. At first he had a house in the village park; but there were other houses near by for use by summer visitors whose pianos soon drove him to a more secluded place, far from the madding noise. Here he would spend most of his time, visiting the cities only when professional duties imperatively called him; and it was during his solitary rambles in the woods that he invented his musical ideas.

It was, however, only from 1885 to his death, eight years later, that he thus realized his ideal; previous to that his desire to be a recluse remained little more than a pious wish. In January, 1875, he writes from Moscow to one of his brothers:

"I feel entirely deserted, and were it not for my work I should become a complete victim of melancholia. My character comprises so much dread of human beings, so much needless modesty, so much distrust, in short, a number of traits which make me more and more shy of men. Just fancy: I often consider the advisability of entering a monastery."

On other occasions we find him envying a monk, or expressing the intention to flee to a desert. It is doubtless more a coincidence that the declaration of this intention is preceded by this sentence: "Yesterday I made up my mind to drink no more brandy, no more wine, no more strong tea." Undeniably there is a morbid element in Tchaikovsky's love of solitude and distrust of his fellow men; he constantly violated the laws of health and suffered the penalties. A man of perfect mental health could not have felt as Tchaikovsky did sometimes, according to his brother's description:

"He was inclined to look on every unknown person at first as his enemy. If, for instance, he stepped into a full railway car and saw that the passengers looked at him indifferently, or followed his movements anxiously, for fear that he might take a seat occupied by their bags or baskets, he felt as if he were among persons who not only felt ill-disposed toward him, but also despised him. If he participated in the *table d'hôte* at a foreign hotel, he fancied that every one at the table looked at him with abhorrence because he had had the effrontery to force himself into their noble company. In return he despised all of them, but only until a pleasant word or look was exchanged. Then he promptly pardoned them and even found them sympathetic."

In one of these morbidly suspicious moods he gives utterance to this extraordinary sentiment in a letter to Mme. von Meck:

"Undoubtedly I could do much toward making my compositions known abroad if I made calls on all the coryphees and paid them compliments. But, O God! how I hate such a thing! If you only knew in what an insultingly condescending tone these men are wont to speak to a Russian musician. One can readily read it in their eyes: 'To be sure, you are a Russian, but I am so kind as to honor you with my attention.' Last year I was with

Liszt. He was polite, *ad nauseam,* but on his lips there was a smile which expressed the words just cited with unmistakable distinctness."

It is needless to say that this interpretation of Liszt's smile was utterly ludicrous—a mere nightmare of his morbidly suspicious fancy. Liszt was always appreciative of genius, and kind to musicians who had not one hundredth of the claim to his attention that Tchaikovsky had.

Nevertheless, the morbid trait in the great Russian's character was by no means the only—or the main—cause of his misanthropy and love of solitude. He loved nature for her own sake better than he loved mankind and better, by his own confession, than art. Some flowers he loved, in his own words, "quite insanely," and, alone in the forest, he experienced "moments of delight, incomparable, indescribable." But to enjoy such moments he "must be alone." Mushroom hunting was one of his passions, and when he came across a fine specimen he felt, he says, as an enthusiastic card player must feel when he gets a hand of trumps. In one of his letters he tells how he spent an hour watching a snail defending itself against an attack by ants. He cannot understand how any one can ever be bored in the country. Is not such a tragic scene, he asks, "a thousand times more entertaining than the dull conversation at so-called social entertainments."

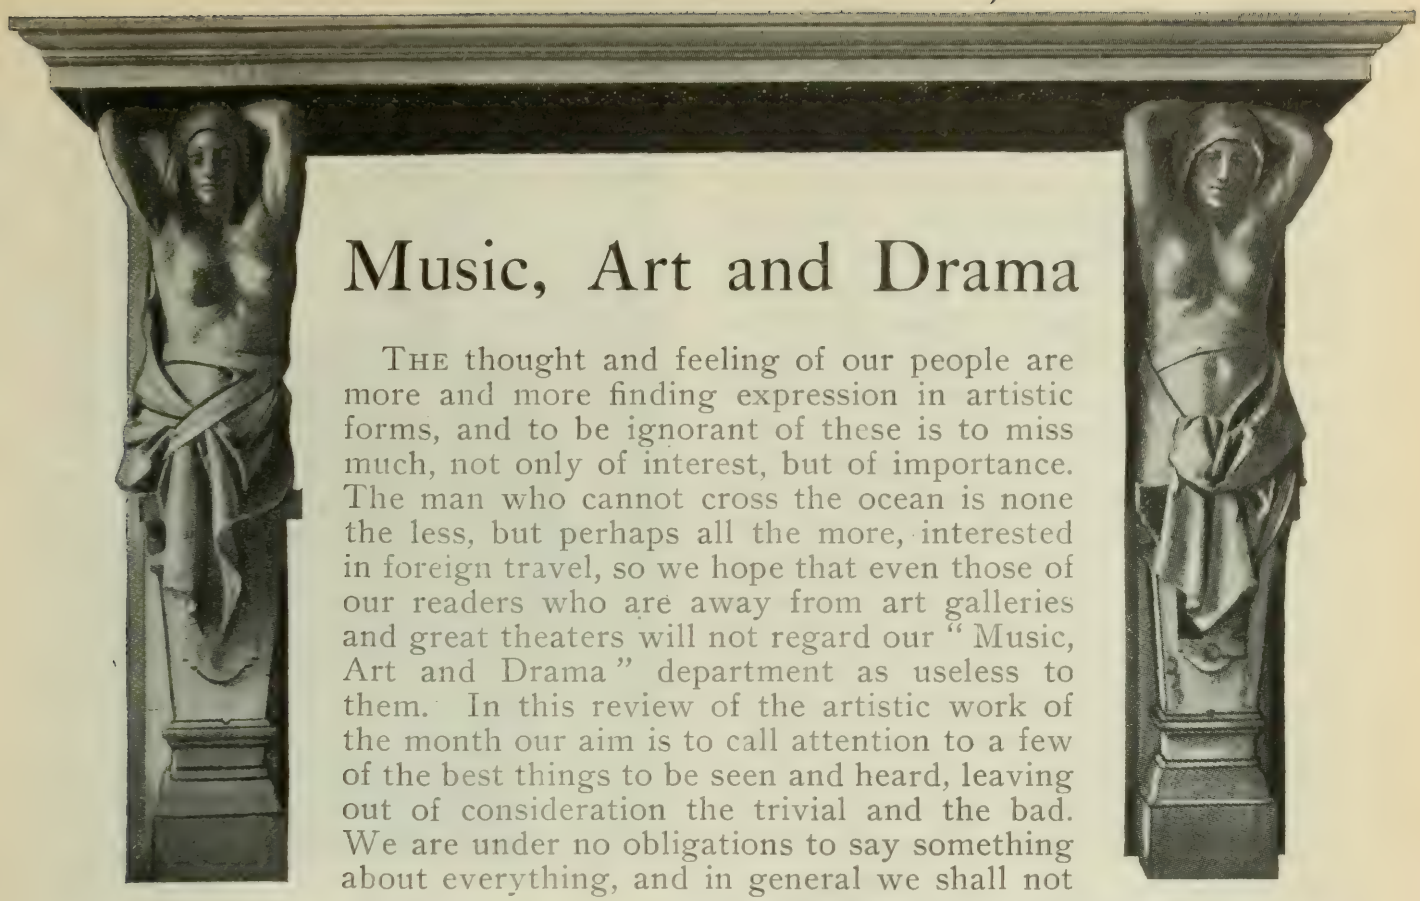
NEW YORK CITY.

The Voice of the Wind

BY ELIZABETH ROBERTS MACDONALD

The voice of the wind has spoken; has not your spirit heard?
Out of the night a whisper, out of the dusk a word!

Once, it seemed to be sorrow only it's crooning told,
Sorrow and helpless longing and memories manifold.



But now when I wake and listen I hear a lovelier strain,
A crying of "Rise and follow; the quest shall not be vain."

A murmur of "Trust and conquer," dearer than words can tell,
Is the answer that meets our longing, in the land where all is well.

So when the wind comes calling by night about your eaves,
Say not that always, only, for some lost hope it grieves.

But hear the whispered tidings of countries love has known,
And catch, beneath the sighing, joy's endless undertone.

PRESBYTERY, CAMDEN

Music, Art and Drama

THE thought and feeling of our people are more and more finding expression in artistic forms, and to be ignorant of these is to miss much, not only of interest, but of importance. The man who cannot cross the ocean is none the less, but perhaps all the more, interested in foreign travel, so we hope that even those of our readers who are away from art galleries and great theaters will not regard our "Music, Art and Drama" department as useless to them. In this review of the artistic work of the month our aim is to call attention to a few of the best things to be seen and heard, leaving out of consideration the trivial and the bad. We are under no obligations to say something about everything, and in general we shall not mention what we cannot praise. To one who can spend only a few days in a large city it is important to know what is most worth seeing in order not to waste one's valuable time. A careful consideration of the suggestions of our critics will help one to make the most profitable use of one's opportunities.

The Musical Season

THE announcement that Boston is to have only one week of grand opera this season calls attention to what is perhaps the most puzzling problem relating to music in America. Not only in Italy and France, but even in Germany, the opera is the most popular of the various kinds of musical entertainments, for the obvious reason that it pleases the eyes as well as the ears, and at the same time satisfies the appetite for a theatrical plot. The English appear to be able to thrive on a scant operatic diet, but they listen to more performances of oratorios than any other people. Americans hear little of oratorios and less of operas. Most of our cities seem to be content with the current "musical comedies," which are becoming more inane from year to year. Mr. Grau, with the greatest singers in the world, was never able to make it worth while to give a short season of grand opera in even such vaunted musical centers as Boston, Chicago and Cincinnati; and Mr. Conried is having the same experience; hence his shortening of the Boston season.

Boston, no doubt, has many concerts to listen to, but that is no reason why it should not have room for a few weeks of opera, too. New York will have fully a hundred orchestral concerts this season and several hundred other concerts, yet it supports grand opera four full months. New York is four or five times the size of Boston, but it is only twice the size of Chicago, which also does not appear to know what to do with more than a week or two of grand opera. As long as this anomalous and inexplicable situation remains New York will retain practically a monopoly of this branch of the art, and music lovers elsewhere will have to come to the metropolis to hear the world's greatest singers, except the few who can be tempted away for an occasional concert. This year several of the Metropolitan singers (Madame Gadski, Signor Campanari and Mr. Bispham) are not to appear in opera at all, but in the concert hall only, wherefore they will be heard in all of the large American cities and in many of the smaller ones. Similar tours will also be made by the famous violinists

and pianists, who are invading the land in greater numbers than ever before.

Last year Mr. Conried was criticised for not having a sufficient number of first-class sopranos and tenors. This year the most fastidious will have no ground for complaint. If the operagoers of London, Paris, Berlin, Vienna or Milan were told that their impresario's list of sopranos and tenors was to include Nordica, Melba, Eames, Ackté and Sembrich, Caruso, Burgstaller, Knote, Dippel, Reiss and Saléza, the man at the ticket office would be mobbed. Nor, indeed, are New Yorkers indifferent to the situation: the operatic subscription is said to be the largest on record. It will be remembered that Mr. Conried last season staged some of the operas in his repertory with a splendor unknown during the Grau *régime*. The same policy is to be continued this year in the case of other operas, including Wagner's "Flying Dutchman" and "Die Meistersinger" and "Gioconda." The repertory for the first two weeks indicates that much reliance will be placed in the tenor Signor Caruso, who last year vied with "Parsifal" in his capacity to draw crowded houses. For him and for Madame Sembrich there will be revivals of several archaic Italian operas—Bellini's "Norma" and "I Puritani," Donizetti's "La Favorita" and "Lucrezia Borgia"—which will be novelties to the younger generation of operagoers. "Parsifal" is to be sung at least seven times in German, while the eight weekly performances given in English by Mr. Savage's company constitute a decided novelty in our operatic annals, since heretofore no grand opera has had a regular "run" like an operetta. The opening performances of the English "Parsifal" were excellent, being far superior to anything ever before attempted by Mr. Savage. The singers and conductors and the scenic effects won cordial praise, and Mr. Savage has reason to pride himself in having shown the world that Wagner's most difficult work to stage can be done satisfactorily in an ordinary theatre.

No less auspicious than the outlook for opera is that for concerts. Here the Philharmonic Society and the Boston Symphony Orchestra are in the lead, and while the Boston band has the advantage

CARUSO
Copyright, 1904, by Aimé Dupont, N. Y.

of more frequent rehearsals, there are music-lovers who hold that this is more than counterbalanced by the fact that the New York orchestra will have six world-famous conductors in succession—Kogel, Colonne, Safonoff, Weingartner, Panzner and Theodore Thomas, who, thirteen years ago, gave up the leadership of the Philharmonic to go to Chicago, and whose many admirers will, no doubt, give him a royal welcome when he returns temporarily. He is, of course, lost to New York forever now that Chicago has shown its appreciation of him by building a $750,000 concert hall for him. As regards the other orchestras to be heard, it is interesting to note that they illustrate the modern tendency toward specialism. The Russian Symphony Orchestra allows only Russian music in its programs, while Mr. Arens's People's Symphony concerts are for the benefit of wage-workers. Both of these organizations have moved from the Cooper Union Hall to the more comfortable Carnegie Hall. Mr. Frank Damrosch will continue his Concerts for Young People, while Mr. Walter Damrosch, Mr. Victor Herbert, and Mr. Hertz supply Sunday orchestral concerts, with soloists.

Of soloists for the concert hall, Sunday and week days, the supply is to be unlimited. Undoubtedly America is still the happy hunting ground of pianists and violinists, else they would not cross the Atlantic in such numbers. To mention only the most famous ones, we are to hear, besides our own Maud Powell, the three violinists now most in vogue in Europe—Ysaye, Kreisler and the youthful prodigy, Franz von Vecsey. Equally impressive is the list of pianists, which includes, beside our own Joseffy, MacDowell and Bloomfield Zeisler, the European D'Albert, De Pachmann, Aus der Ohe and Paderewski. The name of minor musicians is legion.

Last, but not least in its importance from an educative standpoint, is Henry W. Savage's English Grand Opera Company, which opened its season in October with a week at Brooklyn, and is now making a tour of the United States and Canada. We advise all our readers who can hear this company to do so, especially in "Aïda," "Carmen" and "Faust." With the exception of Mr. Savage's "Parsifal" Company reviewed above, this company is probably the best that has ever sung in English in this country, and gives as good an evening's entertainment for the price as any production we know of. Of course, the singing and the orchestration are not as good as Mr. Conried's Metropolitan Opera Company offered. Still, Mr. Sheehan is one of the most pleasing lyric tenors now singing, and Miss Ivell's impersonation of "Carmen" is about as good as Calvé's. The company is not so good in the Wagnerian as in the French and Italian rôles, but the voices are young and fresh and superior to the best voices in our metropolitan church choirs, moreover, there are no three hundred pound Juliets singing love to grandfather Romeos, as one somtimes sees on the Metropolitan stage. Enough has been said to indicate what is coming and to bear witness to the important place music is beginning to occupy in American life. We spend many millions on it.

FRANZ VON VECSEY

Awards in the Art Department, St. Louis Exposition

The jury at St. Louis gave 9 grand prizes, 5 special gold medals, 116 gold medals, 258 silver medals and 277 bronze medals to the exhibitors from all countries in the Group for Paintings and Drawings. Of these 39 gold medals come to artists of America, 12 go to Germany, 12 to Belgium, 1 to Holland, 9 to Italy, 8 to Australia, 6 to Sweden, 5 to Japan, 4 to Argentina, 2 each to Portugal, Hungary and Russia, and 1 each to Mexico, Cuba and Brazil. At this writing the following awards to Americans have been announced:

John S. Sargent, Grand Prize.

John La Farge, Diploma and Distinguished Service Medal of Honor.

GOLD MEDALS.

John W. Alexander (oil), Myron Barlow (oil), Cecilia Beaux (oil), Frank W. Benson (mural), E. H. Blashfield (mural), George H. Boughton (oil), George de F. Brush (oil), Emil Carlsen (oil), Kenyon Cox (mural), Bruce Crane (oil), Joseph De Camp (oil), Thomas Eakins (oil), Mark Fisher (oil), Charles Fromult (pastel), Childe Hassan (pastel), Henry Muhrman (pastel), Lucia Fuller (miniature), Laura Hills

(miniature), Theodora Thayer (miniature), G. H. Hallowell (water color), Leonard Ochtman (water color), Horatio Walker (water color), Seymour T. Guy (oil), H. T. McLure (oil), Childe Hassan (oil), Winslow Homer (oil), Eastman Johnson (oil), H. Bolton Jones (oil), Sergeant Kendall (oil), Walter MacEwen (oil), Gari Melchers (oil), Leonard Ochtman (oil), J. J. Shannon (oil), P. N. Tryon (oil), F. P. Vinton (oil), Horatio Walter (oil), J. Alden Weir (oil), Irving R. Wiles (oil).

In the Group for Engravings and Lithographs 2 grand prizes, 1 special medal, 13 gold medals, 20 silver medals and 37 bronze medals were given.

Timothy Cole received the grand prize for engraving, Gustav Kruell and Frank French gold medals, and a special medal and Distinguished Service Diploma were given to Henry Wolf. Arthur Keller and Violet Oakley received gold medals for illustration.

Water Colors at the Fine Arts Galleries

The New York Water Color Club is first in the field this season with a showing of 418 pictures by its members and by a group of painters of the Boston Water Color Club, whose works are hung by themselves in the Central Gallery. One of the visitors, G. H. Hallowell, carries off the Beal Prize of $300.00 for a picture called "The Wissataquick Drive," inferior to all of his seven other exhibits. Texture painting is not his strong point and the rocks on which the raftsmen in his picture stand suffer in consequence, tho the composition has some force. His "Altarpiece" in three panels has some beautifully balanced color masses and in it his rather conventional handling is shown to best advantage. Three small pictures by H. D. Murphy, in which interest centers in the skies, are interesting, especially "The Milkman's House." Dodge MacKnight's six landscapes have a fine masculine way of putting problems of time and place, with the main facts noted and subtleties avoided. His work is a relief to the spirit after wanderings among the indecisive expressions as numerous as ever throughout the exhibition. C. H. Pepper shows four or five color-block prints and forty drawings made in Japan after the Japanese manner and all either good or bad, according to whether one compares them with American or Japanese decorative compositions. He learned the manner and doubtless much else in doing them and it will be interesting to watch his future work. Elsewhere among the pictures certain efforts toward the decorative, with often little natural sense of design, are apparent. Miss E. S. Green is nearly always successful in her figure and color arrangements in her illustrations for "St. Stephen's Eve." In the decorative heads and borders of her pictures she fails in knowledge of spot rhythm. Perhaps the most successful picture in the exhibition in just this very sense of rhythm, but applied to tone and color especially, is a very small picture called "The Old Lime Kiln," by Charlotte B. Coman. It will be overlooked by many because of its composure, but it is a beautiful thing.

A large landscape, called "The Hills," by H. H. Breckenridge, is a consistent study of outdoor light and makes one clearly see the realism of impressionism. Colin Cooper has two renderings of parts of the St. Louis Exposition grounds that have the same strong feeling for the grandeur of architectural expression shown in his work among our own skyscrapers last year. A. C. Robinson's work is individual. Adele Herter's full length "Venetian" is an attainment in technique. Georgia Fry shows a definite color sense of her own or of some loved old master's. A good landscape called "Solitude" is by Ritschel, and the most charming of the flower pictures is a delicate rendering of June roses by Grace Pomeroy. M. H. Squire shows three delightful drawings of foreign streets that suggest the best of the fine German lithographs of to-day; and a small drawing of a young man by Jean McLane is the most interesting portrait sketch shown.

More Tissot Bible Illustrations

Brooklyn liked the earlier works of Tissot sufficiently to buy the whole collection of the illustrations for the Life of Christ for its Museum. It will now

Abraham Guarding His Sacrifice. From the Tissot Old Testament. Copyright by De Brunoff, 1904

have a chance to decide whether it will complete the set by buying another collection illustrating the Old Testament. Tissot believes himself called to paint these subjects, and that they are the last word in religious painting, even superseding all previous efforts, because of faithfulness to fact. Some of us may still prefer "The Supper at Emmaus," by Rembrandt, to anything Tissot painted of episodes in Christ's life, or find Tanner's pictures instinct with religious fervor, but Tissot spares no labor in getting his archeology correct at least, and his pictures are an education in the local color of biblical matters.

The Drama

THE best productions on the stage so far this fall are: Classical, Marlowe and Sothern's Shakespeare revival; Society Drama, "Business Is Business" and "Letty," and Light Comedy, "The College Widow."

The production of "Romeo and Juliet," by E. H. Sothern and Miss Julia Marlowe, was one of the best representations of that play that has been seen in New York in recent years. Miss Marlowe's acting in the part of Juliet is interesting and fine throughout. Her delineation of the passion of the part is extremely good, notably in the scene where she drinks the potion, and she carries all through the play the sense of girlish grace and tenderness which permeates the character. Any actress attempting the part of Juliet inevitably suffers, in the recollection of old playgoers, by comparison with recollections of Ellen Terry and Adelaide Neilson, but in recent years we recall no better representative of the part in New York. Sothern's Romeo is not in the highest degree satisfactory. It is a bit hard and metallic. He has appeared to much better advantage in other roles. But the part is a difficult one, and, upon the whole, his acting is of a high degree of merit. The play was beautifully staged and the scenery was unusually bewitching. The glorious thrill and passion of the poetry in the old play makes almost any representation of it delightful, and this production of it did ample justice to its inherent beauty.

David Beheading Goliath. From the Tissot Old Testament. Copyright by De Brunoff, 1904

Esther Brought to the Palace. From the Tissot Old Testament. Copyright by De Brunoff, 1904

In "Much Ado About Nothing," which followed "Romeo and Juliet," the results were quite as satisfactory. Miss Marlowe's Beatrice was keenly in sympathy with the Shakespearean ideal. The character of Beatrice had been just enough modernized to harmonize it with the spirit of to-day. In her dialog with Benedick Miss Marlowe was particularly spirited. She triumphed especially at the point where she delivered the splendid outburst of "Kill Claudio." Mr. Sothern's Benedick possessed many excellent qualities, in spite of some limitations that have been pointed out. The transition from the man of indifference to the character of lover was not at all bad. We should say that Miss Marlowe was better as Juliet than as Beatrice, while Mr. Sothern was better as Benedick than as Romeo.

The play of "Business Is Business" is one of the most brilliant pieces of dramatic work that has been recently written in France. The movement is so swift and strong that it holds the attention breathless. Crane, who plays the leading part of a typical modern multimillionaire, acts with quite unusual force and power. We have become so accustomed to Crane in humorous parts that few have appreciated his genuine eminence as an actor, but in this part he presents a character conceived and worked out with admirable consistency, and delineated with extraordinary vivid-

ness and accuracy. The minor parts are well taken. Mrs. Dellenbaugh, representing a silly woman, is admirable, and Joseph Wheelock, Jr., takes the part of a blasé boy with singular cleverness. The play is one of the best of its kind produced recently in New York.

Mrs. Fiske has been acting for several years in the part of "Becky Sharp." She is an actress of quite exceptional originality, with a singularly distinctive and delicate art, and she plays the part of Becky with subtility and skill. A sense of its cleverness grows upon one throughout the play. People either think Mrs. Fiske the greatest American actress or else they don't like her at all.

John Drew is always a good actor. He plays well in "The Duke of Killicrankie." The play is witty and brilliant in style—indeed, almost too brilliant. It coruscates with epigrams. Nobody ever talked so. Still it is very clever and the plot is novel. The abduction of the heroine was a common thing in the eighteenth century drama, but is rather startling in the twentieth. Margaret Dale has a part to which her pervasive grace and lovely voice are well adapted.

Among any notice of the opening plays of the season "The Sorceress," in which Mrs. Patrick Campbell is the leading player, must be included. "The Sorceress" is by Victorien Sardou and deals with the iniquities of the Spanish Inquisition. The ideal play appeals to the eye, the emotions and the intellect. In its appeal to the eye "The Sorceress" leaves nothing to be desired. It is staged superbly, and any one who is interested in Spanish history will thoroughly enjoy the costumes and stage settings. In other aspects, however, "The Sorceress" is mediocre. In no single instance does it rise to the hights, and, in our opinion, it affords Mrs. Campbell one of her poorest roles. The fourth act, in which the Sorceress is convicted by the Inquisition, is the best and gives a most vivid picture of those inhuman practices by which the Christian Church has forever been disgraced.

Of all the lighter plays produced this fall in New York none has such a genuine sunny wit and makes such a pleasant spectacle as George Ade's pictorial comedy, "The College Widow." It is a play of college life that ought to appeal to every person, especially the dyspeptics and the young people. Indeed, if many more playwrights write plays of this character we will soon have a genuine revival of distinctive American comedy. The play is excellently staged and there is not a dull moment in it.

"But no one knows what is in the mind of the author"

were the words which Bernard Shaw appended to the problem play of "Candida." The public took up this challenge and hotly discussed the new theory which he propounded. Our answer goes to the weaker man who needs her own counsel of acting on the traditional policy implied by the adage, "None but the brave deserve the fair." Now, Mr. Shaw deigns to "explain" "Candida" by writing

E. H. SOTHERN

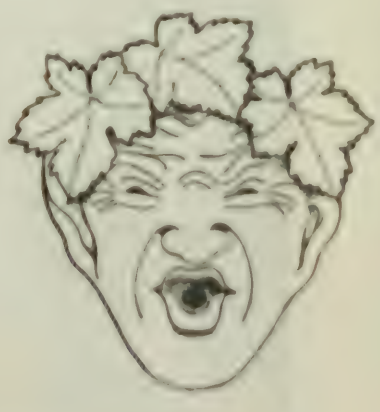
for the New York stage a "comediettina, a warning to playgoers," who took him so seriously. In this play, "How He Lied to Her Husband," the situations and in part the lines are the same as in "Candida," but carried just another step into the ridiculous. The New York husband, unlike his conventional prototype of the stage, when he discovers the love poems which have been written to his wife, begs permission of the lover to publish them at his own expense in *édition de luxe,* with deckle edges and vellum covers. Mr. Shaw has gradually eliminated the supernumeraries until at last he has reduced the society drama to its lowest possible terms, a triolog, in which "Her Husband, Her Lover, Herself" are the only characters.

In "The Serio-Comic Governess" Mr. Zangwill draws another story from his "Grey Wig," but Eileen O'Keefe lacks the charm and pathos which won all hearts in "Merely Mary Ann." She is a girl who can take care of herself, and, therefore, we do not care for her. Cecilia Loftus, who takes the part, too often forgets that she is no longer "Cissy Loftus" of the vaudeville stage.

Another play made over from a book is "Mrs. Wiggs of the Cabbage Patch," so well known that it is only necessary to say that Mrs. Wiggs appears as well on the stage as she does in the book, and much better than she does in real life. Optimistic philosophy in dialect is always popular and it speaks well for the public that it is. To get a theater full of people to laugh at pessimism as personified by Miss Hazy is a moral lesson in itself, Miss Helen Lowell, who takes that part, brings down the house every time she lets her voice fall and her mouth droop. There is no plot, no mystery, but everybody from Mrs. Wiggs, through all her continental family and the neighbors, down to the annexed horse Cuby, do their best to make the play go, and it goes.

That Mrs. Gilbert, in her eighty-third year, should be able to take a star part successfully proves that stage life in itself is not necessarily injurious to health or morals. Mrs. Gilbert has amused, frightened and touched three generations of playgoers, yet there is no apparent reason why this should be, as it is announced, her farewell tour. The play "Granny" was written for her use this season by Clyde Fitch, and it fits. Altogether it is a clean, sweet and wholesome play.

A few years ago Mr. Otis Skinner made a success in the character of that fifteenth century poet-vagabond, François Villon, and now he appears in a very similar character, "The Harvester," adapted and spoiled from Richepin's "Chemineau." There is nothing of interest in the plot, incidents, scenery, costumes, minor characters nor lines. All the more credit, therefore, to Mr. Skinner, who makes of this poor material a dramatic idyl of much power. His rich and sympathetic voice and unaffected manner never fail to touch the public. The play's end is weak and inconsistent.



JULIA MARLOWE

Scene from "Mrs. Wiggs of the Cabbage Patch"

The two foremost of British dramatists are well represented this season in Pinero's "Letty" and Jones's "Joseph Entangled"; both first-rate pieces of stage-craft and well acted even to every minor part. Both deal with compromising situations, but certainly cannot be considered immoral in their teaching. On the contrary, "Letty" closes with an epilog which conveys in a very effective manner the wholesome lesson that the simple life is that which brings health and happiness. The character of Letty, with all its apparent inconsistencies, is one of the most lifelike of any now on the stage, and in the cause of her turning away from the alluring by-path open to her Mr. Pinero shows his deep insight into feminine character. Mr. Jones gives in "Joseph Entangled" a somewhat farcical presentation of the old theme of the fallaciousness of circumstantial evidence.

Literature

The Autobiography of Moncure D. Conway*

Among the many interesting experiences narrated in Herbert Spencer's Autobiography, one of the most curious is the well-meant but fruitless efforts of his friends to select for the philosopher a congenial consort. They made the mistake of choosing an austerely intellectual woman, and after a trial conversation with her, Spencer remarked that instead of impressing him as a great mind, she seemed rather to be "a small brain in a state of intense activity." It would be unfair to speak of Mr. Conway's intellectual endowment as small; but, after reading his Autobiography, one sees that his mind is certainly more active than profound. He has been, indeed, a literary Jack-of-all-trades—Methodist and Unitarian minister, lecturer, biographer, novelist, historian, scientist, journalist, editor and war correspondent. The record of his busy life, as pleasantly narrated in these two thick volumes, fills over nine hundred pages, and while some matters receive too much space, the work as a whole is highly entertaining. It has the faults and virtues of the journalistic formal.

In the preface, which is modestly and frankly written, he quite propestly and frankly written, he quite properly describes himself as a "surviving witness to developments and events which have made momentous chapters of history." We do not read Boswell's "Life of Johnson" primarily because we are interested in Boswell; and it is the Boswellian character of this book which makes it so attractive. We soon lose interest in the author's own mental struggles, and his opinions on slavery and religion seem emotional rather than well-considered. He believes the Civil War could have been prevented; and his own motto was and is "Liberty first and union afterward," which Webster rightly called "words of delusion and folly." Like Wendell Phillips, he attacked President Lincoln fiercely during his lifetime, and refuses to worship him now that he has received the martyr's crown. And yet in the conversations that he reports between himself and Lincoln it seems to us that the latter had the lion's share of both wisdom and patience. In politics Mr. Conway shows all the idealism and zeal of the true Mugwump, joined with the characteristic lack of good sense and practical efficiency. He voted for Lincoln in 1860, and adds: "It was the only vote I ever did cast for a President, having in Washington had no vote and in later years no faith in any of the candidates or in the office." After reading a few statements like that one ceases to have any respect for the political opinions of the author, or any curiosity to know how they may develop.

In religion, one may sum up Mr. Conway's stormy career by adapting the words of Paul: "I have fought the good faith." His hatred of Christianity enlivens nearly every page. Beginning as a Methodist minister, he went into Unitarianism and finally into what he would probably regard as complete emancipation. Like the late Professor Clifford, whom he idolized, his hostility to religion is as dogmatic in utterance as his previous defense had been. For example, speaking of John Brown's raid, he remarked in 1863, "But God's plan was a different one," etc. His maturer comment on his own speech is:

> "I am now certain that no god had anything to do with the affair, except the phantasmal god of war worshiped by Brown, and that the biblical captain, who revived that deified wrath, inflicted on America sequels of slavery worse than the disease."

It must be pleasant to be sure of something, even if that something is nothing.

This Autobiography differs from most of its class by the fact that it would be exactly as interesting if it had been published anonymously. Its interest is, we repeat, journalistic, objective; the author's mind is not powerful enough to

* Autobiography. *Memories and Experiences of Moncure Daniel Conway.* In two volumes. Boston: Houghton, Mifflin & Co. $6.00.

hold our attention, but when we find that he knew personally Browning, Carlyle, Tennyson, Darwin, Huxley, Tyndall, Thackeray, Dickens, Mill, George Eliot, and all the other intellectual giants of the Victorian Age, we listen with breathless attention to what he has to say. It is a case of "Ah, did you once see Shelley plain?" His work is a series of interviews with tremendously interesting people, and Mr. Conway, who is a born journalist, has the art of writing up an interview to perfection. The long evenings he spent with the Carlyles, and the walks on the crowded London streets with Browning; the sobbing multitude at the funeral of Charles Dickens, and the handful of distinguished men with whom he saw Carlyle interred at lonely Ecclefechan; his admirable description of Daniel Webster in action; an amusing adventure in the dark with Tennyson, after an exceedingly good dinner; a talk with Bismarck during the war; Mark Twain's first appearance before a British audience; hundreds of lively anecdotes, and brilliantly executed pen pictures keep the reader in a state of steady enjoyment and confident anticipation of the next page.

We note very few typographical errors and few slips. In view of the Appendix to Spencer's recently published Autobiography, he ought not to be classed among the Englishmen who were "silent" during the Civil War (Chap. 26). The Brownings did not call their son "Pinna" (Chap. 29), but "Pennini," or "Pen," after his mispronunciation of "nini." Nor, in view of the popularity of Page and Mark Twain, is it quite fair for Mr. Conway to explain the failure in America of his novel "Pine and Palm," by saying, "The American people could see no picturesqueness in the old South, and were rather irritated by attempts to revive the subject." A number of misplaced accents and trifling slips occur in the French words, which are somewhat frequent in the narrative; thus, "*Malgre*" occurs once for *malgré*, "*la votre*" for *la vôtre* (II, 263), "*dejeuner*" for *déjeuner* (II, 186); the most famous street in the world is called the *Champs d'Elysee* (II, 140), and other minute errors are "seceded" (II, 64), "Christie Johnston" for "Johnstone" (II, 166), and the "Rev. Dr. Twitchell" for the "Rev. Mr. Twichell" (II, 144), which ought to be noted, for this distinguished preacher objects to the "Dr." more than he does to the misspelling of his name, and it is his fate constantly to hear the former and to see the latter.

Early Spanish History in the Philippines

THE first eleven volumes and the first half of volume 12 of this important series of documents bearing on the history of the Philippines* under Spain brought the account down to 1604, dealing principally with the events of 1565 (Legaspi's conquest) to 1600. The first five volumes were mainly occupied with documents regarding the discoveries and the early explorations, which have already been published in Spanish, tho in great part not easily accessible even to the student who possesses that language. In the succeeding seven volumes, which have already in part been mentioned in THE INDEPENDENT, the proportion of documents drawn directly from the archives of Spain (principally from Seville) increased very notably. A large number of such documents have not hitherto been available to the student outside of the archives themselves. On the whole, the editors have deserved commendation by their selections of material.

Five volumes have since appeared, the last bringing Philippine history down to 1616. These are notable, above all, for the reproduction, for the first time in English, of the "Relation" of Father Pedro Chirino, S. J., written in 1602, and of the second English version of Doctor Antonio de Morga's "Sucesos," or "Happenings," in the islands up to 1606. But these works review the first generation of Spanish rule in the Philippines, Doctor Morga especially writing a quite systematic historical treatise; both also deal considerably with the habits and customs of the primitive Filipinos, here again Morga being the more reliable and scientific in his mode of treatment.

* THE PHILIPPINE ISLANDS 1493-1898. *Explorations and Reports of Historical Documents.* Edited by Emma Helen Blair and James A. Robertson. Cleveland: The Arthur H. Clark Co. $4.00 per volume.

The relation of Chirino takes up half of volume 12 and most of volume 13, being translated from copies of the original edition (Rome, 1604) in the libraries of Harvard University and of Edward E. Ayer, of Chicago, title-pages, etc., being reproduced. No reprint has ever been made, except for a cheap Manila edition of 1890. But Chirino served as the basis for the work of Colin, another Jesuit, published in 1663, and of various other missionary writers of later date, some of whom have rather distorted the statements about the natives. In reading Chirino's relation it is to be remembered that he looked at everything from the sixteenth century missionary's point of view, was prone to give a miraculous touch to any insignificant matter, and, moreover, does not always confine himself to what he had seen and knew. He is to be checked by such documents as Loarca's relation of 1585 and Father Plasencia's relation of 1589, both already reproduced in this series; by Morga's work, and, above all, by modern research, in a really scientific manner, among the still primitive people of the Philippines.

The translation of Morga takes up volume 15, except for abstracts of Thomas Candish's voyage and of early Dutch voyages among Spanish possessions, and also most of volume 16, the rest of it being devoted to abstracts and translations from passages bearing on the Philippines from B. L. de Argensola's "Conquest of the Moluccas" (Madrid, 1609), *par excellence* the best written of the early histories of Spanish conquest, but not always so commendable for accuracy as for literary style. Another Plasencia manuscript completes these two most valuable volumes, a description of the customs of the Pampangans in their lawsuits—at least, Editor Robertson, who brought it to light for the first time from the Seville archives, ascribes it to Father Plasencia, with every appearance of probability.

Morga's work was published in Mexico in 1609. He was a judge of the Audencia of the Philippines, also for a time Lieutenant-Governor, and his work is the most authoritative we have in the way of a contemporary account of early Philippine history. It was translated by Lord Stanley and published by the Hakluyt Society in 1868, but no Spanish reprint of it had appeared (tho one was in press at Madrid) until José Rizal published a new edition in Paris in 1890, his notes not being devoid of passion and constituting, along with *Noli Me Tangere* and *El Filibusterismo,* the chief basis of the charge that he was anti-Spanish. The editors of this series have used Rizal's notes extensively—for they constitute good evidence of his ability as a scholar—but also with the necessary caution.

Volumes 14 and 17 are given up to miscellaneous documents, bearing especially on missionary work, commercial, political and ecclesiastical jealousies (which always kept every Spanish camp in a foment), and the contests with the Dutch in the Far East. In the confusion of recriminations it stands out quite clearly that there was demoralization in the Augustinian order in the Philippines at the beginning of the seventeenth century, some of the testimony to this effect coming from within its own ranks. A glimpse at the trade policy which was to prove the ruination of Spain as a colonial power is afforded in this argument, presented in the Council of State in 1607:

"The preservation of the Indies consists in this, that, through their need of articles which are not produced there, they may always depend upon this country; and it would be the means of losing them if their wants could be supplied elsewhere."

Christ

Dr. S. D. McConnell is well known as a very plain-spoken advocate of views of Christianity more consonant with the advanced knowledge of to-day than with the cruder knowledge of centuries long past. In none of his works is this trait of his more evident than in his recent exposition* of the office and personality of Christ.

Starting with the premise that:

"The Christ of the Eastern Church is not the Christ of the West. The Christ of the Roman Mass is not the Christ of the Salvation Army. The Christ of theology is not the Christ of the average pulpit, and neither of these is the Christ of poetry, of art, or of popular thought";

* Christ. *By S. D. McConnell, D.D., LL.D.* New York: The Macmillan Co. $1.25.

he proceeds to seek for the real Christ. We have a study of him in the aspect of his humanity; as the Sacrificial Victim (or, as Dr. McConnell calls it, "the Inhuman Christ"), as the incarnate and eternal Messiah, and this naturally leads to his divinity. The author then considers the type of the Christian Man, holding that the truth of the term depends upon the individual's "regenerating force in human society," rather than upon acceptance of any dogma or the profession of what is called Christianity. This "regenerating force" can only proceed from the life which acceptance of Christ as a living principle brings into existence, and here is one of the strongest points made by Dr. McConnell. Not that it is new, for it is the dominant theme of the "Easter Anthem" of the Protestant Episcopal Church, but it is urged with a new force by Dr. McConnell.

Statue of Savonarola in the Great Hall of the Palazzo Vecchio

"This was he,
Savonarola, . . . the star-look shooting from the cowl."
—Casa Guidi Windows, pp. 31, 32

From "Florence in the Poetry of the Brownings." McClurg & Co.

As he puts it, Christ's work was to bring to light and to impart a new life, so as to inaugurate a "biological" Kingdom as unique as the vegetable or animal kingdom. This Kingdom is represented on earth, the author acknowledges, by the true Church, if such can be found among the crowd of organizations which appropriate the title. We are led on, then, to a consideration of the Church itself. The discussion then turns upon the conception of the God, not of the theologians of ages past and present; but revealed by Christ to the members of his Kingdom. Finally, Dr. McConnell treats of the life within the Kingdom and endeavors to fit its eternal principles to modern temporary conditions.

There is much that is very noble in the volume, much that is assuredly the result of deep spiritual insight; but the work will probably arouse discussion.

The storm center will be around the chapter on "The Inhuman Christ," in which the doctrines of propitiatory sacrifice and vicarious suffering are attacked as relics of a "Hebrew-pagan cult." As the author has named some Churches which make these doctrines "fundamental," we have a right to ask why he has omitted the name of that whose commission he bears. He mentions the Greek, the Roman, and the Church of the Westminster Confession, but none of these uses stronger language than does the Protestant Episcopal Church. That body, in the Book of Common Prayer, prescribes that whenever the Holy Eucharist is celebrated these words shall be used and, doubtless, Dr. McConnell has uttered them many hundreds of times:

> "Who made there (by his one oblation of himself once offered) a full, perfect and sufficient sacrifice, oblation and satisfaction, for the sins of the whole world";

and, again, in the Thirty-nine Articles of Religion, incorporated with the same book (Art. 2), it is stated that Christ

> "truly suffered, was crucified, dead and buried, to reconcile his Father to us, and to be a sacrifice, not only for original guilt, but also for actual sins of men."

Again, in his intense and praiseworthy zeal in emphasizing the Kingdom of Spiritual Life (call it "biological," if you will), Dr. McConnell seems to forget that the Kingdom of Christ, the Kingdom of Heaven, the Kingdom of God, according to the aspect in which it is regarded, is the anti-type of all kingdoms. The fact that it is "biological" does not prevent it from being monarchical, autocratic, patriarchal, paternal. It is a Kingdom of Law as well as a Kingdom of Life. It is a Kingdom of Obedience as well as of Freedom, for its service is perfect freedom—"freedom," but yet "service." It is not an unorganized body of well-wishers to each other, but an organized one; it is not the acme of anarchy because, being sinless, it knows no law against wrong-doing. It is not democratical, for the *demos* has no part in the government. It is not oligarchical, but monarchical. The One Ruler, to whom "the Son also himself shall be subjected," is the sole legislator, administrator, sovereign.

It is true that all laws are comprehended under one law—the Law of Love. But that Love is not the colorless thing, emotion, principle (what you will) that Dr. McConnell makes it out to be when he would translate it into being "well disposed." It is useless to compare it with the love of man and woman, or the charitable sentiments of the philosophic "well-wisher" to his fellow-men. David had seen it in a vision when he said of Jonathan "Thy love to me was very wonderful, passing the love of women." Christ spoke of it when he said, "Greater love hath no man than this, that a man lay down his life for his friends." St. Paul knew it when he wrote: "I could wish myself accursed from Christ for my brethren my kinsmen according to the flesh." These words sound strange beside the calculating ones of Dr. McConnell. His last chapter is the weakest in the book.

Florence in the Poetry of the Brownings. Being a Selection of the Poems of Robert and Elizabeth Barrett Browning which have to do with the History, the Scenery and the Art of Florence. Edited by Anna Benneson McMahon. With sixty illustrations from photographs. Chicago: A. C. McClurg & Co. $1.40.

Tourists in Rome have been accustomed for many years to extra illustrate "The Marble Faun" with photographs

of their own selection and to adorn "Romola" in the same way with Florentine views. More recently, publishers have prepared editions of these books with the usual set of photographs reproduced in half-tone, and now we have some of the poems of the Brownings published in this way. The idea is an excellent one, for the poems are so definitely located and so closely identified with certain Italian places and pictures that the reader, who is not thoroughly familiar with Italy, loses much of their interest and fails to get the impression of reality. With this book one can see "Casa Guidi Windows" at the same time he looks through them; "Old Pictures in Florence" are before him as he reads; he stands with Browning at the old book stall by "Baccio's marble" while he buys "The Book"; he can follow "Fra Lippo Lippi" in his midnight ramble.

The Revelations of Herself. By Mary Farley Sanborn. New York: Dodd, Mead & Co. $1.50.

Last spring, while "Jessica Doane" carried on a correspondence in the *Critic* (in which she circled about her lover like a green butterfly about an ornamental tombstone), "Madge Pullen" was making these *Revelations of Herself* in the *Bookman*. It is difficult to say which succeeded in showing more of the private theatricals of the feminine heart, but both were equally endowed with the sense of irresponsibility and in the determination to get themselves adored. Their goodness was not a virtue, but a charm and their reasoning faculties were fastened hard and fast to reasoning temperaments. And to the astute reader, it is evident that neither was so gifted in the grace of loving as in the art of getting themselves loved. But Miss Pullen possessed dramatic abilities far beyond Miss Doane's, and this is proved by that chapter in these "revelations," the whole of which consists in one sentence, "I have killed my grandmother." Doubtless a man edited the book, for no woman would have been so criminally brief in recording her crime. She would have stood beneath the sentence like a little exclamation point of woe and appealed to the reader's sympathy until she won it over the supreme bench of his better judgment. That is why women should be prohibited from making their personal "revelations" and "confessions" in public. They upset the moral integrity of the masculine mind, which is about all a good many of us have in the line of virtue. The problem suggested, however, by these particular revelations is why a good and tender-hearted young woman should have killed her grandmother; and, having done so, how does she remain so ineffably sweet and innocent. A man, however mitigating the circumstances, would be so maddened by his sense of guilt that he would probably end by murdering his great grandfather and other ancestors down to their third generation. But this is one of the paradoxes of femininity. They have capacities for innocency unwarranted by their deeds. The best of them are often more ably unscrupulous in conscience than a sinful man.

How to Collect Old Furniture. By Frederick Litchfield. Illustrated Imported by the Macmillan Co. $2.00.

One great objection that has frequently been urged against the collection of bric-a-brac generally is that a pursuit of this kind lacked the utilitarian quality. Some have even claimed that the material gathered together in the process of collecting had a tendency to "clutter" and sometimes to become hideous. Many other objections there are that need not here be massed, lest the collector, that might be otherwise, become discouraged and the world a loser by just so much. The collection of old furniture is at least free from a lack of utilitarianism. If one has old furniture it is always possible to use it. One may sit upon a chair that is antique or bestow his belongings in a highboy or even in a lowboy with no loss of dignity or standing. One preliminary to the satisfactory collecting of old furniture is that the collector should know something about styles, periods and schools. It is better for him to know a *Vernis Martin*, a Chippendale or a Heppelwhite piece on inspection, because then there is not so much danger of purchasing a spurious specimen. The author of the present book knows his theme well, and has pre-

viously written upon it. The domestic furniture of England, France, Italy, Flanders and Spain is in the present volume comprehensively dealt with, from the sixteenth to the middle of the nineteenth century. In his chapter on "faked" furniture, the one on hints and cautions, and also that dealing with notes and explanations, there is much of immediate value to the man who is just beginning to collect old furniture.

The Apology of Ayliffe. By Ellen Olney Kirk. New York: Houghton, Mifflin & Co. $1.50.

Ellen Olney Kirk's books are supposed to be especially good for young girls; but this last one suggests some questions that have doubtless occurred before this time to young girls themselves: Why is the heroine so often surrounded by excellent maiden aunts? Why does she sit up unhealthily with her conscience and pray without ceasing upon the window sill at night? And why, Oh why, does she almost invariably end by marrying her guardian, a sternly virtuous man with iron gray hair and a biblical manner of making love? And if, by mistake, two normal young people do become involved in the story, why are they not permitted to love and marry properly, instead of being swept out upon a threatening sea in an open boat, shipwrecked on some scandalous shore, and forced by the elements and the improprieties of the situation into matrimony? Would the author intimate to her girl readers that these or similar conditions are the only ones in which it is not a wanton and unlady-like concession? In fact, it is liable to suggest more compromising situations to the average young reader's imagination than she would otherwise think of.

The Eagle's Shadow. By James Branch Cabell. New York: Doubleday, Page & Co. $1.50.

An abridged form of this story recently appeared in the *Saturday Evening Post,* and a more entertaining one has not been published this year. The situations are nearly farcical without too much caricaturing. Good humor, tenderness and a fine sense of color are the distinguishing characteristics of the author's literary style. He portrays all the weakness of human nature subjected one way or another to the influence of great wealth, and then kindly covers them with shining excuses. And his women characters are made to illustrate every contradiction between mind and heart that femininity is heir to with a sort of masculine mimicry that is highly diverting. The "Eagle" is not only the hero on the family coat of arms, but he is the dollar image which threatens to dominate the scene in spite of Love's braver feathers.

Old Testament Prophecy. By A. B. Davidson, D.D., LL.D. Edinburgh: T. & T. Clark. Imported by Charles Scribner's Sons. $3 50.

Waiting Upon God. By A. B. Davidson, D D., LL.D. Edinburgh: T. & T. Clark. Imported by Charles Scribner's Sons. $2.50.

The possession of Dr. Davidson's lectures on *Old Testament Phophecy* will be a boon not only to theological students, but to those thoughtful persons who are concerned with the development of their faith. Endowed with a reverent and spiritual temperament, combined with a perception specially conducive to exposition, and trained in a scholarship best described as broadly conservative, Dr. Davidson was eminently fitted to deal with this important subject. His work will take a permanent place in Theology.

The usual meaning of the word "prophet" has been a source of grave misunderstanding as to the position of the Prophets in the economy of the Hebrew theocracy. They were men called into a closer communion with Jehovah (to use the well-known biblical form of the Divine name) than the rest of their age and nation. They realized the Deity as the essence of truth, justice and purity, with a peculiar love for Israel. They could, therefore, speak forth His messages to His people and impress upon them the duty of reflecting His attributes with an emphasis which raised them to a dominating position among their contemporaries. While working for the present good of the theocracy, its future development would be ever-present to them, and therefore the Messianic idea was inseparable from their teaching. Hence *fore*telling, while not essential,

was characteristic of the prophetic office. All this is brought out by Dr. Davidson in a way at once admirable and remarkable, and with a clarity of treatment which leaves nothing to be desired. The general reader need not fear that he will be overwhelmed with Hebrew or Greek. Whatever technicalities are introduced are not burdensome. The Sermons, of which *Waiting Upon God* is the first, are such as one would expect from Dr. Davidson, expository rather than hortatory; calm, thoughtful and suggestive; well fitted for meditative reading.

Literary Notes

DANA ESTES & Co. reprint Alexander Dyce's "General Glossary to Shakespeare's Works" in a single volume of 200 pages, very well printed, illustrated with portraits and sold for $3.00. The references in the "Glossary" are arranged especially for the Cambridge text.

....Messrs. Yamanaka and Company, of 254 Fifth Avenue, are importing some important art publications from Shimbi Shoin, of Tokyo, Japan. Among these the "Masterpieces Selected from the Kôrin School" is a very attractive and decorative art work, both in design and reproduction, a product of the Far East. The edition is limited to 2,000 copies, of which 200 only are intended for America. The illustrations are hand-colored wood cuts.

....As the liturgical order of service grows more elaborate in Protestant churches, such books as Dr. Hungerford's "The Common Order of Morning Worship" and his accompanying "Common Order Choir Book" (Green Mount Press, Burlington, Vt.), will be especially welcome to the leaders of church services. "The Pilgrim Hymnal," issued by the Pilgrim Press, Boston, Chicago and New York, contains, in addition to a large collection of choice hymns, Responsive Readings and Chants, to be used in such a service.

....Under the title "The New Life," Thomas Y. Crowell & Co. publish Dante's "La Vita Nuova," translation and illustrations by the poet-artist, Rossetti. No other could bring such perfect equipment to the task. We are indebted to the same publishers for several other good reprints this season. "Aucassin and Nicolette," "Immensee," by Theodor Storm, poems like "The Deserted Village," and Gray's "Elegy," as well as three biographies, that of "Raphael" and of "Emerson," by Sarah K. Bolton, and "Richard Wagner," by Nathan Haskell Dole. The illustrations are good. (50 cents each.)

Pebbles

IN the graveyard: "I'm in dead Ernest," said one little bug to another.—*Harvard Lampoon.*

....Miss Daisy Devoe presided at the piano and beautifully played Mendel & Sons wedding march.—*The Clear Lake Correspondence.*

....Somehow when a woman spits on her handkerchief to wash a dirt spot off her baby's face the Sacredness of Motherhood gets a jolt. —*Atchison Globe.*

....Professor Lewis Rollings and Miss Pearl Cox, after several months of heart-to-heart conversation on the perfumed sweet avenue of love, passed under the roseate archway of hymen, where soul meets soul on waves of ecstatic feelings.—*Emporia Gazette.*

ATTENTION, VOTERS!

A report comes to me that I have said that there were three candidates for council from the First Ward—a Jew, a barkeeper and a gentleman, and that I was the gentleman. This I deny. A. L. Curtis, candidate for Council, First Ward.—*Political Advertisement in the Atlanta Journal.*

"'You are old, Father William,' the young man said,
'And your teeth are beginning to freeze,
Your favorite daughter has wheels in her head,
And the chickens are eating your knees,'
'You are right,' said the old man, 'I cannot deny
That my troubles are many and great,
But I'll butter my ears on the Fourth of July,
And then I'll be able to skate.'"

—*Collier's Weekly.*

THE LAST ISSUE OF THE HARVARD ADVOCATE.

It is too bad that the last, and I may as well say the latest, *Abdicate* is not so good as it might have been. Of course, the *Abdicate* is not to blame for this, though a more illiterate critic than me (*sic*) might have thought so. There are, however, two perpetrations which are legible. One, a sonnet, called "My Fall Suit," treats not of autumnal tailoring, but of a love affair at Wellesley. The other, an ode, is entitled "Imitations of Immorality." It describes fully (*sic*) the adventures of a Freshman in the prohibition town of Boston. The "Story of a Goody Who Lost Her Heart" could be termed clever, except for the unfortunate fact that it is not. "To Hell with Yale" is amusing, but as the printer put "Harvard" for "Yale," the point is lost, or, rather, evaded. There is no question in my well trained mind that the best article is "The Nightmare of John the Stableboy," being unique in title, underhand in treatment, and altogether unfit for print.—*Harvard Lampoon.*

Editorials

Publicity for Campaign Funds

A BITTER controversy in the last days of the campaign concerning the collection or reception of contributions to party funds—a controversy which interrupted and practically suppressed all discussion of platform issues—must compel a consideration, after the election, of the question whether full publicity ought not to be required for all contributions to a party committee, as well as for the committee's expenditures. We are glad to see that our own opinion in favor of such publicity (expressed on the 20th ult.) has been mentioned with commendation by many journals. We think of no objections that should have weight against the arguments for publicity, arguments to which peculiar force has been given by partisan debate in this year's campaign.

We believe now, as we said three weeks ago, that neither Mr. Roosevelt nor Mr. Cortelyou is capable of making an improper use of the power vested in the Department of Commerce. In our judgment, nothing could induce either of these gentlemen to entertain for one moment without sharp revolt and intense indignation a suggestion that contributions should be solicited by threats of disfavor, or received upon any understanding as to immunity from prosecution. Mr. Roosevelt's statement in reply to Judge Parker was the natural expression of an honest man's resentment when accused of being the chief figure in an infamous conspiracy.

At the same time, as we have said before, circumstances did lend themselves to the support of the theory set forth and the charges made by the President's opponents. No one who really knew either Mr. Roosevelt or Mr. Cortelyou could believe those charges were well founded. But there are many whose knowledge of either is not sufficient to disprove such charges in a heated campaign. It should not be possible for any intelligent and fair-minded citizen, either in a campaign or after the election, to believe an upright President guilty of the offenses with which Mr. Roosevelt has been charged. But it will be possible, so long as the lists of contributors and of expenditures are withheld from the public.

Why should not the contributions be published? If publicity restrains those who otherwise would give, this restraint will be felt by both parties, and in that respect neither will have an advantage. The perfectly legitimate expenses call for a large sum of money. Why should any honest American citizen be ashamed of his gift to meet such expenses? Why should he be unwilling that the world should know his devotion to the interests of his party? Do corporations or the officers of them feel that their contributions ought to be concealed? For the enlightenment and for the good of the public these should be made known. No law forbidding them is needed; publicity would be sufficient; contributions from such sources that could not bear the light of day would not be made, and they ought not to be. If publication were compelled, a party's managers would neither solicit nor receive contributions from corporations or persons exposed to prosecution under Federal statutes. In a political sense it would not be profitable for either the giver or the party.

As we have said, a large sum is required for clearly legitimate expenses. Why should the character and extent of these expenditures be concealed? But a wrongful and corrupt use of campaign funds ought to be prevented. Will any one say that it should be permitted? Publicity would prevent it. No party could afford to have the record of corrupt or otherwise improper expenditures spread before the country. Publicity for expenditures is clearly in the interest of honesty and morality; secrecy may easily be a cloak for bribery and corruption. We are writing before election day. But interest in this question should not die out with the counting of the votes. We hope that legislation on this subject will be considered at the coming session of

Congress. We shall not be surprised if it is suggested by Mr. Roosevelt himself.

Such publicity would elevate the office of campaign Chairman in the judgment of the people and make it attractive to men of high character. Will any one say that the selection of such men for that office is not to be desired? Last Saturday night, ex-President Cleveland published his opinion as to the appointment of Chairman Cortelyou, saying that with "the question whether the latter had improperly or otherwise extorted or obtained contributions from Trusts and combinations" he had "nothing to do." The President had said that Mr. Cortelyou had been Mr. Cleveland's Executive Clerk in the White House. "He might have gone further," said Mr. Cleveland, "and spoken of my high opinion of Mr. Cortelyou, amounting to personal attachment." But he had a "complaint" to make:

"Mr. Cortelyou before his selection as the head of a partisan National Committee, with all it implies, was pre-eminently the best illustration the country afforded of the useful and beneficent operation of civil service reform. Without influence or powerful friends he earned a humble place in the public service through civil service examination. He rose step by step through his own merits to positions of the most delicate and confidential character; and when he was put at the head of an important and new Department of the Government and took a place among the members of the President's Cabinet, I believe there was not a right-thinking man in the United States who did not rejoice in his advancement as well earned, and I am sure every sincere civil service reformer was gratified by the opportunity afforded to point to so convincing a justification of the reform.

"The last place his friends or the friends of civil service reform would have thought of as one he could appropriately occupy was Chairman of the Republican National Committee, and the last thing they could have expected him to do was to resign his well earned and befitting Cabinet position to take such a place. I regard it a distinct loss to the cause of civil service reform that he should have gravitated to duties and work so far and so distinctly removed from any relationship to this reform, or even to the best things in politics."

Let us see about this. We may fairly assume that in the opinion of Mr. Cleveland, this man—for whom he has so high regard, amounting to personal attachment, who earned step after step by pure merit until he entered the Cabinet, and who then became "pre-eminently the best illustration of the useful and beneficent operation" of the merit system—not only was an honest Cabinet officer, but also was incapable of corrupt and infamous action in the Chairman's office. Did he suddenly cease to be trustworthy, honest and meritorious when he became Chairman? Evidently Mr. Cleveland does not think so. It is necessary for a party to have a campaign manager. Is it not to be desired, in the interest of clean politics and for the public welfare, that this office shall be filled by a good man, such a man as we see in Mr. Cleveland's description of Mr. Cortelyou?

Some one must have the place. It seems to us that it should be held by just such a man as Mr. Cleveland believes Mr. Cortelyou to be; for such a man will permit no corruption, but will insist upon a policy in accord with his character. What is there about the duties of the office that is necessarily base and degrading? Is it not within a Chairman's power to make his work harmonize with his own standard of decency? We think so, and we believe the office should be given to the best man available.

If a man's merit has been demonstrated to the satisfaction of such men as Mr. Cleveland and Mr. Roosevelt by admirable service and by rapid and remarkable promotion, without the aid of political influence or "pull," we do not see why his exhibition of the same qualities in the office of Chairman should be regarded as "a distinct loss to the cause of civil service reform." If as Chairman he continues to be an honest man, insisting upon honesty and decency within the wide scope of his authority, this should be regarded as a triumph of civil service reform, one object of which is to purify politics.

Mr. Roosevelt and his friends say that it was because of his proved integrity, and to make the campaign management clean, that Mr. Cortelyou was selected. Many of his partisan opponents (Mr. Cleveland appears not to

agree with them) believe that he has sanctioned and promoted corruption in various forms. Real publicity as to contributions and disbursements would furnish convincing proof as to what his course has been. It would tend to compel the adoption of a high standard by Chairmen yet to come.

The "Lesser Breeds"

An extremely interesting article is that in this issue by Prof. E. A. Ross, in which he discusses the value-rank of the American people. Yet it raises some questions that need solution.

We are very fond of claiming that the American strain originated in the spontaneous immigration of unusually hardy, enterprising people. Certainly there were many such, the sort whose memory is retained by history. But was there not another class, perhaps quite as numerous, perhaps more numerous, whose influx was by no means so spontaneous? Do not old colonial records abundantly tell of a low and ignorant class, in New England and Virginia and elsewhere, who had no suffrage, many of them the off-scourings of prisons and poorhouses, sent here to develop labor, or to free the Old Country of undesired elements? Of course, the leaders were the choice of their people, but does not every old Eastern town of the seventeenth and eighteenth centuries have its traditions or its records of districts and people that had to be kept under special restraint, who were hardly reached by the religious and moral influences, and who had to be kept in place by harsh provisions of law? We are told that the brainiest and most energetic are pioneers in the wilderness. True, but did not they take with them the other class to do their manual work, and was it not done thus, and in those conditions, by redemptioners and negroes? True, that in the mountain valleys of the Rockies we find eagle-faced men like the Vikings; but over the Rockies is not the labor done by short, yellow-skinned people?

Again, are we quite sure that there is not a bit of Anglo-Saxon arrogance in the claim that there has been a serious weakening of the American strain by foreign immigration? Is it quite certain that we can properly speak of the immigration before 1860 as "low grade"? It is true that they were driven by famine from their native bogs, but are not their well fed sons just as tall and just as stout as those of the original American stock? We should be slow to deny it.

We are afraid of the self-assurance which looks pityingly on the "cheap stucco manikins from Southeastern Europe," as compared with our own "granite men." Thus speaks Professor Ross of what he calls, following Kipling, the "lesser breeds":

> "The flood of immigration now flows from different sources, and taps lower human levels than the earlier tide. Overpersuaded, from Croatia and Dalmatia and Sicily and Armenia, they throng to us, the beaten members of beaten breeds, often the more aboriginal men that have been elbowed aside or left behind in the swayings of the mightier European races. Do these Slovaks and Syrians add as much to the strength of the human piers that support our civilization as Scotch-Irish or Scandinavians? As undersized in spirit, no doubt, as they are in body, the later comers lack the ancestral foundations of American character."

"Beaten members of beaten breeds." We stop and think awhile. Of all the races that come to us, which one is most successful; which one comes nearest to crowding us out in all successful business, art and scholarship? It is the Jew, battered, bandied about, beaten for twenty centuries, the race that has in all this time—and wisely—lifted no sword in self-defense, that has taken the beating, the persecution, the humiliation with godlike patience, has yet kept its silent courage and its faith, and which now, coming to this country, "beaten members of beaten breeds," comes to its own, and that the best. And we are ready to think something else than evil of these other "breeds," "Slovaks and Syrians," from "Sicily and Armenia." Those "beaten" Armenians go to no poorhouses; they get rich. They have a saying in the East that a Jew is equal to two Turks, a Greek to two Jews, and an Armenian to two Greeks—the ruling Turk to the bottom of the line, and the oppressed Armenian at the top. They are successful merchants in this city.

And we should be slow to despise the hardy races from southern Europe, from Italy or Greece, which have not yet lost

the brain of the old breed. We remember when the Irish immigrant was called the scum of the world, but now no word is warm enough for his praise; and yet the Irish came in swarms, none better, all worse, from the even lowest stratum, they told us, of the starved population. Things have changed since then; and we venture to think no worse, in physical vigor or mental power, of the "Slovaks and Syrians." Give them a chance; great men have come out of such stock.

Altho we raise these questions of doubt we heartily support Professor Ross's conclusion, "Dilution need not spell decline." Very easily do the newcomers enter into our social heredity and learn our ideals with our language. The sons of dwarfed comers from Eastern ghettos are as big and as brainy as the sons of Yankees. The tough fiber is in them. Full food gives hight and breadth and courage. The Jew and the Armenian cease to cringe; even the negro emancipated is blamed because he lacks submissiveness. It is mentioned to the praise of Bishop Clinton, born a slave and buried with much honor by the white people of South Carolina the other day, that he was "always deferential to white people" and so taught those of his own color. The little Sicilians are no more diminutive than the Japanese, and certainly they are not a "beaten breed"; they have good stuff in them. We hope that the Yankees now being dispossessed in New England by other races are not inferior to them, and we do not believe they are. We simply say that we dare not join in the contempt often expressed for the populations about the Mediterranean, for the countrymen of Kossuth and Jokai, of Sienkiewicz and Madam Curie, of Nicola Tesla and Mathilda Serao; of Napoleon and d'Annunzio.

The Reading of Plays

One of the most interesting literary movements of the day is the increasing willingness of the public to read plays. Not many years ago it was almost impossible to get a modern play into print, either before or after its staging, because, as the publishers said—and they doubtless knew—no one would buy it. Now one can get a very good idea of the dramatic work of the day without ever stepping inside a theater.

One of the causes for this is the larger number of persons of literary taste, outside of our large cities, who take an intelligent interest in the progress of the drama, but only at rare intervals have an opportunity of seeing the best plays. The movement began, perhaps, with Ibsen, and even yet the Ibsenites who have never seen one of his plays acted outnumber those who have. Sudermann and Hauptmann, Wilbrandt and Heyse, Maeterlinck and Rostand, have thousands of readers and admirers in this country, but too scattered and isolated to make the frequent staging of their plays profitable. The reading of plays in a foreign language has always been a popular method of learning its idioms, but one reason why French and German dramatists have been preferred was because until recently it was impossible to get the books of English plays, except the classics. Now that one can buy Pinero and Jones and Shaw they are being read extensively.

Mr. G. Bernard Shaw writes his plays with a special view to publication, giving the action, not as mere stage directions, but in a readable form, and adding his delightfully witty prefaces, appendices and footnotes. He holds that the playwrights themselves are to blame if the public will not read their plays, and inquires how many readers Charles Dickens would have had if he had written in this manner:

"SYKES *lights pipe—calls dog—loads pistol with newspaper—takes bludgeon from R. above fireplace and strikes* NANCY. NANCY: Oh, Lord, Bill! (*Dies.* SYKES *wipes brow—shudders—takes hat from chair C. P.—sees ghost, not visible to audience—and exit L. U. E.*)"

And while some dramatists are making their plays more readable, the novelists on their part are approaching the play type by putting into their stories more dialog and action and less descriptive matter. The change has been almost continuous from the novels of the eighteenth century, with almost no direct discourse, to those of the present day, in which we often find pages of dialog without even enough stage directions to keep the run of the speakers. Our popular novels take to the stage so readily because

the difference between the modern novel and drama is mostly one of form, and even that distinction is becoming less. That readers now do not object to the dramatic form is shown by the fact that some of our magazines publish a farce almost every month. In the next few years we expect to see these followed by more serious plays, in both prose and verse, such as occasionally appear now.

In fact, we may see the customary procedure reversed and plays converted over into novels, as has long been done in France. Instead, then, of being dependent upon the manager and the Theatrical Trust, the author will first publish a play, which may be done very cheaply; then if it finds readers in the course of months or years, there will be no difficulty in getting it staged, and afterward rewritten as a novel for those who prefer that form. The immense initial expense of putting a play upon the stage and keeping it running until it gains friends debars all plays except those which can stand the test of immediate popularity. If the conditions in literature were the same as those in the drama, and no books could be published except those which were certain to sell ten thousand copies in the first two weeks, we should have as few good books as we have now good dramas.

Altho the solitary reader may enjoy a play, still the interest is enhanced by a nearer approach to a dramatic rendering such as may be secured by several readers. An acceptable change from the conventional essays, readings and discussions of the local literary club can be made by devoting a season to the study of the modern drama. There are a dozen authors whose plays are well worth reading, and, in fact, must be known unless one is to be ignorant of an important part of the world's intellectual activity. To make successful an evening devoted to the reading of a play there should be nearly or quite as many readers as there are persons in the drama, and enough copies of the book, so that the stage directions need not be read aloud. The parts should be carefully assigned to those who will best do justice to them, but there is a difference of opinion as to whether the play should be previously studied by all who are to take part in it. In the case of poetical and serious dramas perhaps it is better to distribute the books beforehand, but for light comedies the interest is greater if the sequence is unexpected, for the reader will quickly enough get the clue to his parts sufficiently to read it expressively. This way of reading plays is by no means such an inadequate substitute for the theater as the ordinary playgoer is apt to think. On the contrary, since the reader is more than a passive spectator, he sometimes gets a clearer conception of the part he has read than one who has seen the play.

The Art of Managing Husbands

It is not war, or famine, or pestilence, or national calamities which cause most of the unhappiness in this world, it is the little obscure domestic tragedies of life. Thus, it is possible for a husband and wife to live happily together under the worst form of government. Their riches may take wings, their sons fall in battle, but through all the vicissitudes of time and fortune they remain safely housed in one another's hearts. But the fact is that many married people do not achieve this satisfactory basis of relationship even under ideal conditions. And the question to be decided is not which is "to blame," but to arrive at some intelligent solution of the problem that is practical.

To begin with, it is safe to assume that hysterical, ineffective wives and dissipated, mismanaged husbands are the generators of more misery than the criminal classes bring to pass with their uttermost skill in wickedness. At some other time we may have something to say about the hysterical wife, but now we are concerned to throw light upon the finest art practiced in the civilized world, the art of managing husbands.

It is possible, indeed, only to an advanced stage of civilization; for at an earlier period such husbands as were to be had were not managed at all. They flourished like wicked green bay trees at the expense of their wives. And the more wives they had, the less were they disciplined. This singular coincidence teaches the diplomatic advantages of monogamy.

Now the average woman who wishes

to marry (and most of them do) does not choose her husband. She simply takes the man who asks her, whether he is ideally suited to her or not. And even when she has a considerable number to select from, she generally gets what she was not expecting, so that the result is the same in the end. She is morally and tenderly attached to a being who turns out to be a stranger. And if she is wise she quickly recognizes the matrimonial limitations of a man's intelligence. Long ago he learned to be a warrior, priest, philosopher, statesman, bridegroom, but he never has evolved into a husband. And, doubtless, this is a beneficent dispensation of Providence, for a mere husband-man would be an abomination to any woman, whatever he might be to the Lord. This explains why he must be managed properly to insure happiness. And it is needless to add that the best managed husbands are like other well governed people, who do not know that they are being governed at all. It is a delicate business, and could never be achieved by one man over another. It is further complicated by the fact that many husbands become in the course of time as shrewd and suspicious of their free will prerogatives as maniacs. The wife's genius will consist in making him see what she sees, and act upon what thus she inserts through the ribs of his imprisoned mind. In short, she should be a good hypnotist and possess an occult knowledge of masculine nature. And if the worst comes to the worst, she can always resort to the Irishman's method, who drove his pig to Cork by pretending that he was going to Dublin.

The wife should understand that a man has difficulty remaining in love with a woman who is always the same and she should therefore change his illusion of her as often as possible by a continual metamorphosis. He will tire of the prettiest bride ever made with honey tongue, because she strains his eternal commonplace too much. At length he wants a sensible woman who is ready to cope with the realities of life. And it is at this stage that the young wife often makes her first mistake as a matrimonial diplomat. When the bridegroom tone of his voice changes to the flat business note; when he discards the romantic phraseology of the honeymoon and begins to discourse intelligently upon ordinary subjects, she whimpers and complains:

"Oh! George, I feel that you are changed; you do not love me as much as you did!" Now the *rôle* of husband is one thrust upon him by honor and morality, but he is not gifted with intuitions, nor does he carry it out except by suggestion; and so when his wife persists that he is "changed," he may gallantly deny it to her, but really he agrees with her and loses much of his ambition to be an adoring husband to the end of his days. Instead of thus discouraging him the wise woman will "change" herself when she observes these earthy symptoms of inattention on the part of her husband. No one but a fool would wish to remain a bride always. There is the larger life in which she may show herself advantageously to him. No existence is so circumscribed as that of the average bride's. It is confined to her trousseau and to tender variation of her smile. The point is to remain a demure or some other kind of heroine to him all the days of her life. And it is easy for her to interest him, because, as a rule, he is not expecting it; for her to be prettily charming to him, then, invariably takes him off his guard. When a woman becomes mysteriously silent, sets her middle-aged head coyly on one side and smiles esoterically at her husband, as if she really knew more than was dreamed of in his heaven or earth, she is practicing that *finesse* which will hereafter make her sons great statesmen; for they inherit diplomacy from their mothers, not from their fathers. Naturally he does not know what she means, but he is interested, and that is the main thing. For when a man is interested in the guileless wife of his bosom he is enjoying a peculiarly happy and innocent experience, and is as easily led by her invisible apron strings at such times as any child.

Of course, a great trust is imposed now upon the wife; she deliberately invites it when she uses her wits to influence her husband. And if she uses this sacred relationship for mean or selfish ends, she is a mischievous person, for whom all men, particularly, have a sort of moral contempt which the marital relation does not alter.

But what about the woman who has married a bad man? This complicates the situation, but her case is not so forlorn or difficult as it appears. The same method of government that holds for the good man is even more effective in managing a bad one, because it compliments him, it ignores his weakness. Besides, there is one important thing to remember, one magnificent rule to follow. First, no man really wishes to be wicked. Men love darkness rather than light only because their deeds are evil. Every man prefers virtue if he could achieve it. But either he has lost his cue, or he has been cowed by his own conscience. And there is nothing so ruffianly cruel to him as his sense of outraged righteousness. God forgives him with a thousand scriptures, but such a man rarely learns to forgive himself. His hopes are like houses built upon the sand for this reason. His memories are like storms that descend and beat them down. Therefore, the wife should have the sublime faculty of forgetting. The rule to follow is to have enough and to spare of what he lacks. If he is wicked, she should be good, not with an accusing, cataleptic piety, but richly, beautifully, tenderly good for him. Nothing is so stimulating to the morally sick as that sort of gracious goodness which may be imparted to them like a cup of cold water. And she should have courage, that immortal confidence in human nature which only love justifies. Not long ago a poor farmer returned home from the neighboring village shamefully drunk. The following morning his contrition was evidenced by a dejected silence. After breakfast his wife said briskly:

"John, you must go back to town this mornin'. An' you'll jest have ter keep on goin' till you kin come home sober."

"Oh, Mary, do you think I could?"

"Hain't I a showin' you what I think?" retorted Mary. And he went, returning at evening perfectly sober.

"I knowed you could do hit!" remarked the incomparable Mary nonchalantly.

Many never bring about the reforms they desire, of course; but the wife who remembers these things, and keeps this rule, can no more remain miserable than love can stay forlorn. The desire to get herself loved often makes a woman unhappy; but to be able to love unfalteringly is a sort of gift. It is the measure of her strength, her power of life-giving. Her instincts and ambitions change, so that what was grief becomes hope—hope with a new, lifelong definition. And she is right. Let a woman thus lose her self-consciousness of virtue and lose herself joyfully in a life of almighty goodness, and no man, however married and bad, can hold out against her heavenly forces. He may die drunk, but God will know of a change in him somewhere—else there is no law governing the sublime phenomena of love.

All this is based upon the theory that when a woman marries she lives for her husband and children rather than for herself. And it is a very good way to live, in spite of some new ideals of domestic economy which are being propagated these days. When married women are detached from their homes by that favorite illusion of "the higher development of herself in liberty of thought and action," they may, indeed, come to be an authority upon earth-worms and stars. They may even learn to speak eloquently and to control themselves in public assemblies according to parliamentary law, but if they lose control of their husbands this world will be a grumpy place to live in. There will be no more sentiment, no more beautifully foolish courtships; but marriage will be a contract which does not make two people one. And the issues of it will be orphans.

What America May Learn

We are often reminded of the words with which Laurence Sterne begins his "Sentimental Journey," "They order this matter better in France." For example, it is a very easy thing in the French Chamber of Deputies to bring a session to a close. All the presiding officer has to do is to put on his hat, if a scrimmage takes place, and that makes an adjournment. In our Congress it would require a vote. It was last Friday that the Minister of War, General Andre, made a statement, and a Deputy General called out: "That is a lie!" and refused to withdraw the expression. Then, after a vote in which the Secretary of War was supported by the barest majority, a very lively scene occurred, displaying

Gallican vivacity. There were shouts of "Resign, resign!" and one Deputy rushed at Prime Minister Combes and tried to strike him in the face, while another Deputy and ex-University Professor rushed up to General Andre and punched him in the face, so that the blood flowed. Then began fighting all over the floor, and then occurred the thing which it was our object to commend in writing this paragraph, and which they order better in France—the President of the Chamber put on his hat! The session was adjourned. The further fighting was in legitimate conditions on the floor, while the officials cleared the galleries.

And also in Germany they order things differently, and we suppose better. We have lately been told that there is more freedom in Berlin than in New York. It was on theater evening in that city last week, and the Emperor of Germany had given the play the honor of his attendance. He observed that a number of ladies present were not in evening dress, a very great fault. In this country there would have been no way to reprove and correct the misbehavior of these ladies. But there was in Germany. The Emperor ordered them to correct and reduce their dress, and they did it, for wives in Germany are docile and obedient. They found scissors and maids to use them, and the upper works were rased away, and the neck and shoulders bared to the proper limit, while tears and tears and silken clippings fell on the floor of the anterooms, as says the veracious report. There is a directness and vigor in Emperor William's action that even our own Imperialist President could hardly venture to equal; and yet they say that an American President, if of Imperialistic spirit, has more power than any European monarch. It is good to live where things are thus ordered, and where there is so great liberty for Emperors, even if "women must weep." *Hoch der Kaiser!* and *Vive la France!*

A Significant Labor Tendency

An interesting article by Mr. Walling appears in the current number of *The Annals* on the increasing importance in American industry of the unskilled worker. Mr. Walling strives to prove his thesis from the Census inquiries on wages, drawing the line between "relatively skilled" and "relatively unskilled" at the rate of $2.25 a day or $13.50 a week. He finds that in manufacturing industries less than one-third belong to the former class, and that this is a considerable decrease in their proportions since 1890. While we are surprised to see the machinist classed with the unskilled, the fact, if it be such, that so large a proportion of them receive such low rates of pay, gives striking support to Mr. Walling's proposition of the increasing uniformity of wages of the skilled and unskilled This he ascribes to the subdivision of the former operations of the all-round artisan and the distribution of the specialized parts among unskilled workmen. Mr. Walling does not note that this may have pushed up the wages of a small proportion of the skilled workers who are specialized on the more delicate parts of the work where the greatest damage could be done. This, of course, would permit a much larger proportion to be assigned to the other parts, and would be in itself evidence of the increasing importance of unskilled labor, viewed from the standpoint of the workmen. These unskilled workers are the first to be discharged and the last to be taken back, in the fluctuations of prosperity and depression, and they therefore are not able to share in the advances of wages which the skilled men can command. They become, therefore, the moving power in unionism; and the "industrial union," comprising all the workers in an industry, is encroaching on the old "trade union," which comprised only those in a trade that often cuts across several industries. The stationary engineers, for example, are employed in hotels, breweries, machine shops and so on, but the industrial union would take them out of their trade union and distribute them among as many different unions as there are different industries. The mine workers, butcher workmen, brewery workers, longshoremen, teamsters and others are the types of industrial unions which have already absorbed the remnants of former "trades" within the industries manned by them, and the conflict of "trade unions" with "industrial unions" is looming large in the American Federation of Labor. Out of the struggle Mr. Walling sees a closer

alliance, or a reciprocity by interchange of "cards," and a new vigor to the labor movement, not only in industry, but more significantly in politics, and he adds:

"When once the union policies have been so broadened as to make room for unskilled labor as is the case to-day, there seems to be no reason to suppose that they will stop short of complete unity. They will then have, acting together in one organization, the majority of the consumers, votes and citizens of every industrial community in the United States."

Suffrage in the New States

There is no occasion for quite as much heat as the *Woman's Journal* expresses over the Constitution for the two new States to be made out of Arizona, New Mexico, Oklahoma and the Indian Territory, and which must be approved by Congress. A provision declares that no people shall be disfranchised except for "illiteracy, minority, *sex,* conviction of felony, mental condition," etc. So far as we see it was necessary that "sex" should be included, because it is yet a matter not settled by general experience that women should have the privilege of voting. We believe they should, and we hope they will never be excluded from the ballot in these new States. But it cannot be expected of Congress that it shall impose female suffrage for all time on any new State; that is a matter for the States themselves to settle—as yet; the time will come when we shall no more allow women to be excluded than negroes, but the country is not yet educated to it.

The Essentials for Church Union

It would be difficult to express the conditions for Church union better than is done by *The Churchman:*

"The great purpose of reunion is to subordinate the secondary and accidental to the fundamental and essential teachings of Jesus Christ. Concordant work can go on with the widest divergences of practice."

The primary essence of Christianity and liberty of creed and worship—this is all that is necessary. In his sermon before the English Church Congress Dr. Chanasse, Bishop of Liverpool, puts it in this way:

"Reunion must exclude no Christian body in which the fruits of the Spirit are manifest."

This language has the true ring. If this spirit were to prevail reunion would not be far off. Only it must mean the union of Churches on equal terms, and not the demand for the absorption of other Churches into some single favored one. That federation of our Protestant Churches for which a meeting is provided in this city twelve months hence may prove a very large step toward such a reunion, and we trust that no counsel of superior legitimacy may stand in the way of any one of our denominations taking part in it.

The Canadian Election

After eight years of power the Laurier Government in Canada has now, in a general election, received a vote of confidence that increases its already large majority in Parliament. The Liberal victory was emphasized by the defeat of the Conservative leader at his home in Halifax, and the capture of every district in his province. During the campaign one question was easily paramount —the Government's project for a new railway from one ocean to the other. It is proposed that the Government shall construct the eastern section (from Winnipeg by almost an air line to Quebec and thence to Moncton, N. B.) and shall lease it for 3 per cent. of the cost to the company that is to build the western section by means of bonds guaranteed by the Government and other aid from the same source. This is the line that will be carried westward from Winnipeg by way of Edmonton, reaching the Pacific at a point nearly 500 miles north of the terminus of the existing Canadian transcontinental railway. There seems to have been reason in the contention of the Conservatives that it would be better for the Government to make and own the road, but the Liberal plan and policy have been sustained. Overtures for reciprocity must be made on this side of the boundary, if they are made at all. They are not expected, and probably Canada will soon be ready to deal with us by means of maximum and minimum tariff rates. Mr. Chamberlain's fiscal policy is regarded with some indifference by the Liberal majority. While Canada is distinctly loyal, the dominant element of the population would increase, rather than diminish, her measure of independ-

ence. An indication of this tendency is seen in Sir Wilfrid Laurier's plea for Canadian autonomy in international negotiations concerning questions affecting Canadian, rather than British, interests.

Catholics in Italian Elections

A dispatch from Rome, dated October 19th, states that several bishops, among whom is Cardinal Ferrari, of Milan, have appealed to the Pope for permission for Catholics to vote at the forthcoming elections, but only for Catholic and conservative candidates—that is, a limited permission is sought for. The two reasons alleged are noteworthy. The abstention of Catholics during the last thirty-four years has seriously endangered the interests of religion by intrusting power to the open enemies of the Church. Again, this neglect has wrought no advantage to the claims of the Vatican. In other words, the Curia has played into its enemies' hands to its own loss and—what is far worse—to the decay of religion. Now the Piedmontese clergy hope to recover lost ground by getting Catholics to the ballot boxes. Are their hopes well founded? In his "Italy of To-Day" Mr. Bolton King tells us that there is no Papal veto on municipal elections. It covers only national contests. The proportion, however, that goes to the poll does not differ greatly in the two sorts of elections:

"In 1895, 63 per cent. of the registered electors voted in the local elections; in the last three Parliamentary elections 58 to 59 per cent voted."

Furthermore, in the Center and South—that is, in the former States of the Church and the Two Sicilies—the proportion of voters in the Parliamentary was higher than in the local elections. At best the difference is but five per cent., which would not materially affect a country like Italy, with its limited suffrage and the neglect of over a third of its voters to exercise their privilege. In spite of all protests and prohibitions the Italians vote or decline to vote as they judge best. Hence it seems foolish to have a ban registered and brought into contempt, and the Pope is besought to get rid of it. The query further arises: By what right does the Pope forbid the Italians to vote in one kind of election and permit them to do so in another? By what right does he pretend to interfere with the Italian ballot box? What a hubbub there would have been among American Catholics if in 1896 or 1900 the Pope had forbidden them to vote for William Jennings Bryan because his doctrines were subversive of sound government. Or if he had laid the ban against McKinley in 1900 because the United States had started in to throw light upon the friar question in the Philippines? How would Catholics to-day feel if Pius X forbade them to vote for Roosevelt because the money to be paid for the friars' lands in the Philippines will remain in Europe and not reach the Malay Archipelago?

It is not a crime that Governor Odell, or Judge Parker, should own stock in the Shipbuilding Trust. But the man who buys such property has no right to be denouncing trusts; he may be fairly supposed to be kindly disposed toward them and their profits. Mr. Odell makes no shame of his venture in search of trust profit, altho he was a shearer who got shorn. That Judge Parker had the same experience is now proved by Governor Odell, who himself sold Judge Parker $25,000 worth of the stock. That the legitimate possession of this stock affected Judge Parker's decisions on the bench, we should be very slow to believe. We doubt not that if any case had come up which had any direct bearing on the value of his stock he would have declined to sit in the case. Certainly that would have been his duty.

It is not war but murder that is going on at Port Arthur. General Stoessel is very brave, but he has no right to hold out to the bitterest end when he knows that the end is near and that it is now impossible for General Kuropatkin to relieve him. It is grand, or grandiloquent, for him to write to the Czar bidding him farewell and promising to die in the last assault, and he might defend his course in self-devotion, as does sometimes the captain of a sinking vessel, or a Japanese officer who disembowels himself rather than yield; but he has no right thus to sacrifice his soldiers. That is a massacre required by no rules of war or reason.

Insurance

Lloyd's and What It Signifies

Sir Henry Hozier, secretary of Lloyd's, in a recent interview printed in a London paper, gives an interesting account of the origin, rise and progress of that establishment. It had a small beginning, but it is now to the world of shipping and marine insurance what the house of Rothschild is to the banking and financial world. Lloyd's dates from the latter part of the reign of Queen Elizabeth. The earliest business of the concern was transacted in a small coffee house in Tower Street, London, kept by Edward Lloyd. He was an enterprising man, and because of his close contact with seafaring men and with merchants engaged in foreign trade, came to an early realization of the importance of improving shipping and the methods of marine insurance. He it was who originated the system of maritime and commercial intelligence which has since been developed into its present day effectiveness.

Marine insurance has to do with the ship, the cargo and the freight, all of which may belong to different owners. In time of war there is what is termed the maritime risk—that is to say, danger from accident, collision and stranding, which is entirely distinct from the hazard of capture or seizure by a belligerent.

Lloyd's was incorporated by act of Parliament in 1871. The objects of the society, as set forth under this act, were: (1) The carrying on of the business of marine insurance by members of the society; (2) the protection of the interests of members of the society in respect of shipping, cargoes and freights; (3) the collection, publication and diffusion of intelligence and information with respect to shipping.

The growing favor with which photography is being received by fire underwriters as a means of providing permanent and unimpeachable records regarding actual conditions existing in regard to insured property when a policy is made binding, suggests to *The Spectator* the application of this same photography to life as well as to fire insurance. It is easy to understand how photographic reproductions of applicants for life insurance might easily be of material assistance to the medical directors at the home offices of insuring companies, and that with photography it would be possible to reach more equitable conclusions as to the desirability of an offered risk than could be secured without such aid. Photography would also tend to checkmate substitution frauds. There seems indeed to be a wide field within insurance circles for the amplification of the present use of this art in a variety of ways.

....Advices from Cleveland state that marine insurance underwriters have had fewer losses on the Great Lakes this year than has been the case heretofore for a very long time. It is, of course, possible that some big accident may yet take place before the close of navigation, but if such is not the case the present season will be a record year.

....The Fidelity and Casualty Company has extended the scope of its disability insurance, and is now issuing a policy by means of which it is possible to insure an income. That is to say, the cessation of an income due to the stoppage or interruption of employment or business arising because of damage by fire, flood, tornado, cyclone or explosion is provided against for a period not exceeding ten weeks. The annual premium charged is ten cents for each dollar of weekly indemnity.

....The North British and Mercantile Insurance Company are issuing through Rand, McNally & Co. a political atlas. The publication is a compendium of facts and figures, platforms, biographies and portraits of the men and the issues of the Presidential campaign of 1904. A summarized political history of the administrations of the United States, together with portraits of the various Presidents from Washington to Roosevelt is included, as well as a mass of pertinent political information.

Financial

Railways of the United States

Poor's *Manual* is at hand again to show the growth and great extent of our railway system. On December 31st, 1903, the mileage was 207,604, a net increase of 4,595 miles for the year. It was in the Southwest that growth was most noticeable—1,804 miles, Oklahoma leading with 732. If we look back only 24 years, we find in all only 93,262 miles of road; one decade increased the total to 166,654 (in 1890) and in 1900 there were less than 6,000 wanting to make a round 200,000. Stock and bonds together now exceed $13,000,000,000, and are almost evenly divided. Average capitalization per mile (bonds, $32,494) is $65,380. In 1903, for the first time in many years, the average dividend rate rose above 3 per cent. (3.01); interest, which had gradually fallen to 4.07, rose slightly, to 4.13. Gross earnings showed an increase of $188,000,000, or a little more than 10 per cent., but higher cost of operation left an increase of only $32,500,000 in net. Operating expenses were 68.96 per cent. of gross earnings in 1903, against only 67.45 in the preceding year.

One naturally inquires whether rates have advanced. Receipts for freight per ton per mile were 7.81 mills, against 7.64 in 1902, and 7.56 in 1901. Average passenger receipts per mile rose to 2.052 cents from 2.012 in 1902, and 2.028 in 1901. During the year nearly 700,000,000 passengers were carried, the average distance traveled by them being 30 miles. The entire cost of road and equipment is entered in the tables at $11,233,311,285; the addition of $2,550,000,000 in real estate, stocks, bonds, etc., with nearly $1,000,000,000 for current accounts and other property, makes the total of assets $14,862,111,000.

Opportunities in China

A well known American newspaper correspondent who recently returned from China deplores the failure of our capitalists and engineers to improve the opportunity for the construction of railways and other public works in that country. According to his reports, we have lost prestige there by reason of delay in connection with the project for a railway from Canton to Hankow, covered by the very favorable concession obtained by the Brice syndicate seven years ago. On the other hand, a Belgian syndicate already has in operation 500 miles of road northward from Hankow, constructed under a concession of the same date. It happens that the correspondent's critical review of this American project appears at about the same time with the report of a semi-official trade organization at Berlin, which asserts that China is awakening from sleep and providing for development in many directions. It is quite apparent from the tone of this report, with its detailed description of opportunities for German capital, that some preparation has been made at Berlin for work in China that is soon to be done, but which Americans seem disinclined to do.

It is expected that about $14,000,000 of the new Japanese loan will be allotted to New York bankers.

....The contract for the new Mexican loan—the subject of an article on this page two weeks ago—was signed in Mexico last week by Minister Limantour and Mr. James Speyer, of Speyer & Co.

....The New Haven Company's purchase of the New York, Ontario & Western will be followed by the double tracking of its line from New Haven to the Poughkeepsie Bridge. It is said that by this purchase the company will reduce by $1,500,000 the annual cost of the coal it uses.

....Dividends announced:

Am. Cotton Oil Co., Preferred, 3 per cent., payable December 1st.

Am. Cotton Oil Co., Common, 1 per cent., payable December 1st.

Niles Bement Pond Co., Preferred, 1¼ per cent., payable November 15th.

Amer. Chicle Co., Common, 1 per cent., payable November 21st.

The Independent

VOL. LVII NEW YORK, THURSDAY, NOVEMBER 17, 1904 No. 2920

Survey of the World

The Presidential Election

Mr. Roosevelt was elected President on the 8th inst. by a great majority in the Electoral College and by the largest plurality of the popular vote ever known. He carried every Northern State and even broke the solid South by winning the electoral votes of Missouri. As we write, the action taken by Maryland is still in doubt, with a probability that seven of her votes will be Democratic and one Republican. If they be counted in that way, Mr. Roosevelt has 336 votes (out of 476) and Judge Parker has 140. This is less than Bryan's vote in 1896 or 1900. Mr. Roosevelt's plurality of the popular vote exceeds 2,000,000, and is more than twice as large as Mr. McKinley's was in either of those years. In addition to this great victory in the contest for the Presidency the Republicans largely increased their majority in the House of Representatives. In the present Congress it is 31; in the next it will be 100 (243 Republicans and 143 Democrats); and changes in Legislatures will yield a net gain of one Senator. In the following table pluralities are given in accordance with the latest reports:

State.	Plurality. Rep.	Plurality. Dem.	Electoral vote. Rep.	Electoral vote. Dem.
Alabama	.....	75,000	..	11

As soon as the result of the election was known, Tuesday evening, the President gave to the public the following statement:

"I am deeply sensible of the honor done me by the American people in thus expressing their confidence in what I have done and have tried to do. I appreciate to the full the solemn responsibility this confidence imposes upon me, and I shall do all that in my power lies not to forfeit it.

"On the 4th of March next I shall have served three and one-half years, and this three and one-half years constitutes my first term. The wise custom which limits the President to two terms regards the substance and not the

form; and under no circumstances will I be a candidate for or accept another nomination."

More than 10,000 telegrams of congratulation were received by Mr. Roosevelt within the 24 hours immediately following the election. "The people by their votes have emphatically approved your Administration, and I congratulate you," said Judge Parker in a message sent at 8.30 P. M. on the 8th. "I thank you for your congratulations," said the President in reply. Emperor William promptly cabled congratulations, saying: "May heaven give you prosperity," and adding in Latin a wish that the President's own success might benefit and bless the American people. At Rome Cardinal Satolli expressed his own satisfaction, adding that the Pope congratulated Mr. Roosevelt "on the splendid returns, which he is sure will be for the prosperity of the glorious American Republic." Monsignor Chapelle, archbishop of New Orleans and apostolic delegate to Cuba and Porto Rico, being on the ocean, sent a congratulatory message by wireless telegraph. He is returning from Rome, and bears a written message to the President from the Pope. To the son of Chairman Cortelyou, at school in Pennsylvania, Mr. Roosevelt sent a telegram saying that no campaign had ever been conducted on a higher plane.—The vote for Debs, candidate of the Social Democratic party, was about 600,000, against less than 100,000 four years ago. In Wisconsin the Socialists elected five Assemblymen and one Senator, and in Milwaukee Debs's vote exceeded that of Parker. Illinois gave him about 100,000, against less than 10,000 in 1900. He ran far ahead of Watson (Populist), receiving 48,000 in Wisconsin, where Watson had only 1,800, and 24,294 in the city of New York, where the Populists had less than 5,000. It is estimated that the entire Populist vote does not exceed 100,000. About 300,000 votes were cast for the Prohibitionist ticket.—There was little disorder. Several persons were killed in the rural districts of Kentucky, and two Democratic election judges, with a Republican deputy sheriff, in Cripple Creek, Col.—Much gossip about Cabinet changes has been published. It is said that Secretaries Shaw and Hitchcock may retire, and it is authoritatively announced that Secretary Hay intends to remain throughout the coming Presidential term.—In answer to the invitation of a committee from St. Louis, Mr. Roosevelt has promised to visit the Exposition on the 26th inst.

Judge Parker's Address

Judge Parker issued, on the 9th, a brief address to "the Democracy of the nation." Thanking the Chairman and members of the National Committee, he remarked that "our difficulty was beyond the reach of party managers." He was still confident that he had done right in leaving the bench. "I shall never seek a nomination for public office," he continued, "but I shall to the best of my ability serve the party that has honored me and through the party serve my country":

"The party has in the near future a great mission. Before long the people will realize that the tariff-fed Trusts and illegal combinations are absorbing the wealth of the nation. Then they will wish to throw off these leeches; but the Republican party will not aid them to do it, for its leaders appreciate too well the uses to which the moneys of the Trusts can be put in political campaigns. When that time comes, and come it will, the people will turn to the Democratic party for relief; and the party should be ready, ready with an organization of patriotic citizens covering every election district, who are willing to work for the love of the cause."

The Republicans had been aided by "a large army of office holders, many of whom gladly followed the examples set them by the members of the President's Cabinet in devoting their time and services to the party." The Democratic forces had been weakened by divisions. There had been quarrels over non-essentials:

"If we would help the people, if we would furnish an organization through which they may be relieved of a party that has grown so corrupt that it will gladly enter into partnership with Trusts to secure money for election purposes, we must forget the differences of the past and begin this day to build up, wherever it may be needed, a broad and effective organization. And we must, by constant teaching, through the press and from the platform, apprise the people of the way the vicious tariff

circle works. We must bring home to them at other than election times the fact that money contributed to the Republican party by the Trusts is not only dishonest money, but it is given that the Trusts may, without hindrance, take a much larger sum from the people."

In his opinion, he said in conclusion, the greatest moral question confronting us was: "Shall the Trusts and corporations be prevented from contributing money to control or to aid in controlling elections?" Judge Parker will become a member of a law firm in New York, and it is reported that an income of $50,000 a year has been guaranteed to him.—Two days before the election the Democratic Committee, in a long address relating chiefly to the charges concerning the Trusts and the Republican fund, asserted that this fund amounted to $5,000,000. At about the same time Chairman Cortelyou published a statement saying that the Republican Committee's fund was much smaller than it had been in any campaign for twelve years past. Made up of contributions from more than 4,000 persons, it was about half as large as the Republican fund in 1896 and about half as large as the Democratic fund in 1892:

"Every part of this fund has come from voluntary contributions, made without demand, importunity or pressure, and without any agreements, pledge, promise, assurance or understanding, expressed or implied, regarding the policy or the action of the Administration, or looking to any benefit or advantage to any contributor, except the benefit which will come to all business and to all our people from the continuance of Republican policies and Republican administration."

Following the election, the New York *World*, which had been a prominent supporter of Judge Parker, published a statement that the Democratic Committee "had more than $1,500,000" (not including $130,000 given by ex-Senator Davis in West Virginia), or "almost as much as Chairman Harrity's committee had in 1892, when Mr. Cleveland was elected." Figures were given for the sums sent to each of the doubtful States, and one of the managers was quoted as saying that "we had all the money necessary for a legitimate campaign and a little to spare." Mr. Wellman, a well-known political correspondent and a supporter of the Republican ticket, says the Republicans raised about $2,700,000, and the Democrats about $2,000,000. Mr. Hanna, he adds, "had $5,600,000 in the first McKinley campaign," and Mr. Whitney "had about $4,000,000" in the Cleveland campaign of 1892. It is reported in New York that at the close of the campaign $400,000 of the Republican fund remained in the treasury.

Bryan's Explanation and Advice

Mr. Bryan's remarks concerning the election were awaited with considerable interest. He published his views at length on the 10th. Pointing out that the convention had accepted the "so-called conservatives'" assurance that victory could be won by leaving the coinage question out of the platform, that Judge Parker's gold telegram was applauded by the Eastern press. and that the Judge had the indorsement of Mr. Cleveland, together with the support of the newspapers that bolted in 1896, and the aid of those who were prominent in the last two campaigns, he says that the verdict "against the reorganizers' plan is a unanimous one." The result was due to the fact that the party had "attempted to be conservative in the presence of conditions which demanded radical remedies, and had sounded a retreat when it should have ordered a charge all along the line." The Republican party occupied the conservative position, defending "those who, having secured unfair advantage through class legislation, insist that they shall not be disturbed." The Democratic party could not hope to compete successfully with the Republicans for the support of the plutocratic element; if it should win this support by becoming more plutocratic than the Republicans, it would lose several times as many votes as it would gain:

"The Democratic party has nothing to gain by catering to organized and predatory wealth. It must not only do without such support, but it can strengthen itself by inviting the open and emphatic opposition of these elements. The campaign just closed shows that it is as inexpedient from the standpoint of policy as it is wrong from the standpoint of principle to attempt any conciliation of the industrial and financial despots who are gradually getting control of all of the avenues of wealth. The Demo-

cratic party, if it hopes to win success, must take the side of the plain, common people."

Southern Democrats had been so alarmed by the race issue that they had listened to the promises of success held out to them by those who had defeated the party in the two preceding campaigns. The experiment had been a costly one. Eastern Democrats had been deceived by promises of financial help from the monopolists if the party "would only be less radical." The eyes of hundreds of thousands of Democrats had now been opened to see that they must either go into the Republican party or join the Democrats of the West and South in making the Democratic party a positive, aggressive and progressive reform organization. He was ready to assist in putting the party once more on a fighting basis. The party must continue to protest against a large army and against a large navy, and to stand for the independence of the Filipino; it must "maintain its position on the tariff question;" must renew its demand for an income tax, to be secured through a Constitutional amendment; must "maintain its position in favor of bimetalism," but this question must "remain in abeyance until conditions so change as to bring the public again face to face with falling prices and a rising dollar." The Trust question presented the most acute phase of the contest between democracy and plutocracy. No one could answer the logic of Judge Parker's arraignment of the Trusts' contributions to the Republican fund. The Trusts did not subscribe millions of dollars to such a fund unless they were "paying for favors already granted or purchasing favors for future delivery." But the party's attack upon the Trusts must be so vehement that no one would suspect it of receiving aid from them. The party must decline Trust aid and at the same time publish its contribution list. Mr. Roosevelt had four years in which to disappoint either the Trust contributors or the voters. In the one case, the Trust question would be in the process of settlement; in the other, the people would have a chance to settle with his party. "Death to every private monopoly" must be the Democratic slogan; any other position would be a surrender. The party must continue its defense of wage earners, insisting upon legislation concerning hours and arbitration and against government by injunction. It must oppose National banks of issue, and continue its fight for the popular election of Senators and for direct legislation. Among the reforms he believed to be needed were a postal telegraph, State ownership of railways, the election of Federal Judges for fixed terms, and the election of postmasters. "To doubt the success of our cause is to doubt the triumph of the right, for ours is and must be the cause of the masses. Let us begin the campaign of 1908; let us appeal to the moral sense of the country and arraign the policies of the Republican party before the bar of the public conscience."

Interesting Results in the States

In five States that gave pluralities to Roosevelt, Democratic Governors were elected; in several others the Republican candidates for the office of Governor ran far behind the national ticket and were saved only by the great pluralities for Republican Presidential electors. Massachusetts gave Roosevelt a plurality of 86,000, but at the same time elected a Democratic Governor, William L. Douglas, a well-known manufacturer of shoes at Brockton, by a plurality of nearly 36,000. His opponent, Governor Bates, had offended the workingmen by vetoing a bill forbidding the employment of women and children at night in factories. He had also by appointment given control of the police in Boston to a Commissioner whose policy was offensive to many. In other ways he had excited hostility of large groups of citizens. On the other hand, Mr. Douglas was a popular employer; he skilfully advertised his political platform and his own rise from poverty to wealth; his arguments for reciprocity with Canada and against tariff duties abused by Trusts appear to have had much effect. The other State officers are Republicans.—In Missouri, uniformly Democratic for more than 30 years, Roosevelt won by 28,000, but Folk, Democrat, the famous prosecutor of thieves, was elected Governor by

more than 30,000. Folk's machine associates (Cook and Allen) on the ticket, and all other Democratic nominees for State offices, were beaten. A Republican majority of 14 in the Legislature, on joint ballot, will elect a Republican to succeed Senator Cockrell.—Minnesota, for Roosevelt by at least 125,000, elected a Democratic Governor (John A. Johnson) by about 10,000, but the remainder of his ticket was lost. Mr. Johnson's opponents made the blunder of attacking him on the ground that his father had for a time been a pauper and his mother had taken in washing. —In Montana a plurality of 7,500 for Roosevelt was accompanied by the election of Toole, Democrat. A Republican Legislature will probably elect ex-Senator Carter to succeed Senator Gibson. The election of certain judges indicates, it is said, the defeat of Heinze in his contest with the Amalgamated Copper Company.—Owing to the labor troubles in Colorado, Governor Peabody was not re-elected, altho Roosevelt carried the State by 15,000. Adjutant General Bell goes to Mexico, where he will engage in mining.—Governor Garvin, in Rhode Island, ran ahead of the Democratic national ticket, but was defeated by 594 votes, Roosevelt's plurality being nearly 16,000.—New York, with a plurality of 176,000 for Roosevelt, gave Higgins (Republican) for Governor only 80,000, owing to the fight made against Mr. Odell, the Governor-Chairman. To the surprise of almost everybody, Judge Parker's plurality in the great city was less than 36,000, while Judge Herrick (for Governor) had a plurality of nearly 81,000 there. It is reported that Governor Odell will become president of the Pacific Mail Company.—At last reports, Governor La Follette, in Wisconsin, had run only 15,000 behind Roosevelt's plurality of about 75,000. His supporters control the Legislature, and Senator Quarles will not be re-elected. The primary election law was approved.—It appears that Addicks has been eliminated from the political field in Delaware. If the Republicans of his faction in the Legislature were true to him he would still need 5 votes for election to the Senate; but it is asserted that they have deserted him because he failed to supply any money for the campaign, and that they have agreed with the Regulars to elect Colonel Du Pont as the successor of Senator Ball.—Mr. Bryan's State elects a solid Republican Legislature, except that one seat is in doubt. He is not a candidate for the Senate.—West Virginia, Mr. Davis's State, gives Roosevelt 25,000, electing a Republican Governor and Legislature and Republicans in all the five Congressional districts. —In Iowa, the only Democratic Congressman has disappeared; in Pennsylvania (plurality 494,000) only one is left to sit with 31 Republicans; all the Representatives from California will be Republicans. Washington's Republican plurality was 66,000, but ex-Senator Turner (Democrat) for Governor was beaten by only 15,000. W. H. Andrews, formerly one of Mr. Quay's lieutenants in Pennsylvania, was elected Delegate in New Mexico; Oklahoma was Republican by 1,800; Arizona went the other way. Porto Rico elected Julio Larrinaga, Unionist, and the Republicans will have only 10 of the 35 members of the House.

Prospects for Peace

President Roosevelt's invitation to the Powers for another Hague Conference seems to have been issued at a propitious time, and the reception given to it by European nations is decidedly favorable. In reply to the objection that it is inopportune because Russia is at war, Mr. Porter, our Ambassador at Paris, pointed out to M. Delcassé, the French Foreign Minister, that Russia issued the call to the first Hague Conference at a time when the United States was engaged in a war with Spain. Denmark has accepted the invitation and calls attention to the need of more definite regulations about neutrality and contraband goods. Negotiations have been opened for an arbitration treaty between Denmark and the United States. In France the comments of the press from Conservative and Royalist to Republican and Socialist are all favorable to the projected conference and unite in praising Presi-

dent Roosevelt for thus taking the initiative. As is shown by the recent vote in the Chambers, M. Delcassé is one of the strongest men in the present Government, and even if the Combes Ministry should fall he would probably remain Minister of Foreign Affairs and be enabled to carry out his arbitration policy. On the other side of the Channel the press is equally favorable, and the British Foreign Minister, Lord Lansdowne, devoted his speech at the recent Lord Mayor's dinner at the Guildhall to an urgent plea for arbitration in general, and a justification in particular of his action in leaving the North Sea dispute with Russia to an unbiased commission to pass upon the facts. He said:

"Mr. Choate walked into my room yesterday and asked if we would sign an arbitration treaty with the United States. Simultaneously we received from President Roosevelt, whom we must congratulate (cheers), a message inviting us to participate in a second international peace conference at The Hague. It is needless to say that the invitation has not been refused; only, we have reserved to ourselves the right to consider what subjects should be discussed. We hesitated not a moment in informing America that we were ready to participate and in wishing President Roosevelt godspeed in this undertaking."

Italy has expressed a strong desire for a second Hague Conference in order to determine the rights and duties of neutral Powers in time of war. King Carlos and Queen Amelia of Portugal are now paying a royal visit to the King and Queen of England, and it is expected that the two countries will be brought closer together by this event, not merely in the way of public sentiment, but by some definite arbitration treaty. No objection seems to have been offered by Russia to the proposal for another Hague Conference, but it is evident that the country would seriously resent any attempt to use it in the settlement of the present war. Inquiries are reported to have been made by several Powers of France to ascertain if her ally, Russia, would receive any offers of mediation, but an emphatic refusal has been returned to all such proposals. There is reason to believe that Japan would not consent to peace measures. The Pope is said to be preparing a letter on the horrors and futility of war.

The Attack on Andre

The attack on the French Minister of War, General André, in the Chamber of Deputies, has passed from words to blows. In descending from the tribune at the conclusion of his defense General André, who is now 67 years old, was struck in the face by M. Syveton, an athletic young Deputy from Paris. His face was cut by Syveton's ring and he would have fallen if he had not been caught by Premier Combes. The Chamber voted the suspension of M. Syveton, but as he refused to leave, the sitting was suspended and he was removed by the military guard. The reaction of feeling caused by this violence changed the Governmental majority from four to a hundred. The charge made against General André was that he had been systematically weeding out the Clerical and Nationalistic officers of the army, using for this purpose the secret records of the Grand Orient Masonic Council. The Minister of War denied using underhand methods and spying, but declared that the Jesuits had for many years been securing the promotion of officers who were conspiring against the Republic, and that it was his duty to see that the army was kept loyal. The charges of the opposition were supported by the publication of letters giving information about the political opinions, ecclesiastical affiliations and private life of officers in the French army and recommending that they be promoted or passed over according to whether they were Republican or Clerical in their sympathies. The action of the Government is shown to have corresponded with these delations. An investigation is being made in the Grand Lodge to discover how these documents were allowed to fall into the hands of the enemy. M. Syveton will be prosecuted for assault and, if convicted, will be liable to a sentence of five years' imprisonment, with loss of his civil rights. Five duels have been fought, mostly between Deputies and army officers, as a result of the André affair, and more are in prospect. None of them has resulted fatally. Lieutenant André, a son of the Minister, was wounded in the hand by the sword of Count de la Rochetulon, a Deputy. The General and Mrs. André while the duel was in progress waited for their son at the Vincennes

fort, near the dueling ground. M. Syveton fought with Captain Gail, representing General André.

Anglo-French Treaty Ratified

The treaty between France and England by which all the disputed points between the two nations on colonial questions have been arranged was passed by the Chamber of Deputies after a ten-day debate by a vote of 443 to 105. This gives France a free hand in Morocco and England in Egypt. The opposition to the ratification of the treaty was chiefly on account of the relinquishment of the ancient fishing rights of the sailors of Brittany and Normandy on the "French shore" of Newfoundland. The treaty with Siam by which the boundary line of French "influence" is still further extended, was also ratified. Altogether, it was a great victory for the peace and colonial expansion policy of M. Delcassé, Minister of Foreign Affairs.—The Chamber of Deputies has authorized the Municipal Council of Paris to take away from private corporations the manufacture and supply of gas to the city. This is likely to be followed by the municipalization of the electric lighting system of Paris. The political object of this action is to insure the support of the Socialists, who constitute a necessary contingent of the "block" or Governmental majority.

Student Riots at Innsbruck

The opening of the Italian law school in connection with the university at Innsbruck was followed by a street riot, in which there was much bloodshed and destruction of property. The Italian school at Innsbruck was founded by the Austrian Government in response to the demand of the Italian subjects of Austria for a university at Trieste, where instruction would be given in their own tongue. As a compromise the Ministry decided to form a separate Italian faculty of law at Innsbruck, in spite of the violent opposition of Germans in that city. On the evening of November 3d a group of Italian students were attacked by Germans in the streets. They drew revolvers and wounded some of their assailants. The mob then increased and soldiers were called in to quell it. In the mêlée a German artist, August Prezzy, was killed. The next day the rioting was renewed and the mob demolished the furniture and equipment of the new university building and smashed the windows of all Italian shops and houses. The Municipal Council sympathized with the anti-Italian feeling and demanded the closing of the Italian Faculty by the Government. Prime Minister von Körber has refused to take such action in spite of the pressure brought to bear upon him by the Tyrol representatives. The Municipal Council ordered a funeral of the artist at public expense. All the city buildings were draped in black and the burgomaster and council attended the funeral. Afterward a crowd of 3,000 assembled in the streets, which were cleared by the mounted gendarmes. All the Italian students have been arrested. The conflict has spread to Vienna, where, on Saturday, the German students started the trouble by singing "Wacht am Rhein" and demanding that all the other students take off their hats. The Italians, Slavs and other non-German students refused to do this and a fight ensued with fists, sticks and umbrellas. As the affair took place on university ground no arrests have been made by the authorities. Signor Tittoni, the Italian Foreign Minister, has remonstrated with the Austrian Government for not preventing the anti-Italian demonstrations, which may result in a serious discordance between the allied nations.

The War

No important operations have been reported during the past week from the vicinity of either Port Arthur or Liao-Yang. Along the Shakhe River both parties seem determined to stay just where the last great battle left them. The lines of the outposts are only a few hundred yards apart in some places. There are occasional artillery duels, more for the purpose of getting the range than with the idea of doing important damage. The Russian soldiers have constructed dugouts to protect themselves from the weather, which, however, is much milder. The Japanese have prepared very elaborate systems of defenses, consisting of wire entangle-

ments, mines, pits and several lines of ditches, some of them filled with water from the Shakhe River. It is asserted very positively from the Russian headquarters that General Kuroki, who has led the First Japanese Army on its victorious progress from Korea to Liao-Yang, was killed on October 4th by the bursting of Russian shell. General Alexieff, the Viceroy of the Russian possessions in the Far East, has returned to St. Petersburg.—At Port Arthur the attack of the Japanese seems to be concentrated on Etse hill (Etseshan), which from its hight and position northwest of Port Arthur commands the town and the approaches to it from the north. Rihlung hill is now in the possession of the Japanese, or at least under their control, and the Keekwan and Urlung forts have been silenced. It does not appear that any of these positions on the north and east have yet been occupied in force by the Japanese; probably this is impracticable because they are under the guns of the Etse and other forts. Tunneling and countertunneling are constantly going on. Corpses are lying between the lines unburied and eaten by dogs. On account of the reported discouragement of the Russian garrison and the refusal of General Stoessel to receive any propositions to surrender, General Nogi has sent back a Russian prisoner with a message to his fellow soldiers assuring them of ultimate Japanese success and offering immunity to any who would desert and come over into the Japanese lines. It is at last admitted by the Japanese that the "Yashima," one of their finest battleships, was sunk by a mine off Dalny last June. This leaves only four battleships to the Japanese with which to meet the Baltic fleet when it arrives in the Far East, but in cruisers the Japanese fleet much outnumbers the enemy.

Parade in Port Arthur, Manchuria.—General Volkoff Addressing the Troops. General Stoessel stands behind him. From Stereograph Copyright, 1904, by B. L. Singley.

The Northern Lights

BY JOHN GREENLEAF WHITTIER

[There was a remarkable display of the aurora borealis in January, 1837, and this poem commemorates the phenomenon. It was printed in the Haverhill *Gazette* at the time, but was never collected.—S. T. PICKARD.]

A LIGHT is troubling heaven! A strange dull glow
Hangs like a half-quenched veil of fire between
The blue sky and the earth; and the shorn stars
Gleam faint and sickly through it. Day hath left
No token of its parting, and the blush
With which it welcomed the embrace of Night
Has faded from the blue cheek of the West;
Yet forth from the solemn darkness of the North,
Stretched o'er the "empty place" by God's own hand,
Trembles and waves that curtain of pale fire,—
Tingeing with baleful and unnatural hues
The winter snows beneath. It is as if
Nature's last curse—the fearful plague of fire—
Were working in the elements, and the skies
Even as a scroll consuming.

Lo, a change!
The fiery wonder sinks, and all along
A dark deep crimson rests—a sea of blood,
Untroubled by a wave. And over all
Bendeth a luminous arch of pale pure white,
Clearly contrasted with the blue above,
And the dark red beneath it. Glorious!
How like a pathway for the Shining Ones,
The pure and beautiful Intelligences
Who minister in Heaven, and offer up
Their praise as incense; or, like that which rose
Before the Pilgrim Prophet, when the tread
Of the most holy angels brightened it,
And in his dream the haunted sleeper saw
The ascending and descending of the blest!

And yet another change! O'er half the sky
A long, bright flame is trembling, like the sword
Of the great angel of the guarded gate
Of Paradise, when all the holy streams
And beautiful bowers of Eden-land blushed red
Beneath its awful wavering, and the eyes
Of the outcasts quailed before the glare,
As from the immediate questioning of God.

Oh, God of mystery! These fires are thine!
Thy breath hath kindled them, and there they burn
Amid the permanent glory of Thy heavens,
That earliest revelation written out
In starry language, visible to all,
Lifting unto Thyself the heavy eyes
Of the down-looking spirits of the earth!
The Indian, leaning on his hunting bow,
Where the ice-mountains hem the frozen pole,
And the hoar architect of winter piles
With tireless hand his snowy pyramids,
Looks upward in deep awe,—while all around
The eternal ices kindle with the hues
Which tremble on their gleaming pinnacles
And sharp cold ridges of enduring frost,—
And points his child to the great Spirit's fire.

Alas for us who boast of deeper lore,
If in the maze of our vague theories,
Our speculations, and our restless aim
To search the secret, and familiarize
The awful things of Nature, we forget
To own Thy presence in Thy mysteries!

Frantz Funck-Brentano

BY ALVAN F. SANBORN

AT the annual convention of the *Fédération de l'Alliance Française*, held in New York City last March, Dr. William R. Harper, the retiring President, announced that the American Historical Association was anxious to have the *Alliance* bring a French historian to America, and had passed a resolution to that effect. The lecturing tour of Frantz Funck-Brentano, who delivers his first lecture at Boston, November 26th, is the obvious response of the *Alliance* to this appeal.

M. Funck-Brentano is primarily an archivist and paleographist. He was graduated from the Paris *Ecole des Chartes* in 1885 with the title of *archiviste-paléographe*, and was appointed immediately after to the position of Archivist of the Arsenal Library, which possesses, among other treasures, the archives of the Bastille. He devoted ten years to finishing the arduous task of classifying the Bastille archives begun by his predecessor, François Ravaisson. The resulting catalog, which is a model of its kind, was crowned by the Academy of Moral and Political Sciences. This catalog was published under the auspices of the national Government. For the city of Paris he prepared later a complete list of the prisoners of the Bas-

tille, accompanied by voluminous notes and a study—recognized by experts as masterly—of the history of the *Lettres de Cachet.*

These two formidable works belong exclusively to M. Funck-Brentano's specialty. He is the author of two other volumes that come very near falling under the same category: "The Origins of the Hundred Years' War," crowned by the Academy of Inscriptions and Belles-Lettres, and "The Bastille of the Comedians," which was awarded the prize offered by the Society of Theatrical History in 1902.

"M. Frantz Funck-Brentano," says his fellow-historian, Albert Soul, "is at one and the same time a savant and a writer of great distinction, who adores life and knows how to render it. He is a delicate analyst and an ardent portrayer of human sufferings and passions." Thus it is that alongside of the works of pure erudition mentioned above M. Funck-Brentano has produced four volumes which are solidly based on this same erudition, but which have been as largely read by the unscholarly as by the scholarly public, because they possess all the fascination of romance. They are: "Legends of the Bastille," "Princes and Poisoners," "The Diamond Necklace" and "Cagliostro and Company." * In these he has devoted himself to correcting the errors and solving the puzzles of history.

The "Legends of the Bastille" explodes the myth of the sufferings of Latude and other Bastille prisoners, and clears up the mystery of "the man with the iron mask." "Princes and Poisoners" is a study of the extraordinary mania for poisoning which beset the court society of the seventeenth century, and sheds a great deal of light on the hitherto obscure careers of la Brinvilliers, la Voisin, and Madame de Montespan, and on the death of the Duchess of Orleans. "The Diamond Necklace" and "Cagliostro and Company" (its sequel) restate and review in an admirably clear, if not an entirely conclusive, fashion the celebrated case which is considered by many historians to have caused the death of Marie Antoinette and precipitated the Revolution.

In his latest book, "Les Brigands," a work of a still more popular character, M. Funck-Brentano has definitively located Bluebeard, and has established the historical truth regarding such picturesque rascals as Mandrin and Cartouche all in expounding the important *rôle* played by brigandage in French history from the Middle Ages to the present time.

M. Funck-Brentano's personality (as the accompanying photograph shows) is a forceful one. It tallies, moreover, with the dual nature of his work. He wears the spectacles of the professor and the flowing tie of the artist. He is equally enamored of facts and of picturesqueness. He is alternately scholar and esthetic. When I visited him at the Arsenal his enthusiasm vacillated between his cherished archives and the eighteenth century frescos with which several of the rooms are decorated. In repose his bearing is that of the patient, persistent savant; when he speaks it is that of an illuminé. German phlegm (M. Funck-Brentano is of German extraction) and French vivacity were never better blended.

DECIZE, NIEVRE, FRANCE.

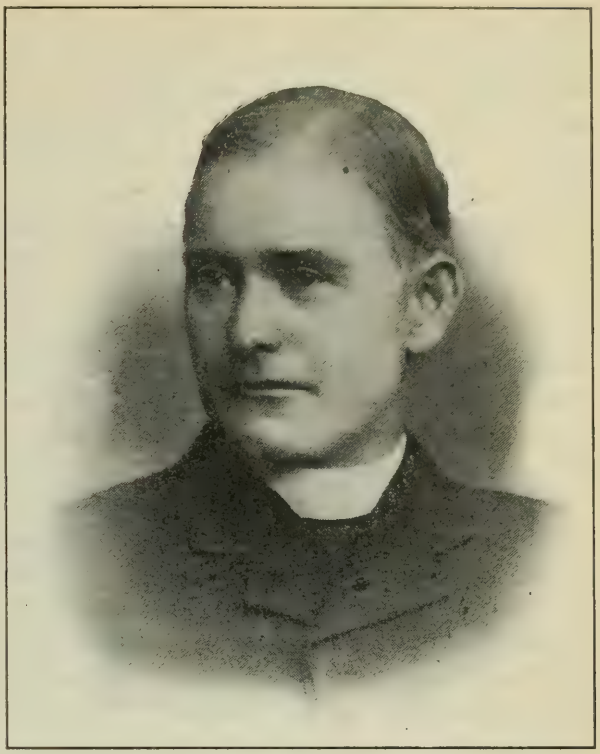
* I use English titles because all these volumes have been translated into English.

Punch Politics and Letters in England

BY JUSTIN McCARTHY

THE number of *Punch* just issued contains an amusing and appropriate cartoon from the expert pencil of Mr. Linley Sambourne. It is called "The Magic Kettle," and it shows us the magician, who wears an eyeglass and has a striking resemblance to Mr. Joseph Chamberlain, standing in front of the kettle which he is endeavoring to boil. The kettle is labeled with the name of "Protection," and it is placed upon a boiler which bears on its side a face that seems frozen, but in which, nevertheless, one can still trace out the features of Mr. Balfour. The legend beneath the cartoon tells us that the operator says, "Gentlemen, notwithstanding the apparent frost, the kettle is going to boil all the same."

The cartoon illustrates humorously, but withal very fairly, the present attitude of Mr. Chamberlain. Most of us are well convinced in our own minds that the kettle is frozen and will not boil, but we are none the less ready to admit that Mr. Chamberlain is a man of many resources and many expedients, and that he will not hesitate about any device which can prevail upon his followers that he has yet some art or craft to fall back upon and justify his reputation as a political conjurer. One of Mr. Chamberlain's especial accomplishments is his faculty of quick change. When you think he is driven to his last resource, and has nothing left but to admit defeat, you may hear him suddenly proclaiming that you have entirely mistaken his meaning and that he was all the time on the victorious side. Thus we all know that he entered the House of Commons as a Radical of Radicals, as indeed something very like a proclaimed Republican, and that he kept on this political attitude until all of a sudden a crisis came, when Radicalism ceased to mean political success, and then we were all surprised to learn that Mr. Chamberlain was a Tory of the Tories. Thus, too, Mr. Chamberlain was when he first became conspicuous in Parliament a strong advocate of Home Rule for Ireland. He was then, as I remember full well, the close friend, ally and confidant of Parnell and the Home Rule party. After a while it became evident that Home Rule was not going to carry the day quite so soon as some of us had hoped and expected, and then the world quickly learned that Mr. Chamberlain had become an opponent of Home Rule, and he presently accepted office in a Tory administration.



THE LATE J. HOLLINGSHEAD

No great surprise, therefore, would be felt by any one if at some critical moment Mr. Chamberlain were to announce that although he could make the Protection kettle boil if he so willed it, he had nevertheless made up his mind to take it off the heater and throw it into the dust bin. Indeed, I have heard it suggested that Mr. Chamberlain might find that an easy and a telling way out of the whole difficulty, and that he is just the man to adopt such an expedient. Why not boldly announce to his constituents and the public in general that he has for the last few months been playing off a

practical joke at the expense of the easily deluded? Why not declare that he was during all that time, as he had ever been up to that time, a convinced Free Trader, and that his only object in starting the backward movement toward Protection was with the idea of inducing some insincere Free Traders to display their insincerity and thus convict themselves forever in the judgment of their constituents? He might then go on to show that by this clever device he had prevailed upon the false Free Traders to confess their falsehood, and had thus rendered inestimable service to the cause of Free Trade. I certainly do not commit myself to any prediction that Mr. Chamberlain will adopt such a course as that which some facetious friends of mine have suggested as suitable for his occasion, but I quite believe that if he could see his way to such a course of action he is just the man who would have courage, or what is vulgarly called "cheek," to play the part with bewildering effect. The time is now fast approaching for his winter campaign, and he must, I should think, have made up his mind that he cannot carry the constituencies with him in the crusade which he marked out for himself when he opened this new chapter in his political career. We may confidently expect a surprise of some kind, and we may be sure that whatever be the crisis Mr. Chamberlain will come out of it with absolutely undiminished faith in his own infallibility and his own claims to the applause and the gratitude of his country.

The probability is, however, that Mr. Chamberlain will not call up his inventive powers for a new departure in policy or a new revelation of his purposes until the General Election shall have decided the fate of the existing Ministry. So far as can be judged from a comparison of expert forecasts, the probabilities are strongly in favor of the Liberal party's return to power. Even if this were to be the result of the General Election Mr. Chamberlain might still be found waiting for his opportunity. The Liberals, or perhaps I should rather say the Liberal leaders, do not seem to be quite agreed as to their policy, or perhaps I should rather say do not seem to have yet started a policy on which there is any likelihood of their agreeing. Lord Rosebery is, of course, still conventionally regarded as foremost among the leaders of the Liberal party, and most of us, nevertheless, find it difficult to understand why he should any longer be regarded as a Liberal. On some of the most essential articles of the creed of Liberalism, as Mr. Gladstone preached and typified it in his later years, Lord Rosebery has for a long time been an avowed heretic, and there are many subjects on which he approaches much more nearly to the tenets of the Conservatives than to those of the Liberals. There are some very able men among the Liberals in the House of Commons—men, for example, like Mr. John Morley, Mr. James Bryce and Mr. Asquith—but not one of these seems as yet to have called up for himself that following which marks a man out for the position of political leader. In politics as well as in literature John Morley stands in the foremost rank of English thinkers and speakers, but he never seems to have coveted the position of Liberal leader. James Bryce is a writer and a thinker rather than a political commander, and Mr. Asquith, a most successful legal advocate and a brilliant parliamentary debater, has not thus far, at least, succeeded in prevailing upon the great body of Liberals to regard him as their predestined leader.

THE REV. DR. WILLIAM BARRY

Every day that passes only makes the

great mass of the Liberals all over the country feel more deeply than before the loss which their cause has sustained by the death of Sir William Vernon Harcourt. No man on his side of politics since the death of Gladstone could fairly compare with Harcourt in the qualities which especially fit their possessor to be the leader of the Liberal party. Harcourt was a great parliamentary debater, and even it might be said on some occasions a great parliamentary orator. He was a master of finance; he had a thorough knowledge of parliamentary work; he was a powerful speaker on public platforms; had a ready wit and mastery of repartee, and he had what may be admitted to count for something in such a field of work, a commanding presence. He was sometimes inclined to be overbearing in his manner of debate, and he occasionally showed a certain impatience when dealing with dull antagonists, but he was known to have a kindly heart and a generous spirit, and he was, taking him for all in all, one of the most popular men in the House of Commons during our time. During my parliamentary life, and especially during its earlier years, I often found myself in opposition to the policy of Sir William Harcourt, but he was always genial and kindly in private and public, and I was ever proud to rank myself among his personal friends. He was at one critical period in public affairs put aside most unwisely and even unfarily, I think, in order that Lord Rosebery might take the vacant place of leader, and I cannot doubt that he felt this slight very keenly. He has passed out of life at a crisis when his death is nothing short of a calamity to the Liberal cause.

Death has lately removed from our midst a man who, altho engaged in a very different field of work from that which occupied the intellect and the energies of Sir William Harcourt, was yet a very conspicuous figure among English notabilities. I am alluding now to Mr. John Hollingshead, who died a few days ago, and whose name is almost as well known, I should think, to the American public as it is to the public of this country. Yet John Hollingshead was, above all things, a Londoner. He was an author who made London his chief study, and he was also the organizer of great theatrical companies and great schools of musical comedy which have made themselves famous all over the civilized world. He was introduced into literature by Charles Dickens, and was a constant contributor to Dickens's *Household Words;* he was on the staff of the *Cornhill Magazine* under Thackeray, and then all of a sudden he turned to bringing out theatrical enterprises; helped to found the Alhambra Theater, and founded the Gaiety Theater, which introduced an entirely new school of musical comedy to England and to the world in general. I used to meet him often at one time, and always enjoyed his humor and his varied reminiscences. Whole fortunes must have passed through his hands, and yet I believe he was himself but a poor man when he died.

One of the most remarkable contributions to the literature of criticism which we have had for a long time bears the striking name "Heralds of Revolt," and is the work of the Rev. William Barry, a distinguished clergyman of the Church of Rome. Dr. Barry has already written many books which have made an impression on the reading world, and I have given my opinion of more than one of them in the pages of THE INDEPENDENT. He is the author of several novels, among which "The New Antigone" and "Arden Massiter" are perhaps the most remarkable, but every one of which has made its distinct impression on the literature of our time. "Heralds of Revolt" is a volume of "Studies in Modern Literature and Dogma," and is, in fact, a volume of essays on the founders or leaders of the modern schools in literature and philosophy which have made it their endeavor to shake off outworn traditions and to bring new impulse and new interest. Among the authors whom Dr. Barry introduces into his book are Carlyle, George Eliot, Heinrich Heine, Victor Hugo, Dumas, George Sand, and Friedrich Nietzsche. Some of the chapters, it should be said, are essays on schools of thought and phases of dogma studied as influences and tendencies rather than as subjects of individual portraiture. If I am not greatly mistaken this book is destined to make its mark on our present literature. Dr. Barry's read-

ing is evidently most profound and varied, and he can illustrate every subject with which he deals with a perfect prodigality of appropriate citations and comparisons drawn from all literatures, ancient or modern. He is a bold and a penetrating critic who judges for himself and takes little account of merely conventional decrees in criticism; his language is vivid, his style picturesque, and he often makes us feel as we become absorbed in his pages that we are not merely reading, but are actually listening to his words. He is very much in earnest on any subject which he discusses, and he does not hesitate when his mind thus inspires him to deal scornfully with the most cherished traditions in criticism. I have read the volume with intense interest, and my interest has been none the less even when I could not agree with the author's opinions upon this or that book or literary school. He seems to me, for instance, to undervalue strangely even the greatest novels of the elder Dumas, "Monte Cristo" and "The Three Musketeers," or as I believe it is called in your American translation, "The Three Guardsmen." I should put these romances on a level with some of the best romances of Walter Scott. There are other judgments, too, given by Dr. Barry with which I could not hold myself in agreement, but it is no part of my purpose now to enter upon a criticism of our critic, who has himself written romances which I feel sure are destined to live. There is this to be said for Dr. Barry's critical pages: that even where the reader is most inclined to differ from them he cannot but see that his attention is called to new points of view, and that Dr. Barry has ideas of his own to sustain all his opinions, and that the most accomplished student of his book must find himself all the better for his absorption of these ideas and for the wealth of study which the pages of this book open up to him. The great charm about Dr. Barry's essays is their freshness of thought and their originality of illustration. The essays which make up the "Heralds of Revolt" are reproduced, some from the Dublin *Review,* and the others from the *Quarterly Review* of historic fame. Dr. Barry has rendered a valuable service to the reading world of to-day and the future by reproducing his critical studies in this collected form.

A brilliant light in our artistic world went out prematurely yesterday. Mr. Charles W. Furse, the most rising and indeed of late the foremost among our English portrait painters, died of some pulmonary complaint. Furse had only reached that year which Disraeli calls the fatal year of genius—the thirty-seventh year—of Raphael and Byron; indeed Disraeli cites a whole catalogue of careers thus early cut short. Furse was in his early days a student of the Slade School of Art in London under the late Professor Legros, an extremely clever French artist and teacher, who never could be prevailed upon to learn the English language. I used to know many of Furse's fellow students at that time, and even then it was confidently believed that he was destined to fame. And now he is gone, and leaves the fame which he had so fairly won to speak for him.

London, England.

The Evolution of the Literary Aspirant

(PAPER III)

[The two former articles we published by the "Literary Aspirant" were printed far and wide. We note that now that he has achieved the hights of his ambition his article shows less mutterings against fate in the shape of unkind editors and publishers. His point of view seems much more serene.— EDITOR.]

IN my former papers printed in THE INDEPENDENT I have sketched what befell me, first, as a free lance, entirely dependent upon the beck and call, the caprice, of various editors; second, as the author of a book seeking a publisher, and now in the course of my evolution from a literary aspirant but one step remains and that has to do with my subsequent and present experience as an editor. Between the would-be contributor and the editor there is sometimes said to be interposed a great gulf, so that when one has passed from the one class to the other there has been a notable achievement. Having now accomplished this I look upon myself with ill concealed pride. I find that I still have a tendency to pinch myself on awakening in the morning lest I should suddenly find it all a dream and have to go back to hawking my literary wares and wearily climbing the *Sun's* winding stairs (they are winding, even if they are not spiral), etc., in the process. But, no; it is quite true, I am at last in the editorial class. My name is painted on one of the doors of a great magazine office as one of the editors. Literary aspirants now come to seek me out and win my favor, if happily they can enlist my approval, so that I shall print their screeds. I read and pass upon the merits of unsolicited contributions, and it comes within my province to determine the art features of my magazine. I am rapidly becoming an autocrat. My friends notice a change in me. The time when I had to wonder if my stuff would be printed has gone by. I now confidently send it down to the composing room every day, knowing that if it is not printed in the current issue it will be in a following one, and every once in a while I mark my copy "must" for a certain issue. I realize that this *IS* a beautiful world, and there is great joy in looking down from my high eminence upon those who grovel in the literary valley. I now understand, at least in a measure, how Homer must feel in the spirit world when so many cities contend for the honor of having been his birthplace, for no less than half a dozen editors have at various times claimed the honor (?) of having discovered me.

I scarcely know how it came about that for six days in the week I sit upon a mission furniture chair in my little box of an editorial office lined with shelves containing volumes of poetry, reference and other books, and whose other wall spaces under my inspiration have been hung with sundry pictures and other artistic things which are intended as inspirations to the art editor. I never thought of seeking the post I now have and was quite surprised when invited into the editorial chair. My former experience as a free lance and with the publishers comes in very well, however, and with this experience I frequently find use for the desk telephone with which my office is equipped.

There is still much popular ignorance regarding the duties of an editor, notwithstanding the large amount of matter that has but recently been printed regarding magazine and newspaper offices and the personalities of the men who make their papers what they are. According to an Oklahoma editor,

"all a fellow has to do to run a newspaper is to be able to write poems, discuss the tariff and money questions, umpire a baseball game, report a wedding, saw wood, describe a fire so that the readers will shed their wraps, make a dollar do the work of ten, shine at a dance, measure calico, abuse the liquor habit, test whisky, subscribe to charity, go without meals

attack free silver, defend bimetallism, sneer at snobbery, wear diamonds, invent advertisements, overlook scandal, appraise babies, delight pumpkin raisers, minister to the afflicted, heal the disgruntled, fight to the finish, set type, mold opinions, sweep the office, speak at prayer meetings, stand in with everybody and everything."

There is somthing more than just a grain of truth in all this, as in practice, while an editor may seem to have very little to do, there is a lot of hard work to be done by him, notwithstanding. After reaching the editorial rooms in the morning and looking over the mail that comes to my desk I give immediate audience to the literary aspirants who may wish to see and consult me. I often wonder now if I was as hopeless in my free lance days as some of those are who now come to see me. If I was, the editors I called upon in the old days have my sympathy, if at this late date that will be any consolation to them. I receive those who have sketches and other pictures for me to see, and read my exchanges and write things for my department between whiles. I consider manuscripts sent by mail. Then there is the correspondence, editorial conferences, the search after illustrative matter, the preparation of dummies, and a thousand other details constantly arising that lends an infinite charm to the routine office work. Step by step I am coming toward the editorial point of view. I, too, am now searching, as are all other editors, for the new contributor who can write printable stuff. Every time any one comes in to see me now, however, I have a haunting fear that he has a manuscript in his pocket that he is going to try to sell me, but that, upon examination, it will turn out to have just missed being the real thing.

There are no dull moments in a city room, and the editor differs essentially from the actor, since the editor's emotion never requires to be "pumped up." The pursuit of that which is timely and, if possible, exclusive, gives to editorial work a constantly sustained interest. The joy of editorial attainment in either of these directions is not unlike that which comes to the biologist engaged in research, who, undertaking a new problem, solves it, and is able to demonstrate his solution.

I enjoy the life of an editor. It seems to me to have many compensations and no drawbacks. One may study human nature from the editorial chair with diverse and yet multiple material. Some of the letters that come to an editorial office are very interesting as text-books in the study of dear old human nature. Because of a department in which problems are solved and advice is given to readers, this letter was recently received, viz.:

"Your apparent unlimited capacity for advice and assistance to tried and perplexed woman moves me to present my case, which is, I cannot market the product of my fertile brain and facile pen. Ahem! (sic).

"My friends say this is rather from lack of persistent effort than because of a demerit of my work, which competent critics say is quite equal to the average magazine fiction: Will you kindly suggest some syndicate or bureau through which I may possibly dispose of MSS."

In this case there was no pausing to inquire "Am I called to write?" or "Have I a message to deliver?" but because of the desire to write there was the confident assumption of ability to do so. Alas! as an editor it has been ground into me that it is not all of writing merely to write, otherwise it were true that a gold mine lurks in every five-cent bottle of ink when accompanied by some few sheets of writing paper and any one to write upon them.

I find that there are many literary aspirants who look with longing eyes upon a personal connection with an editorial office, irrespective of the question of fitness. Sometimes they come in and try with seductive glance and soft words to win a place upon the staff. At other times they write letters, of which the following is typical:

(*Verbatim*)

"I have been reading you magazine for some time, and really I am so pleased with it I should like to become one of you. I enjoy literary work so much can you not choose some duty to extend upon me as a help to your paper?

"I should like to belong to your differant clubs. Should like to keep up a corrospondence with the work.

"Will you kindly write me about the matter. I have an anxiety to become a great newspaper woman and I might start now as any other time. Most of my time has been spend in a school of Elocution, of which I make a

profession, having for some time recited under management of Western Star Lecture Breau. But being married now I must employ myself with some employment at home and I think none better than being connected with the readers and officers of the —— ——.

"I trust you will write me at once seeing how interested I am.

"I also should like to corrospond with some of its writers. Kindly introduce me.

"Your's Resp.,

"————————."

About the only sad thing connected with editorial life is the manifest impossibility of saying "Yes" to every one who knocks thus at editorial doors seeking to enter into the inner circle and have fellowship with the elect, or who sends a manuscript that cannot be made available. The editor with the banker must say "No" when, if he could do the other thing, he would be only too delighted. Journalism is a complex thing, and even Mr. Bok, without doubt one of the best known and most successful editors of the day, confesses he does not yet know everything there is to know regarding it.

Some contributors are very business-like. They are for knowing why a given manuscript of theirs does not get into print, so as to avoid in future the rock upon which they went to pieces. They have tiresome blanks for the editor to fill out, which they send with their offerings. They are aggrieved when their blanks are not used, and do not for a moment seem to realize the pronounced chill that seizes the average editor when he encounters such a blank. The following example is a type of which there are many modifications:

"————, ————, 1904

"To the Editor,

"————————.

"Dear Sir—I am inclosing MS. entitled ————, which I hope you will find suited to the needs of your publication, and which I shall be pleased to have you retain at usual rates.

"If not acceptable will you kindly check reasons below, that I may be guided by them in submitting other MSS.

"1. Not suited to our publication in its general character.

"2. Declined because of lack of literary qualities.

"3. Lacking in interest.

"4. Requires careful editing and revision.

"5. Too long for our use.

"6. Similar material on hand.

"7. Not buying contributions at present.

"8. Do not pay for contributions.

"9. (Remarks).

"Yours very truly,

"————————."

It is not always possible to analyze a manuscript and say just why it is not available. They try to teach you to do this in the schools of journalism, but in practice it can never be done with certainty. Any editor can tell if a certain manuscript is or is not available, but it is not so easy to say why. If the editor says a given MS. "lacks soul," it might not be understood by the aspirant; but, vague as is such a statement, that is what about ninety per cent. of the unsolicited MSS. lack.

The breed of poets is to-day more numerous than ever. Some few poets write sweet verse, into which is woven charming sentiment, bits of pathos and other things that must be if there is to be poetry. These are the rare poets. Other poets send in poems like unto the following:

"So off on a lark,
To Asbury Park,
I see you, my friends, to-day.

Your faces beaming,
Of pleasure dreaming
Gaily you start down the bay.

And when you arrive,
You'll be quite alive,
To the charms of As-bu-ry."

Which remind the long-suffering editor of Milton's verses—they are so different!

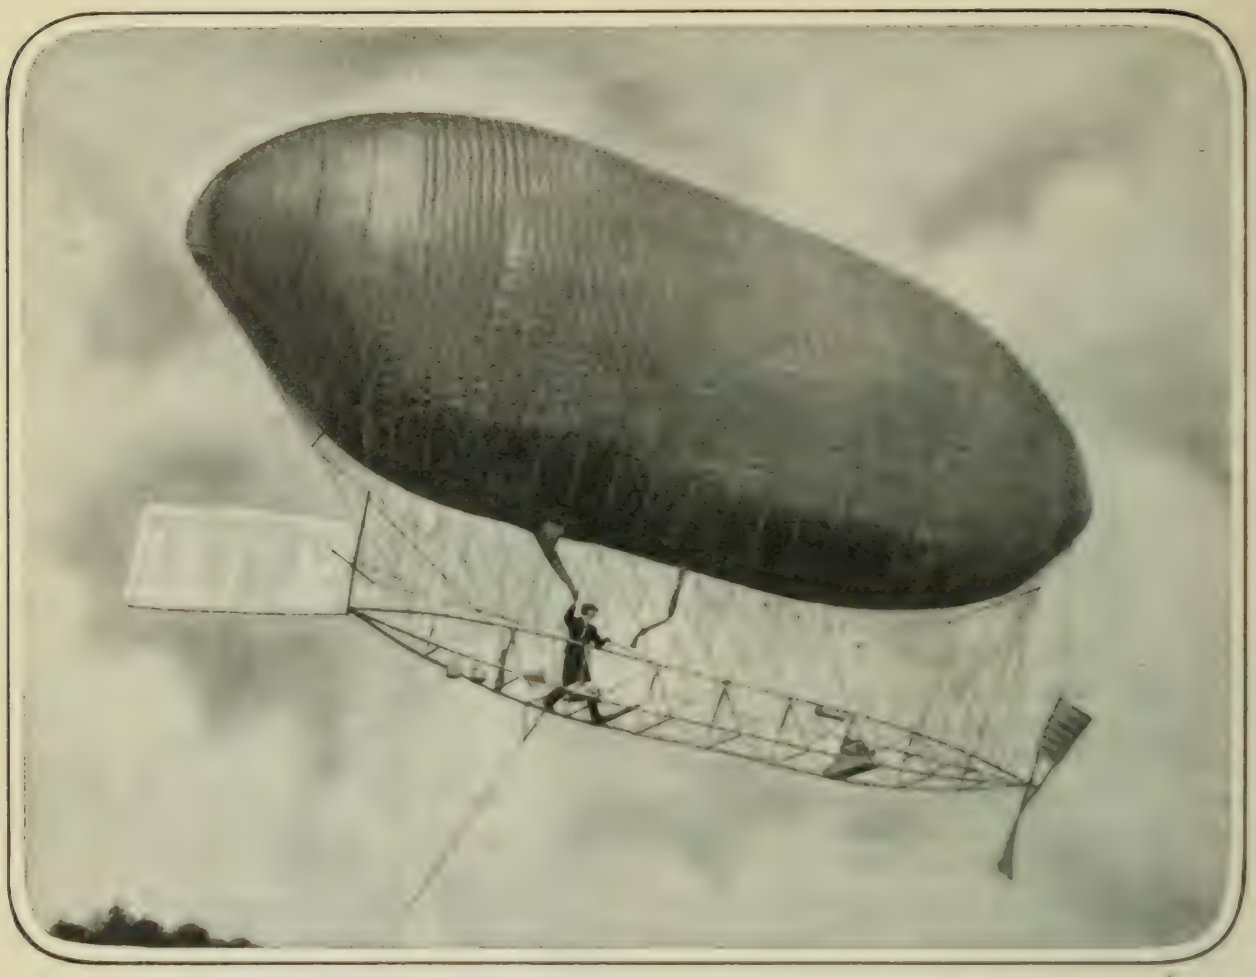
Since my advent as an editor I do not feel that I actually know much, if any, more than I did when I was a free lance. One of my associates told me once that I had more useless knowledge than any one he ever knew, and this is, I fancy, still true; but I really feel a trifle nervous when, assuming my advanced knowledge, I am invited to speak at dinners, before schools of journalism and the like. My nervousness is by no means allayed when, having told a story about my newspaper life that I have picked up I know not where, the same story is applied to me and I am made the hero of my own tale, when the fame properly belongs to an unknown. In a way the imputation of knowledge or attainment one does not have is exceedingly stimu-

lating and spurs the individual on and on to more strife after attainment, so that as I write I am seriously considering the desirability of adopting as a motto:

"Remember it is not the things you know you know, but the things that others think you know that count."

My Flights in the "Arrow"

BY A. R. KNABENSHUE



[Mr. A. Roy Knabenshue, the son of S. S. Knabenshue, editor of the Toledo (O.) *Blade*, has suddenly risen to fame by his ascent and flights the other day at the St. Louis Fair in Capt. T. S. Baldwin's air ship, the "California Arrow." He demonstrated perfectly the dirigibility of the air ship, his success being the more phenomenal because he had never before attempted an aërial flight in anything except a balloon.—EDITOR.]

I HAVE been a balloonist for four years, but my first ascent in an air ship was made with the "California Arrow" in the last week of October, from the aëronautic concourse of the Louisiana Purchase Exposition. Dirigibility was, of course, the property of the air ship which I was to demonstrate. Simple floating above the housetops, in heaven's blue, as the air currents might send one, hundreds of men had found pleasant as well as possible. But the "California Arrow" was to be pulled about like a tender-mouthed horse, now east, now west, as the rider might elect, to any point of the compass.

To explain the readiness with which the "Arrow" responded to my direction,

Knabenshue, in the "Arrow," Sailing Over the Concourse Fence, and Throwing Out Sand

The Descent of the "Arrow" on Tuesday, Knabenshue Letting Out Gas

I will briefly describe the position of the ground over which I soared and turned again and again on October 31st and November 1st, my most successful days. The tract may be roughly diagrammed as a rectangle stretching from southeast to northwest, about three-quarters of a mile long, and 2,000 feet wide. At one corner, say, was the Philippine reservation, the farthest point to the south; a little more than a mile away, horizontally across the rectangle, towered the Woman's Magazine building, the northernmost point; while on the west was the forest outside the Exposition grounds, and down to the east and south lay the Floral Clock, visible a thousand feet above, as I discerned in my flight. A few yards beyond this was the floral map of the United States. The aerodrome, from which the "Arrow" was let go, inside the aeronautic concourse, is well to the north in the outline which I have presented.

On Monday, October 31st, the flight was more spectacular, because I went out in the face of the wind, hovered for a while over the Ferris Wheel, and then swooped down like a great bird, landing within 300 feet of the spot from which I started; but Tuesday, November 1st, gave the better test, because then I went exactly in the directions suggested to me before starting by Mr. Baldwin, who made the air ship, and also because I remained in the air a longer time—47½ minutes. Confidence, too, comes more and more to the navigator with each successive voyage.

The high fence surrounding the concourse was an object of apprehension to me no less than to Mr. Baldwin. We knew that if any of the ropes should catch in the pickets the "Arrow" would come to earth at once, a good deal more rapidly than we wanted it to. I soon learned that the weight of my body one way or the other would cause the air ship to tilt. The next day, Wednesday, I had some trouble mastering this principle. The drag-rope got on the ground, and I began ineffectually to try to rise. The trouble was, I was on an incline, and the propeller therefore was pulling me down.

I balanced in the other direction, and threw out ballast—about ten handfuls of sand—when I shot up 1,000 feet. On Tuesday, however, I was poised correctly, and vaulted the fence easily.

I went straight over to the Philippines, turned and went back over the aërodrome. Then I went over the Floral Clock. I could see the time; it was five minutes past three. I sailed then over the woods to the west, described an arc over the Philippines, and went around over the concourse again. A second trip to the Floral Clock showed me it was fifteen minutes past three. I passed over the map of the United States, went back above the woods, and directed my course above the tower of the Woman's Magazine. I hovered a while above the aërdrome, and I could have landed where I rose within the inclosure, but Mr. Baldwin had told me not to do so, on account of the fence, so I came to earth a little outside. If the engine had been working better so that I might have had more power, and if I had had a better supply of gasoline, I could just as well have gone on to the city and made a long-distance trip.

The great thing in managing this air ship is to hold the rudder steady. If it is not held firm it will commence to turn on the instant, and unless I act very quickly I cannot recover my position without describing a complete circle. If I attempt to shift my weight to alter the angle of the machine, then I lose my steering power on account of having to give up the rudder. You must have your hand on that every moment.

But when one learns how—and the art is soon acquired—it is almost as easy to direct an air ship as its flight looks to the people below.

Landsmen may think that dizziness would be one of the perils of the aëronaut, but it is not so. I take pleasure, when I have time, in looking down on the landscape. There is something about the motion of a balloon or air ship

The "Arrow," after trial flight. Propeller blades show patches made by Captain Baldwin after trial trip. Mr. Knabenshue is on the air ship. Captain Baldwin is stooping over, to the right, behind the propeller.

which relieves the voyager entirely of that dizzy feeling which he experiences when standing on a high building, or at the edge of a precipice, and which prompts him to hurl himself down. I have never been at all dizzy, and other balloonists tell me that they have the same immunity. I feel entirely different looking down from a balloon from what I do when stationed on anything attached to the earth.

Yet one is not so remote from earth in the air ship. In my flight, Wednesday, when I was fully 600 feet high, I called down to Mr. Baldwin: "Get out the automobile!" so that he might follow me, and he heard me.

The throng of people around me on Wednesday were part of the reason, I think, that the trial that day was no better than it was. I must admit that a crowd makes me nervous. You never know what the people are going to do, they may clip off a piece of the silk in their craze for souvenirs; and then all their comments are heard by the aëronaut in his preparations.

But I took a certain pleasure, after all, in the enthusiasm of the people. During the preparations the excitement was intense. The onlookers—and the gate receipts will show how multitudinous they were—were all saying: "Do this!" or "Do that!" When I once start, their voices are drowned in the puffing of the engine. That is all I can hear.

On preparing to make a landing, as I did on Wednesday, in the corn-field fifteen miles away, I glanced down, and saw in the various roads leading in that direction automobiles tearing along, loaded down with enthusiastic fellows. As I came down, they burst into the field, and raced across it at their best clip. They were covered with dust from head to foot, but had forgotten everything except the pleasure of the moment. The thought occurred to me that here were these dignified men, holding responsible positions in the world, who, after all, were nothing but grown-up boys, out for a good time, and playing away like children. Then came the terrible task of towing the ship home, avoiding wire fences and watching the ropes that they should not be caught.

The ascent on Wednesday of which I have spoken when by throwing out ten handfuls of sand I went up 1,000 feet shows how nicely balanced the "Arrow" is. The smallest weight has an effect. Even a quarter of a dollar makes a difference in the balance. But the adjustment is so perfect that it is easily possible to make an ascent and flight and land again without throwing out a particle of ballast.

As I sailed the last time over the Woman's Magazine I thought how simple a matter it would be to drop a little bottle of nitro-glycerine on it and put the building out of existence. With a dirigible air ship like this one the problem, for instance, of blowing up Port Arthur would be reduced to easy terms.

Some one suggested to me, "Suppose the Japanese Government were to offer you and Mr. Baldwin $100,000 to aid them with the air ship, would you go?" I can't say what Mr. Baldwin's answer would be to such a proposition, but I myself would not be mixed up in it for a million. The air ship in such surroundings would become the center of their firing. It would take only one shell to reduce the "Arrow" to such destruction that not an inch square of her silk would remain. The only safety to her captain would be the tolerably probable chance that neither the Russians nor any one else could gauge the altitude so as to make a sure aim. A cloud in the sky is something very few marksmen can hit. There would be a similar uncertainty about the air ship. Yet if the projectiles did strike the mark nothing but a profound patriotism could make allowance for so horrible a death. There would always be danger, unless the air ship should sail two or three miles above the land, and to be so high would greatly limit its efficiency in dropping explosives.

St. Louis, Mo.

Novels and Novelists

BY MRS. L. H. HARRIS

[All of our readers, of course, know Mrs. Harris, but not all, perhaps, know that she is one of our regular and most valued book reviewers. The Putnams have just announced that she and Mr. Paul E. More (our former literary editor and now literary editor of the *New York Evening Post*) are the joint authors of "The Jessica Letters," published anonymously a few months ago. We have taken the liberty of printing Mrs. Harris's picture elsewhere in this issue.—EDITOR.]

WE are too young yet, and merely clever to produce good literature in this country. We have genius enough and to spare, but we lack the manner and mental repose and intellectual breeding upon which the art of literature is founded. What we really need is better informed and more effective critics. In the days of Hawthorne, Lowell and Emerson, while we were still influenced chiefly by elder English authors, we wrote with some of the repose and dignity which characterize real literature; but since we have begun to be just ourselves we miss the mark somehow. It is reported that More, the author of the "Shelburn Essays," has found it, and Hamilton Mabie always thought he knew where it was, but if so he has been as indefinite about locating it as was the South Georgia Cracker who gave a stranger this general direction:

"Hits two sights and three hoots that er way from here to Puddin'town!"

And, of course, there is Bliss Carman, who writes about literature with the air of a man who felt the laurels on his brow. That is his trouble, he feels his own brow too much. But the three-page length of his essays indicates how astutely he gauges popular interest in this subject. And the average reader is so simple he is not offended; for he is heard to quote from "The Kinship of Nature" and "The Friendship of Art" oftener than he does from any other books of this class, because Mr. Carman's nebulous reflections exactly equal the vagueness of his powers of comprehension. He represents the sophomore stage of American art intelligence.

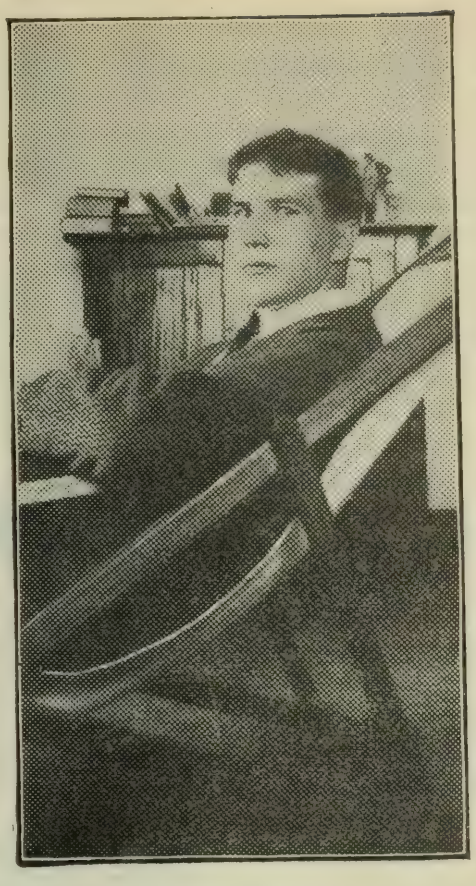
HALLIE ERMINIE RIVES

But the fact that we do not know how does not mean that we are not writing a great many books, mostly novels. Since January the writer has received 120 novels from THE INDEPENDENT and elsewhere for review, and while few will survive the year, nearly all of them are absurdly clever, showing that the authors have ingenuity and energy, rather than a literary sense of things. The scenes are laid everywhere on the earth, and nearly everywhere in time. There is much fresh coloring and erratic psychology. Even little children, monkeys and tadpoles are involved. But not many stories have been written that are vouched for by the natural, eternal order of things. We are returning, in fact, to the idea which produced the fauns, satyrs and centaurs of mythology. But with the ancients this was a poetic way of indicating a reversion to type, while with us it is the literary art of caricaturing and misplacing human emotions and ac-

BLISS CARMAN

tions. Kipling revived the fashion to suit the times in his Jungle stories. Balzac did it long before for the French in tales like his "Love in the Desert." And always, everywhere, there have been traces in fiction and poetry of this amalgamation of instincts and emotions between different species; but in this country we had not passed the innocent, humorous stage until during this year. Seton-Thompson's "Johnny-bear" was really a peevish little boy with the stomach ache, and the dog hero in "The Bar Sinister" was a man disguised by canine features and mannerisms; but recently Robert Chambers has crossed the line with his story of the man fish. There is no poetry, power or charm in this conception to justify it—nothing but a hideous wit and a frightful suggestion to explain it.

Nearly all the novels mentioned above were written by what may be termed average novelists, the kind who write chiefly to please the public. Fecundity is a characteristic of this class. They all produce from one to three novels a year, and there are more of them than one would suppose. Few authors, indeed, can afford to ignore the average readers. Some think Henry James has reached this high estate, but that is a mistake. Notwithstanding the elevated titles he gives his stories, Mr. James occasionally looks back over his literary shoulder and winks so scandalously at the most wicked and commonplace of his readers as to convulse him with merriment over his understanding of the real meaning which lies delicately suggestive of the worst beneath the chastity of the writer's literary expression. Theodore Roberts published a story this year remarkable for its masculine integrity and for the fact that



ROBERT CHAMBERS

there was no telepathy between him and the reader. Merriman saw things far and near in their dramatic relations to one another, and his last novel was a deliberate effort to prove the same, apparently for his own hermit satisfaction; but Mr. Howells is perhaps the only novelist in this country who successfully evades the average reader. The latter buys his books, probably for conscience sake; but he was never known to read one through to the final chapter. The reason is that Mr. Howells has reduced romance so nearly to the level of life that the victim does not know whether he is living or reading. And he is not the man willingly to extend his experience of the commonplace to the very literary edge of things.

Of the novels mentioned 61 were written by men and 59 by women. Now, in George Eliot's day women wrote like men, but of late that is the thing they do most femininely. In real life many of them cherish the most manly ambitions and the broadest ideas concerning their right to do and develop, until one could imagine that they wish to become the fathers of their country. But the most excruciatingly feminine thing ever seen in this world is a novel written by a woman. It grows out of her greater sense of freedom. She has got the intellectual use of herself, and

UPTON SINCLAIR

THEODORE ROBERTS

she unconsciously puts herself forward in fiction, just as she dares in life. These books are always readily recognized even when the writer signs her initials, man fashion. They have the heartrending "earmarks" of femininity. First, she invariably detaches the "soul" from the body in her dramatic fervor. A man writer would be ashamed to approach a strange reader at once with the naked soul of the hero in his hand, so to speak; but the female author works straight through the coat and vest chapters of her story until she reaches the quivering, distracted souls of the hero and heroine. Then she sets up a standard of ethics between them (Edith Wharton has excelled in this moral Tower of Babel building!) and exhausts all the other chapters trying to drag them away from it. This is the dramatic feature of the story—the female tenacity with which the hero clings to his "ideal," while actually carrying on much worse than he ever does in a man's novel. A book could be written explaining why the actual and ideal are the East and West of a woman's mind; meanwhile every story she writes proves it. With her in literature all action is heart action. Her char-

acters progress through the tale from one state of feeling to another. And they demonstrate perfectly that sentimentalism is often egotism in tears. Generally they are being consumed by some mysterious inner fire even when the reader first meets them calmly seated upon the Juliet gallery in the first chapter. This is why Alice Brown's heroines all have pallid hands and a sort of poetic hysteria. They aren't well; usually they have a fatal malady. There was a time, of course, when consumption and other kindred disorders could be used with great effect in fiction, but now we know too much about microbes and bacilli to be impressed by such symptoms, and the woman novelist should realize it. At present she has a neurotic use of words even in descriptions of natural scenery. No chemistry of colors, for instance, could produce such a horizon as Hallie Erminie Rives describes in "The Castaway," altho one might approach the general effect with a green flash light and a variegated Roman candle if the sun wore a red night shirt in the middle of the afternoon. She, by the way, is the first writer to compare rain clouds to "white horses' tails," and gives poor Byron the credit for it! This is probably the youngest simile in the year's fiction, and it will be a long time before the heavens live up to it.

HENRY JAMES

A few years ago the heroine in fiction had "irregular" teeth and very little hair on her head. It was the fashion to say that she had just a "wisp," and the intimation was that she took no care of it, "roughed" it, in fact. Now not so much is said about her teeth, even when she smiles, but her hair is greatly emphasized. And she invariably sits down after the ball to brush it out before the dazzled reader. And if real women had as much, the evening "pompadours" we see would be far honester than they are. Naturally no novelist would be able to do justice to a bald-headed heroine. She would appall his romantic imagination and offend all his male readers; but if Mr. Howells could have confessed to a little thinness about Hope Hawbeck's temples it would not have spoiled the tale; or if Charles Marriott could have left Genevera's red locks modestly braided (as they should have been at the time of night when she met her lover in the candle lit passage), instead of having them leaping about her in copper waves, the effect might have been less entrancing, but women readers would not have been so mortified by the contrast between facts and fiction.

But this discussion of the year's fiction would be incomplete without an appropriate tribute to the "great American" novel and to the author of it. Both are like the poor, we have them always with us. No sooner are we over the agitation of expecting one before another is born. And they do bear a striking family resemblance to one another; for, almost without exception, they are founded upon our social evils and national sins, past and present. The author's patriotism is a rabid form of sectionalism, or something worse. Thus Mr. Lewis's new novel is an effort to present as actual every sort of corruption possible to a republican government. And his offense consists in the brilliancy with which he accomplishes his purpose.

But the latest novel of this class is Upton Sinclair's "Manassas." What Thomas Dixon did in "The Leopard's Spots" by way of collecting evidence of crimes and cruelties practiced by the North against the South during the Civil War period and afterward Mr. Sinclair

has matched in this very able book with an exposure of the South prior and during the same period. Each has chosen the time when his enemy was at his worst. The initial chapters of "Manassas" give what the author considers the Southern aristocrat's hallucination of the situation. Then he makes haste to Boston, from which angle of vision the remaining chapters are composed to show how loathsome the Southern people really were. And he has buttressed the whole thing up so well with a history of the Missouri Compromise, with the Kansas election frauds, as to make the Southerner's character a marvel of villainy. He is a brave man, with the literary courage of his convictions—convictions, to be sure, which belonged to the honest old Abolition days in New England, and which cost nothing now to proclaim. But to those who know the people he so ably dishonors his book will seem like an ignoble tribute to men long dead—all of whom were heroes and many virtuous beyond this immaculate author's powers of conception. That slaves were often as cruelly treated in the South is doubtless true. And the peculiar literary distinction of that class of writers to which Mr. Sinclair belongs is that they will not permit the innocent young sons of the South to forget it. He would brand them to the third generation with the stigma of a system for which they are in no wise responsible. This is the crime most often committed in the name of godliness. Heaven forgives, sinners forgive, but there is a certain sort of person who never does. They gloat with carrion prayers over the iniquities of the whole world. This is the element in which their virtue moves and fattens. And they have a notion of godly vengeance that is demoniacal. Thus in this story the slave who dies of his wounds passes at once to the bedside of the overseer who had tortured him. And here we have a livid scene of horror rarely surpassed in fiction. It represents the author's idea of retribution. And evidently he has the dramatic hang of the situation—if God were just a man God. But even then, when the South was rotting beneath a brutal order of things, God was not quite Mr. Sinclair's kind of Abolitionist, else the South would never have survived the agonies inflicted upon it. For never was a good deed accomplished with more lasting cruelty than was the abolition of slavery.

But the irony of it all is expressed in Sinclair's pompous dedication of the volume: "That the men of this land may know the heritage that has come down to them." He gathers up the offal of the South during her most putrid period, mixes in the hatred of the North, frosts it with abolition virtues only and presents it as a valuable literary contribution to "the men of this land!" A more egregious insult could scarcely have been conceived. How fairly does Kipling's fame shine by comparison, not merely because he is a great writer, but because he is loyal to what is brave, honest and virtuous in the British Government and character. If we could only see it, nothing is more degrading to national consciousness than books like Sinclair's and Dixon's, works of art and genius made up of all that we should wish to forget. It is a sort of literary inversion of patriotism. And from such a point of view it would be easier to discover the North Pole than to write the "Great American Novel."

NASHVILLE, TENN.

A Review of the Important Books of the Year

Fiction

Traffics and Discoveries. By Rudyard Kipling. Doubleday, Page. $1.50.
Double Harness. By Anthony Hope. McClure, Phillips. $1.50.
Genevra. By Charles Marriott. Appleton. $1.50.
Dorothea. By Maarten Maartens. Appleton. $1.50.
The Son of Royal Langbrith. By W. D. Howells. Harper. $2.00.
The Golden Book. By Henry James. Scribner. $1.75.
Gorgo. By Charles Kelsey Gaines. Lothrop. $1.50.
The Queen's Quair. By Maurice Hewlett. Macmillan. $1.50.
The Ladder of Swords. By Gilbert Parker. Harper. $1.50.
The Last Hope. By Henry Seton Merriman. Scribner. $1.50.
The American Prisoner. By Eden Phillpotts. Macmillan Co. $1.50.
Sir Mortimer. By Mary Johnston. Harper. $1.50.
The Crossing. By Winston Churchill. Macmillan. $1.50.
The Issue. By G. Morgan. Lippincott. $1.50.
Manassas. By Upton Sinclair. Macmillan Co.
The Deliverance. By Ellen Glasgow. Doubleday, Page. $1.50.
The Common Lot. By Robert Herrick. Macmillan. $1.50.
The Woman Errant. By "The Commuter's Wife." Macmillan. $1.50.
The Issues of Life. By Mrs. John Van Vorst. Doubleday, Page. $1.50.
He That Eateth Bread With Me. By Mrs. H. B. Mitchell Keays. McClure, Phillips. $1.50.
The Undercurrent. By Robert Grant. Scribner. $1.50.
Sanctuary. By Edith Wharton. Charles Scribner's Sons. $1.50.
The Letters Which Never Reached Him. Dutton. $1.50.
The Jessica Letters. By Paul E. More and Mrs L. H. Harris. Putnams. $1.10.
Nancy Stair. By Elinor M. Lane Appleton. $1.50.
My Friend Prospero. By Henry Harland. McClure, Phillips. $1.50.
Adventures of Elizabeth in Rügen. Macmillan Co. $1.50.
The Wood Carver of 'Lympus. By M. E. Waller Little, Brown. $1.50.
The Sea Wolf. By Jack London Macmillan. $1.50.

KIPLING'S books prove his near relationship to the whole human race. With the exception of those who resent his gospel of force and imperialism he has won the affection as well as the admiration of his readers. It is, therefore, with peculiar anxiety and pleasure that they welcome a new volume from his pen. What if he had lost the inimitable Kipling touch, that manly sense of things and character which makes what he writes delightfully stimulating? Suppose his amazing faculty for the incredible and spiritual had been domesticated at last by the insidious rationalism of the age! So far as his last volume of stories is concerned, we may thankfully dismiss our fears. They are all we could hope for, and that is more than we expect from most authors.

There have a number of good English novels this year, but Anthony Hope's will probably attract more attention than the others. He could not have got the suggestion for this story from his own honeymoon so recently passed. If he is correct, the perils of the married life in English society should appeal especially to his melodramatic ability. But they do not. He writes gracefully and cheerfully of shrews, drabs, libertines and fools all married to one another, and all highly respectable people. It is very confusing and some people will question his artistic veracity in representing such a state of affairs. Charles Marriott's Cornwall story is particularly satisfying in the completeness of his conception, the chaste and delicate color tones suggested by his literary style, and especially in the fact that he presents a heroine without botanizing her. She holds together to the last with the fine reticence of a real woman. She is like a lily left standing in a lonely garden. *Dorothea* is also a lily heroine, but crowded on all sides by brambles and foul-smelling weeds. But the book is a fascinating one on account of Maarten Maartens's nice character drawing—not the same thing as the drawing of nice characters.

In discussing our own fiction Mr. Howells's novel comes first by custom, altho he is not primarily a novelist, but a psychologist who uses fiction for purposes of illustration. This year, however, he is more interesting, less neurotic, and the book gives the impression of having been written by an evolutionist with his hat off to the old-fashioned heaven. Henry James sustains about the same relation to our literary world that William Astor does to our social order; but we have never shirked the responsibility of owning him on this account. And it is a responsibility when we consider that the titles of his novels is all most people ever understand. The best classical novel of the year, or of the years, for that matter, comes from Prof. Charles Kelsey Gaines. It is something more than a tableau of Athenian life; it is a living interpretation

of the noblest period in Grecian history.

Second to none in literary merit, Maurice Hewlett's story of Mary, Queen of Scots, comes first, chronologically considered, among the historical novels. This is a knight's defense of a woman, written with the charm of a genius and the accuracy of a student. The fact that Gilbert Parker's story of Huguenot persecution has proved such a notable failure would seem to indicate that a gifted writer is often so limited in temperament and perception to his own times that he cannot realize the past in any vitally dramatic form. Henry Seton Merriman's last novel is historical and psychological. He had the power of contrasting the characteristics of two nations as if they were individuals. And he worked their respective national lineaments into his story with the caustic severity of one who sustained a judicial rather than human relation to men and affairs. Phillpotts's novel is the only one we have ever had giving the English version of the War of 1812. And it is particularly worthy of note, since it contains a scene on the lonely moor in a stormy night between a murderer and a traitor which comes nearer reaching the hights of tragedy than we find anywhere else in this year's fiction. Mary Johnston has at last crossed over from Colonial Virginia (probably in one of those British ships which always anchored early in her other stories to let out the heroine or villain destined to torture the hero's faithful heart!) and laid the scene of her last novel in England during the nineteenth century. But it does not really matter where she lays her scenes, since they never touch earth any how. Her characters float in a mist of fine language, and they never did or could have lived anywhere outside of a lady's imagination. The fact that Churchill's novel is the best selling book of the year does not mean that it is especially good from the literary point of view. He has made an awkward effort to dramatize one of those great pioneer movements which stretched the boundaries of this country. It appeals to American pride and patriotism—qualities more highly developed in us than any sense of art. Morgan's story of the Civil War is an abler book, but it is open to the same criticism of being out of drawing in many places. Upton Sinclair covers the same period from a widely different point of view. Morgan is an artist lacking in technic, while Sinclair is a socialist whose literary style has not yet reached maturity and certainty. He is apt to begin a paragraph in a deep bass, man-tone and end it with a feminine shriek. Ellen Glasgow's novel is a faithful representation of conditions in Virginia during the Reconstruction period, but the popularity of the book arose from the anti-bellum philosophy it contained and from the contrasts drawn between social ideals before and after the War.

MRS. L. H. HARRIS

Robert Herrick is entitled to the distinction of having produced the most significant novel of the year in this country. Unlike most writers who deal with the problems of our peculiar civilization, he is not an iconoclast, but he is constructive. He forecasts an ethical order of things toward which we tend with all the moral

and intellectual strength we have. Possibly he lacks enthusiasm, but he is an able man, a good prophet, imbued with the right kind of socialism. But most of our problem novels have been written by women—not that they know anything about solving such difficulties, but they are by nature alarmists, and the dangers that beset us appeal to their dramatic instincts. "The Commuter's Wife," who is distinctly a man's woman, has given a very accurate diagnosis of the woman who is attempting by a certain course of conduct and mental exercise to evolve a third, neuter sex. And she proves that after all it is nothing more than a new form of feminine hysteria. Mrs. Van Vorst has portrayed with equal antagonism, but less ability, another danger which threatens us. She thinks that the women in this country are about to quit bearing children, and that their social and intellectual pursuits lead to nervous prostration if not to suicide. This is awful if it is true, but at least we are not yet obliged to impart it to our public school children. Mrs. Keays presents the divorce problem in a light which suggests that all parties concerned will be damned if they do, and equally damned if they don't. And this is about the way of it with people who seek outside affinities and inside separations, but no one was expecting a woman to be so plain about it. Mr. Grant strives to prove that the High Church doctrine of the indissolubility of marriage is tyrannical, oppressive and productive of immorality. Edith Wharton's literary style is not so pure as it was three years ago, and in her last novel she carries her moral speculations to the point of absurdity when the heroine consents to marry a man whom she despises in order that she may save his possible children from degeneracy.

Eleven volumes have appeared during the year in which women "confess" or write letters about themselves, and they have all been most conceitedly clever about it. They supply the ballet element in our fiction; they have the same art of genuflecting and enticing in a literary way that these stage dolls have in reality. *The Letters Which Never Reached Him* is the only volume in the list where literary quality dominates the peculiar mannerism of coquettish femininity.

The *Jessica Letters* belong in a class by themselves, half way between novels and essays—that is, they are just what they purport to be, letters, and very good ones. It is the sort of book which tempts one to pencil the margins.

Some books are to be prized because of the charm they exercise over the reader's imagination, or for some appeal they make to the finer sympathies. Elinor McCartny Lane's story belongs to this latter class. No woman ever could have been so lovable as this Nancy Stair, but her "Nancyness" reminds us of all feminine adorableness. And Henry Harland's romance would create a May morning mood in the mind of any reader on the bleakest December day. The iridescent style in which it is written is like sunshine, and the characters are as native to it as butterflies are to June weather. In the same way Elizabeth's account of her vacation on Rügen is refreshing and entertaining like the society of a charming woman on a holiday. We miss Peter Rosegger this year, whose novels always abound with forest and peasant life. Mary Waller's story of the cripple living among the Green Mountains of New Hampshire is the only book which belongs even remotely to this class that has been published in this country this year. She has interpreted a trifle feverishly, but she conveys a message from the quiet places worth while.

In originality and power the *Sea Wolf* is probably the most important novel of the year. A man and a woman, superrefined, delicately nurtured and overcultured, are carried away by an Arctic sealer, under a captain of inhuman strength and brutality, and are brought into primitive conditions where they must fight for life and struggle for existence.

Poetry

The Rout of the Amazons and *The Centaur's Body*. By F. Stuart Moore. London: Duckworth & Co. 1 shilling each.

The Fire Bringer. By Wm. Vaughn Moody. Houghton, Mifflin. $1.10.

Sappho. By Bliss Carman. Boston: L. C. Page. $6.00.

At the Gates of Song and Eastaston Days. By Lloyd Mifflin. London: Henry Frowde. $1.25.

Cornish Ballads and Other Poems. By R. S. Hawker. New York: John Lane. $1.50.

Collected Verses. By Alfred Cochrane. New York: Longmans, Green.

Fifis. By Grace Denio Litchfield. Boston: Richard G. Badger. $1.25.

El Dorado: A Tragedy. By Ridgeley Torrence. New York: John Lane.

THE annual crop of poetry has been rather sparse and thin, and is, on the whole, what there is of it, rather characterless. At the same time there are a few happy exceptions in which some more or less definite aim or tendency is at least discernible. There seems, for instance, to be a sort of tentative reaction in favor of classicism, and the most successful work of the year has evidently been composed with an eye to Greek poetry. First and foremost in this class come Mr. Moore's *Rout of the Amazons* and *Centaur's Booty,* the former of which in particular contains some exquisite verse. Both these pieces are Greek, after a fashion, not only by their subjects, but also by their appreciation of the sensuous beauty and exhilaration of life. They are romantic, however, by the indeterminateness of their form and by their extreme sensibility. They are troubled by the very vision of that beauty in which they delight and they lack in their final effect the large, pacific contemplativeness of Greek art. Close beside these two dramatic dialogs should be set Mr. Moody's *Fire Bringer,* which resembles the former in being also divided between two contrary impulses. On the one hand, it approaches the Prometheus of Æschylus in its penetrating sense of horror at a world confused, but, unlike the latter, its dread is not so much of moral as of physical disorder. On the other hand, it approaches Shelley's Prometheus by its faith in the efficiency of a regular social system rather than in the integrity of the individual conscience. While Mr. Moody's verse is the more rhetorical and orotund, Mr. Moore's the more flexible and insinuating, they are both alike encouraging, inasmuch as they seem to mark a decided revival in the dramatic use of blank verse as compared with Browning's prosing and Tennyson's lyricism. In connection with this same consciousness of classic models should be mentioned Mr. Carman's *Sappho,* an interesting attempt to restore, or better, perhaps, to recreate the lyrics of that unhappy poetess, whence are emitted some few sparks of boreal passion from time to time.

There is but little to remind one of the Greeks, on the contrary, in Mr. Mifflin's sonnets. The naturalism by which they are animated is altogether modern. Mr. Mifflin, who is unquestionably the most successful and considerable of present day sonneteers, is distinguished by his cunning in the craft to which he has almost exclusively devoted himself and by his enthusiasm for nature. His weakness is rather that of his generation than his own. It consists essentially in a tremulous susceptibility to the intimations of the physical creation and an inability to convert them to the uses of the moral creature. In this sense nature is literally his passion.

Of serious lyric there is almost nothing notable. It seems to be growing harder from year to year to produce these "profuse strains of unpremeditated art." There have been numerous attempts, and, with the exception of Hawker's reprinted pieces, which really belong to another time, very nearly as many failures. Even the interest of this Cornish poet is partly antiquarian and curious, something like that of old china, while his temper shades off into a sort of clerical or ecclesiastical mysticism. His collection, however, holds a few rather fine pieces, "Song of the Western Men," "Pauline," and the fragmentary "Quest of the Sangreal," which makes a striking pendant to Tennyson's. In lighter and occasional vein Mr. Cochrane's volume is thoroughly praiseworthy. It is simple, quaint, pleasantly old-fashioned, a little regretful, and with that quiet humor which hovers rather doubtfully between jest and earnest as tho uncertain which were after all the more serious.

With regard to the literary drama—that is, the play which will read at any rate—there is small cause for congratulation. Miss Litchfield has produced in her *Vita* a rather close and clever imitation of a morality, an ingenious *tour de force,* presumably inspired by the revival of "Everyman," and Mr. Torrence in his *El Dorado* has reverberated a few Elizabethan echoes. But they are both of them pale, unearthly apparitions, haunting in regions quite remote from the pre-emptory concerns of every day.

Religion and Philosophy

Religions of Authority and the Religion of the Spirit. By Auguste Sabatier. McClure. $2.50.
The New Testament in the Christian Church. By Edward Caldwell Moore. Macmillan. $1.50.
Faith and Morals. By Wilhelm Herrmann. Putnam. $1.25.
The Veil of the Temple; or, From Dark to Twilight. By William Hurrell Mallock. Putnam. $1.50.
Ultimate Conceptions of Faith. By George A. Gordon. Houghton. $1.30.
The Direct and Fundamental Proofs of the Christian Religion. By George William Knox. Scribner. $1.20.
Christian Faith in an Age of Science. By William North Rice, of Wesleyan University. Armstrong. $1.50.
The Beginnings of Christianity. By Paul Wernle. Putnam. $2.50.
The Character and Authorship of the Fourth Gospel. By J. Drummond. Scribner. $3.50.
Le Quatrieme Evangile. By A. Loisy. Paris: Picard et Fils.
The Book of Genesis. With Introduction and Notes by S. R. Driver. London: Methuen and Co.
A Critical and Exegetical Commentary on Numbers. By George Buchanan Gray. Scribner. $3.00.
Narratives of the Beginnings of Hebrew History. By Charles Foster Kent. Scribner. $2.75.
The Psalms in Human Life. By Rowland E. Prothero. Dutton. $3.50.
A Dictionary of the Bible. Edited by James Hastings. Extra volume. Scribner. $6.00.
The Jewish Encyclopœdia. Vols. VI, VII and VIII. Funk and Wagnalls. $6.00.
The Code of Hammurabi. University of Chicago Press. $4.00.
The Evolution of Theology in the Greek Philosophers. By Edward Caird. Macmillan.
Humanism. By F. C. S. Schiller. Macmillan. $2.75.
The Nature of Goodness. By George H. Palmer. Houghton, Mifflin. $1.10.
Morals: The Psycho-Sociological Bases of Ethics. By G. L. Duprat. Scribner. $1.50.
An Introductory Study of Ethics. By Warner Fite. Longmans, Green.
Adolescence. By G. Stanley Hall. Appleton. $7.50.
Herbert Spencer. By Josiah Royce. Fox, Duffield. $1.25.

THE first place among the religious books of the year must be given to Sabatier's *Religions of Authority and the Religion of the Spirit*, because of its ability and learning, its spiritual unction and the importance of its subject. It is a critique of the principle of external authority, both as manifested in the Catholic dogma of the infallibility of the Church and in the Protestant doctrine of the infallibility of the Bible. Against the idea of an external authority Sabatier asserts the religion of the spirit, the absolute freedom of each man before God, the privilege and duty of the soul to its own life. He argues, with much ability and careful appeal to history, that this religion of absolute spiritual liberty is the religion of Protestantism, and he claims merely to carry out the faith of the reformers to its logical end. Professor Moore maintains similar positions in regard to authority in *The New Testament in the Christian Church.* His book tells, in clear, graphic style, the history of the rise of the New Testament canon,

"The process of investing of certain perfectly natural and incidental and occasional writings of the earliest Christianity with the character of Scripture."

Faith and Morals is a translation of two of the briefer writings of Wilhelm Herrmann, the most distinguished teacher of systematic theology in Germany. The book presents one of the leading and most important elements of Herrmann's teaching, that of the intimate and vital relation between ethics and religious faith. It contrasts the Catholic and Protestant principles of morals, with sharp criticism of the Catholic position. It is an important addition to the literature of Christian ethics.

The Veil of the Temple is a philosophic dialog on the present status of religion and ethics in the light of modern science. Spencer, Balfour, Henson and other English leaders of thought are the speakers, and the positions of each are treated to very shrewd and penetrating criticism. Mr. Mallock is an able writer on themes in the borderland between religion and philosophy, and his book is one of the most thoughtful and entertaining of the year.

The vigorous thought, the clear expression, and the habit of writing on subjects of which people really wish to think, which have made Dr. Gordon so widely and favorably known, appear again in his *Ultimate Conceptions of Faith.* He treats such subjects as Personality, Humanity, Optimism and the Moral Universe. Dr. Knox's "essay in comparative apologetics," the sub-title of his work on *The Direct and Fundamental Proofs of the Christian Religion*, is an endeavor to defend and recommend the important elements of Christian belief by portrayal of the religious teachings and ethical ideals of Jesus. He adopts a new method in apologetics, one in accord with the modern view of the world. Professor Rice aims to show that *Christian Faith in an Age of Science* is entirely possible. He expounds modern scientific theories with accuracy, and modern views of the Bible with fairness, and his attempt at reconciliation is

marked by good sense and good temper.

In biblical history and interpretation a number of scholarly and valuable works have been issued. The translation of Wernle's *Beginnings of Christianity* makes accessible one of the most brilliant, tho one of the most radical, of recent expositions of the life and work of Jesus, the character of Paul, and the creation and earliest development of Christianity. The difficulties of the question of the authorship and character of the *Fourth Gospel* are shown by the elaborate commentaries of Principal Drummond and the abbé Loisy. Drummond holds to the traditional authorship and early date, and gives special attention to the external evidence for the early use of the Gospel. Loisy maintains the post-apostolic origin and the unhistorical character of the writing to which the name of John was so early attached, and treats the difficult questions with breadth and thoroughness and reverent religious feeling, and with juster sense of proportion than Drummond.

Both Driver's *Genesis* and Gray's *Numbers* have taken rank at once as the best commentaries in English on their respective portions of the Old Testament, and both treat helpfully the questions in Old Testament History and Religion suggested by the text of the two books. The *Narratives of the Beginnings of Hebrew History,* the first volume of the Student's Old Testament, arranges the historical portions of the first eight books of the Bible in parallel columns according to the division into documents now held by most scholars. It enables ready comparison of the priestly writer, the prophetic writer, etc., and is the least expensive and most convenient of such books thus far published. Mr. Prothero, in *The Psalms in Human Life,* has collected many interesting instances when the Psalms have been quoted at important crises in men's lives, and when they have served to give expression to feeling at memorable scenes in history.

The extra volume of Hastings's Bible Dictionary is a valuable addition to that valuable work of reference. It contains complete indexes, and a number of long articles by writers of the best authority on subjects closely allied to biblical study, such as the Religion of Babylonia, the Religion of Israel, the Didache, etc. The *Code of Hammurabi* is treated at length, tho of course not in the fulness of the now standard work on the code issued by the University of Chicago Press.

Of importance both in religion and in philosophy is the *Evolution of Theology in the Greek Philosophers,* by the Master of Balliol. Dr. Caird has sometimes been criticised for too broad generalizations, but his works possess a thoroughness and penetration which make him one of the most suggestive and most quoted of present writers in the philosophy of religion. Mr. Schiller is an energetic and vivacious sort of a metaphysician, and in *Humanism* he treats man as he stands, the "world of man's experience as it has come to seem to him," in a style reminding one of William James. Professor Palmer's study of *The Nature of Goodness* is a helpful and persuasive essay on some daily problems of the moral life. In *Morals,* by Professor Duprat, the psychological view of the grounds of moral obligation is expounded and applied to several modern ethical systems. Professor Fite is an idealist and a severe critic of hedonism. His *Introductory Study of Ethics* is marked by mature judgment and trenchant criticism, and is one of the more valuable of recent treatises in morals. Professor Royce's work is a review of the history and meaning of the Concept of Evolution, in particular of Spencer's view of evolution in the light of his recent autobiography, with certain critical observations on Spencer's work as a thinker. There is likewise—and what is perhaps best—a very entertaining description of Spencer's personality.

Hall's *Adolescence* is one of the most important contributions yet made by the young science of experimental psychology to the problems of religion, philosophy and education. We shall soon discuss it in a special article.

Politics, Economics, Sociology

Actual Government as Applied Under American Conditions. By Albert Bushnell Hart. Longmans. $2.00.

Machiavelli and the Modern State. By Louis Dyer. Ginn. $1.00.

The Story of New Zealand. By Frank Parsons. C. F. Taylor, Philadelphia. $3.00.

Canada in the Twentieth Century. By H. G. Bradley. Dutton. $4.00.
Ethics of Democracy. By Louis F. Post. Moody Publishing Co.
Elements of Political Economy. By J. Shield Nicholson. Macmillan. $2.25.
Elements of Political Economy. By James Bonar. Dutton.
Principles of Political Economy. By Charles Gide. Translated by C. W. A. Veditz. Heath. $2.00.
The Principles of Economics. By Frank A. Fetter. The Century Co. $2.00 net.
Introduction to Economics. By Henry Rogers Seager. Holt. $2.00.
Getting a Living. By George L. Bolen. Macmillan.

The Truth About the Trusts. By John Moody. Moody Publishing Co. $5.00.
Trusts of To-day. By Gilbert Howard Montague. McClure. $1.20.
The Problem of Monopoly. By John Bates Clark. Macmillan. $1.25.
American Tariff Controversies in the Nineteenth Century. By Edward Stanwood. Houghton. $5.00.
History of Coinage and Currency in the United States, and the Perennial Contest for Sound Money. By A. B. Hepburn. Macmillan. $2.00 net.
A Century of Drink Reform in the United States. By August F. Fehlandt. Eaton. $1.50.
The Theory of Business Enterprise. By Thorstein Veblen. Scribner. $1.50.
Methods of Industrial Peace. By Nicholas Paine Gilman. Houghton. $1.60 net.
Anthracite Coal Communities. By Peter Roberts. Macmillan. $3.50.
The Slav Invasion. By Frank J. Warne. Lippincott. $1.00 net.
The Home: Its Work and Influence. By Charlotte Perkins Gilman. McClure. $1.50 net.
The Tenement House Problem. Edited by Robert W. De Forest and Lawrence Veiller. Macmillan. $6.00.
Municipal Trade. By Leonard Darwin. Dutton. $3.50.
The American City. By Delos F. Wilcox. Macmillan. $1.25.
The Shame of the Cities. By Lincoln Steffens. McClure. $1.20 net.
Life and Labor of the People in London. By Charles Booth. Vol. 17. [Conclusion.] Macmillan. $2.00.
Working with the Hands. By Booker T. Washington. Doubleday. $1.50 net.
Problems of the Present South. By Edgar Gardner Murphy. Macmillan.

The Laws of Imitation. By Gabriel Tarde. Translated by Elsie Clews Parsons. Holt. $3.00.
The Socialization of Humanity. By C. K. Franklin. Kerr. $2.00.
Success Among Nations. By Emil Reich. Harper $2.00.
Human Work. By Charlotte Perkins Gilman McClure. $1.50.

Christian Socialism in England. By Arthur V. Woodworth. Scribner. $1.00.
Modern Socialism. By R. C. K. Ensor. Imp. by Scribner. $1.50 net.
Mass and Class. By W. J. Ghent. Macmillan $1.25 net.

THE output of books on social and political subjects shows either an increasing public interest in these themes or a greater activity on the part of writers. It is a larger output than that of last year, and, on the whole, a more important one. One distinctive feature is the number of works on general economics.

Political Science has two notable numbers in Professor Hart's study of the American Government, and Mr. Dyer's study of the influences and of Machiavelli on the modern state. Professor Hart's work is a description, rather than a treatise, and details in a masterly manner the workings of our various Governmental institutions. A distinctive character in Mr. Dyer's work is its clear exposition of the main phases in the political history of the sixteenth century. Professor Parsons relates exhaustively the facts of the political and social revolution in New Zealand during the last fourteen years, furnishing, in fact, an encyclopedia which no one interested in the subject can afford to do without. Mr. Bradley describes Canadian institutions and conditions and speculates on the future. Mr. Post contributes a well written study of Democratic principles from a modified Jeffersonian standpoint.

General Economics is notably well represented. Professor Nicholson condenses his larger work, omitting most of its historical and controversial matter, into a more popular form. Smaller, more compact and yet more comprehensive is Mr. Bonar's work. Professor Gide's volume had reached a high reputation abroad before being translated into English, and in its new dress has been widely used as a text-book. Professor Fetter's book has very recently appeared. Its method and arrangement make it exceptionally adaptable for use in schools and colleges. Professor Seager gives a particular emphasis both to the historical phase of modern industry and to the problem of distribution. In his treatment of the latter he has confessedly made free use of the writings of his colleague, Prof. J. B. Clark. Mr. Bolen's contribution is written in a popular style and intended for the general reader. It discusses entertainingly, but with a marked capitalistic bias, the current questions arising out of the prevailing mode of production and distribution. It is to be noted that the individualist assumption is conspicuous in all of the volumes under this specific head; the collectivist view must be sought in other quarters.

In Economic Studies of particular problems, the ever-present trust looms large. A number of books and pamphlets on the subject have appeared during the year, but it is possible to mention but three of them in this place. Professor Clark's *The Problem of Monopoly* is a pro-

found and subtle study of the trust problem, viewed from the standpoint of the danger to free competition. Government ownership is conceded to be a possible remedy. Mr. Moody's book furnishes the data of the problem. An enormous mass of facts has been gathered and carefully arranged. Mr. Montague recognizes certain potential evils in the present trust domination, but, on the whole, is inclined to a *laissez-faire* attitude.

The tariff is treated from a protectionist standpoint in Mr. Stanwood's exhaustive history of the conflict between the two opposing schools in this nation, and the currency from a gold standard standpoint in Mr. Hepburn's chronicle of the successive struggles over "sound" and "unsound" money. Temperance reform is also treated historically in Mr. Fehlandt's contribution. Professor Veblen appears in one of his characteristic productions, this time on *The Theory of Business Enterprise,* wherein his critical attitude toward the present system of production is carefully veiled to all but the initiated by a keenly satirical manner of treatment. Professor Gilman discusses *Methods of Industrial Peace* from an assumed standpoint of society as a whole, tho it is difficult to see wherein his conclusions differ greatly from the particular contentions of capital. Social and economic conditions in the anthracite region are treated in two books—exhaustively by Dr. Roberts and more simply and popularly by Mr. Warne. Mrs. Gilman discusses with her usual vivacity and wit the expense, waste and lack of organization as revealed in the modern home and, proposes among other things, the elimination as far as possible of the individual kitchen and the substitution of communal kitchens, wherein the food for many families may be prepared.

Municipal Problems receive an increasing attention. The tenement house is treated in all its phases and bearings in the two large volumes written by a number of experts and edited by Robert W. De Forest and Lawrence Veiller. Major Darwin, in his *Municipal Trade,* discusses critically the increasing assumption of public utilities by the municipalities of Great Britain. *The American City* is treated from a progressve standpoint by Dr. Wilcox. Mr. Steffens reproduces in book form his series of articles that appeared in *McClure's Magazine* on the corruption of American city governments. It is a startling book, and its lesson needs to be widely disseminated. The vast undertaking of Mr. Charles Booth—that of collecting and publishing the vital facts of the life and labor of the people of London—reaches its conclusion and summing up in the seventeenth volume. It may truly be called a monumental work.

The Negro Problem receives treatment at the hands of Mr. Booker Washington and of Mr. Edgar Murphy. Mr. Washington gives an entertaining and instructive account of the methods employed in teaching students at the Tuskegee Institute. The education and treatment of the negro is but one of the questions discussed by Mr. Murphy, but it forms a large and important part of the contents of his volume.

The most important contribution under General Sociology is the work of the late Gabriel Tarde. It is not easy reading, since its terminology is often unfamiliar, and its manner too abstrusely psychological for the general reader. But it is a noble and profound work, and must in time come to its deserved heritage of regard—at least among scholars. An ambitious but less satisfactory work is Mr. Franklin's *The Socialization of Humanity.* Its general principles and its broad outlook will doubtless compel admiration, but its *dicta* are not carefully thought out, and it is unskillfully written. Dr. Reich discusses learnedly the social and psychological qualities in the people of different nationalities that make for success or failure. Here, too, because it treats of its subject in its social and psychological, rather than its economic phases, may be included Mrs. Gilman's second contribution for the year, *Human Work.*

Socialism has three mentionable numbers. Mr. Woodworth relates the history of the Christian Socialist movement in England, beginning with Maurice and Kingsley about 1848. Tho written from an Anglican standpoint, and therefore slighting some of the Nonconformist currents of this movement, it is nevertheless a contribution of considerable value. Mr. Ensor's book is a collection of au-

thoritative utterances from Socialist leaders such as Liebknecht, Bebel, Kautsky, Jaurès and Vandervelde, and of Socialist pronunciamentos. It is an exceptionally valuable work for all inquirers desiring to know the tenets and policy of Socialism at first hand. Mr. Ghent's book is properly a study of economic classes, and might therefore be mentioned in another place. But it is palpably, if not confessedly, written from a Socialist standpoint, and it advocates a Socialist *régime*.

History and Biography

The French Revolution. The Cambridge Modern History. Vol. VIII. Planned by Lord Acton. Macmillan. $4.00.

The Reformation. Cambridge Modern History. Vol. II. Macmillan. $4.00.

Reformation and Renaissance. 1377-1610. By J. M. Stone. Dutton. $4.00.

The Oligarchy of Venice. By George B. McClellan, Mayor of New York. Houghton, Mifflin. $1.25.

Dukes and Poets in Ferrara. By Edmund G. Gardner. Dutton. $4.00.

Leonardo da Vinci. By Edward McCurdy. London: George Bell. Imported by Macmillan. $1.75.

Mediæval England. English Feudal Society from the Norman Conquest to the Middle of the Fourteenth Century. By Mary Bateson. Putnam. $1.50.

Charles II. By Osmond Airy. Longmans, Green.

English Literature and Society in the Eighteenth Century. By Leslie Stephen. Putnam. $2.00.

The Fall of Feudalism in Ireland; or, The Story of the Land League Revolution. By Michael Davitt. Harper. $2.50.

The Unreformed House of Commons. By Edward Porritt. Macmillan. $7.50.

The Creevey Papers. A Selection from the Correspondence and Diaries of the Late Thomas Creevey, M. P. Edited by Sir Herbert Maxwell. Dutton. $4.00.

The Letters of Horace Walpole. In sixteen volumes. Edited by Mrs. Paget Toynbee. Vols. I. to IV. New York: The Oxford University Press.

Letters of Lord Acton to Mary Gladstone. Edited by Herbert Paul. Macmillan. $3.00.

Herbert Spencer. An Autobiography. 2 vols. Appleton. $5.50.

Bismarck's Letters to His Wife. Appleton. $1.00.

The American Colonies in the Seventeenth Century. By Herbert L. Osgood. 2 vols. Macmillan. $5.00.

American History and Its Geographic Conditions. By Ellen Churchill Semple. Houghton, Mifflin.

North Carolina: A Study in English Colonial Government. By Chas. Lee Raper. Macmillan. $2.00.

South Carolina as a Royal Province, 1719-1776. By W. Roy Smith. Macmillan.

The American Revolution. By Sir George Otto Trevelyan. Part II. Vols. I., II. Longmans, Green. $5.00.

Historic Highways of America. By Archer Butler Hulbert. Cleveland: The Arthur H. Clark Co. 15 vols.

Stepping Stones of American History. By four-teen writers. Boston: W. A. Wilde Co. $2.25.

The Philippine Islands. Historic Documents Relating to the Philippine Islands. Collected by Blair and Robertson. The Arthur Clark Co.

Early Western Travels, 1748-1846. Edited by Reuben Gold Thwaites. 8 vols. The Arthur H. Clark Co., Cleveland, Ohio.

How George Rogers Clark Won the Northwest, and Other Essays in Western History. By Reuben Gold Thwaites. Chicago: McClurg.

Christopher Columbus, His Life, His Work and His Remains. By John Boyd Thacher. Vol. III. Putnam. $9.00.

The Life of John A. Andrew, Governor of Massachusetts, 1861-65. By Henry Greenleaf Pearson. Houghton, Mifflin. $5.00.

History of Andrew Jackson. By Augustus C. Buell. 2 vols. Scribner.

The most hopeful sign in the historical world is the decreasing number of shallow craft that venture upon the ocean of historical writing. There are still some "wise men" going to sea in a bowl, but the literary sharks are pretty sure to get them before they have journeyed far. A few thoroughly wretched things have appeared—monsters, where every paragraph is a blemish, every chapter an encumbrance, and the whole book a disgrace, to paraphrase Lord Hervey—but they seem to have been readily recognized except by the "yellow journals," who eulogize everything. On the whole, the work which has been best received is that which unites at least fair scholarship with good literary sense, and there is a greatly enlarged circle of readers for the most rigidly scientific work.

The most prominent historical enterprise among the books of the year is, perhaps, the Cambridge Modern History planned by Lord Acton. The volumes upon the Reformation and the French Revolution attempt in a series of chapters done by specialists guided by the editors to patch up a scientific and accurate view of these great historical periods.

LORD ACTON

REUBEN GOLD THWAITES

The effect is rather kaleidoscopic, here a brilliant piece and there a dull, leaving us dazzled and with no clear view of the whole field. The Revolution volume especially is marred by unequal work, and some great writers have given evidence of undignified haste, which deprives the work of that authority which might have been gained, tho at the sacrifice of interest. While both volumes are of real value, the specialists are agreed that the latter is disappointing.

The semi-popular work of J. M. Stone upon the *Reformation and Renaissance* is a very satisfactory treatment of those great social and religious changes which began the modern *régime*. Gardner's *Dukes and Poets of Ferrara* is one of the real historical gems. Since the death of Symond's the best work on the Italian Renaissance has been written by Mr. Gardner. Nowhere in English can there be found so good an account of this Italian State, whose influence was so powerful during the Renaissance. Of a different type is McClellan's *Oligarchy of Venice*, able, suggestive and scholarly, but chiefly valuable because we are given the political reflections of the Mayor of our greatest city, who, while talking of Venice, is thinking of New York.

To English history some striking contributions have been made. Miss Bateson's study of *Mediæval England* is a trustworthy picture of feudal society from the eleventh to the fourteenth century. Tho popular in style it shows intimate knowledge of the sources and collects the results of much patient investigation. A fine piece of literary history is the late Leslie Stephen's work on the literature and society of England in the eighteenth century—a study of the "literary organ," the public and the authors of that day. *The Unreformed House of Commons* is one of the real contributions to knowledge, very scholarly and not dry. It is an interesting, readable epitome of an important phase of English political history, tracing the development of parliamentary franchise. Its very antithesis in method and spirit is Michael Davitt's *Fall of Feudalism in Ireland*, which is only valuable as a politcal document, wherein the author has consulted his passions more than his authorities. *The Creevey Papers* and the enlarged edition of *The Letters of Horace Walpole* have added some valuable material for the study of history. The former collection contains many letters from prominent English Whigs during the Napoleonic wars and on up to the Reform Bill of 1832, with realistic descriptions of social life, its scandals and its immorality. Walpole is the pre-eminent observer of English society during the years before and during the American Revolution.

Of quite another sort are Lord Acton's letters, where judgments are passed upon the larger aspects of society rather than running comments made upon men's actions. The author was not, however, a mere abstracted scholar, but a noble, high-minded man of the world, absorbed in every human struggle for liberty. Quite different are the letters of Bismarck covering the period of the Franco-Prussian War, full of hate for the French, interesting revelations of Bismarck's psychology. Herbert Spencer's Autobiography, the most notable work of the year in biography, has been so thoroughly discussed by us that it only requires mention here.

The greatest work of the year in American history is Professor Osgood's *The American Colonies*, an epoch-mak-

ing book in the study of colonial political organization. Many old conceptions are overthrown and a great amount of new thought given to neglected but important institutions. Its chief interest is for students, but it will change the historical writing on the colonial period. Next, perhaps, in importance, and vastly superior in general interest and literary skill, are the two new volumes of Trevelyan's *American Revolution.* Such a charming style, such wit, such extended knowledge of the little things that together make the true picture, such graceful satire has never been lavished upon the Revolution before. The hights and the depths of the Revolution are touched as far as the English side of the conflict is concerned, but the great political experiments then tried in America for the first time are not considered.

Admirable monographic works are the two studies in colonial government by Smith and Raper. Based as they are upon actual study of the documents, they come as contributions to our knowledge, changing the currents of historical work, and making real advances toward the goal of truth. A new line of historical research is Miss Semple's work on the geographic conditions of American history. The forces of nature are clearly shown, determining the paths of men, modifying their social and political development, and even creating the institutions of democracy. Mr. Hulbert's thirteen volumes upon the historic highways of America constitute a monumental work upon one phase of Miss Semple's subject. The origin and development of many of the great national highways prove again the truth of the old doggerel lines that tell how

> "Men for two centuries and a half
> Followed the footsteps of that calf."

The trail of the deer and the bison to the salt-lick becomes the trail of the fur-trader, the path of the immigrant and the highway of commerce. *Stepping Stones of American History* contains fourteen essays, on colonial and revolutionary topics, by as many different authors, some of them our best known historians. The book is illustrated with fourteen full page color plates.

Very valuable as documents and original materials for the construction of his-

The Departure of the Mayflower. From "Stepping Stones of American History." Copyright, 1904, W. A. Wilde Company

tory are the Philippine Islands papers collected by Blair and Robertson, and especially the eight volumes of reprints of rare books on early Western travels, which are being edited by that master of Western history, Mr. Thwaites, who has also given us the little book of scholarly essays, of which the most important is *How George Rogers Clark Won the Northwest.*

Of the writing of biographies there has been no end, but few are of real value as human documents. Pearson's life of Governor Andrew is a truly worthy memoir, while Buell's *Andrew Jackson* contains much that is new, tho often trivial. The failure of Mr. Buell to grasp the essentials was due to a lack of historical training, the want of which has destroyed the value of many ambitious works written by authors who regard their task as merely a literary one. The great gains that American hitory writing is making are due to the rapidly increasing number of trained men who are entering the field.

Travel and Description

The Russian Advance. By Albert J. Beveridge. Harper. $2.50.
Russia: Her Strength and Her Weakness. By Wolf von Schierbrand. Putnam. $1.60.
Russian Affairs. By Geoffrey Drage. Dutton. $6.00.
A Handbook of Modern Japan. By Ernest W. Clement. McClurg. $1.40.
Japan: An Attempt at Interpretation. By Lafcadio Hearn. Macmillan. $2.00.

Fetichism in West Africa. By Rev. Robert Hamill Nassau. Scribner. $2.50 net.
Thirty Years in Madagascar. By Rev. T. T. Mathews. Armstrong. $1.75.
The Harriman Alaska Expedition. Vols. I, II, III. Doubleday, Page.

THE flood of books on travel and description probably reached its highest mark during the last year. Doubtless the war in the East is responsible for a large part of the output; but it is notable that few regions of the earth have escaped treatment.

Only a list of the more important or more interesting of these volumes can be made in this place. For information about them our readers must consult the reviews of them which we have published, or which will appear in the near future. A special reminder may be given of the appearance of a second edition, revised and brought down to date, of Dr. Griffis's well-known volume on Korea. Mr. Hamilton's *Korea* is notable for its exhaustive study of conditions in the hermit kingdom, tho in view of its attitude toward the missionaries, it will be well for the reader to consult Mrs. Underwood's contribution to the subject.

Sverdrup's *New Land* will hardly be overlooked by readers interested in Arctic exploration, while Russell's *North America,* by reason of its thorough study of the physical features and conditions of this continent, will be sure to win an increasing attention. It is not usual to include a Baedeker Handbook among important volumes, but the recently published one in the United States certainly deserves high praise. Professor Deecke's *Italy* is another sterling work, and the two volumes mentioned above on Arabia and Further India are of notable excellence. The Highways and Byways Series and the Life in Town and Country Series have both had a number of important additions during the year, but lack of space prevents us from giving a deserved mention in detail.

The narrative of the Harriman Alaska Expedition and a popular account of its discoveries were given in the two first

volumes, and now the scientific monographs are appearing in the same sumptuous styles of printing, illustrating and binding. The glaciers are the most interesting features of the country to the tourist, consequently the third volume by Grove Karl Gilbert on "Glaciers and Glaciation" will be valued by the general public as well as by specialists.

Every Man His Own Reviewer

[In our issue of October 29th, 1903, Mr. Andrew Lang wrote a very plausible article with the above title, in which he claimed that authors were or ought to be the best reviewers of their own work. We thereupon asked Mr. Lang to prove his sincerity by reviewing his own book, "The Valet's Tragedy." A number of other authors have been obliging enough to comply with our request to follow Mr. Lang's good example in reviewing their own books. If now they find fault with these autoreviews we shall be obliged to fall back upon our regular critics again.—EDITOR.]

The Valet's Tragedy

By Andrew Lang

In accordance with the request of the editor of THE INDEPENDENT, and in conformity with Coleridge's scheme of "Every Man His Own Reviewer," I criticise my own *Valet's Tragedy*.

In Mr. Lang's *Valet's Tragedy* we find the familiar defects and qualities of this veteran author. It is not, perhaps, Mr. Lang's fault that he was not born to be a novelist, but certainly it is his misfortune. His essays deal with historical events and characters that Providence clearly designed for no other purpose than to be employed in the composition of popular historical fiction. Any man of genius could see this, but Mr. Lang is not a man of genius. His countryman, Sir Walter Scott, perceived, of course, that Amy Robsart's case, properly handled, had money in it, and he handled it properly in the novel of "Kenilworth." He brought poor Amy out of her grave in St. Mary's Church at Oxford, and made her fair, fascinating and hapless some sixteen years after the date of her mysterious death. Mr. Lang, on the contrary, examines with irritating minuteness the history of Amy, and apparently enjoys proving that Mr. Froude, Mr. Gairdner, Major Martin Hume, and Baron Kervyn Van Lettenhoeve, with other gentlemen, have not been strictly accurate. Meanwhile he has passed a misprinted date in his own work. We "do not call this very popular pie." Again, in two essays, named "The Valet's Tragedy" and "The Mystery of James de la Cloche," Mr. Lang had the plot of a novel made to his hand. He finds (by rummaging in historical dark corners) that in 1668-1669 the eldest son of Charles II, under the traveling name of "James de la Cloche," engaged in certain intrigues between Charles II and the General of the Jesuits. He finds that, about January, 1669, de la Cloche disappeared, and was never more heard of by mortal man. He also discovers that the Man in the Iron Mask was seized by the French Government in July, 1669, and for nearly forty years was kept a secret prisoner, dying at last in the Bastille. Thus, just when the princely intriguer with the Jesuits, James Stuart, called de la Cloche, mysteriously disappears, the Man in the Iron Mask as mysteriously comes on the scene. What could not Miss Bertha Runkle do with such a combination? The Man in the Iron Mask is not a mere valet (as Mr. Lang insists on proving), but is the English prince, the elder brother of the Duke of Monmouth, the victim, perhaps, of the Duke, perhaps of the Jesuits. Several love affairs naturally occur in the story. But Mr. Lang throughout has chosen to write history, not fiction, and either wilfully or by sheer incapacity has misused his materials, and must expect the neglect which attends such literary crimes. The volume is not devoid of flippancy, and we regret to observe that Mr. Lang speaks disrespectfully of the scholarship of the late Mr. Ignatius Donnelly.

London, England.

The One Woman

By Thomas Dixon, Jr.

I wished to show in this story that the growth of Socialism in America is weakening the moral fiber of its leaders and destroying the family as a unit of our civilization. In reply to the brilliant and specious pleas for Free Love made by our modern Socialistic Reformers I presented in this parable the fact that Monogamic Marriage is not merely a dogma of the Church, or a convention of Society, but that it is eternally fixed in Nature, and that he who departs from it will come back at last by the way of Blood and Tears.

How a man of ordinary intelligence can find anything immoral in the book is beyond my ken. The story is taken from our daily life. A few years ago the Rev. Frank Gordon was the most brilliant minister in the American pulpit. To-day he is a Socialistic bushwhacker in Chicago, preaching Socialism with his new "wife." That the leaders of Radical Socialism are the enemies of our family life is plainly shown by their divorce court records. Their savage personal letters to me and their hysterical reviews of my book indicate that "The One Woman" hit near the mark.

One of my charming critics declares that Ruth Gordon is too good to be true. And yet she confessed to me personally that she knew that I had torn some poor woman's soul open and robbed it of this story of Ruth! So I did. And I will risk my hope of immortality on the assertion that she is the normal woman. She could have done nothing else than what she did. The world is full of such women.

The very tragedy she played was being enacted in Washington before President Roosevelt while I was writing the story, altho I did not know it until after the manuscript was finished. A man in New Orleans deserted his wife and children and went to the Klondike with his new love. On the way, in the freedom of the wild North, his new wife smiled on another man, and he killed the interloper. She testified against him, and he was convicted of murder. The deserted wife took her place by his side, and through every trial fought with desperation for his life. On the final appeal to the President she sat down on the steps of the White House, and for weeks made Mr. Roosevelt's life miserable with her piteous pleading.

The One Woman was written in thirty days at white heat under a single overpowering impulse, hence its strength and weakness. Had I laid it aside for six months I would have corrected many of its faults. It is overcrowded with incident. Its emotional development is too swift and intense. The contrast between the Flesh and Spirit as embodied in Kate and Ruth is too strong for the very young. Its intensity in many ways I would have restrained. I would have cut the closing chapters and ended the book with Gordon knocking at Ruth's door the night he fled from his new wife's home. All this and more I would have surely done had I held the book out six months and carefully revised it, and in so doing I would just as surely have made it in every way weaker and more ineffective for every purpose I had in view. As it stands the book is an authentic record of human life in America to-day. I wish it had been better written. It was the best I could do at the time. I hope to do better in the next.

DIXONDALE, VA.

Manassas

By Upton Sinclair

A gently insinuating request from a magazine editor to write a review of your own book! Plainly this cannot be too seriously meant; and yet *Manassas,* like all the rest of the works of the subscriber, is so portentously serious. And then, too, it has been six months since I finished *Manassas,* and since that time I have been out stumping for the Socialist ticket, and have forgotten all about it and what I think of it. And the editor asks for a review at a week's notice!

In that joyous day when the impending revolution shall have consummated itself and the soul of man is free I judge that it may become the fashion for authors to review their own books. I personally should not care for any other sort of review from an artist whom I loved. A true artist is his own best critic; in many ways he is his own only

possible critic. It is he alone who knows what he tried to do, and therefore the measure of his failure; it is he alone who can truly compare his work and understand its growth. Would we not give all the reviews of all the journals in England for a few brief paragraphs by Keats or Shelley upon their poems? Would we not give all that has ever been written about Shakespeare in three centuries for a page review of "Hamlet" over Shakespeare's own signature? To come down to modern things—if the editors of THE INDEPENDENT would only get a review of "The Ambassadors" by Mr. James, so that we might know whether or not he himself has any inkling of the ghastly hideousness of the charming society which he so genially portrays. If only they would get Mr. London to review "The Sea Wolf," so that we might know if the hero speaks for the author, if Mr. London himself does not understand that morality, humility, love, self-renunciation, are just as much products of natural evolution, of the struggle for existence and the survival of the fittest, as the tiger in the jungle and the pirate upon the high seas.

I cannot be sure if any one will be interested in my opinion of *Manassas*. I have said so much about what I think of my own works—often in THE INDEPENDENT—and it does not seem to have pleased folks or helped them to an understanding. A year or two ago I published "The Journal of Arthur Stirling," and only this month the gracious editor of a literary monthly, which has been systematically grilling me ever since, takes occasion to express "the fervent hope that Mr. Sinclair has come to see the error of his early ways." And to think that any one who ever read "The Journal of Arthur Stirling" could suppose that I should ever be ashamed of it! Could fail to perceive that, good or bad, or a mixture of both, it is flesh of my flesh and soul of my soul, and no more to be apologized for or regretted than the beating of my heart!

Manassas is the first part of what will be a trilogy of novels, an attempt to put into art form the body and spirit of one of the great crises of human history. It is not a historical romance; it is not a novel, in the ordinary sense of the word. It is a try at a national epic. It is not a story about the war, but an attempt to make the war itself a living, breathing reality. Hence it is either something very big or else it is a failure. A few critics seem to have so far perceived that.

Manassas comes with several handicaps. It comes when the world is surfeited with historical romances; and the reader has no way of knowing that it existed in the writer's mind—only much better—long before this deluge began, and is not part of it. Also it ends abruptly, leaving the hero in a ditch, and the reader does not like to have books end that way. Also, it shows the South in her prosperity, and the beauty of the South was in her adversity; the reader does not know that I am a Southerner and dearly love the South. Also, it shows Lincoln as he was in 1860, a raw, uncouth, backwoods lawyer, with undreamed of possibilities of greatness, and the reader is apt to conclude that I am cheaply trying to tear the laurels from a noble brow.

Manassas represents two years of heart-breaking toil. It represents the patient reading of half a thousand volumes and the consulting of half a dozen times as many—every book dealing with the period of the existence of which I could find out. The effort to get the soul out of all this dead matter and embody it in art work has perhaps been less successful in the first volume than it may be in the others; the time covered in *Manassas* is fifteen years, and this requires a good deal of discursive narration. I could not work all the events into a story, as I can work the war proper. The characters of the work are, of course, types—the real hero of the book is the Republic. This is something that has been done for Poland by Sienkiewicz; it has not yet been done for America. Any one is free to attempt it, of course, so let the readers wish me good luck. I go to the two coming volumes with somewhat the same emotions as must have been felt by that ancient hero of American legend—I forget who it was—who crawled into the wolf's den and throttled the creature with his naked hands. I have not read any book since "The Octopus," which seems to me to

stand for as much pain of spirit as *Manassas*. I make this statement in all seriousness and with entire humility of soul.

PRINCETON, N. J.

More Goops

By Gelett Burgess

Ever since the "Cautionary Verses" of the early eighteenth century the attempt to get doses of ethics into as palatable form as possible has been a favorite experiment with writers for children. The adjuvant lesson has been concealed in fiction, fright and fun. By far the most successful essay was that made in "Struwwelpeter" by Dr. Hoffmann, whose classic rimes are now in their 251st edition. Next, perhaps, in point of interest comes Boutet de Monvel's "*Civilité puérile et Honnête.*"

There seems to be an especial charm in those children's books which are illustrated by the author himself. Edward Lear's "Nonsense Book" and Rudyard Kipling's "Just-So Stories" are cases where the interest is divided almost equally between the writing and the pictures. There is a certain guaranty of good faith and sincerity in this dual method, and an intimacy which adds much to its popularity. It brings the author nearer to the reader, somehow; it is almost as if his voice were heard as one looked over his shoulder.

In *More Goops*, however, the pictures are more original than the verses. The author has tried for great simplicity and directness, a contrast to his former method, which made a "special appeal," and the result has been that his rimes are bald. He has missed a chance to make a classic, for, with an inevitability about his Goops that seems convincing, he has failed to describe them in verses whimsical and fanciful enough to stick in the memory and stimulate the imagination. They are mere didactic rimes, not quite catchy enough to tantalize and capture. The idea of the book—that of tuneful verses embodying lessons in juvenile etiquet—ought to have been more carefully studied. The children themselves may not notice the lack, but parents, aunts and uncles who look over their shoulder will miss the "secondary sensation" that Mr. Burgess has sometimes succeeded in getting into his work.

The illustrations are not only original in drawing, but in technic. Mr. Burgess's only knowledge of form has come through the repeated attempts he has made to illustrate, and the result is a queer example of the influence of the restraint influenced by a lack of knowledge. His work is in pure line, with never the least attempt at shading, no matter how great the temptation. The result is that, to make up for verisimilitude in light and shade, and roundness, he has infused a certain appearance of life into his more successful drawings, by a certain virility of "*trait*," and more especially by a definite effect of motion in the arrangement of his curves. His work is not so *naif* as when he drew grotesques for the "Lark," but it has a subtle harmony—what the Japs would call the "notan of line," which, with a recklessness of abandon, makes his drawings "different."

Indeed, it would be hard to characterize them. They are too out of drawing, too highly conventionalized, to be either grotesques or caricatures. Perhaps the Elizabethan term "gargarisms" best describes them. This applies, however, only to the lay figures who pose as parents in his domestic scenes. His Goops are absolutely true to themselves, and organized according to law, not to be changed now by him or anybody else. They are things which have come to be and must exist *sui generis*—circular heads, tangential shoulders, noseless, earless, hairless faces and all.

These drawings are most similar to a few of the modern German and French caricaturists', altho one has to look hard before one can find any one so totally abstinent as regards shadows. Here he takes a leaf from the Japanese theory of art and makes his representations of the "intrinsic" rather than the accidental phase of things. The result has been that he has drawn as the child draws, grafting upon the child's private conceptions his own knowledge of form and construction, and it seems to be a fact that many children prefer such simplicity to the gorglorious colored and highly decorative pictures offered in so many juvenile books. If only his verses were as "gargaristic" as his illustrations!

SCITUATE, MASS.

The Souls of Black Folk

By Professor W. E. Burghardt DuBois

One who is born with a cause is predestined to a certain narrowness of view, and at the same time to some clearness of vision within his limits with which the world often finds it well to reckon. My book has many of the defects and some of the advantages of this situation. Because I am a negro I lose something of that breadth of view which the more cosmopolitan races have, and with this goes an intensity of feeling and conviction which both wins and repels sympathy, and now enlightens, now puzzles.

The Souls of Black Folk is a series of fourteen essays written under various circumstances and for different purposes during a period of seven years. It has, therefore, considerable, perhaps too great, diversity. There are bits of history and biography, some description of scenes and persons, something of controversy and criticism, some statistics and a bit of story-telling. All this leads to rather abrupt transitions of style, tone and viewpoint and, too, without doubt, to a distinct sense of incompleteness and sketchiness.

On the other hand, there is a unity in the book, not simply the general unity of the larger topic, but a unity of purpose in the distinctively subjective note that runs in each essay. Through all the book runs a personal and intimate tone of self-revelation. In each essay I sought to speak from within—to depict a world as we see it who dwell therein. In thus giving up the usual impersonal and judicial attitude of the traditional author I have lost in authority but gained in vividness. The reader will, I am sure, feel in reading my words peculiar warrant for setting his judgment against mine, but at the same time some revelation of how the world looks to me cannot easily escape him.

This is not saying that the style and workmanship of the book make its meaning altogether clear. A clear central message it has conveyed to most readers, I think, but around this center there has lain a penumbra of vagueness and half-veiled allusion which has made these and others especially impatient. How far this fault is in me and how far it is in the nature of the message I am not sure. It is difficult, strangely difficult, to translate the finer feelings of men into words. The Thing itself sits clear before you; but when you have dressed it out in periods it seems fearfully uncouth and inchoate. Nevertheless, as the feeling is deep the greater the impelling force to seek to express it. And here the feeling was deep.

In its larger aspects the style is tropical—African. This needs no apology. The blood of my fathers spoke through me and cast off the English restraint of my training and surroundings. The resulting accomplishment is a matter of taste. Sometimes I think very well of it and sometimes I do not.

Atlanta, Ga.

Mass and Class

By W. J. Ghent

The merits, if any, in Mr. Ghent's book will doubtless be pointed out by the Socialists and their kind, and therefore need not here be noticed. The defects, on the other hand, call for especial mention. There is first to be noted a regrettable proneness to levity in discussing weighty things. Surely the quotation (p. 180) from so unscientific, not to say frivolous, a writer as the late Lewis Carroll, is inappropriate in a work professing to be serious. Snarks and boojums in the economic world there undoubtedly may be; but no economic writer should so far forget the traditions of his calling as to refer to them. The high and holy mission of the economic writer is to deal in noble abstractions, far removed from the rude and boisterous actualities of everyday life.

There is also to be noted a deplorable tendency to make light of the teachings of savants, such as college professors, theological doctors and the like, to whom God in his infinite wisdom has intrusted the instruction of the multitude in economic and moral science. The audacity, not to say impertinence, of pitting such unschooled opinions against the disciplined conclusions of official teachers cannot be too severely condemned.

Clearness of expression is a first

requisite in good writing. Assuredly, Mr. Ghent does not everywhere meet this requirement. In at least one conspicuous instance (p. 24) he has written a sentence which may be interpreted in two directly opposite ways:

"That the influence of the economic factor is often exaggerated, and that to it are often ascribed historic episodes wherein it has small place, are not to be denied. *Professor Seligman has furnished a number of such instances.*"

Does this mean that Professor Seligman has been guilty of such exaggerations, or that he has pointed them out in the writings of other men? There are reasons for believing that the Professor regards it as susceptible of the former interpretation, while the author stoutly maintains that he meant the other thing. It is, at the best, a woful ambiguity, for which no adequate excuse can be framed.

A censurable laxity in the conventional use of titles is revealed on page 23. The eminent historian, Woodrow Wilson, is referred to as "Professor" Wilson. Now it happens that Mr. Wilson is indeed a professor; but it also happens that he is at the same time the head of Princeton University; and it is thus needful to point out to the author, in plain but courteous terms, that the proper appellation in this case is "President" Wilson.

Finally, it is to be said that had the author written his book in an entirely different way, starting from different premises and reaching conclusions more nearly in accord with the opinions of the schools, it would doubtless have been a far more acceptable book.

NEW YORK CITY.

The Personality of Prince Fushimi

BY JIHEI HASHIGUCHI

[We are glad to give our readers the following account of the personality and life of Prince Fushimi, who arrived this week in the United States to visit the St. Louis Exposition and make a tour of the country. He is the first member of the Japanese royal family who has ever been officially sent to this country, and his visit, therefore, is a compliment of the highest order paid by the Mikado to the American people.—EDITOR.]

GENERAL H. I. H. Prince Sadanari Fushimi, who arrives in Washington this week, is an uncle of the Mikado by virtue of blood relationship, altho he is a few years younger than his nephew, being 46 years old. So are Princes Kan-in and Higashi Fushimi, the younger brothers of Prince Fushimi, for their father, the late Prince Kuniiye, was the brother of the Mikado Jinco, the grandfather of the present Mikado. By the way, Prince Kan-in, as has been reported in the dispatches, has distinguished himself in the battle of Shakhe River by leading a force of cavalry against the left flank of the Russian line of battle, thereby cutting the enemy's communications and inflicting severe havoc on them. He is a Major-General and has been in the service under General Kuroki ever since the battle of Yalu River. Prince Higashi Fushimi is also conspicuous, for he is on board the second-class cruiser "Chitose" as the second in command and with the rank of Commander. He has been conspicuous, especially because the "Chitose" has played a most important part in the naval warfare, which began on August 10. She was the one that sank the Russian cruiser "Novik" off the coast of Saghalien.

Prince Fushimi, the eldest of these gallant brothers, is third in succession to the throne, Prince Arisugawa being the immediate successor to the Crown Prince Harunomiya. This order was established in spite of the fact that Prince Fushimi is the oldest of all the Imperial Princes and that he is one of the most intelligent among them. It is the quality of blood that settles the matter. When he was a boy and while he was in Kyoto with the rest of the Imperial family, before the

Restoration of 1868, he was, as most of the Princes were, reared in a Buddhist temple, where he was educated particularly in the line of the Japanese poetry, *koka*.

Prince Fushimi is a warm-hearted man, altho he is very particular about the manners of daily life. He is quiet, thoughtful, reserved, never given to ostentation such as might tempt a person of royal blood. Altho any one of the Princes has the royal prerogative to attend the upper house of the National Diet and to participate in the discussions therein, yet never before had a Prince availed of this opportunity. Prince Fushimi very often takes part in the proceedings of the Diet. In the battle of Wei-hai-wei, ten years ago, he shared the hardship of war with the common soldiers and partook of their common rations. In the present war, before the first division of Tokyo started for the battlefield, he, the Commander of the division, invited 250 of his men of low rank to a dinner in his palace, and he and his wife entertained them as if they were personal friends. It is said that at the dinner Princess Fushimi poured wine with her own hand to fill the cups of her guests. This honor was a great encouragement to the soldiers.

Princess Toshi Ko, the wife of Prince Fushimi, is a daughter of the late Prince Arisugawa, senior, who had been an immediate successor to the throne before the Crown Prince was proclaimed. Now his son, Princess Fushimi's younger brother, is the immediate successor to the Crown Prince. Princess Fushimi is, like her husband, 46 years old, being a month younger than he. She is the oldest of the Princesses.

The couple are the parents of two sons and four daughters. Prince Kwacho (30 years old), who had been on board Admiral Togo's flagship "Mikasa" since the beginning of the naval war, and who was slightly wounded in the battle of August 10 off Port Arthur, and consequently was recalled, is the eldest son and the eldest of the children. The eldest daughter, beautiful and bright as she is, might, it is said, have become the wife of the Crown Prince Harunomiya, and, indeed, there was some talk about their marriage before the Prince was married But the fact that the two are too closely related was the objection to the match.

Prince Fushimi, as a general, is, together with Rear-Admiral Prince Arisugawa, the principal military counselor of the Mikado. Their relation is therefore very cordial. The Mikado, with the counsel of Marquis Ito, has acted wisely in choosing Prince Fushimi to represent Japan in the St. Louis Fair, and to fulfil a mission in this country of which little is made public as yet. Among other reasons, attributable to the Mikado's wisdom, two are particularly to be noted: In the first place, Prince Fushimi has an experience in that line. In the coronation of the Russian Emperor Nicholas II the Prince represented Japan as a special envoy for the occasion. Marquis Yamagata went with him as his assistant, altho the Marquis had an entirely distinct mission to negotiate an agreement with the Russian Government in regard to the Korean affairs. In the second place, Prince Fushimi has played a very conspicuous part in the battle of Nanshan hill as the Commander of the First Division of Tokyo. His experience in the battle is set forth in the following exposition:

The boat on which the Prince sailed for the battlefield was the "Hitachi," which has subsequently been sunk by the Russian Vladivostok squadron in the Sea of Genkai. During the several days of sailing the Prince passed the time in good cheer in spite of the billowy sea. He completely broke all precedents by condescending to converse and dine with the battalion commanders and commissariat officers, an incident which is not customary for an Imperial Prince. He would often say to the minor officers: "You alike and I are soldiers whose lives are to-day, but may not be to-morrow. We are all to serve the Mikado's Empire. There should be no nice distinction between you and me. I want you to pass these days of voyage with me in perfect comradeship."

This high honor which the Prince conferred upon the officers made them resolve more than ever to do their best after they had landed on the Liau Tung's shore. When the "Hitachi" reached its destination the matter of how the Prince should land was discussed between the Chief of Staff and the Prince's accom-

PRINCE SADANARI FUSHIMI

panying officers. There was no adequate wharf by which General Prince Fushimi might land with dignity, so it was arranged that a temporary wharf be constructed for the purpose, and that the Prince should land at 5 o'clock the next morning. But, owing to the pressing matters on hand, the construction of the wharf could not be completed at the time prearranged.

Major Mihara, the accompanying officer and who also is now a member of the Prince's party here, reported to the Prince the condition of affairs as follows: "Some of our men have already landed, but the number is small. The wharf has not yet been constructed. The weather is not now favorable for your landing. If a delay of twelve or twenty-four hours would not greatly interfere with your military plans, would it be the pleasure of Your Highness to wait until the work on the wharf is completed?" He replied: "The weather is not good, as you say. But you can't be sure that it will clear up in a day or two. The work on the wharf, too, may not be completed so soon as the men say it will. The battlefield is my destination. Hardships of travel are what I have expected. Opportunity must not be lost. The enemy may at any time attack our army. With a part of our men landed, how can I remain idle on this boat? I'll do without the wharf. I don't mind the stormy billows. I will land at the appointed time, in my bare skin if need be."

Next morning, May 8th, with the cold weather of Manchuria still unabated, the Prince rose early, and, after a hasty breakfast, prepared to land. At the precaution of Major Mihara three artillerymen of gigantic physique were instructed to accompany him in the sampan in which he approached the shore. But from the point where the sampan had to stop owing to the shallow water the shore was still 80 yards distant. This distance had to be forded without hesitation. The three giants supported him

to the shore. After he reached the shore he remarked to Major Mihara, "Mihara, this is delightful." When Major Mihara answered "Aye," the Prince continued: "The sea water bath, on a foreign shore, especially before the enemy, is delightful."

All the followers of the Prince had now landed, and the Prince, after he had dressed himself, proceeded toward Bakaton, where he temporarily quartered. The house in which he passed the night was a shambles, the floor of which was covered, not with the customary straw mats, but with so-called *ampera*. The flooring of the house had received no repairs or cleaning in years, for it was dirty to an extreme, and a bad odor permeated the house. Nor was that all. Dirt was here, dirt was there, dirt was everywhere; for the land is notorious for dirt. Even the bed in which the Prince slept was covered with awful dirt, and the dirt on the streets, reinforced by the soot, made ten or twelve fold layers, which could never be swept clean. But, making the best of everything, the Prince was made as comfortable as possible. The room had no lamp, nor any *andon*, the Oriental lamp. Major Mihara, being a man of foresight, carried with him a number of candles. But there was no candlestick, not even an empty beer bottle which might be made to serve as the candlestick. Finally he looked up to the tabernacle for the family god, and noticed one, which he shook down and used to serve his purpose. Such was the state of affairs. But the Prince passed the night cheerfully.

The Prince's stay at Bakaton was only for two days. The First Division under his command marched forward, and on May 15th reached Yokaton, which had been on the previous day a Russian headquarters. As the Russians had ransacked the town, it was in a dreadful condition. There was not even a utensil left with which to boil rice. But, finding an empty meat can which the Russians had left, the cook managed to prepare food for the Prince. But what had the Prince for supper? Not boiled rice, but boiled wheat, which is not considered in Japan as a respectable meal.

The next day, May 16th, was the day of the battle of Juzanridai. The battle was the first in which the First Division was engaged in this war. The enemy held the strategic points in order to prevent our men from marching westward to join with our men that landed on the other side of the peninsula.

As the breakfast had been served for the Prince before dawn that morning, the dinner was at once prepared. Major Mihara and one Goto sat beside the Prince, while the Chief of Staff was seated at a distance of seventy feet from them. The Prince, with the chopstick in his hand, was about to touch the boiled rice in the bowl, when a bullet of the enemy whistled past his head and exploded within fifty meters of him. The accompanying officers sprang up in excitement and urged the Prince to retire to some safer place. But he was not easily urged. "What matters a bullet?" he smilingly remarked. "It's rather a good relish for our meal. I will enjoy my dinner all the better." And he went on eating as if nothing had happened. Then came another bullet even closer than the other, and another and another, in all five bullets. The excitement of the accompanying officers now became so great that the Prince was finally persuaded to remove. But where should he remove? Presently a hill two hundred meters away on the right was sighted, from which a good view could be obtained of the surrounding country, and there he betook himself.

The enemy seemed to have fired the bullets with no definite purpose, for there was no need of firing at the position aforesaid when there were no guns on our side as yet. Meanwhile, the guns had been brought and formed in line, and now the artillery combat commenced in earnest. There were eight quick-firing guns against our twelve. Our original idea of silencing the enemy's guns at the first engagement was completely upset by their skill in handling them. The Prince-General ordered as quickly as possible two more guns to be added to the twelve, making in all fourteen. The effect was seen immediately, for the enemy, however invincible, was now drowned in the showering shells of our guns, and began to retreat, our second regiment following on the enemy's rear and occupying their stronghold. Previous to this artillery duel our infantry, who had faced the

enemy's battle line at the foot of the Takushan Mountain, marched forward in spite of the rain of the enemy's shells. When the Prince saw the men furiously advancing in spite of the mortal blows under which many fell he was filled with thanks to them and said to some one: "How grateful will his Majesty the Mikado feel toward these men when he hears the reports of this battle?" When the banner of the Rising Sun was seen floating over the captured enemy's stronghold, and the battle seemed to have ceased for the time being, he ordered Major Mihara to investigate the condition of the wounded soldiers and to do everything possible for them. The Major forthwith executed the order.

At the field hospital the Commander of the artillery battalion, Major Mizunoya, lay severely wounded, together with thirty or forty other wounded and dying soldiers. Major Mihara had arrived to see the dreadful scene. These men had one hour before been conversing and sharing the hardships of war with each other. Now they lay pale. Their voices were scarcely audible. But the soldiers expect to suffer and die in battle. It is folly to lament the fate. Especially when they are fighting for the Mikado it is rather a glory to accept it. Major Mihara, however sorrowful for the wounded, has a mission from the Prince to fulfil. So, restraining the tears, he said to the men thus: "Your noble deeds have been witnessed by the Prince yonder upon that hilltop. He appreciates your brave service to our country. Be cheerful and rest assured that your duty has been well performed. If you have any words that you want to send to the Prince, speak. I will carry them to him."

Then Major Mizunoya, whose throat had been struck by a bullet, feebly answered, "I thank you." Next Second Lieutenant Arakuma (literally Wild Bear) Kikuchi, representing the wounded men, said, "I, in behalf of the wounded officers and men, thank heartily the kindness of the Prince. This I ask you to tell the Prince." Major Mihara returned to the Prince and reported the condition of the wounded.

The enemy retired toward the Nanshan Hill, and the Prince's First Division came into the possession of the battle-ground. The Prince removed to a Buddhist temple, the Temple of Kasui, at the side of the Takushan Mountain. On May 25th, the date on which the attack on the Nanshan Hill was made, the Prince rose before daylight and prepared to start for the battlefield. Owing to the heavy rain and the intense darkness the Chief of Staff suggested that the Prince wait until dawn. But the latter said that when the officers and men were marching there was no reason why he should not do the same, as he had two legs, just as they. He felt his way carefully in the darkness for nearly two hours, and at five o'clock came to the place where the Chief of Staff and other officers were busy with the preparation for the attack.

The attack on the Nanshan Hill was prearranged to begin at 4 A.M., but it was delayed until 5.30 on account of the weather. Suddenly diminutive sounds, like the humming of bees in the air or the cracking of peas in a frying pan, began to be heard coming from the direction of Kinchau. Then men whispered, "The battle's begun," and, leveling their glasses, they could descry in a vivid picture our men marching from the direction of Kinchau through the plain toward the isolated hill of Nanshan like the army of ants.

The final fall of the Nanshan Hill into the hands of the Japanese was effected at 7.30 P.M. The Prince rested in his headquarters for the night at ten o'clock. In spite of the fact that he rose at 3 A.M. his supper was served him late at night. The Prince, accustomed to the royal life of luxury at home, has never complained of his circumstances, but has been always cheerful and content.

His exploit has been reported to the Mikado, who was greatly pleased with the conduct of the Prince. But the pressing duties which the former had in store for the latter at home caused the Imperial order to be sent to the hero of the battle of the Nanshan Hill to return. The Prince, anxious as he was to remain on the battlefield, was now obliged to return, and this he did in July.

NEW YORK CITY.

Editorials

The Presidential Election

No candidate, standing upon the public record of his own acts and words, could reasonably ask for more emphatic popular approval of his course or a more earnest expression of confidence than Mr. Roosevelt has received at the polls. But those enormous pluralities and that sweep of the States from one ocean to the other were an expression of something more than confidence. There must be added admiration, and even affection, for this man in whom a rare combination of qualities and accomplishments appeals to every class and kind of good Americans. In one sense, but not exclusively, it is a victory for an engaging and forcible personality. It is a tribute to Mr. Roosevelt's honesty, sincerity, fairness and courage. But it is also approval of the acts and policies of his Administration and his party. This, too, is personal; for how difficult it is to think of the President apart from those acts and policies! When we attempt to do it we realize how much that has been done in the last three years was suggested and pressed to accomplishment by him, how distinctly many of the party policies that were attacked in the campaign were his own.

What have the people approved by votes that give a popular plurality greatly in excess of any heretofore shown and have increased the Republican majority in the House from thirty-two to one hundred? The policy of the President and his party concerning the army, the upbuilding of the navy, the education and development of the Philippine people, and the government of the Philippine dependency; the recognition of the Panama Republic and the negotiations for the Canal; reciprocity with Cuba, and our relations with that island; the attitude of the Administration toward the Far East, toward the South American republics; the President's course with respect to the coal strike, and his action in the Miller labor case; his efforts and those of Mr. Hay for the promotion of international arbitration and peace; his just treatment of the negro; his vigorous assault upon corruption in the Post Office Department; his selection of Mr. Cortelyou to be Chairman of the campaign committee, and his recent reply to the charges of Judge Parker concerning the collection of that committee's funds.

There are other acts and policies which the people have accepted and commended, but most of them are embraced in the general view of the President and his associates as to the growth and power of the nation, its duties and its place in the world. It was to approve all this that thousands of Democrats voted for Mr. Roosevelt—so many thousands that the number of Gold seceders returning to their party had no determining weight. Approval of the party's economic policy and of the Administration's attitude toward the Trusts was qualified in a great many minds, we think, by a hope or an expectation that this policy would be modified hereafter and this attitude be more clearly defined by the influence of Mr. Roosevelt himself.

But a victory so overwhelming cannot be fully accounted for even by the attractive personality of the President and the soundness of the principles and policies for which he stood. We must turn to the errors of the Opposition. Its first and greatest was its refusal to accept the gold standard in its platform. Judge Parker's telegram did not and could not avert the consequences of this blunder. A prominent Eastern journal that supported the ticket now says: "A party that has been eight-tenths wrong for eight years cannot regain public confidence at once by being even eight-tenths right, particularly when on the vital question of honest money it was set right only under compulsion by its nominee." But it was not set right by Judge Parker.

The nominee was a cause of disappointment. Owing to his position there was a prevailing impression that he must be a great jurist and a man of commanding intellect. When he made himself known the illusion was dispelled. Because of a majority of the men who surrounded him, and because

of the associations of those to whom the management of the campaign was intrusted, the movement for his election to many seemed characterized by insincerity. It was not, as Mr. Bryan says, that the party erred by trying to be conservative, for many of Judge Parker's later utterances were sufficiently radical. Surely it is not to be expected that a really conservative nominee and party leader will solemnly warn the people that the election of his opponent must transform the Republic into a despotism. Such warnings were commended by some Democrats; to others they seemed ridiculous.

It was an error to seem to make the Philippine question the paramount issue; a grievous blunder to express a preference for the common law in dealing with Trusts, because it was easily shown to be unavailable for use in Federal prosecutions. The Judge's later speeches did not lack force in their attacks upon the tariff, but all this seemed belated and not strictly in accord with the known preferences of ex-Senator Davis and the tendencies of several persons who had promoted the Judge's candidacy at St. Louis and were conspicuous in the management of his campaign. Attacks upon the Government's Panama negotiations were neutralized, not only by the votes of half the Democrats in the Senate, but also by the party's avowed willingness to accept and enjoy all the fruits of the negotiations and the action which were denounced. Judge Parker carefully avoided the race issue, but the Vardamans and Heflins more than made up for his silence. For a Democratic opinion on this subject we turn to a recent issue of the New York *World*, whose loyalty to Judge Parker and the party was not questioned:

"None of the minor influences helped Mr. Roosevelt more than did the abuse which the Southern politicians and newspapers heaped upon him for entertaining Booker T. Washington at the White House. The American people will never accept the dictum that a negro scholar is the inferior of a white ignoramus, that a negro gentleman is the inferior of a white blackguard, that a man's title to consideration rests on the color of his skin and not on his character and his achievements. The *World* hopes that this little lesson has finally been thoroughly learned."

There was Mr. Bryan, declining to take back the bitter things he had said, intent only upon preserving his "regularity," and known to be planning a reorganization of the party after the defeat which he expected. Young men, about to vote for the first time, were repelled by a reactionary policy and attracted by the candidate who stood in their minds for progress. They were asked to believe assertions about the President's motives and purposes that were absurd and incredible. Added to all these and other unfavorable influences were the defection of many Irish Catholics and the tendencies of those who feared that change would put an end to prosperity. But the election of Democratic Governors in several Republican States where issues were presented with force, earnestness and sincerity proves that the party is by no means dead.

Work the Victors Should Do

To the Republican Party the people have given an extended lease of power by an unprecedented plurality of the popular vote. The party, now controlling both the executive and the legislative branches of the Government, will have, after March 4th, a majority of 100 in the House and nearly two-thirds of the Senate. It has a leader enjoying in a remarkable degree the respect and confidence of the people, a leader who is just, courageous, energetic and perfectly free. Having laid aside all thought of another term, the influences that might promote his nomination and election in 1908 cannot affect his judgment or his course. We are not saying that he would permit them to do so, even if he had not announced his purpose neither to seek nor to accept a second nomination.

A grand opportunity is thus offered to the victorious party. The course of the Executive with respect to many questions of importance can be foreseen. We know in a general way what his attitude toward the army and the navy will be, and that the President

and Mr. Hay will pursue a policy already exemplified concerning arbitration and other international questions. The Government's course in the Philippines and at Panama can easily be predicted. With respect to these and many other subjects the action of Congress will not diverge from the established policy. As to certain other questions, however, neither the executive nor the legislative branch is fully and clearly committed. The new Congress surely ought by legislation so to fortify and protect the gold standard that it will defy assault. Here something remains to be done, and it ought to be done without delay.

There is always something to be learned by a victorious party from what has taken place in a campaign like the one through which we have recently passed. It is plain that many of the tariff duties, and especially those which are abused by combinations, do not commend themselves to the general public. The retention of these duties without revision is a cause of just complaint. A great many persons who voted for Mr. Roosevelt desire that they shall be revised. Another subject of enduring interest is the regulation or restriction of Trust corporations. The great Republican pluralities were not given in approval of the tariff as it stands, or as an expression of popular satisfaction with the growth and exactions of great combinations of manufacturers.

The tariff should be revised and improved, not at the coming short session, but at the first long session of the new Congress. We expect that Mr. Roosevelt will ask that Congress to do the work. There are treaties of reciprocity now pending (as they have been for a long time) that should at least be taken up, discussed and carried to a vote. It seems to us that they ought to be accepted, possibly with some modifications. The contemptuous refusal even to consider them has been discreditable and little short of disgraceful.

A reasonable policy for the restraint and supervision of Trusts should be formulated by the President and Congress. The Administration has been sharply criticized for the remark of Attorney-General Knox, after the Northern Securities decision, that the Government would not "run amuck" among the corporations, and for the apparent suspension thereafter of proceedings under the Sherman act. We assume that the President had good reasons for not prosecuting other railroad combinations under that law. He should have made them known to the public. This would have prevented any misunderstanding as to his motives.

Strict enforcement of the Sherman act against the railways would not serve the public interest, nor, if we may judge from the effect of the Northern Securities prosecution, would it prevent the virtual consolidation of parallel and naturally competing roads. In many a railway system that law is violated; but how is the public to gain anything by attempts to tear apart all the parallel lines that are now under the control of a single company or of one harmonious group of capitalists? We say attempts, because we judge, from an examination of the Northern Securities decision, that few if any attacks of that kind upon consolidations long existing would be made successful by the Supreme Court.

It was not intended that the law should be used against railroads. If it is not desirable, for the public good, that it should be so used, then Congress and the people should be so informed by the President or the Department of Justice. If the public interest demands a strict enforcement of the law, then such enforcement should not be delayed.

It really was intended that the Sherman act should be used against combinations of manufacturers. Such prosecutions as were undertaken led to decisions which appear to make it ineffective against such defendants. The people, or many of them, do not understand why the law is not enforced against what they call the Trusts. Is it true that it cannot be? The Government should answer this question. A prominent journal in New York now says that there "are still 439 Trusts to attack," and asks if the President intends to "resume the work of prosecution where he dropped it nine months ago." These are combinations of manufacturers, and,

as we understand it, the Sherman act cannot be used against them. If this is so, the public should have from the President and his Department of Justice an authoritative statement to that effect.

If they can be reached by no existing law, and if they ought to be reached, what is to be done about it? As for the railroads, the consolidation of which, in our judgment, cannot be prevented, there should be effective supervision and regulation of rates by a Commission of large powers. The alternative is Government ownership. As for the combinations of manufacturers, surely they should not be allowed to take advantage of high duties (no longer needed for reasonable protection) to the injury of American consumers, whom they compel to pay prices much higher than those for which they sell their goods to foreign buyers. But the problem of legislative restraint is not easily solved. Both parties have proposed the withdrawal of interstate transportation privileges as a penalty under certain conditions, but the bills have not been enacted. We are not sure that they ought to have been.

What is needed most at present is an explanatory statement that will clear away the fog by which the merits of this question are obscured, a statement showing what can and what cannot be done under existing law, why certain things have not been attempted, what ought to be done, and by what means the work should be taken up. We hope such a statement will be given to the public by a message to Congress or in some other way, and that the President and Congress will strive to overcome all the difficulties that are encountered in dealing with this very important question, difficulties that have been the cause of much misunderstanding and many unjust charges of corrupt intrigue.

The Future of the Democratic Party

It is easier to say what the Republican Party ought to do than it is to forecast what the Democratic Party will do, and yet this is the most serious problem in the present outlook. The Republican Party stands on its record and moves forward in its own direction. The Democratic Party has no record, or, rather, its record is so contradictory that one must dance to follow it, as he would trace a rabbit track.

Of old the Democratic Party was radical as against Silver Gray Whig conservatism. Then, when the Whig Party melted away, the Democratic Party became suddenly more moss-backed and Hunkerish than its old rival, talked Constitution, forgot its record in the Mexican War, and, in the Copperhead interest of the peculiar institution, worked for peace all through the Civil War and lamented its outcome. It opposed the Spanish War, then supported it, and then berated the terms of its conclusion. Thus boasting itself conservative and even regressive, it was suddenly captured by the Populists of the silver craze, and for two quadrenniums shouted the Bryan madness of that folly. Then it made a sudden reversal, and, under Cleveland, accepted the standard money of the world; but the people did not long believe in its sincerity and refused to trust it with power. Never have the people uttered such an overwhelming verdict as this of last week, and now the defeated party stands dazed, uncertain which way to go, ready to accept any principles that will draw the vote of the people. Cleveland was its gold leader, then it took Bryan as its silver leader, and just now it has been defeated with Parker as its gold leader again. Which way will it go next? It has been defeated both ways.

But there is great probability that it will turn another somersault and go back to Bryan and the Populists. The Eastern leaders, Hill and Belmont and Gorman, are disgusted and disheartened. But Bryan is not disheartened; he is almost as hilarious with delight over his defeat as the Republicans are over their victory. The millionaire Hearst, dragging his leash of newspapers behind him like yellow dogs, is in a chuckle of delight. In New York and Chicago the Silver Democrats and the Populist Democrats are meeting, fully determined to capture the party. They had the Populists with them under Bryan, and why should not Watson and his followers come back under their shadow again? Indeed, it is whispered that they will. Then we shall have the Democratic Party led by Bryan, Watson and Hearst, with the millionaire, the

capitalist, the big newspaper trust man of the trio as the candidate four years hence of the Populist, Democrat, anti-trust party. That is the scheme which is set up for us, to capture the silver-greens, the Populists, the labor men and the Socialists, if possible, all in a party of the common people, and drive the rich men, the capitalists, the trust men—all of them but Hearst—into the Republican Party. That is the plan.

Will it work? Very likely it will in part. It now looks as if the radical element would get control; they certainly expect to. But it is far from certain that such control will do them any good. There is likely to be a considerable breaking up of the Democratic Party. The loss of the conservative Democrats represented by Cleveland and, we suppose, Parker, and a good part of the South would not be small. It might mean the building up of a strong Republican Party in the South; indeed, the next four years are likely to show a political invasion of the South. Further, the new and growing parties, Socialist and Populist, are not wholly likely to trust themselves with such a chameleon-like party as the Democratic. They have great faith in their future, and both are likely to grow considerably, and always at the expense of the Democratic Party. With every change of policy and platform a number of dissatisfied members drop off, and quite likely as many as it will gain.

Still further, the policy of the Republican Party is likely to draw the more intelligent men whom the Democratic radicalism will seek to gain. President Roosevelt is almost certain to make it his policy to probe the injustice that attaches to great corporations. We may expect legislation which will give more power to the Interstate Commerce Commission. We believe that our people, even the wage-earners, do not wish to harass the capitalist employers, but only to prevent injustice. We believe the people will see this and will not easily trust those who would kill the goose for the sake of the golden egg. Accordingly, while the prospect now is that the Democratic pendulum will swing again to the left, we see no great fear as yet that the party will strengthen itself thereby. It has no fixed principles, and Bryan cannot fix any upon it. Therefore, till it finds a place to stand, it is not likely to move the people.

Roosevelt: Past and to Come

THEODORE ROOSEVELT'S past is secure. What is to be his future?

Mr. Roosevelt once replied, when asked what advice he would give a young man, that if he had no wealth he should work and provide for his family; but that if he had a competency he should work just the same, but give his services in some form to his country and the world. Mr. Roosevelt inherited a competency—not a multi-millionaire, but rich enough so that he might have hoped to become enormously rich if that had been his ambition. But he felt it his duty to give his energies to his country rather than to amassing an unnecessary fortune. The world knows his record—an author and historian; in his State Legislature at 24; candidate for Mayor of New York at 27; National Civil Service Commissioner at 30; President of the New York Police Board at 36; Assistant Secretary of the Navy at 38; Colonel in the Spanish War at 39; Governor of New York at 40; Vice-President of the United States at 41, and succeeding to the Presidency before he was 42. For three years and more he has performed its duties with both courage and foresight. Under him the Philippines have been pacified and are contented with growing self-government, and the Panama Canal has been secured. His foreign policy has been both bold and sagacious, greatly conducing to the strength and honor of the nation and to its influence abroad. Meanwhile his domestic policy has won the esteem and affection of the people. It is on this record that the people have just passed their extraordinary verdict.

Now what may we expect for his future?

We have elsewhere stated what we believe ought to be the policy of the Republican Party during the next four years. We cannot say that we believe Mr. Roosevelt will urge and press all the policies which we have indicated as desirable, for he is a wise, if a bold, statesman, and he will have to work with the party as he finds it, and not wholly as it ought to be. Of some things we may be confident: he will develop the civil service

reform so as to make the political spoils of office as meager as possible. He will not bate one jot his justice to the negro, and yet he will try, as he has in the past, to cultivate the good will of the white people of the South. We may expect him to try to straighten out the tangle in the laws and their enforcement which allow unfair gains to favored corporations. We may expect no reversal of our protective policy, but we may expect some relief by moderate reductions and by treaties of reciprocity. But it is in his foreign policy that we may expect him to lead rather than follow. With no "big stick," with no unconstitutional action, but yet with a constant concern for American interests, we may expect him, with Secretary Hay, in the future, as in the past, to give our American nation its share of influence in the peaceful counsels of the world. There will be a new Hague Conference, in which America will take no second part. When peace is declared in the East the voice of America will be heard for open doors and equal privileges. The Philippines will take a long step these next four years toward self-government, and we shall hear no more of Imperialism than we now hear of sixteen to one. The Panama Canal will be pushed on to completion, and will make us paramount on the Isthmus, with a reasonable expectation that contiguous territory will seek to follow the example of Hawaii. And we may expect that if the South American republics fail to keep their engagements the United States will reconsider its duties under the Monroe Doctrine. In this matter there are great possibilities which require both the wisdom and the courage of such a President.

Mr. Roosevelt wisely declares that he will not seek a re-election. What is there for him after that?

Anything he will. No man of his time and his years has such possibilities, with experience and honor behind him, and influence before him.

Some officious people have declared that he is slated for the Presidency of Harvard University. We do not believe it and we hope it is not true. It is a long time to look ahead to 1909, when his term will end, and much may happen at Harvard before that. Further, Harvard does not need a statesman, but an educator. Still further, it would be a great pity to have Mr. Roosevelt forego public life. There is a bad impression about that ex-Presidents should bury themselves in retirement, and people have even thought of making a special berth for them as life Senators, as if their own States could not send them to the Senate. But we have had one radiant example of the contrary policy. When John Quincy Adams retired from the Presidency he consented to go to the Lower House of Congress, and there he did magnificent service, to his own infinite honor and that of his country. He was the spokesman of liberty and the right of petition against the bitterest assaults of the defenders of slavery. We most sincerely hope that on the expiration of his term Mr. Roosevelt will recall John Quincy Adams's example. If his successor wants him in the Cabinet, or would make him a Foreign Ambassador, or if his State would send him to the Senate, or his district to the House, it would be to their honor and his honor to accept. At the age of 50 he will yet have twenty-five years of active life before him. He may again, after a space, be chosen President; but the last thing the country should expect of him is that he hide himself at Oyster Bay and grow cabbages, or even that he devote himself to the memoirs of his life. It is better that historians thirty years later take up that service.

Voting on the Issues

AGAIN this year, as in other years, the elections have startlingly illustrated the great difficulty, under our political system, of securing an unequivocal declaration by the people on questions of public policy. Each political platform asserts many principles, which the party is supposed to stand for. But it is by no means true that all the voters who cast their ballots for a particular candidate agree with him and with their party on all points. Thousands of electors supported Mr. McKinley because they believed that the maintenance of a gold standard was vital, altho they differed with him, and with the Republican Party, in regard to the tariff. A lesser, but by no means insignificant number, voted for Mr. Bryan in spite of his free

silver views, because of their attitude on the tariff and anti-imperialism. That hundreds of thousands of voters supported Mr. Roosevelt on the eighth of November, altho they oppose the Republican party on specific issues, is indicated by the election of the Democrat, Douglas, as Governor of Massachusetts, and by the relatively large vote for Herrick in New York.

Such conditions and results show that we seldom know positively how the country stands on any one great issue. The result of the McKinley campaign in 1900 was a noteworthy exception, because other issues were for once subordinated to the money question. The yeas and nays in Congress on the bills successively enacted there do not always reveal the popular judgment, because of the unfortunate circumstance that a Congress never meets except in special session until a year after its election.

When a successful candidate enjoys an exceptional personal popularity the outcome of the campaign, so far as any decision upon questions is concerned, is more than ever equivocal. Men differ more in ideas than in feeling, and more in feeling than in instinct, and personal popularity has its roots in the elemental instincts and feelings of human nature, rather than in intellectual conclusions. Since the days of Andrew Jackson, personality has counted heavily in American politics. Not only the Republicans, Lincoln, Grant and Roosevelt, have profited by the American adoration of strength, fearlessness and resourcefulness, but so also has our great Democratic citizen and ex-President Grover Cleveland. Given a great personality as the standard bearer of one party, and a weak or colorless man as the candidate of the opposing party, thousands of voters will break from their party affiliations, regardless of any question of principle or policy, to vote for the strong man.

This is a fact that makes for good but makes also for ill. Leadership we must have, but personal government is rightly regarded as, on the whole, antagonistic to "a government of laws." Democracy of a certain type is possible under personal rule, even under a dictator, but Republicanism in the best sense of the word exists only where a popular electorate intelligently studies political questions and decides them in its own name and right.

The more heterogeneous a people is, the more likely it is to elect a candidate because of his personal popularity, and the more likely it is to fail to agree upon any considerable number of practical questions. Such a population is undoubtedly in danger of losing the reality of self-government by failing to ascertain fully and unmistakably what the prevailing judgment is on each important question of policy.

The American people is already the most heterogeneous community in the world. Immigration has brought every nationality to our shores. The spirit of Protestantism has multiplied sects and denominations, and the marvelous diversity of our economic resources has created an unparalleled differentiation of economic interests. The enormous part that personal popularity has already come to play in our politics should warn us that the possible rule of the strong man is no longer an altogether imaginary danger.

It would seem that we ought to counteract a tendency to overrate the personal factor by a more extensive practice of clean-cut popular decision of questions. Few Americans familiar with our history would deny that the New England town meeting has been the great school of American Republicanism. It has been said that the affairs of a nation cannot be run on the town meeting plan, and there was a period in our history when that was true. Can we be quite sure that it is true to-day? The telegraph and the daily press have made it possible for every citizen, without leaving his fireside or his office, to listen to a popular discussion of every question, and, if he chooses, to take part in it as truly as if he were present at a town meeting. The lacking element is the popular vote on each specific question, as well as in the election of public officers. Under modern conditions we could have such voting on State and national issues by means of the referendum. Can we doubt what its influence and tendency as a political education and discipline would be?

Elections in the States

It is fortunate that the Roosevelt plurality in Missouri did not carry with it the defeat of Folk, and it is also fortunate that the associates foisted upon Folk by the machine element in his own party were defeated by discriminating voters. We regret that Dr. Garvin is not among the Democratic candidates who successfully breasted the Republican tidal wave. The honest voters in Rhode Island should have kept him in office to purify the politics of their State. As a great flood commonly bears much driftwood on its surface, we were prepared to lament the victory of Addicks over the incorruptible men who have so stedfastly opposed him in Delaware. But now comes the cheering news that his former supporters have deserted him and agreed to act with his opponents in electing Colonel Du Pont to the Senate. It is explained that Addicks's treasury ran dry in the recent campaign even before any demands upon it had been made. Mr. Davis saved nothing from the wreck in West Virginia, where the Republicans took everything, including all the Congressional districts. Nor was Mr. Bryan more fortunate in Nebraska, where all the six Congressmen will be Republicans, and there is not even one Democrat in the Legislature to which some time ago he looked hopefully for an election to the Senate. It does not often happen that a candidate for Governor can run 95,000 votes behind his national ticket and still be elected. That was the experience of Mr. Higgins in New York, where the effect of Republican blunders was overcome by the national ticket's strength. Perhaps the most interesting and significant of the minor events in this election was the defeat of Governor Bates by Mr. Douglas in Massachusetts, where a Roosevelt plurality of 86,000 was accompanied by a Douglas Democratic plurality of nearly 36,000. Organized labor resented the Governor's veto of a bill forbidding the employment of women and children at night in factories; other acts of his administration excited the hostility of many voters. Mr. Douglas's reputation as an employer was excellent, his advertising was ingenious and comprehensive, and his tariff arguments were forcible. So far as it represents a demand for tariff revision and reciprocity, his election deserves to be considered carefully at Washington.

The Socialists

The Socialist party has made surprising gains. From its initial vote of 97,730 in 1900, it advanced to 229,762 in 1902, and has now evidently polled more than 500,000 votes. The vote in Chicago is 41,595; in New York city, 25,000; in Milwaukee, 17,000; in San Francisco, 7,231. Among States Illinois takes the lead, with some 75,000 votes; New York being second, with approximately 45 000, and California and Wisconsin third and fourth, with about 35,000 each. Five Socialist Legislators are elected in Wisconsin and two in Illinois, and in Milwaukee the Socialists actually polled a larger vote than the Democrats. Both Massachusetts and Rhode Island show Socialist losses. A feature of the general increase in this party's strength is the fact that it is not confined to the manufacturing centers, but is notable also in the agricultural States. Iowa, Nebraska, Indiana and California will probably show a higher percentage of gain than some of the more predominantly manufacturing States. The Socialist campaign never ceases. Immediately after an election there is a general strengthening of local organizations, and the institution of more intensive methods of propaganda. By lectures, social meetings and the distribution of printed matter, the Socialist campaigners keep up a tireless dissemination of their principles, and every day they add to their numbers. From what economic class the greater part of the new recruits come can only be guessed at. Primarily the Socialist appeal is to the material interests and the class consciousness of the wage earners. But it is, furthermore, an appeal to the *social* consciousness of all men of other classes who believe that the present order is unjust. So far, it is hardly to be doubted that the proletarians are in a minority in the Socialist party. This is not to say that the

party principles are other than those of orthodox Socialism, but merely that up to the present time in the United States the appeal to the proletarians has met with less response than the appeal to the social-minded men of other classes. The expectation of the leaders is, of course, that the entire wage earning class will, in time, merge itself in the Socialist movement. The minor and factional Socialist movement, centered in the Socialist Labor party, has been practically exterminated in the recent election.

The People's Party

The Populist Party was started by farmers, and its main strength has always been in the country; hence the returns of its vote have always been slowly reported, and the present election is no exception to this rule. An accurate total of the vote for Watson cannot now be given, and the papers make it only about 100,000; but National Secretary DeFrance estimates that it will not be less than 500,000, and may mount to 750,000. For instance, in Nebraska, Watson received about 60,000 votes to Parker's 35,000. The People's Party polled a million and three-quarters votes in 1894, but the nomination of Bryan by the Democrats in 1896 practically killed the party, and its organization was only a shell when its national convention assembled last July. Its national vote in 1900 was only 50,000. The almost impossible task of building a national organization in four months on the ashes and *débris* of disorganization, faced the small band that called themselves the "Old Guard." The insinuation of Judge Parker that their work was done with Republican money is repudiated by the leaders. Mr. Watson paid his own traveling expenses, amounting to nearly $3,000, and did not once accept or use a pass, tho they were offered to him. Mr. Ferriss, the national chairman, Mr. Parker, who had charge of the work in the Southwest, Mr. Edgerton, who had charge in the Eastern States, Mr. Palliser, who superintended in New York State, and others have directly stated that they refused contributions from Republican organizations, and did not know of any money from active Republicans, tho some such may have come in anonymously. Most of their receipts were in small amounts. The largest single contribution received at national headquarters was $250. The National Committee spent less than $5,000, and getting as careful an estimate as possible from the head workers, the total amount expended would be between $20,000 and $25,000, or probably less than 1 per cent. of the amount spent by either of the old parties. Yet this party had electoral tickets in thirty-six of the forty-five States and organized State committees in half that number, and in some States has working Congressional and county committees. As to their future, if we can trust Mr. Watson, who speaks after a meeting of the leaders in New York, they will immediately organize the party on "Jeffersonian principles," as they have no faith whatever that reforms will be accomplished by the vacillating Democratic party, which they say is as much in the hands of the money power as is the Republican; and as little faith does Mr. Watson have in Mr. Bryan, whose eagerness for the Presidency ties him irrevocably to the Democratic party, whatever position it may take. We understand that Mr. Watson will not at present take the editorship of the New York *Journal*, which newspaper rumor has said was offered to him, but will return to Georgia, where he expects actively to work in organizing and creating sentiment, and he will probably soon assume the editorship of a Georgia weekly paper.

The Prohibitionists

We know something of the Socialist and the Populist vote, and that their increase has been very considerable and somewhat alarming to the old parties. But we learn very little of the growth of the Prohibition vote. It does not seem to have made much progress. Its friends claim 300,000, a small increase. It appeals to a class of voters generally of quite a different character from that which gives the Populist and Socialist vote. The latter comes from the Democratic Party, and the loss of its two million votes is in part explained by the in-

crease of their vote. But the Prohibition vote mostly comes from those who naturally belong to the Republican Party in the North, and it is evident that not many of them have gone from Roosevelt to Swallow. The reason appears partly in the fact that the best and most efficient way now to close the saloon is by local option. State prohibition will not do it where the popular sentiment will not enforce the law, while local option insures enforcement; and local option, with its referendum, a modified form of town meeting government, seems to satisfy most of those who seek the object which the Prohibition Party attempts in a more wholesale way.

The Solid South Breaking

A political map is most impressive. Every single Northern State went for Roosevelt; also Delaware, Maryland as likely as not, West Virginia and Missouri. It is the States south of this line that went Democratic, and the Kentucky Republicans claim that it was only by fraud that they were defeated. The border States are doubtful States already with good management, and we mean by this to include Virginia, North Carolina and Tennessee. It is only the Gulf States, with South Carolina and Arkansas, that are safely Democratic. And why is this? It is because for many years there has been no political liberty in the South, and it is with great difficulty that in these border States a degree of freedom has been achieved. People talk much of the loss of political influence in the South, as if the North hated the South, or were jealous of its influence. Not at all. The South has lost its political influence because it has lost its political liberty. What is the use of considering a State in which there is no free or doubtful vote? Think of a State in which it is not safe or wise for the great Republican Party to carry on an aggressive campaign, and in which it may not ever have a ticket in the field! Think of States in which the suffrage is denied to nearly or quite half of its citizens because they might not vote to suit such a shotgun party as a few years ago terrorized North Carolina! See the contrast in Massachusetts, where is full political liberty, and where the State went overwhelmingly for a Republican President and yet elected a Democratic Governor by a big majority. It would seem as if this election ought to teach the South the folly of a terrorized suffrage. The country at large does not approve the Southern way. Nor is the country at large a bit concerned with the Southern hysterics whenever Roosevelt's treatment of the negro is mentioned. The great majority of the people are willing that the negro should have his equal fair show, nothing more, nothing less. This election will not open eyes sealed with a black cataract—it would take a knife to do that—but it will open many sleepy eyes, and we may expect considerable political education in the South during the next four years.

The Election and the Races

The election affords hope that races are slowly passing out of politics, and that men and measures are taking their place. This time the Irish vote has been quite broken up, and the Catholic vote as well. A number of Irish Catholic papers have shown active or passive sympathy with Mr. Roosevelt, and they have been aided by the knowledge that the Democratic policy in the Philippines would mean the spoliation of Catholic property and churches there, which the American Government will not allow. Equally the hotheads of the South have been rebuked. Senator Tillman declared that in his opinion the race question was the great issue in the campaign, but the people were not disturbed when he and his ilk devoted their chief attack to Mr. Roosevelt's fair treatment of colored men. The North made no objection and every State gave him magnificent support, while the old slave States were invaded. Nothing is more remarkable than the fact that with every Northern State there went to Roosevelt also important border States of the South, while others gave him a handsome vote. We look for radical changes of sentiment there, and believe that progressive men will dare to come to the front, and we

shall hear less of the rhodomontade of Colonel Watterson, who said:

"If he is elected President the act will be a certain, tho in many cases the unconscious, signal for a war of races, ruinous alike to the North and the South."

That was absurd and we see no evidence of fright. His Louisville *Courier-Journal* and all the other Southern papers are taking the election very peaceably. They see that there is no danger. They must also see that where they have suppressed the Republican vote they have suppressed their own influence.

Mr. Bryan makes haste to draw up a new platform for the Democratic Party. He does not want to be out of sight when the next Presidential election comes. He does not say that he will forsake the party if it does not accept his program, and we may be sure he will cling whatever it may do. These are his items: A small army; a small navy; independence for the Filipinos; protection is robbery; an income tax by constitutional amendment; bimetalism; attack on trusts; legislation for wage-earners; overthrow of "government by injunction"; popular election of Senators, Federal judges and postmasters; direct legislation; postal telegraphs, and State ownership of railroads. Of these some are dead issues in their graves, such as bimetalism and Filipino independence; one at least is farcical, tariff robbery, for the party would not think of overthrowing it; some are unwise, such as the reduction of the army and navy, and some are wise, such as more direct legislation and the election of postmasters. But the wise things will not renovate the party.

Next to the vaporing about race war, miscegenation and social equality if Mr. Roosevelt should be elected, already discounted by the placidity with which the same voices have accepted the result, the most absurd thing in the late campaign has been the effort of a company of Democratic lawyers in this city calling itself the Constitutional Club. If Mr. Roosevelt is such a constitution-smasher, why does not somebody propose to impeach him? When it comes to specifications it simmers down to the pension order which has been approved by Congress, and which merely declares the fact that a man 62 years old is presumptively unable to make but half a living by manual labor, and that at 70 he ought not to be asked to make a living at all in that way. Mr. Roosevelt has been as careful to observe the Constitution as any other President, and has had as able lawyers to advise him in his Cabinet, and the talk of the Constitutional Club has been a farce.

It is extraordinary what faith the whole country puts in our poet Secretary of State, John Hay. Those who criticise Mr. Roosevelt as the man with the "big stick" praise Mr. Hay who agrees with him precisely, and on whose advice he does everything. They will have it that Mr. Roosevelt would run amuck among the republics if Mr. Hay did not hold a restraining hand. We see no kind of evidence that this is so, but yet the country is rejoiced that the election keeps at the head of our foreign affairs a diplomat who has no superior the world over. We can boast that our country falls behind no country abroad in the honor it has put on the literary man, whether President or Premier. And we have with us a fresh illustration of the fact that the literary imagination finds successful field in diplomacy.

Colonel Ingersoll died too soon. He said, "When Missouri goes Republican I will become a Christian." Missouri returns a Republican majority of 10,000. And we wonder whether Ingersoll's unfaith was caused by his dislike for Christianity, or his dislike for Christians whom he knew. In the fly-leaf of a presentation copy of one of his books to his cousin, Mrs. Sarah B. Cooper, the most useful Christian woman that ever lived on our Pacific Coast, he wrote something like this: "If other Christians had been like you I should have taken a very different position."

In Russia the journals tell the people that President Roosevelt is a Jew, which accounts for his interest for the Jews of Russia, and that his original name was Rosenfeld. That is more plausible than true—*Rosenfeld* is German, and means a Rose-field; while *Roosevelt* is Dutch and means Horse-field.

Insurance

Insurance Uncollectible by Murderer's Estate

An interesting decision has lately been rendered in Philadelphia in the case of a man executed for murder whose estate sought to establish a claim against the Metropolitan Life. Judge Ralston, of the City of Brotherly Love, ruled in favor of the company named on the ground of public good. The following is quoted from his ruling:

"We consider, therefore, that upon grounds of public policy the law of Pennsylvania forbids recovery upon a policy where the insured has been executed for crime, and this whether the policy contains a clause upon the subject or not, and even if it stipulates that the company shall be liable in such a contingency. The rule for judgment is discharged."

College Training and Insurance

Under the title "College Training and the Business Man" (Appleton's) Dr. Charles F. Thwing, the President of Western Reserve University, has expressed his own and the views of several others whose opinions are worth while as to the desirability of a college training in connection with general administration, banking, transportation, insurance and in other human relations. In regard to insurance Dr. Thwing has this to say:

"If insurance be regarded as a business, it has become the broadest business, for it touches all relations of life. If insurance be regarded as a profession, it has become a most important and serious one, for its problems are the most intricate. The two earlier and more important forms of insurance, fire and life, are still the most important. The amount of money directly and indirectly invested in them is larger than the amount invested in any other form of human interest." . . .

In the business of insurance, the importance of which is no longer debatable. Dr. Thwing has taken considerable trouble to inquire as to the value of college training as an equipment. By correspondence and otherwise he has been able to ascertain more or less fully the views of a large number of the chief officers of the leading insurance companies in the United States. The preponderance of opinion on the part of such men seems to be that a college training is desirable, if not essential. Interesting opinions, pro and con, are cited from John T. Stone, President of the Maryland Casualty Company; E. W. Scott, President of the Provident Savings Life Assurance Society; James W. Alexander, President of the Equitable Life Assurance Society; Robert W. Huntington, Jr., President of the Connecticut General Life Insurance Company; Joseph A. De Boer, Vice-President of the National Life Insurance Company; John F. Dryden, President of the Prudential Insurance Company of America, as well as a number of others. The book makes interesting reading.

Altho The Independent does not approve of fraternal insurance, the following figures showing the amounts paid as death benefits by some of the leading societies of this kind since their organization will have a certain interest:

Ancient Order of United Workmen, $129,203,677; Knights of Honor, $80,104,124; Royal Arcanum, $79,874,811; American Legion of Honor, $42,775,831; Modern Woodmen of America, $30,113,684; Knights and Ladies of Honor, $19,940,244; Endowment Rank, Knights of Pythias, $19,323,641; National Union, $17,365,469; Knights of Maccabees, Supreme Tent, $14,821,847; Order of Chosen Friends, $13,767,150.25; Independent Order of Foresters, $13,207,572; Catholic Benevolent Legion, $12,799,744.61; Catholic Mutual Benefit Association, $12,199,689; Catholic Knights of America, $11,655,419; Woodmen of the World, $15,500,000.

The total membership in the various fraternal insurance societies, according to recent estimates, is 2,500,000 persons.

. . . .Some of the insurance journals are already sounding warning notes regarding Christmas display hazards. In spite of the fact that it is hard to realize that the Christmas season is so near, the warnings are exceedingly timely, and vigilance in heeding them will go far toward reducing the loss record on stores that will presently be crowded with holiday goods and inflammable decorations.

Financial

The Market for Securities

On the day following the election the record for transactions on the Stock Exchange was almost broken, as the number of shares (2,330,600) had been exceeded only six times. While there have been many signs of manipulation during the advance which began some months ago, it is quite plain that market values now depend largely upon the trading and investing public. Heavy realizing sales on the 9th failed to depress the market, because of the great influx of buying orders from all directions. These were due largely to the removal of all uncertainty as to the result of the voting, but that result had long been foreseen and partly discounted by many capitalists and professional speculators.

Altho at the beginning of the advance favorable general conditions were mainly prospective, they have since, in large measure, become actual and present. This is especially true of the crops, which (wheat excepted) are bountiful. By the Government's final report the corn crop is 2,453,000,000 bushels, a quantity exceeded in only two years. For other crops large yields per acre are shown, with unusually high quality. Thus, the potato crop is 332,000,000 bushels, against 247,000,000 last year, and the average yield was 110 bushels per acre (against a ten years' average of 81), while the quality is 93.4 per cent., against 86 in 1903, 90.4 in 1902, and 78.4 in 1901. A similar difference is shown by the reports concerning tobacco and some of the minor cereals. There is in the agricultural situation a basis for optimism in the securities market, and current reports show growing activity in business as well as increasing confidence. This is observed in the condition of the iron and steel trade. It may be, however, that the rise in securities that has already taken place is all that is warranted by conditions either present or reasonably in prospect.

The Middlesex Banking Company of Middletown, Conn., is offering to pay at once, with interest to date, its debentures of Series D 14, D 23, D 24, D 25, D 26, D 27 and D 28, which mature January 1st next and amount to $400,000.

....Orders for 7,000 steel ties have been placed by the Lake Shore Company. They are to be laid down and tested.

....In September 32 new national banks were chartered, with a capital of $1,550,000. The average capital of 20 of these is only $26,250.

....Half of the new Japanese 6 per cent. loan of $60,000,000 is offered in New York, where Kuhn, Loeb & Co. have organized a syndicate to dispose of it.

....It was announced on the 10th by President Ripley that $25,000,000 of the Atchison, Topeka & Santa Fé Railroad stock had been purchased by John D. Rockefeller and James Stillman, President of the National City Bank.

....Statistics recently published in France make the total tonnage of the world's merchant marine 33,643,000 tons, and the number of vessels 24,853, of which 12,671 are steamships, with 27,184,000 tons. Very nearly half the entire tonnage is British.

....The New Haven Railroad Company is considering plans for improving the Air Line route (by way of Middletown, Conn.), in order that this route may be used for fast trains between New York and Boston, instead of the Shore Line (by way of New London and Providence), which is 19 miles longer.

....The election of Edward T. Jeffrey (President of the Denver and Rio Grande) to be a director of the new Western Pacific Railroad Company was accompanied by an admission that the Gould-Rockefeller interests virtually control the new line, which will extend from San Francisco to Salt Lake City. It is predicted that within two years trains will be running on the Gould-Rockefeller lines from the Atlantic to the Pacific.

....Dividends announced:

Amer Express Co., $3.00 per share, payable January 3d.

Amer Chicle Co., Common, 1 per cent., payable November 21st.

The Independent

Vol. LVII NEW YORK, THURSDAY, NOVEMBER 24, 1904 No. 2921

Survey of the World

Election Aftermath

An unofficial list compiled by the Clerk of the House of Representatives shows that in the coming (Fifty-ninth) Congress the Republican majority in the House will be 118. It was not expected by Republicans, even two or three days after the election, that the majority would exceed 100. Little if any change will be made in the Clerk's list, which gives the Republicans 252 members and the Democrats 134. In each of the States of Pennsylvania, Illinois, Ohio and New Jersey only one Democrat was elected. In the Missouri delegation, now composed of 9 Democrats and 7 Republicans, there will be 1 Democrat and 15 Republicans. Two hundred farmers of Dunklin County, Mo., which touches the Arkansas boundary, have signed a petition asking the Legislature to allow the county to be annexed to Arkansas, simply because the State gave a plurality to Roosevelt. A similar petition has been started in the adjoining county of Pemiscot. The two counties are included in that part of Missouri, at the southeastern corner of the State, which projects into Arkansas. Their inhabitants, it is said, did not hear the news until Saturday, the 12th. The approaching retirement of Senator Cockrell is regretted on both sides of the Senate Chamber, and it is expected that the President will appoint him to some Federal office.—There was published last week by Colonel Mosby, formerly the Confederate guerrilla commander, and now an attorney in the Department of Justice, a letter received by him from the President in September last. Colonel Mosby had sent to the President a letter written by Judge Roulhac, of Alabama, who expressed regret that the President had been criticised and attacked in the South because of his attitude toward the negro. Mr. Roosevelt replied to Colonel Mosby as follows:

"That is a fine letter of Roulhac's, and I appreciate it. I have always been saddened rather than angered by the attacks upon me in the South. I am half a Southerner myself, and I can say with all possible sincerity that the interests of the South are exactly as dear to me as the interests of the North."

Mr. Roosevelt has been invited by several organizations and associations to attend conventions and conferences in the South. At the coming session he will send again to the Senate the nomination of Dr. W. D. Crum to be Collector at Charleston.—In Colorado there is much excitement over the contest for the office of Governor. Owing to the frauds committed two years ago, the Supreme Court, just before the recent election, enjoined the election officers to obey the laws and also sent watchers to 99 precincts. It now has in hand the cases of 27 officers arrested for contempt, 3 of whom have been sentenced. Indeed, it appears to have taken jurisdiction over the entire election. Governor Peabody asserts that he was re-elected. Frauds have been disclosed, but it is thought that Adams's returned plurality of 12,000 will not be overcome. There is talk of civil war if Peabody should be seated. The pending inquiry involves the seats of 15 members of the Legislature. Democrats say that their opponents seek chiefly to control the Legislature, having in mind the election of Senator Patterson's successor. In Rhode Island,

Governor Garvin expresses his belief that he was really elected, but has been robbed of the office by fraud.—Mr. Watson in a long statement explains the result of the election, his explanation being in accord with his campaign speeches. Asserting that no reforms can be accomplished through the agency of the Democratic party, because internal contests between the plutocrats and the Bryanites will exhaust its strength and doom it to defeat, he urges that the Populist party should be built up. Bryan, he says, bound for four years by his acceptance of the action of the St. Louis Convention, can neither drive out the plutocrats nor be driven out by them. Mr. Hearst's papers call loudly for the expulsion of protectionists, Trust men and plutocrats from the party, and for a concentration of effort upon tariff revision and the Government ownership of railroads and telegraphs.—The managers of the Prohibitionist campaign have fallen into a bitter controversy. It is asserted by Samuel Dickie (president of Albion College and treasurer of the National Committee) and John G. Woolley, candidate for President four years ago, that $13,000 of the campaign fund was wrongfully used by the Rev. Oliver W. Stewart (chairman of the committee) and Secretary Tate to build up the latter's newspaper, and to injure the paper conducted by Mr. Woolley. The published statements and letters contain expressions of intense hostility.

Washington Topics

Since the election the President has talked with many Republicans, members of Congress and others, about a revision of the tariff. It was reported at the beginning of this week that he intended to send to Congress at the coming session a special message relating to revision and to reciprocity with Canada. The remarkable victory of Mr. Douglas in Massachusetts was due in part to his attitude toward these questions. He will have a commission appointed to investigate them and to report to the Legislature as to what Massachusetts needs in the way of tariff revision and commercial treaties.—As a result of the inquiry made in Alaska by William A. Day, of the Department of Justice, the President has called for the resignation of Judge Melville C. Brown and has summarily removed United States Marshal Frank H. Richards. The case of Judge Alfred S. Moore is in abeyance. Judge Wickersham is exonerated and has been appointed for another term.—Pension Commissioner Ware has resigned. It is reported that his place will be taken until March 4th by Deputy Commissioner Davenport and that the President intends to give it then to General John C. Black, now a Civil Service Commissioner, who was Commissioner of Pensions in Mr. Cleveland's first term. There is also a report that Mr. Evans, Consul-General at London, will exchange places with Postmaster-General Wynne, and that Mr. Cortelyou will be appointed Secretary of the Treasury next spring. Mr. Whitelaw Reid, it is said, in March next will succeed Mr. Choate as Ambassador at London. It is understood that the President intends to appoint Mr. Cornelius Vanderbilt First Secretary at the Berlin Embassy. Mr. Vanderbilt will be warmly received in Berlin. He enjoys the acquaintance of the Emperor; with his wife he has been entertained on the Emperor's yacht, and his was the only private table at which Prince Henry dined in New York.—Henry Meldrum, formerly United States Surveyor in Oregon, is the first to be convicted for complicity in the land frauds there. He has been found guilty of forgery on 21 counts.—Secretary Morton, speaking at New York last week, said he was in favor of a navy so efficient that no other nation in the world would be willing to attack it. This did not necessarily mean that it should be the biggest navy afloat, but it should be the most efficient. In an address at a law school in Washington, Justice Harlan said he would lose no sleep if the United States should build a navy as large as all the other navies of the world combined.

Statue of Frederick Unveiled

The bronze statue of Frederick the Great, given by Emperor William to the American people, was unveiled at Washington, on the 19th, with elaborate ceremonies marked by much military and official display. It stands on

the grounds of the War College. The guests were a distinguished company, including the President, his Cabinet, the entire Diplomatic Corps, the Supreme Court Justices and the chief officers of the army and the navy. Special escorts of cavalry accompanied the German Commissioners, the German Ambassador and the President, and the arrival of each of these was greeted by an artillery salute. Covering the statue were a German and an American flag, and when these were drawn away by the Baroness Speck von Sternburg (the American wife of the German Ambassador) they rose to the tops of flag poles, one on each side, and were unfurled there. The statue was formally transferred to the custody of the Ambassador by the Kaiser's special commissioner, Lieutenant-General von Loewenfeld. The Emperor, he said, had desired to dedicate to the people of the United States a visible token of his gratitude for the sympathetic reception given to his brother, Prince Henry, and had chosen this statue of his ancestor because "this King, having greeted with warm sympathy the rise and progress of the United States from the beginning, was the first sovereign to conclude a treaty of amity and commerce with the young confederation after the conclusion of peace at Paris in 1783." By the Ambassador it was then given to the American people and accepted by the President, whose long address was the most prominent feature of the exercises. Much of it was historical, relating to the career of Frederick the Great. Mr. Roosevelt pointed to the fusion here of many national types brought in by immigration; to the value of the German element in our composite stock, and to the prominence of men of German origin in our affairs, both of peace and of war. "Our unceasing effort," said he, "is to strive to keep and profit by the good that each race brings to our shores, and at the same time to do away with all racial and religious animosities among the various stocks. In both efforts we have met with an astonishing measure of success." We could claim a more or less distant kinship by blood with each nation of the Old World:

"As such is the case, it is natural that we should have a peculiar feeling of nearness to each of many peoples across the water. We most earnestly wish not only to keep unbroken our friendship for each, but so far as we can without giving offense by an appearance of meddling, to seek to bring about a better understanding and a broader spirit of fair dealing and toleration among all nations. It has been my great pleasure, Mr. Ambassador, in pursuance of this object, recently to take with you the first steps in the negotiation of a treaty of friendly arbitration between Germany and the United States."

In conclusion he accepted the gift in the name of the American people, "a people which, tho with a national history far shorter than that of your people, nevertheless, like your people, is proud of the great deeds of its past, and is confident in the majesty of its future."

Revolt on the Isthmus Prevented

By the forced resignation or removal of General Huertas, and the disbandment of his little army a movement for the overthrow of President Amador's Government in Panama has been prevented. Huertas's army consisted of 182 men and boys. Huertas himself is of diminutive stature, being little more than a boy in appearance. Born of Indian parents in the Colombian province of Cauca less than 30 years ago, he entered the army at the age of nine. But he was a brave little fellow and the people liked him. Some time ago the Panama Assembly gave him $50,000 to pay the expenses of a tour in this country and Europe, during which he was to study the military organizations of the world's great Powers. About two weeks ago he asserted himself by demanding the removal of the Secretary of War and one or two other members of the Cabinet,

GENERAL HUERTAS, Ex-Commander of the Panama Army. From Stereograph, Copyright, 1904, by Underwood & Underwood, N. Y.

coolly informing President Amador that a failure to comply with this demand would be followed by the overthrow of his Government and the imprisonment of the President himself. Amador appears to have been frightened. He did remove the Secretary of War and one other Cabinet officer. Whereupon he was told by Minister Barrett that our Government regarded with much disfavor such petty revolutions as the one that seemed to be impending, and expected him to have a backbone. He was reminded that there were marines on the Isthmus, that there was one cruiser at Colon, and that Admiral Goodrich's squadron was at Panama. Then Amador demanded the resignation of Huertas, who remarked when he gave it that he resigned "to prevent bloodshed and to prove once more his love for Panama." He was allowed to retain his rank and salary. On the 19th his soldiers asked Amador to dismiss them with two months' pay. This was done, and the army has been disbanded. A police force will be substituted for it.—The members of the House Committee on Foreign Commerce, with their families, sailed for the Isthmus on the "Sumner," last week, from New York. Secretary Taft, Rear-Admiral Walker, the Minister of Panama at Washington (Señor Obaldia) and several other persons sailed from Pensacola on the "Columbia" and the "Dolphin."—Col. Frank J. Hecker, of Michigan, a member of the Canal Commission, has resigned. A stay of fifteen weeks on the Isthmus, he says, convinced him that his health must suffer by reason of the climate there. In accepting his resignation the President said that he did so "with extreme reluctance. I appointed you," he added, "because I believed you were exactly the type of business man we needed on the Commission, and the ability with which you have served has amply justified this belief." It is reported in the press that the relations between Colonel Hecker and some other members of the Commission were not entirely harmonious. Similar reports concerning General Davis are published, but are not officially confirmed. The President has extended the civil service regulations over the Commission's employees, laborers and a few appointed officers excepted.

Labor Controversies and Questions

An unsuccessful attempt to resume work in the Fall River cotton factories was made at the beginning of last week. Very few persons entered the mills. The owners insist upon the wage reduction of 12½ per cent., finding that the market is still dull and that the price of print cloths has not advanced, altho the strike is 16 weeks old. At its annual convention, the Federation of Labor voted for an assessment of 1 cent a week for three weeks, to assist these strikers. This will speedily yield $50,000.—Philip Weinseimer, leader of an association of unions in the building trades at New York, who was convicted of extorting $2,700 from George Essig, an employing contractor, has been sentenced to be imprisoned for not less than twenty nor more than thirty-two months. The building trade unions in New York (where several of them are still locked out) are striving to form a new association that shall include all of them. It is asserted that in this way they are preparing for a contest next Spring. The associated employers say that the controversy will not end until the arbitration agreement shall have been accepted.—In Colorado, upon the application of persons affected by the looting of the union store at Cripple Creek, some months ago, Judge Marshall, of the Federal Court, has granted a temporary injunction restraining the Citizens' Alliance and the Mine Owners' Association from deporting persons from the Cripple Creek district or interfering with the business of the store in question. Of the 54 persons arrested and held for complicity in the Victor riots and the dynamite murders, 37 have been set free. Mills at five large mines at Telluride have proclaimed their acceptance of the eight-hour day at satisfactory wages, thus yielding now to the demand that precipitated the strike in Colorado.—The association of the owners of foundries has formally declared that it will not permit a restriction of individual output or earning capacity by unions. These employers will determine for themselves the number of apprentices, and will insist upon their right to introduce new machinery. They stand for arbitration, but will not resort to it after the begin-

ning of a strike. This action was taken after a failure to reach an agreement with the molders.—Some time ago, 77 of the 95 members of the Boston Symphony Orchestra joined the musicians' union. All of these have now withdrawn from the union, owing mainly to the attitude of Major Higginson, to whom the Orchestra looks for support.—A sharp contest is expected in San Francisco between employers and the unions over the question of the "closed shop." The employers have been preparing for it by making contracts with men in the Eastern States.—At the convention of the Federation of Labor, in San Francisco, there are 480 delegates. The per capita tax indicates that the number of members is 1,676,000, an increase of 210,000. At last accounts no important action had been taken. It is said that there will be no attempt this year to commit the organization to the support of socialism, but that the socialists will seek approval of resolutions in favor of the nationalization of Trust combinations, of old age pensions, and of instructions forbidding members to join the militia. A committee reported against the boycotting of any publication for an expression of opinion. There was a unanimous vote against requesting the Secretary of Commerce to appoint an arbitration board for the settlement of strikes.

Sober Thought in Russia

It is certainly noteworthy when the official organ of the Holy Synod suggests the idea of religious tolerance as a result of the present war. It recently said as follows:

"The times are actually not adapted for the division and contentions between the religions of Russia. These differences are indeed natural between the Orthodox and the Dissenters, but now it is time to judge and to act mildly, as the non-Orthodox have in this war deported themselves as loyal Russians as much as the Orthodox have. The present war must necessarily serve as a means to awaken religious tolerance."

Other journals representing official thought have recently again and again spoken in this spirit, but the fear is entertained that this policy of peace is advocated only as a temporary device. The Russian Ministry of Education is now engaged in developing a scheme for popular education. Recent statistics have shown the necessity of this reform. In the St. Petersburg government there are 14,000 children unable to read or write, and in the inner departments conditions are ten times worse. The chief obstacle to the speedy realization of this plan is the depleted condition of the treasury or account of the Japanese war. Another project advocated is the abolition of many of the holy days, the initiative in this respect having come from the Ministry of Agriculture. In the few months between the 1st of April and the 31st of August the Russian calendar has 77 festival days, leaving only 76 working days. The *Novoe Vremya* recently asked: How can the Russian earn as much in 76 days as the other Europeans do in 126? Only in case he is a superhuman being or particularly blessed by Providence. The same journal recently published a comparative list of the work done by the Russian and the other European student in his four-year high school course. During these years the Russian can have only 660 school days; the Frenchman, 804; the Englishman, 888; the Austrian, 936; the American, 940; the German, 960; the Dutchman, 1,062, and the Dane, 1094. In the eight-year gymnasium course the same periodical gives the following facts: Russia gives 232 days less than England, 296 less than the American, 360 less than the German, and 450 less than the Danish college.

The Demands of the Zemstvos

What is likely to prove an important movement in the direction of a more liberal government in Russia is the meeting of prominent members of the Zemstvos, or local assemblies, held at St. Petersburg last week. Altho it was ostensibly of an unofficial character and met in a private house, yet the prominence of the hundred men who took part in the conference and the boldness with which they formulated demands for local self-government and equal justice indic te that the liberals believe that they have in the present crisis an unprecedented oportunity to secure popular rights. The meeting was called to consider methods for assisting the work of the Red Cross and was guaranteed im-

munity from police interference by Prince Viatopolsk-Mirsky, Minister of the Interior and successor of De Plehve. But before passing to this subject the whole question of the relation of the Government to the people was freely discussed and ten resolutions adopted, which, on account of their unusual character and probable historic significance, we quote almost in full. They will be presented to the Minister of the Interior and probably to the Czar himself:

"Section 1. The abnormal system of government prevailing among us, and especially noticeable since the eighties, is due to complete estrangement of government and people and the absence of the mutual confidence so necessary to national life.

"Section 2. These relations between the Government and the people originate from apprehension of development of popular initiative and persistent efforts to exclude the people from participation in internal government. With this object the Government endeavored to extend centralized administration to all branches of local government and impose a tutelage in every branch of national life, admitting cooperation with the people solely for the purpose of bringing popular institutions into harmony with the views of the Government.

"Section 3. The bureaucratic system of causing estrangement of the supreme power and the people creates a field for a wide scope of administrative arbitrariness and personal caprice. Such a condition deprives the nation of the necessary assurances that the rights of each and all will be protected, and undermines confidence in the Government.

"Section 4. The normal current and evolution of State and nation is possible only under the condition of close living and union, and the co-operation of the imperial power with the people.

"Section 6. For the unrestricted expression of public opinion and the free exposition and satisfaction of popular needs it is essential to guarantee freedom of conscience and speech and of the press, and also freedom of meeting and association.

"Section 7. Self-reliance is the chief condition of the proper and successful development of the political and economic life of the country. A considerable majority of the population of Russia belonging to the peasant class, it is necessary first of all to place the latter in a position favorable for development of self reliance and energy, and this is attainable only by a radical alteration of the present inequitable and humiliating condition of the peasants. For this purpose it is necessary:

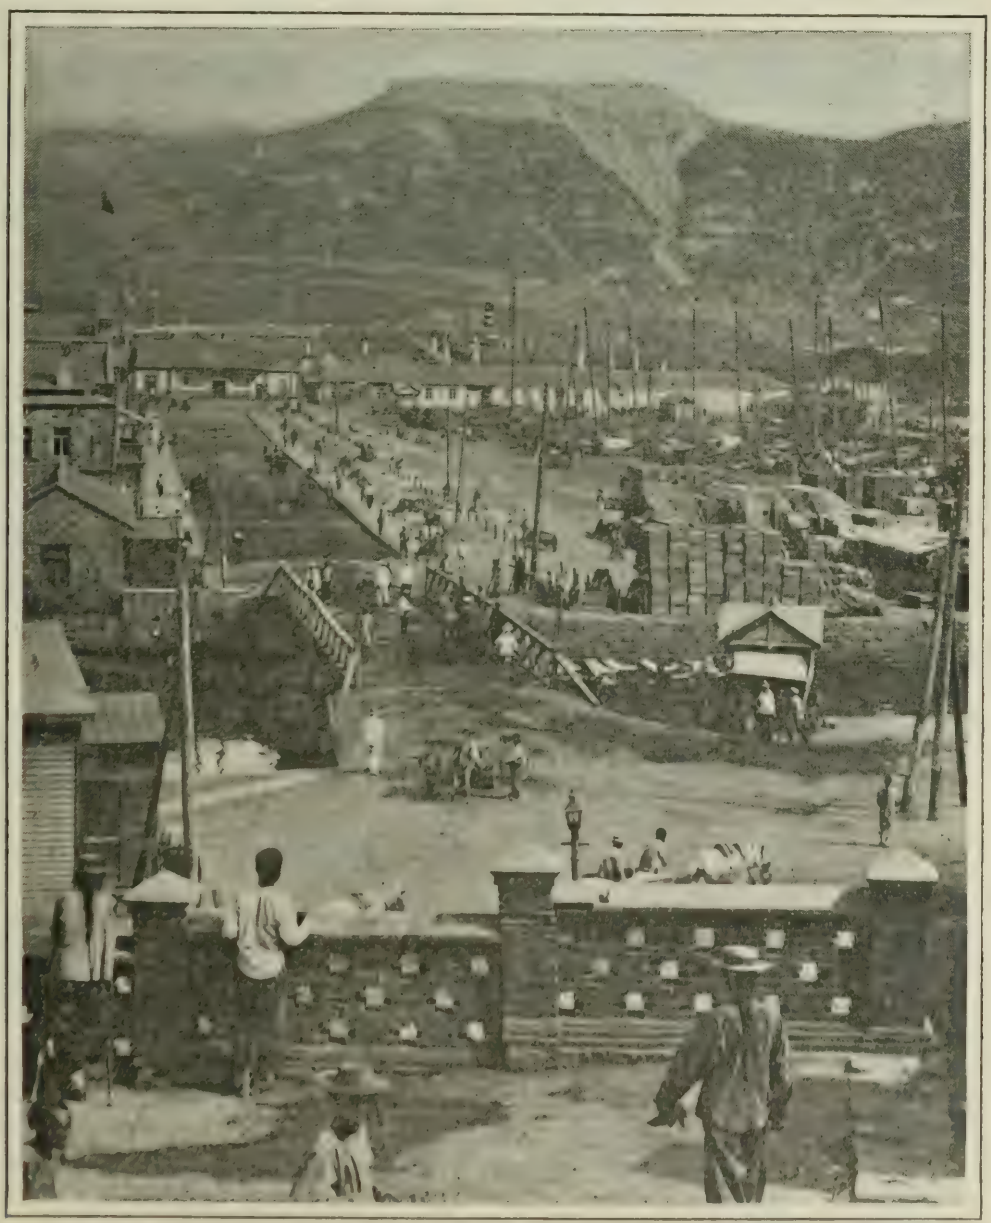
"(a) To equalize the civil and political rights of peasants with the other classes.

"(b) To release rural self-government from administrative tutelage.

"(c) To safeguard peasants by proper courts of justice.

"Section 8. Zemstvo institutions in which local and popular life is mostly concentrated must be placed in conditions in which they may successfully carry out their duties. For this purpose it is necessary that the zemstvo representation be based on no class basis, and all the forces of the local population be admitted to share in zemstvo work; that zemstvo institutions be brought into closer touch with the people by the creation of a small zemstvo, and unite upon a basis guaranteeing absolute independence, and that zemstvo institutions be assured the necessary permanency and independence essential to their proper development and activity and mutual co-operation of governmental with popular institutions.

"Section 9. But for the creation and maintenance of close and healthy communion, a unison of the imperial authority with the people upon the basis above pointed out, and in order to assure the correct development of life, State and nation, it is unquestionably necessary for national representation in the form of a specially elective body to participate in legislation.



"Section 10. This conference, considering itself an informal gathering, of which the members express personal views, considers that settlements of the question of the bases that form the relationship of government and popular representation in the life of the country should be submitted to representatives of the nation chosen under the conditions above indicated as essential for freedom in elections."

The French War Department

The attacks, verbal and physical, made upon General André, the Minister of War, for the system of delation which he has apparently made use of in his efforts to free the army of clerical influence has resulted in the resignation of André. It is not yet certain that by this sacrifice of one of its members M. Combes will save the Cabinet. A civilian, M. Berteaux, has been appointed Minister of War. He is a radical socialist, a member of the Paris Stock Exchange and has a thorough knowledge of army matters. Premier Combes has issued a circular to all public functionaries cautioning them against spying on their colleagues. General André had appointed Captain Mollin, his nephew, a member of his military cabinet and entrusted him with the task of obtaining information as to the Clerical or Repub-

lican proclivities of candidates for promotion. He applied to M. Vadecard, secretary of the Grand Orient Masonic Lodge of France, who procured through the machinery of the order details of the private life of the officers. Copies of his reports to Captain Mollin were stolen from the Masonic archives and published in *Figaro*. The evidence of Clerical sympathies adduced in some cases is very curious. A few examples are here quoted: "He frequents the Café Arnould, where he reads only *Echo de Paris, Eclair* and *Intransigeant;*" "he sends his daughter to a convent;" "he descends from his horse to salute the Host when he meets it in the street;" "in a speech in the distribution of prizes to students he used the name of God with objectionable frequency;" "he obliged his mistress to go to confession;" "very intelligent and dangerous;" "goes to mass to please his wife, but is not to be feared;" "goes regularly to church in full uniform with an enormous missal under his arm;" "his wife busies herself in parochial work," etc.

The War The garrison of Port Arthur under General Stoessel are still holding out with the same desperate courage and it does not appear that the Japanese have captured any important positions, altho there have been repeated assaults and almost continuous bombardment. General Stoessel was struck in the head by a fragment of a bursting shell while directing the defense in per-

Looking South Over Docks to Fortified Hights Held by the Russians, Port Arthur, Manchuria.

son, but the wound is not sufficiently serious to force him to resign the command. On Nov. 3d, the anniversary of the accession of the Czar to the throne, as well as the birthday of the Mikado, he telegraphed his congratulations to the Czar and expressed his joy that the nine day assault, by which the Japanese hoped to capture the fortress on that date, had been repulsed. The Russian destroyer "Rastoropny" escaped from Port Arthur at midnight during a blinding snow storm, dodged the floating mines, ran the blockade of Japanese fleet and entered the harbor of Chee-Foo without accident. Commander Pelem stated that his object was merely to carry dispatches. Captain Ching, of the Chinese cruiser "Hai-Yung," notified him that the "Rastoropny" must leave the harbor within twenty-four hours or be dismantled like the "Ryeshitelni," near which it was anchored. Captain Pelem refused to adopt either of these alternatives and blew up the ship by exploding a small charge of ordinary powder in each of her water-tight compartments. The officers of the destroyer gave out the most optimistic reports of the conditions at Port Arthur. Ammunition and food are abundant, and the garrison can hold out for several months yet. The Japanese claim that the Russians in Port Arthur are discouraged and weakened by sickness, continued hardships and famine, and that the soldiers are only kept from desertion by the threats of their officers. The chief attacks are still being made in the center on the Rihlung and Pei-Yu (Pei Yu Shan) hills, by the Japanese left on the Keekwan forts and by the right on Etseshan. The Japanese are carrying on tunneling operations on an extensive scale in spite of the rocky nature of the hills. The soldiers in the opposing rifle pits fraternize during the intervals of firing and exchange cigarets. Along the Shakhe River both armies hold the same positions, which are being still more strongly fortified. The Japanese deny the rumor that Kuroki was killed. The Russians cannonaded Shakhe station for a whole day recently, throwing over a thousand shells, but without driving the Japanese from this important position. The assaults of the Japanese on Lone Tree Hill have been repulsed with great loss.

German Southwest Africa

The Reichstag will be asked in December for a special appropriation of $20,000,000 for the expenses of the army in the war with the natives of German Southwest Africa. A contingent of 2,000 more recruits and 1,000 horses are now going to the colony to replace the losses due to battle and sickness. Altogether, it is estimated that $25,000,000 has been spent in the war, and the rising so far from being quelled is continually spreading and becoming more formidable, and the allies of the Germans are deserting their cause. Since Colonel Leutwein has been superseded as Governor-General by Lieutenant-General von Trotha, the tribal chiefs whom he had conciliated are taking up arms against the Germans. In particular, Hendrik Witboi, who headed an insurrection of the Hottentots in 1893-4, but since then has been in the service of the Germans, is now inciting an insurrection of the Hottentots in the south, which is likely to be much more dangerous than that of the Hereros in the north. Witboi is unusually well educated, speaks Dutch, and was at one time a village schoolmaster. He aided the Germans in their campaigns against the Khavas Hottentots in 1897-8, and has been until now scouting for the Germans in their marches against the Hereros, for which service he recently received a medal from the Emperor William. Apparently his experience with the German soldiers has not put him in awe of them, since he has decided to cast his lot with their enemies. His followers slipped away gradually, taking with them arms and ammunition, and, when all preparations for the rising were complete, were joined by their leader, who has issued a formal declaration of war. The District Commissioner of Keetmanshoop, Herr von Burgsdorff, on hearing this news, rode unarmed and alone to the camp of the Witbois to dissuade the Hottentot leader from his purpose, but he was held as a hostage, and is reported to have been killed. The Bastards, a half-breed tribe, are the only natives who adhere to the German side. All the Hottentot tribes are expected to be soon in rebellion.

"Give Thanks, O Heart"

BY EDWIN MARKHAM

Author of "The Man with the Hoe," Etc.

Give thanks, O heart, for the high souls
That point us to the deathless goals—
For all the courage of their cry
That echoes down from sky to sky;
Thanksgiving for the armèd seers
And heroes called to mortal years—
Souls that have built our faith in man,
And lit the ages as they ran.

Lincoln, Mazzini, Lamennais,
Living the thing that others pray;
Cromwell, St. Francis and the rest,
Bearing the God-fire in the breast—
These are the sons of sacred flame,
Their brows marked with the secret name;
The company of souls supreme,
The conscripts of the mighty Dream.

Made of unpurchasable stuff,
They went the way when ways were rough,
They, when the traitors had deceived,
Held the long purpose, and believed;
They, when the face of God grew dim,
Held thro' the dark and trusted Him—
Brave souls that fought the mortal way
And felt that faith could not betray.

Give thanks for heroes that have stirred
Earth with the wonder of a word.
But all thanksgiving for the breed
Who have bent destiny with deed—
Souls of the high, heroic birth,
Souls sent to poise the shaken Earth,
And then called back to God again
To make Heaven possible for men.

Landing, New Jersey.

An Old-Time Thanksgiving

BY E. P. POWELL

Author of "Old Farm Days," Etc.

"I FEEL it in my bones," said the little mother, rubbing her right hand gently across the left arm. "Yes; Thanksgiving is in the air!" "To be sure," said the father; "it is a law of nature. What could one do if he could not give thanks?" Then he went to the door, opened it and looked up and down the hillside, where he could see his orchard and his corn fields. The stooks rustled softly in the morning air, with a touch of frost whitening the dry leaves. Pumpkins lay as thick as beechnuts all over the great field. The cows were stretching themselves in the upper pasture, and when they saw the gray head at the door they called to him with kindly lowing. You never heard of such a thing? To be sure! But cows are rarely encouraged to be social. They are chased and dogged and made as brutal as their masters. "Father," said the little mother, "it is a good God who thought out all these things. He must be Love itself." "You are right, little mother; yes, indeed. But what can we do to make it all out? It is hardly the hem of his garment we see." Then as the sun rose and shone out with a great swath of glory all over the hillside they took hold of hands and said, as if to themselves, but also to God: "Our Father, who art in the Heaven, and in the earth, too, we love Thee, and we thank Thee! Open our eyes better to see Thee in all things."

But the little mother had no thought that God was to do it all. Why should he? Were we not his children, and what were hands for but to do such good things as God does—only that he leaves some of them for us to do? And as for woman, did he not clearly make her a cook, with art in her brains, to create delicious foods? And why, indeed, did he leave all his vegetables raw? Pish! 'tis as clear as the New England Primer or the Golden Rule, what the Lord meant. And as for her, she would get up the greatest Thanksgiving dinner that was ever known, and it should not be just to tickle the palates; it should also praise the Lord. So it was decreed, and there are decrees that are as good as seeing ahead—for you might be sure the little mother would do what she said she would do—with a margin over.

It was a wonderful November. We have had half a dozen such in a century. Thanksgiving Day was set in the very middle of Indian summer, and as for Indian summer it was like a great golden sunset. The leaves were not yet all off the apple trees, and the dandelions had come up to see what it was all about, and they made the ground golden where the maple grove kept off the west wind. The world seemed half inclined to skip winter for once, and to call up the hyacinths and waken the lilacs to blossom. Truly one could not hold his happiness. "There is enough," said the father, "for two Thanksgivings." "Indeed," said the little mother, "but you shall see; yes, you shall see." And then we boys began to tread the air, so much were we living the days that were ahead, and tasting before time the feast, till our mouths watered and ran down our waistcoats. "Ned," said our Jim to me, "she looks like an angel in a picture." And truly the little mother was as near inspired as one may be this side of Deborah and Isaiah. Everything went together, matching as it should: the weather and the will and the woman's wit—and the stomachs. So did the world invite us that we sat the tables out of doors, under the big arms of the butternut and the Vergalieu pears; and near by a big bunch of witch hazel bushes were blossoming, as if they had forgotten themselves and lost track of the season. And there came some birds of passage

and sat on the mountain ash trees and ate a Thanksgiving dinner of the berries, and one of them sang to us in a soft monotone —I think it was a Thanksgiving hymn.

But this is getting ahead of the story; for, truly, one must cook a dinner before it can be eaten. Chicken pie was the glory of the days of which I speak. "No, it was not pumpkin pie, altho that came close after; and so did roasted pig with quince sauce, and a goose with the mints that grew by the brook in the orchard. And these I mention simply to whet your appetite—since one can do nothing in the way of Thanksgiving without an appetite. As for chicken pie, there was this about it, that the little mother knew every chicken on the place—yes, by name; and they would eat from her hand, and would light on her shoulders, and would come to her buttery window for a crumb. And I am inclined to think that they came very near to learning to talk English. If any old Bramah insisted on setting beyond reason and common sense, we boys would hitch her to a post by one leg, to let a few showers distract her attention. But this the little mother would not endure and on the sly would fix umbrellas over their heads. Yes, indeed! and I have seen a big wind take those umbrellas up into old apple trees and the Lord knows where not. Yes, yes; the Christmas pie; do not be in such a hurry about it! There was where the hitch came in; not one of the hens of the place must be harmed. But our father laughed quietly and said, "It is well; yes, it is all right to love everything as well as everybody. But we will swap a few chickens with neighbor Bradstreet, and then there will no harm be done. We shall have our chicken pie." When this was disposed of there was the cider barrel to be filled. This was not done with refuse of the orchard—indeed, this was true Thanksgiving cider, and nothing was too good for the Lord—altho we ourselves should drink it, thankfully and rejoicingly. So we selected the best Spitzenbergs and the choicest Greenings, with one-seventh Pound Sweets, and they were washed and then ground in a clean mill, and pressed in clean cloths. So! so! but I have the taste of it still lingering in my mouth. There are but seven perfect tastes in the world, and one of them is Thanksgiving cider.

As for us, the boys, it was our privilege to go to the big pasture and along the "Beaver Brook," where the butternut trees grew, and there we filled bags with the nuts and brought them home on our shoulders. Ah, what days were those for "Ranger"! and what constant discoveries the dog made! Perhaps you have never tasted a butternut pudding. There is so much ignorance in the world nowadays, just as there is also a vast amount of learning. Yes, indeed! more of both than there was in those days. "Come," said the sunshine, "and see what I will do for you. I will mingle oil and sugar and the juices of the trees in exact proportions, and you shall see what you will see." And so came about the butternut, the cream of the nut creation. And we boys cracked them, and we sucked our fingers where the blood blisters followed, and we patted our stomachs, and never stopped eating pudding and nuts, except for an apple or two. And then we cracked a big basketful for the little mother, and we made every meat come out whole. What she did with them I will not undertake to tell; only this I know that the taste of butternut pudding is the second of the seven perfect tastes in the world.

For one whole week the preparation went on, and there were pies, and cakes, and doughnuts, and there was apple butter, and quince butter, and plum butter; and then at last came the day to heat the great brick oven. That was one of the fine arts. Only the sweetest woods must be used—maple and beech, and the kindlings were of cedar. The smoke of the fire must not be like common smoke, and the coals must be hard and clear and full of character.

Pish! But all this while, what with getting the dinner ready, and bragging about it, I have forgotten to go to church. This comes of these degenerate days, when the belly is placed ahead of the soul and salvation means a full dinner-pail, with politics in the place of religion. But in those days we all went to church before noon, to take care of our souls first, and in the afternoon we should take just as good care of our bodies. The sermon was twice as long as the prayer, which was half an hour by the feelings, there being no town clock and few watches. But our parson Chase gave us

what was worth the while—yes, indeed! It was not a lot of wandering enthusiasms about Tolstoy, or Browning, or Ibsen. Bless the Lord, the realists were not in the world yet, and the transcendentalists were in their bibs. The sermon was a plain and right straightforward talk of duty and rightness. To this day I remember that very sermon. Said the good parson:

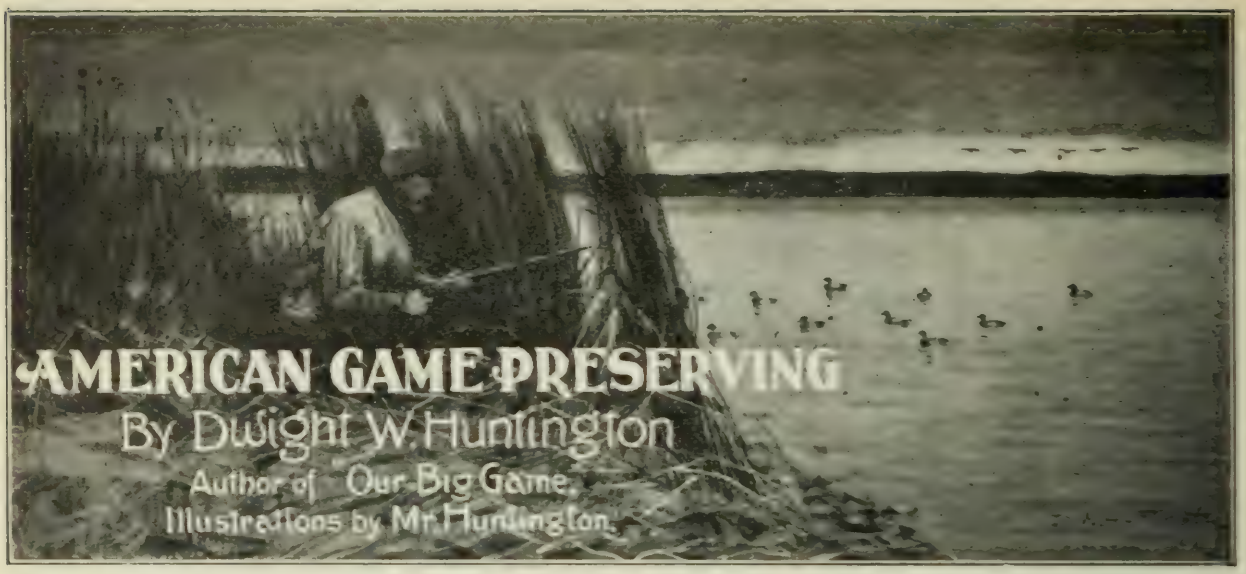
"It is not enough to give thanks; one should be thank-full—that is it—that is what the word means; full of thanks. And there are two more words like it; good, honest, worthy words of our fathers—faith-full and truth-full. These make the trinity of character. One should be full of faith, and truth, and gratitude. This a man fairly owes to God. Keep faith; speak truth; feel thanks. It is an excellent thing that one may be full of each; and not one of them crowd the other. Is it not a glad world that offers us such elements; such soul-food? No, you cannot make up for the lack of such things, by eating fine dinners of dainties. You shall hunger still; till your soul dies within you, and you be, what so many folk are, only outside shucks of men, and without soul-life at all. Then comes the filling up with untruths, and dishonor, and ingratitude. Ah! it is here, right here, that the beast has the advantage of us; for if it can never go so high, it can also never go so low. The dog licks the caressing hand; but the liar beshrews his best friend. And when you think of it, there is no better friend than God. The world is a good world. It is wonderfully gotten up for us; and if I thought that I should forget to be grateful to him, in whom we live and move and have our being, I should not wish to live. Thanksgiving Day is a jewel, to set in the hearts of honest men; but be careful that you do not take the day, and leave out the gratitude."

Then the dear old pastor leaned over the pulpit, which was half way up the wall, and he said in soft, gentle tones:

"Live lovingly; live peacefully; live nobly; be ye men—why lose your only opportunity to be on the right side? For indeed, I tell you, if you go not with God, you will go with the devil—with wrong, and falsehood, and baseness, and decay. Now go to your homes; eat, drink, and be merry; but do not let escape from you what I have said. Feed your souls, as well as your bellies."

Then he spoke to us who were young, and I remember it all. Why not? Cannot one remember a beautiful picture or a glorious sunrise?

"You, my boys and my girls, I love. Yes, for the Father's sake, I love you; and I do pray that you shall fix firm in your hearts these two things, purity and truth. You will have no taste for vice, unless you yourselves make the taste. God did not make you bad."



Yes, yes; sure enough; the dinner! Even a good sermon should not be too long. You did well, little mother, to twitch our coats a bit, for you also had a sermon to preach, and it was not yet written—not all of it. But then the parson should have time. In these days everything is cut short. Thanksgiving is clipped to thanks, and folks settle their consciences with God in the contribution plate. We lack time to be grateful. What we want is a little more time, so we can be decent and honest; and with twice as much time we might be pious. "Little mother," said the father, "there are the pumpkins, and the plums, and the apples, and the mince meat for pies. There are pears, and quinces, and boiled cider, and pound sweets for sauces. There is the pig to be roasted, and the swapped chickens, and the goose." "And the mint, and the sage, and the marjorum from my garden," added my aunt; "and there are cookies, and candy, and crullers, and tarts, and." Now, my aunt, who lived alone near by us and was one of us on all hearty occasions, did not believe there was an end to anything; so she always ended, or undertook to end, what she would say with an and. It put all she thought into a circle. It was an intellectual doughnut, not much unlike the circle with which others have been troubled—and in these days also.

The eating of it! To be sure; you were born too late and there is no mending the matter. You have your steam and your factories, and your patent this and your patent that, but you have not our old-fashioned homefulness, and, as for the snugness of our lives, you have no way of comprehending it. You have removed all your boundaries with your railroads and your telegraphs and your telephones and steamboats. The world is not big enough for you. It is comfortable to know where you live and to have limitations. As for us, we had two things, a neighborhood and a household. The little mother did not belong to any club, as I remember,

unless it might have been an Anti-Slavery sewing society; but she belonged to us and to our neighbors. Yes, she belonged to us, but we also belonged to her and to each other. So you may be sure that we did not have our feast all by ourselves. "Why should we be selfish with the Lord's goodness?" said my father. "It would spoil the taste of it all." "To be sure," said the little mother, and she stopped a moment at the door of the great oven, and the glow of the fire made her aureole. Ah, yes! I see her now. "To be sure, father; what comfort is there in being selfish?" So there came together, not only the cousins and the aunts and the two grandmothers, but there were also the Bristol girls—who, after all, were not girls, but they had been some forty years before—and there was also mother Bennett, the dear old soul who went by the name of Town Blessing. And the sun smiled warmth through the branches, and the soft wind played quiet pranks, dropping now and then a brown leaf on our plates. Everything seemed interested, and I remember that a hawk, far up overhead, cut circles in the sky and looked as if he claimed the chickens in our pie. The cats, who for a whole week had used reasonable prudence, now came out from their retreat and walked with confidence around and beneath the tables. To be sure, cooking is one thing and eating is another; and now cats should be helpful—they did not refuse.

Once there were "seven baskets full of fragments." So were there once again, and they did not all go into the great pantry of the little mother; no, indeed! A selfish Thanksgiving! It would leave a bad taste in one's mouth! It would spoil even the memory of a butternut pudding! So we boys were allowed to "settle our dinner," carrying full baskets to those who had less of God's favors. Pish! I was about to say that. It is not true, however; of that you may be sure. God does not so distribute his favors. The poor are part of the blessings God sends to the rich; they are better than chickens and roast pig. It is not the rich only who are sent to the poor. A world of well-to-do folk would not be a happy world. It would have no chance for doing good. No one would ever get anybody else's thanks—or deserve them, which is all the same, or better. And then how would one know God as the One who dies in Jesus, to save? And how should we ever have a Thanksgiving at all? It is the poor years that make the good ones so very good, and poverty has always what wealth has not, betterment ahead. I do not know how one can be a blinder fool than to think that prosperity alone can make him happy. So it was we were all bound together—some with rich souls and some with rich lands, and we were able to swap our good things and get ahead in the world—I did not say get ahead in the dirt, but in the world. The only really poor person is the one who is mean and selfish. The universe itself would not make such a man weil-to-do. Not a little of the education of a lad is to get him out of the world of eating, and give him a chance and an impulse to feed others. One may go through six tiers of schools and when he comes out of the top one with half a dozen diplomas, be ignorant of the finest of all arts, that of helping God to make the world a good one to live in. "'Tis true," said the little mother, as we all came back to her; "yes, it is true that the best part of our feast was that part which we did not eat ourselves." And then you should have seen the great brown eyes of our Jim; yes, and you should have heard the words he spoke to the little mother. "That is it, our mother; yes, that is the best of it, and we boys will not forget it." Then he and our father went away together with arms around each other, for, indeed, that was the way with them. The friendship of those two was most beautiful. They went away, and God walked with them.

The evening came at last. The sun stretched out its arms over the whole world, and, folding us in a sheen of gold, it bade us good-night with a benediction. It is done, said the wind, as it whistled off over the valley, and our heads nodded assent as the father said a short evening prayer. We left then the dear father and the little mother, drawn up before the fireplace, filled with blazing twigs, talking of the good old times half a hundred years before. So it is and so may it ever be; that the past shall always be like a golden sunset, and the future like a crimson dawn.

AMERICAN GAME PRESERVING

By Dwight W. Huntington

Author of "Our Big Game."

Illustrations by Mr. Huntington.

IN England and on the Continent of Europe the larger game animals and the birds have long been scientifically handled on large shooting estates, where, altho the bags are often excessive enough, birds and big game animals are annually left to restock the fields and forests.

In America the whole subject of game preserving is quite new. Within the memory of many men who shoot game preserving was not considered either necessary or desirable. We had so much game that its extermination seemed impossible, and when a bill providing for the protection of certain game birds was under discussion in a State Assembly it was gravely argued that the birds were too numerous to need any protection. Many sportsmen remember favorite shooting grounds where the birds were sufficiently abundant to sustain the argument made against the passage of the bill.

When game preserving became evidently necessary if we were to have any shooting in America we naturally turned to the older countries for our precedents, and one of the first things which seemed important was that we have some of the foreign birds and animals in order that we might closely imitate foreign ways. Many of the States went into the business of raising the bright-plumaged pheasants in State hatcheries and distributed them to clubs and individuals in the same way that game fish had been distributed long before. Ohio, for example, had quite an elaborate hatchery, and for a period of years distributed pheasants to her people in various parts of the State.

Less than two years ago the writer called the attention of American sportsmen to the fact that in running after the new we were neglecting the old, and in this case the old is far better than the new, since the foreign pheasants do not behave well before dogs and are not nearly so desirable as our own partridges and grouse, which, by the way, are called pheasants throughout the West and South, altho they look no more like a pheasant than they do like a crow or an owl.

While not prepared to say that we should not add the Chinese pheasant to our fauna, as England has done quite successfully, I am sure we should first look after our own, the splendid game birds just referred to, and the magnificent wild turkey, now nearly exterminated, which is a true pheasant, indigenous to America alone and far and away the finest pheasant in the world either for the game preserve or for the table. It seemed to the writer most surprising to see States expending large sums in their endeavor to introduce the Chinese pheasant while closing both legislative eyes and ears to the extermination of better birds. Ohio, I am pleased to observe, has recently gone out of the pheasant business, closed its hatchery and has gone to the front with a new law protecting the native game birds, which provides, among other things, for a very short open season, and that no partridges (quail) or doves shall be shot except when they are flying.

In "Our Big Game" I suggested a general rule for game preserving, to wit: that the best animals for a game preserve are those indigenous to the neighbor-

hood. The Virginia deer, or "whitetail," for example, thrive and increase with wonderful rapidity when protected in the Eastern States; but the antelope when brought to the game preserves as far east as Iowa and Illinois have proved a failure. Applying this rule to the birds, it would appear that the wild turkey, the ruffed grouse and the partridges, which were formerly abundant in the Eastern States, are the birds which should do well on the game preserves. When I began the study of practical game preserving in the United States I formed the opinion that many of the clubs did not properly protect or preserve the birds. I learned of excessive bags, night shooting and other vicious practices, including the tossing of game birds from a pigeon trap at some of the clubs, and I believed that there were but few good rules and that these were too often violated. However this may have been at the start, I am satisfied that hundreds of clubs now have very good rules, which are well lived up to by the club members.

At the outset our game preserving consisted of the posting of favorite shooting grounds by individuals and clubs, which usually leased the shooting privileges and owned but little land. Here the birds were "preserved" for a few, who seemed willing, in some cases at least, to exterminate them. At one club the birds were shot in large numbers for the market. At others I heard of occasional sales of game.

My opinion that the clubs are now governed by good rules, which are enforced, has been formed after visiting many of the club preserves in many parts of the country, and after talking with many sportsmen who know what is going on. Our game preserving differs from that of the older countries in that it is usually communal. There are few private parks or shooting estates such as are common in England and on the Continent. The shooting in America is usually owned by clubs which have a membership of from twenty-five to two hundred, or even more in some cases. There is in the United States a decided prejudice against one person owning a vast estate and prohibiting the public from wandering where it used to wander with rod and gun. The same prejudice exists against the club in many cases, but this prejudice is not so strong when subdivided; and where the preserve is owned by a club many men from the neighborhood are given employment as gamekeepers, guides, punters and attendants of one sort and another, and these and their intimates become naturally the friends of the preserve. As the country becomes older and richer there will be more private shooting estates, but the clubs, I believe, will continue to own most of the good shooting, and as the years go by the shares will increase in value wherever the game is properly looked after. The fact that our present methods of game preserving amount to something is easily proven. A suggestion made by the writer a few years ago that the deer might become a nuisance seems to have come true.

A year ago I referred to the fact that the deer were so numerous in one of the game parks that it was found necessary to release large numbers of them to prevent their starving to death. A recent report from Blairstown, N. J., says that "the farmers of Phaquany Township are finding much fault with the deer that were turned out of the big Worthington Park. The deer are wandering at will over the country and seem to have the right of way to the grain and clover fields, as well as the back yards of the farmers."

From Rutland, Vt., comes a telegram to a daily paper saying: "The sport (deer shooting) is reported as not exciting. The deer are very plentiful and are so tame that shooting them is about as exciting as killing hogs."

While fishing last spring at the South Side Sportsman's Club, near Oaksdale, Long Island, not fifty miles from New York, I observed the deer in good numbers and quite as tame as I ever saw them in the Rocky Mountains. It was very evident that were it not for the game preserves the deer on Long Island would have been exterminated long ago. I am reminded of this by the following paragraph from the *Herald* (November 2d, 1904, the opening of the deer shooting):

"Adjoining the public shooting grounds of Suffolk County are the preserves of the South Side Gun Club, where neither the public nor the members themselves are permitted at any

time of the year to shoot or molest the deer. Were it not for this the deer would probably be exterminated in one season, but the timid animals seem to know that protection lies within the borders of the South Side Club grounds, and they immediately seek the woods in the vicinity of the club, which are guarded by armed guards during the open season."

If I remember rightly the club members are permitted to shoot the deer, but do not shoot many, since the members are, for the most part, more devoted to angling.

Be this as it may, we have quite near New York a splendid example of the benefits of game preserving, and the *Herald* records the fact that several hundred hunters are on the ground for the opening day.

Last week, having the preparation of this paper in mind, I visited a number of game preserves where the upland game birds are protected, and one club which deals almost exclusively with the ducks. I had little difficulty in finding the ruffed grouse in small thickets and woods and the partridge in open fields, where I am sure there would be none in the absence of game preserving. At one club, besides the smaller hares, the "cotton tails," we started several large jack rabbits, which went bounding away, just as I have seen them on the great plains of the West. These "jacks," I learned, were doing nicely on a preserve where none had been put down, and they were, no doubt, the overflow from another club preserve in the vicinity. It was a few days before the opening of the shooting season. I did not hear a gun fired or meet a gunner in the fields. Altho the frost was in the air and the leaves had brightened, there was an evident observance of the game laws and club rules. A few years ago at the same season these fields would have been overrun with gunners, eagerly striving to exterminate the last rabbit or squirrel in fields and woods, where the game birds had ceased to live.

At the duck club I drove to the top of a hill with the superintendent and looked down upon a lovely lake, where thousands upon thousands of ducks and many geese were swimming about. Examining these with a glass, I discovered great rafts of red heads, scaups and widgeons, and smaller companies of other choice ducks, all riding the wavelets of the lake in peace and comparative security, since a club rule prohibits the use of boats to disturb or move them. An

A Game Warden

"Over Dogs"

occasional shot (the duck season was open) from an ambush on the shore indicated that an enemy was near, but the ducks and geese well knew that they were safe when feeding out of gun range in the center of the lake. A club rule at this club limits the bag to twenty-five ducks per diem to each gun. The entire number taken by the club members each season would hardly be missed from the vast flocks which come in the autumn to this game preserve.

I asked the superintendent, who has been familiar with the ground for many years, if the ducks showed an increase since the club was formed and the lake preserved. He answered, without hesitation, that there were far more birds now than formerly. A gunner who went out on the same train with me, no doubt expecting to shoot, was told that the shooting was now closed to all except the club members, and he returned on the same train without taking his gun from its case. The boy who drove me over to the club seemed to have some misgivings as to what would happen upon our arrival, altho I assured him I had a letter to the superintendent.

At Currituck, N. C., last year I saw far more ducks and geese than I would have believed possible had I not seen them. There were also many swans, and there can be no doubt that all the wild fowl show an increase at Currituck, where there are many game clubs, more, I believe, than anywhere else in the world.

At the New York Club I was informed that the members—all, of course—observed the new State law against spring shooting. The superintendent, however, like all the natives I have interviewed, was opposed to the law against spring shooting. "All poppycock" was his laconic summing up.

If Professor Elliott would visit the duck clubs to-day I am satisfied he would no longer, when writing of the ducks, feel that he was writing of a "vanishing race." I am satisfied that the date for the extermination of the ducks has been moved a long way off.

In addition to the introduction of foreign fowls I have observed a tendency in America toward foreign methods of pursuit. A few rich young men have already taken part in a *batteau* where a lot of pheasants was moved by beaters in a wood and driven to the line of guns. These no doubt would have served well as models for the London *Punch*. In "Our Feathered Game" I referred to the fact that setters and the pointers

were going out of fashion in England and that the partridges were now more often driven to the guns, as the grouse are in Scotland. Since we have a tendency toward English methods we may some day give up the good old way "over dogs." But at present there are many fine animals at the clubs. The continued interest in the field trials and the large number of entries would indicate that our liking for the shooting dogs does not diminish. It remains to be seen what the shooting clubs and game preserves will do toward extending the English field practices.

My study of the game clubs teaches me that as a general proposition the clubs are organized for good; that in many instances they have gone far ahead of the game laws in providing rules of conduct looking to the preservation of the game, more especially in shortening the open season, limiting the size of the bag and providing that the animals and birds be only taken in fair chase. The upland clubs should all undertake the restoration of the wild turkey. I hope before long to see this noble fowl restored on a great game preserve on Long Island. I am quite sure this can be accomplished even more readily than the restoration of the deer, since the eggs of the wild birds can be brought in and hatched under domestic birds, just as the eggs of the other pheasants are hatched at many game clubs and preserves.

The experiment is well worth trying.

CENTER MORICHES, LONG ISLAND.

The Labor Vote

BY WILLIAM ENGLISH WALLING

[There are few men in this country who have taken or are taking the pains to understand the labor movement as Mr. Walling. We are glad, therefore, to give our readers his analysis of the labor vote in the recent election.—EDITOR.]

THE independent labor vote has established itself as a factor in American politics. In the recent election almost a million ballots were cast by workingmen in their own interest independently of their previous affiliation with either of the two great parties. Half a million workingmen's votes formerly cast for Democrats were this year given to the Republican Congressional candidates. In Massachusetts 50,000 voters, mostly workingmen, scratched their ticket for Douglas, the union label shoe manufacturer, and elected him in the face of a Republican landslide. Governor Peabody, the dearest enemy of the unions, was scratched twice for each single scratch of his rival, and defeated in spite of his party's easy victory in the State. The Socialists cast from ten to twenty per cent. of the labor vote in nearly every industrial section of the North. In Milwaukee Debs' vote exceeded Parker's, and half a dozen Socialists were elected to the Legislature of the State. In the Chicago ward containing the town of Pullman Debs polled a vote greater than Parker's and a Socialist was sent to the Legislature as a result. Tho no Socialists were elected to Congress, Victor Berger, of Milwaukee, missed carrying his district only by a few hundred votes, and there were Congressional districts in all the manufacturing States in which the Socialists cast from ten to twenty per cent. of the poll. Of the total Socialist votes in the country nearly half a million were those of workingmen.

The votes that left scarcely a score of Democratic Congressmen in the North were largely those of workingmen. In great industrial centers like Chicago, Milwaukee, Minneapolis and Detroit the Democrats were removed from the slate, while the few remaining Democrats were either from a few large and poorly organized cities like Boston and New York, or from the agricultural sections. The vote that removed this score of Demo-

cratic Congressmen was the compact, well directed and well organized labor group that John Mitchell says should be the present aim of the labor movement in politics. The half million Socialist votes stand equally clearly for the independence of the labor vote. But it also means that approximately this number of workingmen believe in the permanent political organization of the labor movement and in the permanent paramountcy of the labor question in politics. The first group stands for independent labor politics, the second for an independent labor party.

The independent workingmen who voted for Roosevelt are believers in the two-party system. They are outnumbered several fold by the Republican workingmen who voted for Roosevelt because they believe in the Republican party, but these mugwump labor voters were choosing the lesser of two evils. Four years ago a heavy majority of them voted for Bryan. Nearly all of them would have voted for Hearst. One of their most trusted leaders, a man of national reputation, was heard to remark recently in private conversation that Hearst would have made an ideal candidate from the labor standpoint. Their ideal is that of John Mitchell: "The formation of a solid group united in their political demands and their political aspirations, but not committed to the policy of forming a third party."

"But if it should come to pass that the two great American political parties opposed labor legislation," continues this able spokesman of the movement, "it would be the imperative duty of unionists to form a third party in order to secure some measure of reform."

Mitchell argues that the movement should not be committed immediately to the formation of a third party, realizing to the full the heavy sacrifice involved in such a movement if prematurely undertaken; but he nowhere condemns the principle of a labor party. With Mitchell in his suspended judgment as to the relative merits of independent politics and an independent party and his preference of the former at the present time in national as distinct from local politics stand a majority of the national officers of the unions. Differing from the Socialists not so much in principle as in their judgment of the ripeness of the times, they are for the most part either privately or openly delighted with the rapid and steady increase of the Socialist vote.

It would be untrue to give an impression that the whole labor movement was pleased at the Socialist vote or that it has made up its mind to independent labor politics. The railway unions and those of the protected industries, such as glass, woolens and tin plate, are largely partisan Republicans. The unions of the building trades and teaming interests and other city trades are through both tradition and interest largely Democratic—especially where, as in Boston and New York, they are dominated by the Irish. But these partisan votes put the districts in question so thoroughly in the hands of the machines that they become political nonentities locally, and nationally offset one another until they are powerless to affect the result.

The only other group is that of the strong individualists who, tho independent in politics and occasionally active in labor's behalf, do not believe in actively pushing the cause of labor on the political field. Ten years ago this group included nearly all the most devoted and energetic leaders of the movement. To-day it embraces a majority of the eleven members of the Executive Council of the Federation. But there are now only a handful of unions in the country that do not show pretty clearly either a Democratic, Republican or Socialist trend, or a well defined resolution to make the union a political factor by an independent course.

The principle of the dominating group, the group that advocates independent labor politics without an independent labor party, is that of the boycott. The principle of the most rapidly growing group, the Socialists, is that of the strike. The political boycott has for the first time been adopted on a national scale by the American Federation of Labor. Candidates for Congress have been pledged on three issues—the anti-injunction bill, the eight-hour bill and the referendum. It remains to be seen whether the Federation will defeat those candidates who have been untrue to their pledges in the coming elections. For the first time the Federation has taken action to line up the

whole movement against the Governor of a State. Governor Peabody was fought not only by the unions of Colorado, but by the Federation, that represents two-thirds of the unions of the country. If the movement is successful it may be carried to other planks of the Federation's platform, such as national ownership of railroads and mines.

The political boycott, a call for a vote against some objectionable candidate, has always been practiced locally. When it develops to any extent it either throws the unions into one of the two party machines, with all that such a result implies, or brings about an independent organization. The latter was recently the result in San Francisco and a number of New England towns. The former outcome has been usual in previous elections. This year brought a new development. The federated unions of Philadelphia and Pittsburg declared a boycott on the Republican Party. The State Federation of Colorado likewise called on the workingmen voters of the nation to defeat Roosevelt, who had refused to lift a hand for their assistance in that State. Considering the former resolution the central body of New York City reflected the more usual sentiment of the city federations when it resolved by a vote of two to one that the Democrats were worse than the Republicans and that the duty of labor was to support the Socialist candidate. The political boycott had led to the political strike.

The strike at the ballot box, the systematic and permanent boycott of all politicians who do not put the interests of their working constituents above all other considerations, is the new development of the labor vote. Mitchell says the two parties have played the labor voters off against one another as the employer plays off the non-unionist against the union man. The remedy for that state of affairs is, in the union mind, the union shop, the making of the non-unionists into union men. Similarly, if the labor vote is not to be split, it must be organized, the unionist is apt to argue. The objection is that the organization of the workingmen, which leaves other classes outside its ranks, means the counter organization of the enemies of the unions. This is a heavy risk. Against a third party Mitchell argues that the Socialists and others have obtained only a few tens of thousands of votes and that they have soon disappeared. The Socialists now have some hundreds of thousands of votes and have shown a steady and, on the whole, a normal growth.

The Socialist vote was swelled by the Colorado situation and the defeat of Hearst. But it also had deeper causes—reductions of wages, high cost of living, unemployment, and economic and legal defeats by the courts and the new associations of employers. The disaffected followers of Hearst, it appears from the returns, were more disposed to vote for Roosevelt than Debs.

The Socialists drew a strong support from nearly all the unions. Besides the backing of a number of the city federations, officially or unofficially, they secured a more or less direct help from the State federations in Missouri and Wisconsin and the open assistance of the national German unions. The Western Miners had declared for Debs. Many locals of the coal miners would show a majority of Socialist votes. Such powerful organizations as the Painters, the Carpenters, the Typographical and the Machinists' unions would perhaps show as many Socialist as Republican or Democratic votes. At the Debs meeting in Chicago over 100 local unions are reported to have been represented on the platform. In a canvass of the employees of the Illinois Central Railroad, where the least Socialist votes would be expected, the *Inter-Ocean* reported that twenty per cent. of the Democrats and ten per cent. of the Republicans had decided to vote for Debs.

The talk of the labor leaders gathered together in Chicago on the day after the election on their way to the San Francisco Convention is all of the political future of the labor movement. While it cannot be said that they are tainted with the lust for office on the one hand, or on the other lured by the attraction of the present program of the Socialists, it can be positively asserted that they are nearly all looking forward to new developments in labor politics, and that there are the fewest exceptions to the general exchange of congratulations on the result.

Chicago, November 9th.

Samuel Coleridge-Taylor, the Anglo-African Composer

BY MARY CHURCH TERRELL

Honorary President of the National Association of Colored Women of America

THOSE who attended the musical festival in Leeds, England, a few years ago witnessed a scene the like of which was probably never enacted before since the world began. A new work was to be sung which had been written by a great English composer. The orchestra of 140 players had assembled to a man. Each and every member of the large chorus was present and a vast audience filled every available seat. All eyes were turned toward that portion of the hall in which the composer, who was to conduct his work, would appear. The orchestra and chorus caught a glimpse of him first and arose to its feet with cheers; then the audience spied him, whereupon all of those Englishmen, who are said to be so undemonstrative and cold, made the rafters ring with their wild applause. The man to whom this great homage was paid is a negro—to be more accurate, an Anglo-African—Samuel Coleridge-Taylor by name, born in London in 1875, the son of a full-blooded African from Sierra Leone and an English woman.

At eighteen this colored youth won a scholarship at the Royal College of Music, and before a year had passed he had written a composition for stringed instruments which took a prize. Before he was twenty-five he had written a cantata, by which he achieved fame. Since he left college he has been commissioned to write for all the great musical festivals in England but one, and the critics admit without exception that he is one of the best and most original composers that Great Britain has ever produced.

Mr. Coleridge-Taylor shows his African origin in the brown of his complexion and the crispiness and curl of his hair. He is under rather than above medium stature and is a bit thin. He has the polished manners of a cultured gentleman, affable, tho somewhat reserved; converses well on any subject and is English to the finger tips. His wife is an Englishwoman, whom her distinguished husband met at the Royal College while they were both students there. Mrs. Coleridge-Taylor took a course in vocal music and has a voice of great sweetness, richness and strength. As a concert singer she might easily make a name for herself, if she chose. Before her marriage Mrs. Coleridge-Taylor sang frequently at private musicales, at which her husband accompanied her. The friendship which began in this way ripened into love, which was consummated in marriage five years ago.

It was my privilege and pleasure to visit these artists last summer in their quaint and comfortable home in South Norfolk, a few miles from London, where I saw their two beautiful children, a boy of four, who is a brunette, and a little girl of two, who is a blonde, with blue eyes and flaxen hair. As I heard Mrs. Coleridge-Taylor sing several of the dainty lyrics composed by her husband, who accompanied her, I thought it would be a long time before I should see a more beautiful picture of domestic happiness than this.

Fortunately for Mr. Taylor, he was born in a country in which he is not handicapped on account of his dark face and curly hair. The English may have a slight antipathy to all dark races on general principles, as is asserted by those who are supposed to know, but it must be admitted that they place no obstacle in the way of those representatives of dark races who possess extraordinary gifts. At present Mr. Taylor is professor of harmony and composition in the Crystal Palace, one of the best conservatories in England. As a judge in musical contests he is in great and constant demand. There are few musicians in England who train and conduct more choral societies

than does Mr. Taylor, but requests for his services pour in upon him in such profusion that he is obliged to refuse many on account of lack of time.

Like all musical prodigies this colored man gave evidence of possessing great talent when he was but a small boy. As he himself says, "I was writing music from my earliest childhood, then I left off scribbling and commenced the study of the violin." Under Professor Stanford, in the Royal College, one of the most renowned teachers in England, Mr. Taylor discovered that composition rather than execution was his forte and so he began to write. Whenever Professor Stanford's name is mentioned in his famous pupil's presence the latter's face lights up with enthusiasm and pleasure as he declares that he owes all the success he may ever attain to his great teacher.

The work by which Mr. Coleridge-Taylor first attracted the attention of the

S. COLERIDGE-TAYLOR

musical world was his trilogy entitled "Scenes from Hiawatha," which is founded on Longfellow's poem. It would be difficult to find a composition in which the music more accurately paints the meaning of the words than does this. The Anglo-African musician has caught the spirit of the Anglo-Saxon poet, so

MRS. S. COLERIDGE-TAYLOR

that the tones produced by the orchestra together with the melodies and harmonies rendered by the human voice affect one precisely as do the poet's words. The first part of the trilogy describes Hiawatha's Wedding Feast, the second Minnehaha's Death and the third Hiawatha's Departure. Of the nine numbers which compose the Wedding Feast eight are for the chorus, and there is but one solo, "Onaway, Awake, Beloved," which is written for the tenor and which is as dainty and melodious as a love song can possibly be. The music describing Iagoo's boasting ripples along with irresistible humor and a delightful swing. From the nature of the case the tragedy of the second canto, describing Minnehaha's Death, is in marked contrast with the comedy and joy of the Wedding Feast. In this cantata, which contains more solos than choruses, the numbers describing the terrible sufferings of the red men through the long and dreary winter, the tragic death of Minnehaha as she lay there trembling, freezing, burning, and Hiawatha's prayer for help are so full of pathos and power that few can listen to them unmoved. The music of the last section of the trilogy, in which Hiawatha becomes prophetic, welcomes the pale-faced strangers, tells what effect their coming will have upon his people, delivers his farewell address to Nokomis and the other Indians, and then sails away to the Kingdom of Ponemah, the land of the Hereafter, is exceedingly graphic, elaborate and pathetic. While the music of Hiawatha represents the highest art, it is so natural, simple and

unaffected that it appeals to the hearts of all . The humblest listener who does not know a note is carried away, while the most callous and cynical critic is charmed. Musicians of international reputation declare that the workmanship is perfect and that no living writer knows more about the secrets of the orchestra—that vast repository of mysteries—than does the composer of "Hiawatha." Mr. Coleridge-Taylor seems to express his own thoughts and emotions as well as those of others as easily as did Schubert, who is said to have written some of his immortal songs in beer houses on the backs of bills of fare.

"Hiawatha" was probably sung for the first time in this country by the St. Cecilia of Boston, one of the oldest and best musical organizations in the United States. Since then it has been rendered many times here. Two years ago a chorus of 200 people, named in honor of Mr. Coleridge-Taylor, sang "Hiawatha" in Washington. Altho they were not accompanied by an orchestra, some of the leading white musicians in the city declared that it was the best chorus singing they had ever heard in the National Capital. The musicians of Washington without regard to race or color, therefore, are looking forward to a great treat this month of November, when Mr. Coleridge-Taylor will come from London to direct this well-trained chorus, which will sing in Convention Hall, the largest auditorium in the city, with a seating capacity of nearly 3,000. On this occasion the chorus will be accompanied by the orchestra of the United States Marine Corps under the leadership of Lieut. W. H. Santelmann, the director of the United States Marine Band. The soloists will all be colored and are trained musicians. Mr. Harry Burleigh, the baritone, is a soloist in St. George's Church in New York City. Mr. Freeman, the tenor, is a teacher of music in the public schools of St. Louis, Mo. Mme. Estelle Clough, the soprano, has been taught by some of the best vocal teachers and has sung in the opera "Aïda" several times.

HIAWATHA
COLERIDGE-TAYLOR
From a recent photograph

Last year at the Heresford Festival in England Mr. Taylor's "Atonement," a sacred cantata, was produced for the first time. The spirit of devotion which permeates the work, the reverence with which the Saviour's character is drawn, the strength both in the choral writing and in the orchestration, the dramatic style of the composition and the good taste governing the promotion as a whole have received the highest praise throughout the musical world. In the Gethsemane scene of the "Atonement," as well as by the numbers in Minnehaha's Death, the young composer shows that he can illustrate intensity of feeling with a picturesqueness and a sincerity which are extremely rare. In commenting upon the "Atonement" one of the best musical critics in England declared:

"My own judgment is that the 'Atonement' is not only a remarkable composition, but the most dramatic work ever written by an English musician. It is laid out and wrought with skill. Every technical device is employed in its structure and nearly every orchestral instrument is brought into requisition in adding color to the glowing tonal picture."

In addition to "Hiawatha" and the "Atonement" about fifty productions represent the pedestal on which Mr. Coleridge-Taylor's fame already rests. Among them may be mentioned his "Blind Girl of Castel-Aille," "Meg Blane," the music for "Herod," which was produced at Her Majesty's Theater in London; a "Coronation March," the musical setting of many poems, among them four sonnets written by Mrs. Browning, and several "Albums of Songs," which include a set entitled "African Romances," the words of which are by Paul Laurence Dunbar, America's colored poet. Mr. Taylor says it will be a long

time before he attempts another religious composition. Neither does he intend to write any more music to order for festivals, as the nervous strain and the responsibility are too great. He would like to write a light opera, if an original subject could be found. In fact, the young composer is already engaged upon what he calls light music, according to a promise made a few years ago to some singers and violinists. An American firm, Oliver Ditson & Co., has commissioned Mr. Taylor to write a book of Negro Melodies, the manuscript of which is already in the publisher's hands, so that the book will probably be out of press this fall. Two of the melodies in this book come straight from Africa. Three choral ballads and several other new pieces composed by Mr. Taylor will be sung in the Norwich musical festival in 1905.

The future of this young Anglo-African seems very bright indeed. On the 15th of last August he was 29 years old. He is primarily and essentially a creative genius and he neither imitates any particular school nor borrows.

WASHINGTON, D. C.

Thanksgiving

BY REBECCA HARDING DAVIS

WHAT word have I to say to your readers about Thanksgiving?

Only to suggest that it is wise for us to take hold of the idea of this holiday—or, for that matter, of any other idea—not in the light of romance or feeling, but of plain, common sense. And common sense tells us that we should not dwarf the idea of Thanksgiving into any petty story of the early settlement of New England or the doings of the Pilgrim fathers.

It is very likely that these early emigrants, in order to show their gratitude to God for their first crops, did set aside a day in the fall of the year to be devoted to prayers, sermons and to a big dinner of turkey and pumpkin pies.

But Thanksgiving surely covers a wider space in time than that filled by these worthy folk and their dinner.

In the beginning—in the years of dawn, when the new-born earth first rolled into space—a few lonely men and women wandered in the early light through its forests and untilled plains looking everywhere to find the dumb, awful Thing which had put them there and to tell Him that they were glad He had done it.

That was the first Thanksgiving. And in all the ages since then teeming myriads of men and women have perpetually swarmed in this same earth, and some of them have always tried to find this silent, unknown Power that made them, to thank Him for their life.

Thousands of years ago certain nations moved every autumn out of their cities into the wilderness, and for a season abode in tents, that they might come closer to this invisible God and discover why He had made them and what He meant them to do.

Why should we dwarf this world old idea of a thank-offering and a search made by a man for his Maker into a petty tradition of a few good folk who once landed on Plymouth Rock?

Yet I am afraid that to most of us the anniversary is but a suggestion of this pleasant legend, and we think only of the day as one on which the shops and banks will be shut and the home dinner will probably be better than usual.

It is a fact that the busy American in this twentieth century does not go into the wilderness to face God; he does not, in order to find Him, even go to church, or pray and sing hymns night and morning as his father did. He is apt to smile at these old-time habits and ideas which uplifted the older man. He tells us he is busy with the great work of the world, its motor powers, railways, elections, commerce, manufactures, and what not.

But, after all, is not the idea which uplifts or drags down a man's whole

life as necessary a motor power to him as is steam or electricity? That he should be a saner, decenter fellow as each year goes by is really more important to him than that he should help to run a new line which will save a half hour between New York and Chicago.

He thinks that he is mature, and hence indifferent to the idea of God which occupied the minds of childish men in the first ages.

Is he right? Is his indifference a sign of maturity? Every rational man is eager to understand radium and electricity and all the other natural forces and to use them if he can. Why ignore the one Force which sent them here, and sent him here, and keeps a hold on him while he is here, and will keep that hold on him when some day he has to leave the shop or office and go—he knows not where—never to come back?

The one creative Force of life is as omnipotent and as dumb as in the first day of the world. His pretense of indifference to it is, after all, not manly, as he thinks, but only childish and bumptious. It is the weak vanity which induces an underbred guest to ignore his host.

For, after all, put it as we may to ourselves, we are all of us from birth to death guests at a table which we did not spread. The sun, the earth, love, friends, our very breath are parts of the banquet.

Some of us may find no other use for Thanksgiving Day than an opportunity to gorge on turkey and pumpkin pie. Are not our manners something like that of Toby in the pen, who does not even look up at you while you feed him?

Or, shall we think of the day as a chance to come nearer to our Host, and to find out something of Him who has fed us so long?

PHILADELPHIA, PA.

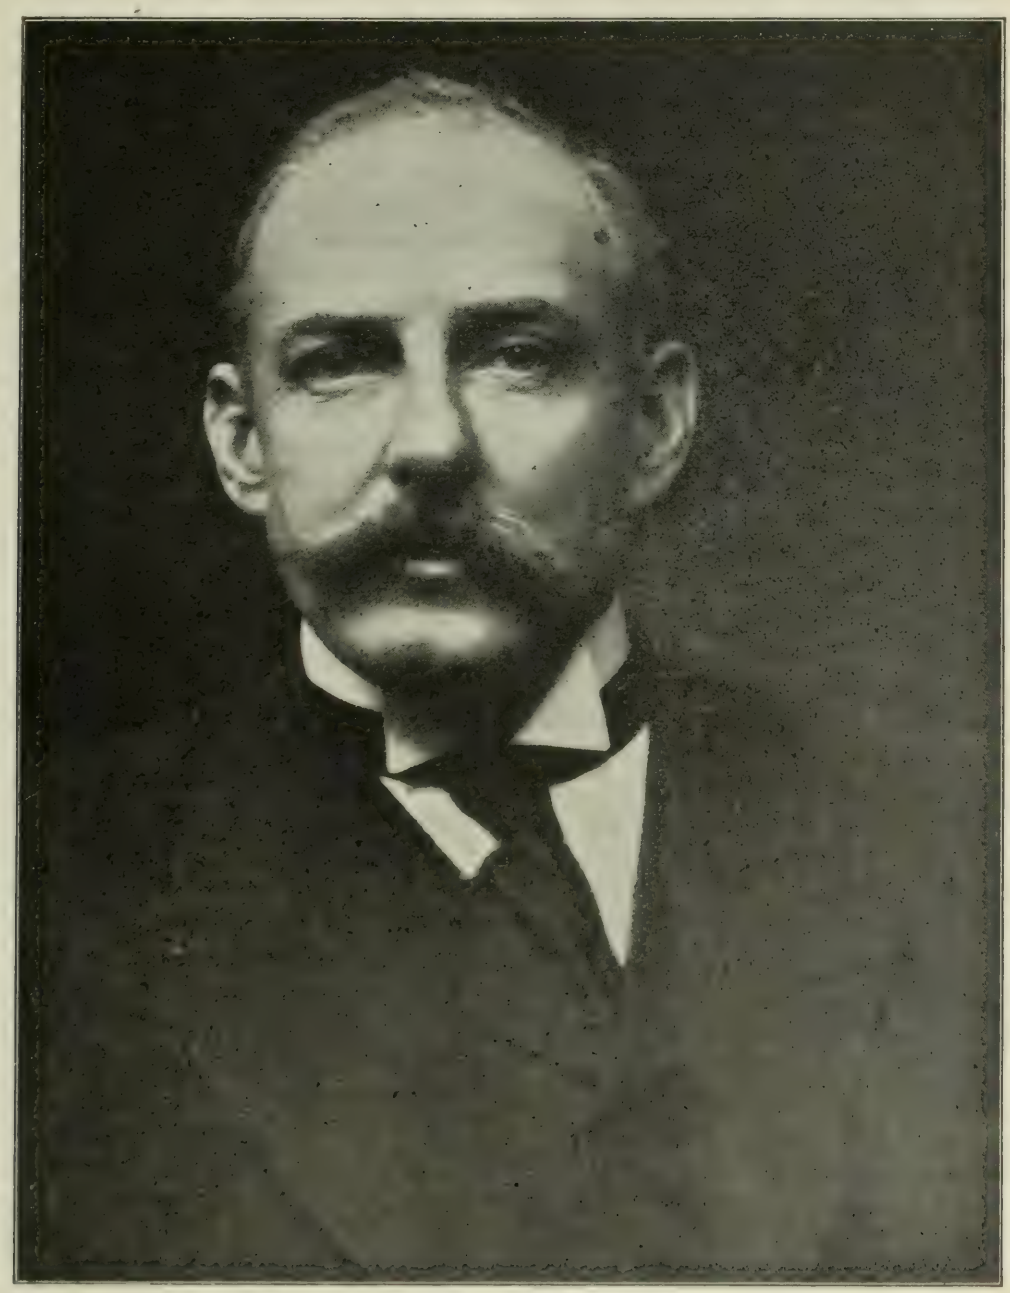
Living Abroad

BY F. MARION CRAWFORD

AUTHOR OF "SARACINESCA," "VIA CRUCIS," ETC.

I HAVE been asked to explain, if possible, why so many American writers and artists look abroad rather than at home for the subjects with which they deal. In the first place, I must say that I doubt whether Americans are really more inclined to look beyond their own country for inspiration than the artists and literary men of other nations. It seems to me that a very large number of the most successful American novelists, both men and women, have especially confined themselves to American subjects. It would be useless for me to quote the names of brother authors in support of this statement; but I think it would be rather difficult to put together any long list of Americans who have principally written upon foreign subjects or who, if they are artists, have done the greater part of their work abroad.

There is, I think, a rather jealous tendency nowadays on the part of the public, and perhaps of critics, to shut up creative Americans at home, as if their good manners were in danger of being corrupted by evil communications with their European fellows. On the whole, therefore, it seems to me that the question put to me is not susceptible of any general answer, inasmuch as it is founded upon mistaken data.



But there are, of course, a few Americans, both artists and writers, who live abroad, think abroad and work abroad. Even as regards these I am inclined to think that more than half of them have reasons for not living at home, which do not directly concern their art at all. There are American men and women who cannot live in the American climate, or, I should say, in any one of the half dozen different climates this country affords. There are others who stay abroad because living is cheaper on the other side, and because, whatever may be hinted to the contrary, novelists

and painters are not generally millionaires.

The case seems to reduce itself in the end within very narrow limits. I very much doubt whether there are as many American literary men permanently established in Europe, as their are American millionaires. It might be interesting to inquire why Mr. W. W. Astor, Mr. Richard Croker and Mr. James Gordon Bennett live in Europe, and whether those gentlemen are drawing upon European civilization for the inspiration necessary to them in order to dispose of their incomes. From this standpoint a much larger question would present itself—namely, why does any man live out of his own country?

Taking your inquiry in the narrower sense, it seems to apply at most to half a dozen persons, of whom I presume that I am one. Whatever answer I am able to give can only be a personal one, not at all applicable to the rest of our very small company.

There is no country in the world where all social, professional and public life tends so entirely to one end as it does in the United States. It is easy to say that this end is money, but as a matter of fact the making of money is only incidental to the accomplishment of the object itself, which is the development in the shortest possible time of a territory which, under the conditions of former centuries, would have required at least

F. MARION CRAWFORD

four hundred years to become populated, unified and civilized. The great and sustained effort which is being constantly made by the present population of the United States to develop the resources of a territory which would support five times their number in comfort, makes itself felt in every phase of American life. It is impossible to escape it; it is impossible to live here without taking part in it; it is impossible to write upon any American subject without being to a great extent guided by it. So far as American writers are concerned, it is only necessary to read the most successful novel of recent times to be convinced that this is a fact.

Now, there are men of letters to whom the history of the past is more interesting than the unwritten chronicles of the future, who feel a keen sympathy for old customs and ancient traditions, and whose taste makes them instinctively prefer old books to new ones; and since talent, great or small, almost invariably follows the line of least resistance, it is easy enough to understand why a man of that sort should be more inclined to write about old countries than new ones. Moreover, when such a man has been born abroad, and by force of circumstances brought up abroad, he is unfit to deal artistically with American material, and had, therefore, much better leave it alone.

If some of us do so, that is not because the material is scanty, but because it is of a kind which we do not know how to use to advantage. I am often asked whether I think that there is a lack of what some people call "distinctive human nature" in the United States. Certainly not. If anything, the types which present themselves in this country are too numerous to be easily dealt with in fiction. New York, especially, is one of the most cosmopolitan places in the world and probably offers a greater variety of material than any other modern city. But the consequence of this is that no one social element here is in itself homogeneous, whence it follows that it is extremely hard to give a true idea of any phase of New York life. There is no body of customs and traditions here, created by a people that lives more or less according to them. Every man is a study in himself, brought into contact and collision with other men all differing from him and from each other. This being the case, it is easy to understand why in so many American novels the interest is made to turn much more upon events than upon the humanity of the personages described. Almost all true romance is based upon the influence of tradition and custom on typical characters—that is, upon characters with which the reader can easily identify himself and on traditions thoroughly familiar to him, or to which the writer skilfully introduces him. This may be the reason why, tho there are many good American novels, very few truly American romances have been written since Hawthorne died. Where everything is continually changing, developing and, let us hope, progressing, there can be no such thing as tradition and there can be but few enduring customs. People are more easily interested in what is happening than in each other; the whole seems more interesting than any of its parts; public excitement outweighs private emotion, and men's happiness depends more often upon the loss or gain of a point in politics or business, than upon the old-fashioned huma naffections.

Whether a man should strive to preserve his own personality in his writings or to divest himself of it, is a question I shall certainly not venture to answer. I will say, however, that no novelist, playwright or historian should attempt to write of men and women who do not naturally appeal to his sympathies or rouse his antagonism, nor of events in which he would not play a part if he could. Any one who neglects this simple precept is sure to write a dull novel, a dull play, or a dull history, which is worse than either.

New York City.

The Nippon Soldier in the Making

BY ADACHI KINNOSUKÉ

"THIRTY years! Just think of it!" said a good American friend of mine the other day commenting on our progress in Manchuria. "It is a splendid showing." It was well meant; it was not meant for a frivolous joke. Nevertheless, it is more delicious as a bit of unconscious humor than a critical compliment on the Nippon soldier. Grave historians there are who find the birth of the Nippon soldier in the purple days of the gods. Most certainly within his veins runs the blood of the ancient fighters of the days of Emperor Jimmu, who ascended the throne of Yamato over twenty-five centuries ago.

The muscles of the Nippon soldier of to-day have not forgotten the rigorous lessons of the elder day samurai. In the clan of Kameyama there was born a baby some twenty-five years ago. (The story of this child is the story of an overwhelming majority of the officers and men under the Sun-flag to-day.) At his birth his mother placed him upon the altar at the shrine of the guardian deity of the castled town of Kameyama, and she delicated him to the gods for the defense of his prince and of his country. From the first day of his existence his life was not his own. It was to be laid down for the honor, preservation and defense of his home land. Early one morning the child was aroused from his sleep. He was four years of age then. It was winter. The snow was thick, stainless and unbroken over the garden of his ancestral home. He had been taught to rise early, and, after his toilet was done, to pay his first respects to his father over the threshold of his room. But this morning it was his father who was before him.

"I have the pleasure," said the father, "of handing you over into the care of your fencing-master this morning. You are becoming a man pretty quickly. You are quite old enough to receive the first lessons in the art of the sword." He was told to dress himself in a thin shirt, such as the boys wear in the practice of fencing, and a short, divided skirt called hakama. His father presented him with the bamboo sword, helmet-like faceguard, thickly padded, gauntlets, etc. Later in life he has never been able to describe in words the exaltation of that moment when he received these first toys of the fighting man of Nippon. His father took him out and made him bow before his fencing-master. Out they went—the fencing-master and the four-year-old pupil—upon the snow. Both of them were bare-footed. They were thinly clad. His master held his bamboo sword in a straight slanting line in front of him. He told his young pupil to strike away freely against the sword, so that his young arms might learn the first lessons in the proper swing of the sword.

"It will not take very long," said the master, kindly, to his shivering pupil, "until you will be quite warm." Under the busy bare-footed tread of the child was the sound of the breaking of frozen snow. A few minutes later the child was puffing and perspiring like a wrestler in summer. That was the beginning of the training of his muscle. In his riper days he was sent to the master of jujitsu. Now, both the fencing-master and his master of jujitsu emphasized one thing—that the muscle must be in training every day of his life, or else it would be wiser for him not to trouble himself to learn either one of these arts. The art of the sword and the art of yielding (which is the meaning of jujitsu) are jealous, exacting masters to serve and the men who have served these masters successfully can afford to smile at the record of Spartan training of body and muscle as upon a holiday game. The Nippon masters of fencing and of the jujitsu care very little for the quantity of muscle; you would never find them exhibiting the bump on their arm with pride. They emphasize the quality of muscle. In jujitsu as well as in fencing the muscle must be so finely trained that the movement thereof is much quicker

than ever a well trained human eye could follow constantly. The art of the jujitsu is still a closed book to the West. When a master of jujitsu comes and tells you that his art is to beat his opponent, not by his own strength but by the strength of his opponent, you of the West are somewhat puzzled. You ask how that could be. It is not so difficult, after all, however. Suppose this case: If you were fighting a man, and if your opponent by the light in his eye, by the flash of his gestures, by the twist of his body, were to give you the impression that he is going to hit you on your eyes, upon our stomach, and upon your side at one and the same time, you would naturally and instinctively try to dodge these three simultaneous blows to the best of your ability. If you try to dodge three blows which you think are coming to you at one and the same time it will result either in your twisting yourself into a knot or in throwing equilibrium to the winds. All this you do not by the strength of your opponent, but by the power that is within your own body. I cite this one instance that you might not scoff at a few things that the masters of jujitsu might say to you, and which seem to you rank heresy. Now, in order to train your muscles to such a fine point extraordinary care and extraordinary measures are to be taken in fostering your muscle and keeping it in trim, and your fencing and jujitsu masters require you to perserve your muscles as you would the razor-like edge of your sword.

And the stomach is the first, naturally, that would feel the chastening effect of the athletic training of the Nippon soldier. Always they have been fed upon simple food, rice and the products of the fields, fishes and not much meat. One day the father of my friend whose history I am trying to tell came to him, and said: "What would you do if your castle were besieged, and you had no food to eat and no water to drink?" The child's lips were too young to frame a ready answer to this question of his father. His father went on: "Days of starvation might come to the fighting men of Nippon any day, and the time to prepare for the days of want is in the days of plenty and of peace." The child found that this was not an idle threat. His rations were suddenly cut down. For weeks he was allowed a few bowls of rice and a few pieces of pickled daikon (a kind of radish). Moreover, in the days of this made-to-order starvation-siege his father had him climb a mountain, chop wood, roll the logs, and subjected him to all manner of physical exertion. "The days of siege are not likely to be idle," said his father by way of explanation. One day, when he was about fifteen years of age, he was sent out upon a long journey. His servant accompanied him, and he was allowed to have two bowls of rice and a dried piece of fish and two cups of water per day to sustain himself. At one time he was sent to Mount Atago, which is a historic mountain standing between the castled town of Kameyama and the ancient flower-capital of Kyoto. He was told to spend fifteen days in the mountain and sustain himself on what he could find with his own hands. These are some of the reasons why the Nippon soldier was able to cover over fifteen miles of the Korean road per day. This training also enabled him to deliver three general frontal attacks against the semi-permanent fortifications at Liaoyang. It also made him the master of Manchurian geography and distances on the ridiculously scanty rations of rice, dried fish and a few stray pickled plums.

Not many days ago to a quiet home in a village in the Province of Aichi came a letter from Kamematsu Kokichi. He is with the Second Army in Manchuria, an army surgeon. This is a paragraph from his letter to his family: "Since our landing we have yet to know the luxury of a roof above our heads. We have been raised on the scale of civilization, and our standard of life is becoming much loftier than heretofore. Frames of wood and walls of mud and stone are too humble to shelter us. We have appropriated the blue skies for our roof. We have learned the refreshing comforts of the dewy sod upon which we sleep night after night. In those rare moments in which we indulge ourselves in a stolen nap we dream of our home and home folks upon the pillow of a rock or on the root of a tree. We are not permitted to finish all of our dreams; the sudden reports of guns and rifle fire are sometimes

without ceremony. The moon that we see nowadays never fails in lighting up a battlefield. Even a high-toned poet cannot ask for anything more. Tame wells we have forsaken, and we refresh ourselves at a mountain spring or at the brink of a stream, and drink heaven's wine from the same ware as our horses do. Our stomachs seem to be surprised when they are lucky enough to have a chance bowl of rice, a pickled plum or two and a piece of dried sardine."

Physical Examination of Japanese Recruits. From a Japanese Print

Much more essential, however, than the training of the muscle and of the stomach is the education of the nerve and of the soul. As if it were an incident of yesterday, I recall how we used to go to an old, deserted house which stood on the outskirts of the castled town of Kameyama. There was a genial gathering of small boys, ranging from seven to sixteen years of age. An old man presided over the gathering. Beyond all cavil he was the most wonderful story-teller I have ever seen; especially in his fund of ghost stories was he rich beyond expression. I fancy your Edgar Allan Poe would turn green with envy had he had the fortune of making his acquaintance with one of the ten thousand ghost stories which used to ooze out, so to speak, from the aged lips of this wonderful story-teller of ours. The dilapidated house in question stood with its back against a thick bamboo grove, which was about three hundred yards wide. The bamboo grove stretched away in the direction of a moss-covered graveyard of an ancient temple of the castled town. On the night of our gathering the old man counted the number of his boy guests. He took out as many candles and went into the graveyard. There he lit them and hid them in all sorts of imaginable and unimaginable corners of the silent city so thickly peopled with tombstones. Then this old man used to tell us his famous ghost stories, the more horrible it is difficult for me to conceive. When the midnight hour came

Transports in Korea Traveling Through the Mud in the Rain. From a Japanese Drawing

we drew lots, and the boy who drew out No. 1 went through the three-hundred-yard stretch of the thick bamboo grove in the thick darkness of midnight into the graveyard to find one of the candles and bring it back to the old man. Now, the patch that led through the bamboo grove to the graveyard was remarkable enough to be in the British Museum for its crookedness. At some portions we had to crawl along on all fours. The nights selected for the gathering were usually stormy. Many a night do I remember having waded through the mud of the bamboo forest on all fours that I might pass into the graveyard. Rain sometimes managed to blow out the candles. Then there was so much the more entertainment waiting for the young boys. We went into the graveyard by turns according to the number of the lots we drew. The boys who were unfortunate enough to draw the first chances did not have very much fun in finding the concealed candles, because for them there were at least thirty or forty to choose from, but the happy, fortunate and ghost-chosen fellow who happened to go after the last candle in the graveyard often found the first pale rays of a new-born day breaking upon his wanderings through the graveyard.

I have heard my elders say in those more remarkable and virile days than ours those white-haired men of my boyhood went through a training that we, the civilized and effeminate children of the latter days, knew not of. When they were not quite ten years of age they had to visit in the still hours of night the decapitated heads of criminals exposed upon the highway for the ethical education of the careless passers-by, and they were told to leave a mark upon the scaffold to show that they were there and were not in a great hurry to escape from the grim sight at the dead hours of night. As if a thousand and one different plans which were so carefully worked out for the edification and entertainment of the nervous system of the youthful generation were not quite enough, the older

boys were always ready to do what they could to perfect this laudable system of education. They are forever playing tricks, the least offensive of which would be enough to land them behind a solid stone wall of a jail in a civilized land. There was a young boy of my acquaintance. Through some means he managed to acquire a reputation of being somewhat girlish. His good looks were more responsible for it than anything else. At any rate, his friends took it into their heads that they had to do a great deal to build up the iron stability of this boy's nervous system. He attended a gathering, and the night was rainy. On his way home the young boy in question had to pass beside a castle moat under the thick roofings of old weeping willows. That was a portion of the castle moat which had become historic because of so many murders committed and duels fought there. The old sayings of the clan had it that it was a favorite haunt of ghosts and badgers. (Now, the badger of our folklore is a being of many uncanny powers. From his cradle every child of Nippon is told that the badger is sometimes

The Meeting of Commander Hirose and Admiral Makaroff Under Water. Hirose was the Japanese hero of the bottling up of Makaroff at Port Arthur. Makaroff was blown up. From a Japanese cartoon.

endowed with all the powers of a demon, that he transforms himself into any shape whatever that he pleases, from the shape of a woman of ghostly beauty to a dragon big enough to swallow the earth. Often the badger is said to play ten thousand different tricks on the cowardly, but it has always been told us that no badger would be able to play his tricks on a man who is brave and strong in will. It is always a weakling who becomes a fool to the badger's tricks.) Now, on that stormy night this gentle boy was making his lonely way home. It was somewhat past midnight. Before him all was black. As he walked on he could hear the sound of the rain whipping the thick leaves of the weeping willows by the castle moat. All of a sudden he saw something that made him pause. Not far from where he stood he saw the blue flame curling up from the ground toward a willow branch. For all the world it was the ghost fire of ten thousand stories told him. He looked at it, motionless. Then, suddenly out of the drooping branches of the willow came a white apparition that looked to him neither like a demon nor a ghost. It looked like a white drifting cloud, or a sheet of white cloth thrown over the shape of a man, as indeed it was! The boy dropped his umbrella. In an instant his sword was out. With wild eyes guided by the ghost-fire the boy attacked the apparition with his sword. That his older playmate escaped with a few slight wounds was because the older boy happened to be such a superb swordsman. But this boy who appealed to his sword so hastily was forever disgraced. Under such circumstances it was expected of every child that he should certainly make a thorough investigation with cool nerve and steady eyes. Nothing was considered so disgraceful to the samurai as the hasty appeal to the sword. Not only was the boy disgraced, but he brought disgrace upon his family.

When he was about thirteen the young boy whose story I have started to tell was sent upon a journey. His father told him to leave Kameyama with the fall of the sun that night. He was expected to go to the village on the other side of the mountain ranges that screened in the castled town of Kameyama. He was to go over to Sonobe, and travel all night. Now, the road that leads out from the castled town of Kameyama and toward Sonobe is a ticklish road. It meanders through dense forests, and at a number of places loses itself along the high cliffs, where a misstep would mean a fall of many thousand feet into the chasms below. It is over ten miles in length. Even for a grown-up man it is no easy task to make a trip without a light. This boy was commanded by his father to make this trip and pay his respects to a relative of his in the town of Sonobe, stay all day with him, and come back through the night over the mountain-pass to his home. That was the first of many hundred trips he was required to take, because this nightly trip through the lightless mountain-pass was considered an excellent means to build up his nerve.

In his riper years, when ghost stories and trips over the mountains were laid aside as too childish for him, he was introduced to the School of Philosophy called Yomai. Now, Yomai is the name of a Chinese philosopher. His philosophy emphasizes, above everything else, what he called the dominant weight of the soul. It is the poise of the nerve which cannot be shaken by any such trifling thing as life or death.

At the beginning of this war Admiral Togo is reported to have said: "I am no scholar. From my early youth, however, my masters have compelled me to examine and follow carefully the teachings of the school of Yomai. It seems to me a soldier can derive a great deal of benefit from the school of Yomai." Wonderful things are said of the doings of the disciples of Yomai. In the flower days of the samurai ideal the disciples of Yomai sat around the loaded cannon, which was made to revolve on a pivot and so arranged that the charge might be discharged at any time, and in whatever direction its muzzle happened to be pointing, and these disciples of Yomai are said to have drunk their sake calmly, chatted pleasantly over trivial affairs, as if they were completely innocent of a sudden introduction into the Nirvana with which the cannon-ball might present to him. The one great aim toward which the disciples of Yomai forever toil is to train themselves to such an ex-

tent that nothing would disturb the calm presence of mind and steadiness of nerve under circumstances however trying.

The Nippon soldier of to-day enjoys all the flower and fruition of these elder day trainings of the samurai. Another thing that accounts for the excellence of the Nippon soldiers of to-day is their philosophical attitude toward death. In the Far East we say that life is something that is quite supersensual. You have never seen life, never smelt, heard, touched it. What we in our careless way of speaking of things call "life" is nothing but one expression of the eternal entity, the noumena. When, therefore, you say that you have killed a man or plucked a flower, you have only destroyed one expression of the eternal entity, which you have never touched—with which it is beyond your power to meddle. Now, death to the Nippon soldier is a form of sleep (I have misread your Bible if the biblical interpretation of death is not identical with this Far Eastern conception).

"If I die this time," said Commander Hirose, who was blown to pieces by a Russian shell in his effort to bottle up Port Arthur, "I shall come back to life nine times over until I see this work of mine completed."

To have so glorious an opportunity as dying for the national existence of his country, for the glory of his flag, is, indeed, in the eyes of the Nippon soldier an extreme of luxury. It is unreasonable, therefore, for you to be amazed at the sight of the Nippon soldier hurling himself against the Russian fortifications at Liaoyang and against the quick firers at the Nanshan.

Ambition, they say, is the last love of man. If you could read a man's dreams you could prophesy with comfort and accuracy what make of man he is. As with the man, so also with the nation. The striking difference between the genius of Western civilization and our Eastern civilization lies in this simple fact—in the West it is the individual who is apotheosized; with us, in the Far East, it is the whole, the country, which we place in our shrine. For the country, the life of a man, his family, his welfare are as nothing. The other day a man presented himself at the War Office.

"I have the honor," he said, "of belonging to the First Reserve. I came in answer to the call." Then the man pulled out a small package from his breast pocket and he laid it upon the table in front of the officers. The Reservist bowed reverently, and said, "This is the sum that we have saved, my wife and I. We would be very happy if we were permitted to offer it to the war fund of the country. I have been married five years, and this small amount is all that we have been able to save." Then he added by way of apology, "We have three children and we have not been able to make very much money."

If he were in this civilized America he would be lucky if he escaped a lunatic asylum—this man with a wife and three children who gives every cent of his savings and puts it to the war fund, and offers himself to boot! In our heathen Nippon, however, such cases as this are entirely too common to be mentioned separately.

NEW YORK CITY.

A Song of Praise

BY ELIZABETH ROBERTS MACDONALD

For the gladness life has brought,
For the beauties passing thought,
For the song, the dream, the quest,
Dawn's clear impulse, evening's rest;

For the lure of Spring that wakes
When the frost's dark barrier breaks,
For the magic voice that calls
Over Summer's viewless walls;

For the memories deeply dear
Passing time but leaves more clear,
For the friendship strong and fine,
For the faith that proves us thine;—

Lord of gladness, hope and dream,
Shadowing cloud and wakening gleam,
Thee we praise, Who dost renew
Love's white fire the long years through!

FREDERICTON, N. B., CANADA.

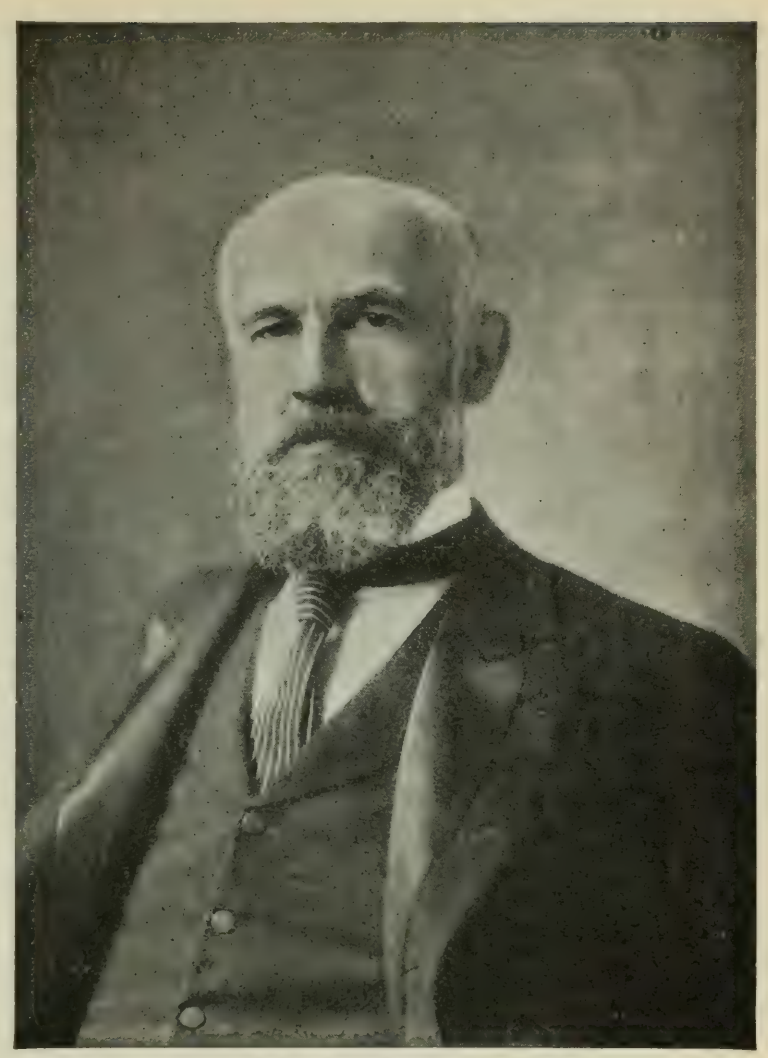
Hall's "Adolescence"

BY EDWIN E. SLOSSON

"Child-study, which began so crudely and has long since silenced many, tho not yet all, of the objections raised against it, has already demonstrated its practical value for education, and is acquiring a place of its own in the literature of other departments, especially pathology, philology and criminology, and is beginning to prove itself a key of unsuspected value in unlocking problems connected with the prehistoric development of the race, supplementing studies of the adult mind somewhat as embryology does anatomy and histology. It has not only made new connections between our work and the above departments, but is steadily developing a logic which, tho as yet unwritten, is destined in my own fond belief to become an instrument of great value in reinterpreting the bionomic law of recapitulation, shedding new light upon early developmental stages, and thus giving psychology a genetic perspective which it has so sadly lacked in the past."

PRESIDENT G. STANLEY HALL in his address at the International Congress of Arts and Sciences at St. Louis, summed up in the words above quoted his opinion of the significance and importance of that branch of mental science to which he has devoted so much of his life. The demonstration of the thesis thus stated is given in his two large volumes on *Adolescence,* recently published.*

President Hall reminds one somewhat of the man who, in trying to sell his farm, laid most stress upon the remarkable convenience of its situation. You could start from the farm, he said, and go to any part of the whole wide world. President Hall starts from adolescence and goes to the remotest bounds of more sciences than he mentions in his title-page. He states that this is his first book, and, if he had not expressly notified us to the contrary, we should have thought that he expected it to be his last, for it is hard to discover what subject he has not touched upon in these 1,400 pages. From the epistomology of Kant to the government of the Filipinos, from dime novels to Plato's Symposium, from college fraternities to the character of Jehovah, from Parsifal to prize fighting, from the chemistry of the blood to the mind of Mary McLane, he discusses everything, and to every topic he discusses he contributes new thoughts, or, at least, new words.



In fact, President Hall is as fond of original and startling phraseology as he is of original and startling theories. On almost every page his polysyllabic propensity is prepotent. Such an exuberance of Latinity and Hellenism has not been seen since the days of Euphues. But his style is not over-ornamented, but over-condensed. His neologisms, tho not always necessary, are never to be considered as meaningless, altho the ordinary reader, even with the most modern dictionary, will not always be able to discover their meaning. President Hall, like a prose Browning, tries to put too much thought into one sentence. The reader who has acquired the habit, really necessary nowadays, of skipping two sentences out of every three, will find his style confusing and inconsequential. In fact, no one with a less agile mind than the author's will be able in all places to follow his thought. The difficulty of connecting the data given with the conclusions he derives from them leads one to suspect that President Hall has some subliminal system of rapid transit not yet open to the public by which he passes from the one to the other.

But it is unfair to complain of missing links in a book so remarkable for the fullness of its references. In these days of dogmatic speculation and intellectual ballooning of all kinds it is a satisfaction to find a work based upon such an immense accumulation of material. As a mere bibliography of the subject, apart from the value of its original contributions to knowledge, *Adolescence* has reason enough for existence.

President Hall has for many years concentrated the research work of Clark University upon the problems of child

* ADOLESCENCE: *Its Psychology, and Its Relations to Physiology, Anthropology, Sociology, Sex, Crime, Religion and Education. By G. Stanley Hall, President of Clark University.* New York: D. Appleton & Company. $7.50.

study and adolescence, and, besides the group of trained and energetic students under his direct guidance, he has had the assistance of hundreds of teachers in the collection of the immense mass of observational and experimental statistics which he has published in his journals. All this and much more is here utilized. It gives a delightful feeling of confidence to read a book wherein a footnote proves that a casual phrase is buttressed by some 1,728 experimental tests. In the past it has been mere fun to write on such subjects as religion, education and the psychology of savages because all that was needed was a ready inventiveness and a flowing pen; but now, when psychology is coming to have as many verified facts as botany or chemistry, one cannot write long without running up against some of them. Ignorance of scientific laws excuses no one.

G. STANLEY HALL

Experimental psychology has lived through its period of popular ridicule and scholastic obloquy. It was once thought pertinent to inquire if it was necessary to send out a questionnaire to a thousand persons to find out that one is more apt to fall in love between the ages of 16 and 60 than beyond the limits of this period. But all beginnings of quantitative work in a new science are liable to the same objection of obviousness and triviality. Now that we can see the sketch of the complete structure, it is apparent that not so much work was wasted in digging its foundations as was thought. So far from being obvious, some of the results of the investigations have been incredibly startling in their reversal of preconceived and time-honored notions. No one can now say that the new psychology is concerned only with petty physiology and micrometric observations and that it has no large lessons for life and gives birth to no inspiring theories.

The collection and study of religious experiences and conversions, once thought puerile by some and blasphemous by others, has resulted in bringing out many interesting facts which President Hall marshals effectively to show the rationality of certain ecclesiastical usages and the irrationality of others. Dreams and fears, legends and fairy tales, love songs and games, all are utilized to throw light, sometimes very flickering and fantastic, on the childhood of the individual and of the race. In this book much more crude material is collected than is critically examined and digested, but this is a good fault.

No teacher, preacher or parent can fail to derive information and stimulation of practical value to him from a study of this work. He will have more understanding of, sympathy for, and patience with, the boys and girls under his control. He will know something more of the reasons for their irrationalities; for their moods and whims, their mysterious

periods of laziness and exuberance; their strange irritability and caprices; their seasons of dullness and disobedience; their alternations of braggadocio and diffidence, of tears and giggles, alike inappropriate and disconcerting to adults. The discovery of the psychological plateau, or period of no apparent progress, which occurs in almost all the curves of growth and education, is alone worth all the time and money which has been expended on experimental psychology, for upon it many young lives have been wrecked. On account of the sensible advice given in the chapter on the dangers of the period of puberty and the way quacks take advantage of them, it would be well to put this book on the open shelves of the college library where every young man can consult it freely. The analysis of self-consciousness throws much light on the shocking numerous cases of the suicide of students on account of low grades in examination or the jests of schoolmates.

The proposition which the new psychology started out, not many years ago, to prove, that educational theory and practice must be founded on a study of the child as architecture is on a study of the strength of materials, is now generally accepted, altho too little adopted. There is more novelty in its present, prospective and purported contributions of the science to religion, sociology, government, history and metaphysics. Professor James's "Varieties of Religious Experience," with its suggestions of polytheism and mystical soul connections, was startling enough, but President Hall has a still more revolutionary philosophy of the unconscious. So far from teaching a psychology without a soul he has much to say about soul, tho little about souls, and he is more interested in its past than its future.

"The salvation motive that in our day often becomes almost hysterical is profoundly anti-scientific, and the immortality prospectors that neglect the past are enemies of real knowledge or sound investigation in this field. The true researcher must be as indifferent to his own salvability as pure science is to cross utility or profit-making, or as the absolute moralist is to pleasure or pain, here or hereafter."

He even goes so far as to consider soul as having been more potent in the past than it is in the present, and, in his St. Louis address, to compare it to the heat which once made the world incandescent but is now slowly dissipating.

"Much if not most soul is lost. With every extinct species of animal life a soul type also vanishes irrecoverably from the world, and as the dead far outnumber living varieties, the great body of soul is irrecoverable to psychologists, and many faculties, traits and genetic stages are gone forever."

Nor can mind, in his opinion, be regarded as any more permanent or apical. He goes beyond Nietzsche in his anticipation of an *Uebermensch* to which we shall be a jest and a sore shame.

"It is well not entirely to forget that in the great cosmic order revealed to the evolutionist, the mind, which modern analysts so carefully dissect, may be merely a developmental stage of that of a higher type as much above us as we are above the dwellers in Lemuria; that some time even it may be studied as a link between the higher and the lower, and that it may itself some day become a missing one."

It would not be fair to regard these speculative passages as representative of a book which contains so much that is practical and is based so largely on scientific data. They are introduced for the purpose of emphasizing the plea for the study of phylogenetic psychology, which President Hall holds to be fundamental to the study of the human mind.

The parallelism between the life of the race and the life of the individual to which President Hall devotes a large part of his work and upon which he bases chiefly his theories of secular and religious education, has in it much of truth and value, but it is questionable whether it will stand the strain of all that he and his followers put upon it. "Back to Nature" is certainly better as a philosophical watchword than "back to Kant," but if by Nature we mean merely our own past, as President Hall seems often to mean, it involves a conception of a noble and natural savage hardly to be distinguished from the Rousseauism that he expressly condemns.

The recapitulation theory, that each child in his growth passes in his mental and spiritual life through the successive stages of barbarism and civilization by

which the race rose to its present position, however true it may be and useful in the correllation of phenomena, is liable to lead, and, in my opinion, has already led, to dangerous educational practices.

The same perversion was made of the laboratory method of instruction when that was first introduced. Every child his own Newton was the theory. The pupil was expected to pass by his own initiative through the same stages as the historical development of the science he was studying. Teachers became hinderers, and concealed, instead of revealing. It was necessary that these extravagances should be checked, and President Hall's recommendation that in the teaching of children dogmatic and repetitional methods must be used, is timely and wholesome.

But now the recapitulation theory is the fad of enterprising and enthusiastic educators. We see schools conducted for the cultivation of barbarism in boys, wherein each room is devoted to a historic or prehistoric culture stage, beginning with a troglodyte kindergarten in the basement and reaching a state approximating civilization on the top floor. For a precocious child to attempt to skip any of these grades and to pass at a bound from, say, the fall of the Roman Empire to the Renaissance, is regarded as altogether improper and ultimately injurious to his mental health. Each one of the child's "archeopsychisms" has to be developed in turn to produce a normal man. To such practices many passages in President Hall's book give altogether too much sanction.

It is a common fallacy of philologists to think that they have settled the meaning of a word when they have traced its derivation. It seems to me that the genetic psychologists similarly assume that the natural is the desirable. It remains to be seen whether the new theory of the total rectitude of the child works out any better than the old Calvinistic doctrine of the total depravity of the child.

The psychology and institutions of savages should be studied; but with the opposite motive, to eliminate, not to imitate them. The danger is that having discovered in our souls the passions of savagery and the feelings of feudalism, we should exaggerate their practical importance to us now and regard them not as injurious survivals to be extirpated, by the surgeon's knife if necessary, but as normal and essential and so endeavor to perpetuate them. Is it desirable to include in gymnastic exercises movements to develop the atrophied muscles by which our prehistoric ancestors and modern savages can wiggle their ears? Must the youth of each generation follow the same circuitous paths and trip over the same stumbling blocks as their ancestors because in adolescence they show a tendency to do so? Granting with President Hall that "more or less erethic diathesis is necessary and inevitable" in youth, it is not to be assumed that fighting and painting the town red are to be tolerated as expressions of it. Nor is it clear that in the vicarious working out of one's passions by reading of the things that he wants to do but dare not, is a beneficial practice.

There is truth in Plato's saying that boys are wild beasts, but this bestial stage can be much shortened. Every child is a quadruped for a time, but we should get him on his feet as soon as possible, even at the risk of making him bowlegged. When our young people try to wander into the by-paths and blind alleys where our ancestors lost themselves for centuries it is the duty of the teacher to hurry them by as rapidly and compassionately as possible. Is it so certain that feudalism, for example, was a normal rather than an accidental stage in human evolution, that we must immerse every child for a time in the noxious atmosphere of the Dark Ages? Is the fact that certain savage tribes put their boys and girls in separate shacks at puberty an argument against coeducation? Is the Protestant missionary method of establishing a civilized home in a foreign land inferior to the Catholic method of celibate preachers? Is it not possible that the "adolescent races" under our control may with advantage omit a few hundred years of the slow, painful and aimless march of our own history? Are the Japanese any the worse for their jump over the centuries?

Adolescence is printed with wide margins. There is plenty of room for interrogation points and annotations.

NEW YORK CITY.

Literature

ROBERT HERRICK

The Common Lot

THIS novel* has excited unusual attention because it is a prophecy of the coming order dramatized in popular forms, and the witness of the spirit in us confirms it. The author has not resorted to the sensational manner or vehement temper displayed by the average novelist who bases his story upon the problems and evils of the day, but he writes it all out with the sobriety and assurance of a man who has actually grasped the situation from a social and ethical point of view. Now, the truth when we find it never looks new or highly colored. But we recognize it by the tone of time it shows, by its intimate kinship to something unspeakable that has always been in us. And so, in this story (which is, by the way, very interesting considered just as a story) it is the old, old Scriptures worked out, diagramed for us according to the conditions of this age. Mr. Herrick's contention is that the desire for social and financial prestige in this country is corrupting the morals of individuals and lowering the standard of ethics and excellence in every profession and every industry. The struggle incited by such ambitions does not produce better citizens, but it results in a reversion to type in men and women terribly equipped with wealth and position to gratify savage instincts. Now this is where the average novelist ends the tale with a menacing crack o' doom scene, but Herrick goes on to propose a solution. He brings his hero backward out of the fury of the contest, reduces him in the scale of outward things to the level of the common lot. And one feels that this is not the climax to an arbitrarily conceived romance, but is the solution of the conditions which exist in this country so far as the man in front can solve it for the man behind. It is the scripture of life applied and tested, it is the explanation of a brotherhood, founded not upon sentiment, but righteousness and intelligence. Out of the confusion of fierce competition, envy, cruelty, the eternal order is evolved. And we know that it is the eternal order, by the relaxation from the feverish strain, by the fact that the hero has time and means to live honestly. He is no longer in a position to be tempted above what he is able to bear, and he has the free mind to follow the best inspirations suggested by his art.

There remains one point at issue which Mr. Herrick's story fails to eliminate. How will a man and woman belonging by birth, education and association to a circle of society where most savage instincts have the grace of refinement, where the peace of life depends upon courtesy and manners—how will such a couple affiliate readily and happily with the grosser forms of life in a flimsy Flat? And how will the Flat receive them? It is not enough that those cruelly advanced in the scale of things at the expense of others should return to share the burden of the common lot; the harder ethical problem is the advancing of the ranks to a higher plane of culture, toleration and intelligence. People who are antipathetic in temperament and different in quality do not live well together socially, no mat-

* THE COMMON LOT. *By Robert Herrick.* New York: The Macmillan Co. $1.50.

ter how much of ethics there is back of the arrangement.

Another thing, the hero returns to share the common lot for the sake of his "dear, dear wife." This is the one puerile touch in the book, a cheap appeal to popular sentimentality. No man does right *rightly* for his dear wife's sake. It is a business which prospers properly only when it is accomplished by a person able to do right for the sake of common honor and righteousness. It is broader than affection. It is his contribution to the sum total of godliness in a world where godliness comes higher than for any mere person's "sake."

Dante's "De Monarchia"

In Miss Henry's introduction to this translation, which, by the way, is everything that a translation should be—clear, scholarly, close and responsive to the letter and spirit of the original—the value of the *De Monarchia* as a message, not for one century only, but for all the centuries, is strongly insisted on. It embodies Dante's political ideals, and altho his arguments are often based on assumptions that are as puerile as they are unhistorical, and altho his civil polity was utterly impracticable, many are inclined to see in some of these ideals a foreshadowing of the system of government in the United States and even of the recent Peace Congress at The Hague. The most important part of the treatise is the third book, which deals with the relation between the spiritual and temporal powers, and in which it is demonstrated that the Empire does not depend on the Papacy, but directly on God. Dante states fairly all the historical and scholastic arguments in favor of the opposite theory—arguments generally as childish and fantastic as his own—and shows that altho the moon (the symbol of the Empire) receives its light from the sun (the symbol of the Papacy), it was created directly by God. The Church cannot confer a power which she does not possess. Her kingdom is not of this world, and she has no authority except in spirituals. The authority of the Pope and that of the Emperor were intended to be complements of each other, the one assuring man's happiness in this world by the exercise of the human virtues, the other guiding man to eternal happiness by the exercise of the theological virtues. Yet tho the imperial authority is derived directly from God, the Emperor should be subject in some degree to the Roman Pontiff,

> "for felicity that is mortal is ordered in a measure after felicity that is immortal. Wherefore let Cæsar honor Peter as a first-born son should honor his father, so that, refulgent with the light of paternal grace, he may illumine with greater radiance the earthly sphere over which he has been set by him who alone is Ruler of all things spiritual and temporal."

Notwithstanding the strangeness and heaviness of the form, the three fundamental propositions are developed with great vigor, and, occasionally, with great eloquence. But apart from this, as an example of how even men of genius reasoned in medieval times, the work is full of interest. Miss Henry discusses at length the date of the *De Monarchia,* a very important question in connection with the career and opinions of the great poet, and concludes that it was written after his exile from Florence. There is no historical evidence one way or the other. Looking at the matter from a purely subjective point of view, however, we are inclined to place it among his early works, to regard it as belonging to the period of the *Vita Nuova.* These are the only two of his books in which he makes no allusion to his exile and his enemies. It seems hardly possible that, when expounding his great political theory and defending the rights of the Empire against the usurpations of the Holy See, he could have refrained from hurling his maledictions at those who had wronged him. To be so entirely impersonal was contrary to his nature. The treatise is copiously annotated, and the sources of Dante's theories, as well as his indebtedness to Aristotle, the Scriptures and Thomas Aquinas, are pointed out where necessary. The frequent cross-references to the poet's other works and to the recurrence of his favorite ideas and favorite figures will also prove helpful to the student of Dante.

* The De Monarchia of Dante Alighieri. *Edited, with Translation and Notes, by Aurelia Henry.* Boston: Houghton, Mifflin & Co. $1.25.

Some New Naval Books

Rear-Admiral Schley* has recently given to the public in his autobiography the record of a career more eventful than that which falls to the lot of naval officers in general. His reminiscences include his service during the Civil War, his very successful leadership of the Greely Relief Expedition, his skilful handling of the trying situation in Valparaiso, when the murder and wounding of several of the crew of the "Baltimore" nearly involved this country and Chile in war, and his gallant and courageous behavior in the van of the storming party which captured the Korean forts in 1871.

To this much of the book, which, of course, precedes the Admiral's presentation of his side of the unfortunate controversy wherein he was chief party in interest, much praise can be awarded. It is entertaining, full of humor, and, in brief, reflects the writer's personality, even to his unconquerable optimism. Its literary form is unfortunate. In an autobiography, one is always pardoned for the egotism ordinarily suggested by the recurrent use of "I," and nothing is gained, indeed, in point of vividness and individuality much is lost, by the self-detachment indicated by the third person singular. To refer to himself, as the author constantly does, by a series of changing official titles (the "Commander," the "Inspector," the "Chief of Bureau," etc.) in the end becomes confusing.

In so far as Admiral Schley reviews and justifies his own acts during the Spanish War, we cannot avoid the conclusion that he will not succeed in altering materially any adverse convictions already formed. He has had his day in court—and, altho there were many circumstances wherein justice miscarried, it is probably safe to say that no naval officer charged with such serious dereliction in time of war and pursued by so powerful a prosecution ever escaped with less suffering. Mr. Long, in his book on the navy, has recently, in a measure, revived discussion by undertaking to defend his own official proceedings, and to this no doubt Admiral Schley will point as justifying a rejoinder. But it is high time for everybody concerned in the dispute to understand that the public wants no more of it.

Mr. George Edward Graham's narrative† of the Santiago campaign, is a yellow-journalistic account without a shadow of excuse for obtruding itself at the present late day. As historical material, it is useless, its "stories" are often absurdly overdrawn and unfounded and its adulation of Admiral Schley is fulsome to a degree. It is furthermore a pity that the Admiral's friends did not dissuade him from contributing the prefatory letter of indorsement which is printed in *facsimile*.

Professor Rawson‡ has managed to bring his *Twenty Famous Naval Battles* within the compass of a single volume without abridgment. The book was favorably reviewed in these columns when originally issued in two-volume form and it has since met with deserved public acceptance. The descriptions of the various battles, which are, of course, popular, and not designed for the student of strategy or tactics, are excellent and the work, we imagine, will hold its place indefinitely among the best of its kind.

What possessed Mr. Edgar Stanton Maclay to produce a condensation of the lately published memorial volume§ to Rear-Admiral Philip we do not know. The original collection of somewhat indiscriminate eulogies served all purposes of a monument, and as such disarmed criticism. This being now challenged by the present outgiving, we have only to remark that its sole claim to consideration seems to reside in the skilful showing by Captain Mahan of his ability to expand the obvious truism that "incidents happen in every one's life which are forgotten if not recorded at the time" into an opening sentence 102 words in length.

* Forty-five Years Under the Flag. *By Rear-Admiral Winfield Scott Schley, U. S. N.* New York: D. Appleton & Co.

† Schley and Santiago. *By George Edward Graham.* Chicago: W. B. Conkey Co.

‡ Twenty Famous Naval Battles. *By Captain Edward K. Rawson, U. S. N.* New York: Thos. Y. Crowell & Co.

§ The Life and Adventures of Jack Philip, Rear-Admiral U. S. N. *By Edgar Stanton Maclay.* With an Introduction by Captain A. T. Mahan, U. S. N. New York: American Book Society.

The Cathedrals of England. By M. J. Taber. Boston: L. C. Page & Co. $1.60.

The author of this work says: "In a book of this size it is clearly impossible to give a full description of the architecture of the thirty cathedrals of England." That is quite true, but, even when we have granted the compiler's reservation, the very meager account given of each is disappointing. Beyond a few measurements which will be meaningless to many there is no attempt to convey to the reader any idea of the beauty and majesty of most of these holy places of the English people, such an idea, for instance, as one gets from Washington Irving's "Westminster Abbey." Mrs. Taber has used the names of the cathedrals as pegs upon which to hang a series of anecdotes, some of them humorous, about persons connected with these ecclesiastical structures. These anecdotes, however good some of them may be, have but little to do with the history of the cathedrals, so that architecture and history alike fare badly, while the tone which these grand monuments to successive ages of faith have fostered in the nation is lost sight of. Some notion of the importance of the cathedrals in the esthetic life of England may be gathered from the fact that in an area but a trifle larger than the State of New York there are thirty of these triumphs of architec-

Newcastle Cathedral.—From Taber's "Cathedrals of England." L. C. Page & Co., Boston

ture. It is, therefore, incongruous to give their name to a mere collection of *personalia*. It is difficult to see what the purpose of the volume is. The tourist who stands under the dome of St. Paul's cares but little for a *bon mot* of Sydney Smith. He will prefer the usual "handbook" for his guide. The general reader who is studying the cathedrals of England will call for matter of a very different kind. The illustrations, however, taken from photgraphs, give a very good idea of the exteriors of the cathedrals.

The Lost Faith. By William T. Browne. New York: Peter Ecker.

That laymen have not, as is commonly believed, lost their interest in theology is shown by this and many other similar books we receive. Mr. Browne here makes an earnest plea from a Unitarian standpoint for a restoration of the simple faith and early unity of Christians, and argues very forcibly against old formulas and traditionalism. His position may be best expressed in his own words;

> "The twentieth century is still listening to the dreams of the cloister, still repeating the primer of feudal times, and making ecclesiastical law a puerile substitute for the everlasting Gospel."

Black Friday. By Frederic S. Isham. Indianapolis: The Bobbs-Merrill Company. $1.50.

This novel begins with a marriage and ends with the couple falling in love. The darkest days of two great cities are brought into the story, Black Friday in New York and the Commune in Paris. The author has made a great effort to avoid errors and anachronisms in his details, and in this he has done well. Still one who played a part in the scenes he describes will detect some mistakes. The Stock Exchange was closed for business a full week before a settlement could be arranged, instead of one day, as Mr. Isham says. The meeting of the alleged "gold conspirators" occurred not at the Fifth Avenue Hotel, as stated in the book, but in the old Erie Railroad Building on Eighth Avenue, now the Grand Opera House. Barnum's Museum (p. 25) was burned before those eventful days. The Tweed Ring came before the public in the seventies, altho Tweed was a power in 1869. Henry Ward Beecher's church was red brick and not a "great white chapel" (p. 46), and to call the famous Plymouth Church the "Beecher Tabernacle" (p. 118) would make the congregation of the late Dr. Talmage object. There were two Boards of Brokers, the regular Stock Exchange and the Open Board, which were consolidated. The selling of stock "on the curb" (p. 125) is of a more recent date.

Robert Browning. By Edward Dowden. New York: E. P. Dutton & Co. $1.50.

The facts of Browning's life are so well known by this time that there is little even for curiosity to expect from a new biography; while in the matter of criticism it seems as tho Mr. Santayana, in his "Poetry and Religion," had spoken very nearly the last word on this subject. Professor Dowden, therefore, is but replowing ground that has already been pretty comfortably cleared and broken; and it is the more astonishing for this reason that he should have missed, even in skirting it, the real significance of Browning's poetry. And yet the upshot of his analyses after all, tho it nowhere comes to explicit utterance, is the fundamentally democratic character and tendency of his author's work. Not only is this bent symbolically manifested, as it were, in the form and technic, in the sort of leveling introduced among all ways and manners of expression, whereby one becomes the poetic equal of another; it is directly apparent also in the thought itself. The import of "Pippa Passes," over which Professor Dowden spends a good many words, lies not solely in "the virtue of mere innocent gladness," but also in the circumstance that this virtue is exercised by one apparently so insignificant in the eyes of powers and principalities. Of course, it may seem as tho many of Browning's ideas, like many of his poetical *procédé*, were simply destructive or at least reductive; but is it not his bent for equalization finally which is alone competent to account for the vogue into which he has grown of late?

Adventures on the Roof of the World. By Mrs. Aubrey Le Blond (Mrs. Main). New York: E. P. Dutton & Co. $3.00.

This volume may be regarded as a sequel to the author's "True Tales of Mountain Adventure." It is a compilation from several sources, but especially from the English "Alpine Journal," with some personal narratives. While intended mainly to convey to non-climbers some idea of the thrilling excitement which mountaineering affords, it sets forth some of the dangers which attend it and the methods to be adopted in meeting them and avoiding disaster. A mountain climber herself of a wide experience such as few of her sex seek or attain, Mrs. Le Blond neither exaggerates nor belittles achievements and difficulties, but conservatively tells her tale so as to assist and encourage those whom fortune may favor with an opportunity for mountain work, and to enable those who sit at home at ease to realize somewhat of the arduous toil of those who thus serve science or hunt pleasure. The book is admirably illustrated with excellent photographs.

Social Life Under the Stuarts. By Elizabeth Godfrey. New York: E. P. Dutton & Co

It is difficult to see exactly on what principle Miss Godfrey draws the line between her former volume on "Home Life in the Stuart Period" and her present work on "Social Life Under the Stuarts." Dress and furniture and nurseries certainly belong to home life; but so also surely do doctors and sickness, devotional exercises and reading. In fact, the present volume is simply a continuation of Miss Godfrey's former compilation, and it is put together in much the same way. There is little original writing in it—only enough to link together the many quotations that Miss Godfrey has gathered from Clarendon and Walton, from Fuller and Verney and Jeremy Taylor, and from many another contemporary writer, as well as from authors of a later date. Altho little can be said in criticism of Miss Godfrey's writing, for, in fact, there is little of her writing to criticise, credit must be given for her careful selection of interesting passages. By means of quotations from writers of the Stuart period or of the days immediately preceding and following the *régime* of the Scotch sovereigns, she gives glimpses into country and town life; into the amusements of the city—the play, music and reading; into friendships, religious exercises and private piety; into the behavior of royalist society in the days of stress and trial, and into the survival of virtue amid the orgies of the Restoration. Miss Godfrey's unconcealed partisanship for Charles I and the Royalist cause make her somewhat unfair in the balance of quotations from Chevalier and Roundhead during the civil war period, and one feels a little disappointed not to find more attention given to the great Puritan middle class which supported the Parliament and Cromwell. Perhaps it is well, however, that the now little popular cause of the Martyr King Charles should be put forward in its best light, that we may be helped not to underestimate the conscientious and unselfish devotion of some of England's noblest characters to what we are apt to think of as the cause of tyranny upheld by perfidy.

A Short History of Ancient Egypt. By Percy E. Newberry and John Garstang. Boston: Dana Estes & Co. $1.20.

Messrs. Newberry and Garstang belong to the tribe of young Egyptian scholars who have been developed by the experience of the Egypt Exploration Fund and other late expeditions in Egypt. Their book is compact, a bit rhetorical, but as nearly trustworthy as the subject allows. They depend simply on the texts and the objects found. They are not extravagant in their claim of Egyptian antiquity. The old figures of 6000 B. C. have faded away, and all they claim is that the founding of the Monarchy was before 3000 A. D. They also admit that the Babylonian civilization is older than that of Egypt, and that its most archaic writing shows traces of Asiatic pictorial forms. The Phenician writing they derive not from Egypt, but from Asia Minor and the Greek coasts and islands. The earliest Egyptian art seems also to have its relations to early Babylonia as its source. The Hyksos they regard as a mixed Semite-Hittite race. This little volume is characterized by the attempt to make it less a record of wars and

dynasties than of customs and sociological developments.

From Adam's Peak to Elephanta. Sketches in Ceylon and India. By Edward Carpenter. New York: E. P. Dutton & Co. $2.00.

A second edition is generally evidence that a book has filled a want. This is probably the case with Mr. Carpenter's volume, for it differs from ordinary books of travel in that, while it gives impressions of scenes and social conditions, it is largely occupied with remarks upon the religious philosophies which have their home in India. Five chapters out of nineteen are specially devoted to these and four contain an exposition of the South Indian teaching on the attainment of "Divine knowledge." Mr. Carpenter was peculiarly fortunate in securing introductions which brought him into very close relations with natives, and he was admitted to intimacy with an adept teacher of note. While the volume will have an interest for the general reader, it will have a special value for students of comparative religion and what is called "Theosophy," to the headquarters of which in South India the author paid a visit.

The Good of the Wicked. By Owen Kildare. New York: The Baker & Taylor Co.

These are Bowery sketches, written before the author's novel, "My Mamie Rose," and they are apparently the rough material out of which that story was made. Mr. Kildare's literary genius is keyed up too high; it is too near the brink of tears and laughter in expression. But his heart is in the right place. Any man who cheerfully kisses his mother-in-law before the entire reading public deserves to be encouraged, and that is what he represents to us in the little sketch entitled *The Mother in Law*.

Working with the People. By Charles Sprague Smith. [Handbooks for Practical Workers Series.] New York: A. Wessels Co. 50 cents net.

Professor Smith's account of his work in connection with the People's Institute in New York City is readable and stimulating. This Institute was organized in the summer of 1897. It began, in the following fall, a course of lectures, chiefly on social science and literature, in Cooper Union, and has maintained these courses, gradually extending its work, ever since. The lectures have been extremely popular, the audiences rarely numbering less than 1,000, while on at least one occasion more than 3,000 persons attended. A Harlem People's Institute, a People's Forum at New Rochelle and a People's Institute Club in New York City are outgrowths of the original body.

Matthew Arnold and His Relation to the Thought of Our Time. By William Hurbutt Dawson. New York: G. P. Putnam's Sons. $1.75.

If it were possible to read even about Matthew Arnold without stimulation, Mr. Dawson's book, it is to be feared, would be quite intolerable. But the subject is fortunate, and of that subject it contains enough in the way of quotation and recollection to save it to some extent. It seems to be all true enough as far as it goes, but its truth is very largely obvious. And of that happy union of ideas by which the progeny of thought is increased there is very little. In short, it is rather a work of recapitulation than interpretation, and, as such, it may find favor among that large class of readers who like to take their literature at second hand.

Literary Notes

THE "Browning Calendar," published by Thomas Y. Crowell & Co., New York, has a remarkably fine portrait of Robert Browning as a frontispiece and an apt quotation for each day in the year (50 cents).

....Preachers are noted for their ability to tell good stories, and a number of them are collected in a small volume on the "Wit and Humor of the American Pulpit (Geo. W. Jacobs, Philadelphia, 85 cents).

....A book which will save the public librarian many questions is Nield's "Guide to the Best Historical Novels," now in its third edition (Putnam's, $1.75). The arrangement of this bibliography is chronological, so one can find out what fiction there is on any particular period of the world's history.

...."Accidents and Emergencies," by Dr. C. W. Dulles (Blakiston, Philadelphia, $1.00), has been known for several years as one of the

handiest and most reliable books of its class. Its directions of what to do for wounds, poisoning and sickness in the absence of a physician are clear and concise, and in following them one may at least be sure he is not doing harm.

....A very elaborate volume, "Eighteenth Century Furniture," by Luke Vincent Lockwood, is being issued by the Rhode Island School of Design at Providence, R. I. The text is concerned with the description of the Pendleton collection, which is elaborately illustrated in photogravure. This is probably the most artistic book on furniture that has ever been issued.

....One of the most important and interesting exhibits at the World's Fair was that of the Bureau of Labor in the Government Building, and many people will be glad to know that a comprehensive account of it, with maps and illustrations, is published by the Department of Commerce and Labor as Bulletin No. 54. Public baths, cost of living and rates of wages, strikes and technical education are the subjects most fully treated.

....Prof. Heinrich Shaefer's unique collection of the songs of the peasants of Upper Egypt, taken down while he was superintending the excavation of the Berlin Museum at Abasir, has been translated from the German and Arabic by Frances Hart Breasted, and published by J. C. Hinrichs, Leipzig (2.20 marks). A transliteration of the Arabic is given and explanatory notes. This little book will be of value to all who are interested in folk-songs.

....A book of over 800 pages, entitled "Japan in the Beginning of the Twentieth Century," has been prepared by the Department of Agriculture and Commerce to accompany the admirable and extensive Japanese exhibit at the Louisiana Purchase Exposition, and is for sale, at $3.50, by Y. Totsuka, 5640 Bartmer Avenue, St. Louis, Mo. It gives comprehensive and largely tabulated statistics of the agricultural and mineral resources, manufactures, markets, finances, postal and telegraph systems, education and military organization.

....The Annual Reports of the Smithsonian Institution, which are distributed free to the people by members of Congress, afford one of the best opportunities for the ordinary reader to keep himself informed on the progress of science. The numerous articles are comprehensive, authoritative, readable, and handsomely illustrated. The Report for 1903 is now published. It contains accounts of the important work now being done on radium and solar problems, in Egyptian excavations, Tibetan, African and polar exploration, the reclamation of the arid West and a score of other topics.

Pebbles

How would you like to be waiting to be relieved by the Baltic fleet?—*The Chicago Record-Herald.*

....There are a good many men who would give more than three dollars and a half to stand in Douglas's shoes to-day.—*The Boston Transcript.*

....Carrie Nation would be doing the world a favor if she could manage to get at the vodka supply of the Russian navy.—*The Washington Evening Star.*

DO YOU KNOW—

That Julius Cæsar never got half as many electoral votes as have been given to Theodore Roosevelt?

That Noah's ark didn't cost as much as J. Pierpont Morgan's private yacht?

That Cleopatra couldn't have paid the taxes on half of Hetty Green's property?

That the speeches of Senator Beveridge would make a larger book than would those of Demosthenes and Cicero together?

That John W. Gates has in a single deal pulled out more than all the wealth of Crœsus amounted to?

That William Shakespeare's income never amounted to as much per year as George Ade's is per month?

That never while he was preaching on earth did Jesus Christ receive half as much attention as is given to John D., Jr.?

—*Chicago Record-Herald.*

...."I fear, my dear madam," said the physician, "that your stomach will never recover its tone, unless you limit yourself to the simplest diet imaginable." "Ah, sir," cried the woman, tears rolling down her cheeks, "would that I could! But that is impossible." "Impossible! Why?" "Because I am the wretched woman who supplies photographs of 'dainty dishes' to the fashion magazines. In order to photograph them, I must prepare them, and, as I cannot afford to waste expensive materials, I must eat them." The physician started from his chair. "It is certain death," he cried. "What have you eaten today, my child?" "I had for breakfast a shredded wheat biscuit filled with candied violets and olives, with a maple sugar and grated cheese sauce, the whole surrounded with a wreath of daisies for decorative effect. For luncheon," the horror deepening in her eyes, "a large ripe tomato stuffed with cold lobster Newburgh and chopped nuts, served with a sherry and chocolate dressing. This was topped with a pure white chrysanthemum, and a few orchids were laid lightly about the plate. They made beautiful photographs." "And they call men brave," murmured the doctor. "I now understand why so large a percentage of my patients are women."—*Life.*

Editorials

Revision of the Tariff

THE tariff ought to be revised by a reduction and a readjustment of rates, and the work should be done promptly. No one familiar with the tasks and the methods of Congress will say that revision ought to be undertaken at the approaching short session. That is out of the question. On March 4th the life of the new Congress will begin, but the first regular session of that Congress will not begin until December, 1905. That session will probably end in the summer of 1906, not long before the Congressional campaign of that year. If it should be burdened with a revision of the tariff and should not begin the work of revision until January (after the holiday recess) it might not be able to enact its bill and adjourn before the middle of the Congressional campaign. Republican legislators who remember things know that there would be a risk in passing a tariff bill at that time.

We expect that a revision will be made before the elections of 1906. We are confident that the President desires a reduction of many of the rates and that he will recommend that Congress shall take up the work. The great pluralities given to him at the recent election were not an expression of the opinion that the tariff ought not to be touched. To a vast majority of those voters—to all of them, in fact—Mr. Roosevelt is a man who is in favor of a square deal for everybody. The masses who gave him their votes trusted him to use his influence for what is just and right, as to tariff revision and all other questions that come before him. He knows that much of the tariff law is not what it ought to be. He will not disappoint them by failing to direct the attention of Congress to the defects and the injustice in it. This, we believe, he will do at the proper time.

What will be the proper time? It is reported that, altho his forthcoming annual message will set forth no recommendations concerning the tariff, he intends that the annual message shall be speedily followed by another relating to tariff revision and tariff reciprocity with Canada. If this be true, it indicates his conviction that the proper time to speak of these things is this coming winter, and that he thinks something can be and ought to be done before the end of the short session—not in the way of revision legislation, but in preparation for it.

And it is true that something can be done. It is said that the President is inclined to recommend provision for the appointment of a non-partisan Commission of experts, directed to prepare a revision bill for the consideration of the new Congress at its first regular session, or at a special session to be held next spring. Congress could provide for such a Commission. On the other hand, it could itself, by committees, do much of the preliminary work before March 4th and thereafter.

In all probability the members of the present Ways and Means Committee will retain their places in the Fifty-ninth Congress. It is a committee upon which the routine work of the short session will not weigh heavily. It could easily find time to begin the work of tariff revision by hearings and otherwise. The committee, or the Republican members of it, could carry on this work after March 4th and up to the assembling of the new Congress in special or regular session. In the winter of 1896-7, after the election of Mr. McKinley, the Dingley Ways and Means Committee, or the Republican majority of it, set out to frame a tariff bill for the coming Congress, and made such progress that the bill so prepared was, we think, published before the end of March. A similar course might be taken this year, and a special session beginning in April could dispose of the whole matter in two months.

A Commission may take volumes of testimony and recommend an elaborate and well-considered scheme of changes, but actual revision rests with Congress, and Congress is inclined to insist upon its rights. The Commission of 1883, composed of protectionists, recommended a revision involving an average reduction of 25 per cent. Congress rejected it, dis-

cussed the question at length, and enacted a revision that made the tariff higher than it was before. It is true that we have never had a non-partisan Tariff Commission of economic experts, the appointment of which is now suggested, but the report of such a Commission, in our judgment, would fare no better in Congress.

Some are saying that a Commission of experts should recommend a few specific changes, which Congress would accept quickly—after only "one week's debate." But Congress does not act in that way. If we may judge by what has taken place, we may predict with considerable confidence that Congress will insist upon doing the work, even if a Commission has been employed; that it will not consent to deal with a few specific changes, but will take up and act upon the entire tariff. It is folly to talk about "a week's debate." Discussion may be limited in the House (not to only one week, however), but on such a question the Senate will always take plenty of time. Moreover, a bill prepared by a committee of Congress, or by the majority of a committee, will be more favorably received and will be subjected to less revision, in the Senate or in the House, than a bill prepared by expert economists. Many a "practical" legislator would take pleasure in so disfiguring the bill of a group of non-partisan economists that its authors could not recognize its features.

Time can most surely be saved and early enactment be procured by assembling Congress in special session next spring to consider a bill upon which the preliminary work has been done by the present Ways and Means Committee, by a joint committee of Republican Senators and Representatives, or by a Commission. The first of these agencies is, in our opinion, to be preferred. Those who desire to prevent any revision whatever will be found advising that nothing be done before the regular long session. There will be a considerable number of them in Washington this coming winter.

It is the most important national question now before the American people—this one of tariff revision, with its relation to what are commonly called Trusts and to reciprocity. It is of peculiar importance to the Republican party, which is to be tested by its treatment of the problem. Under the blighting influence of a great blunder even the great majority of 118 in the House might disappear in 1906. Duties which are not needed for protection and which are used for extortion should be sharply reduced or entirely cut away. Monopolistic combinations that abuse, to the injury of American consumers, the rates which were given to stimulate domestic competition in a protected market, should be disciplined in this revision. Such action should not be prevented by the plea that independent small competitors, if such there be, will suffer most and undeservedly. As a rule, there is very little competition between the so-called independent manufacturer and a great combination in the same protected industry. As a rule, the smaller producer, if he has free access to raw material, can profitably undersell the Trust, if he will, when the Trust must meet the demands of a huge and inflated capital, and his own is reasonably fitted to the needs of his business. But whether this be true or not, there are duties which are needed for protection neither by the Trust nor by the independent, and which are abused by both, to the disadvantage of the public.

The demands of tariff reform have undergone some change with the growth of combinations and the suppression of competition. To-day it is with respect to such tariff rates that the people are most sensitive and most firmly convinced that justice requires severe reduction. Any revision that treats the protected combinations with tender consideration will not satisfy the American public.

A Privileged Class

Mr. Dooley defines a diploma as a license to wear a Mother Hubbard on the street without interference from the police. If this were the only exemption conferred by the college from the rules which restrict ordinary mortals we should have nothing to say, but it is evident that among other medieval tradi-

tions which hang about the American college there is a considerable remnant of the old *régime* when the campus possessed the privilege of extra territoriality like a consulate and the local authorities had no power to arrest the students for any infraction of the public peace. But in those days the university had its own police, courts and prisons. Now the universities disclaim all responsibility for the personal conduct of students, and the civil authorities shirk the duty thus resigned to them.

In New York City last summer a mob of men drove through the streets in the day time catching and kidnapping pedestrians, binding and gagging them in spite of their struggles and throwing them into a furniture van like so many sticks of cord wood. Policemen watching the affair from the sidewalk refused to interfere. This sounds incredible until we add the further, tho unessential, detail that the captors and their victims were university students, who by virtue of this fact are exempt alike from protection and punishment by the law. Of course it would have been different if such acts had been attempted in the slums, for the police are expected to keep order there.

But the Princeton boys can sack a Fall River steamboat, and the Columbia students can gut a restaurant, and other students can break up public entertainments and indulge in street fights and parade in indecent costumes with comparative impunity, because they know enough to pass an entrance examination and are rich enough to pay a tuition fee. In Vienna a couple of weeks ago there was a long and bloody fight between the Germans and Italians, but no arrests were made because they were students.

In Boston on the evening of November 2d a mob of several hundred Technology students fought with a force of 150 policemen, and after a half-hour combat of torches and clubs the streets were cleared and several victims of the riot on both sides sent to the hospitals. It is not probable, however, that the Boston police will attempt in the future to maintain order in such a case, for charges of brutality are being brought against them and public opinion gives them no support. From the number of heads broken by the clubs of the police and the many men, women and children trampled on by their horses in charging the crowd it appears that these complaints are justified, but no one seems inclined to cast a word of blame against the young men who, according to their own evidence at the trial —the trial of the policemen, of course, there is no other—assembled by publicly announced plan to indulge in street rioting and charged the line of police in a flying wedge. Resisting an officer in the execution of his duty is no crime in the case of a man who studies algebra and Latin. The class of her population of which Boston is most proud is that class against which the city has to protect itself by calling out all its police reserves.

In Belgium they have the curious provision that an educated man has two votes. This plan, however justifiable theoretically, is too foreign to our ideals to be adopted in this country, but something could be said in favor of the converse of this: a law inflicting a double penalty on an educated man who commits a crime. In a case where an ignorant man who has offended against public order or decency would be sentenced, say, to imprisonment for a month and a fine of fifty dollars, a college man ought to receive two months in jail and be made to pay a hundred dollars, for he has been educated at public expense, and an illegal or immoral act on his part is doubly heinous. As a man's knowledge increases, his responsibilities and duties to society increase in proportion. If there is any one with whom law should be especially lenient it is with him whose misdemeanors are rendered excusable through neglect of early training. We have no reason to expect any lessening of our national vice, the lack of respect for law, so long as our picked and trained leaders of thought and action are during early manhood regarded as irresponsible, privileged and above the law.

We are not criticising college fun and high spirits. We do not object to horse play, nor even to the tricks of donkeys. We have not a word to say against those Greek letter societies to which a man is not considered eligible until he has publicly made a fool of himself by standing on the street corner in a fantastic costume. The members of such societies have a right to determine in their own way what qualifications are necessary to

their associates. But we object to the gown, which is supposed to confer dignity and honor, being used as a cloak to privilege law breaking.

How Liberty Is Lost

THE American people cares supremely for efficiency. More than any other people in the world we are occupied with "business." The habits and the virtues that conduce to business success, we have come to think of as above all other habits and virtues important. The assertion that a man is unbusinesslike is a condemnation that often carries with it the severe penalty of exclusion from economic opportunity and social consideration. Machines that are antiquated or below the highest standard of effectiveness we consign to the scrap heap, with a disregard for capital invested that makes Europeans gasp. Officials and employees that fail to produce looked-for results are dismissed from service, with as little regard for their future well-being as if they also, like our creations of steel and brass, were unconscious mechanisms. New methods are substituted for old without regard for any possible reaction of method upon character. The only question ever raised is, Which method is best for the purpose of achieving the maximum efficiency of all the forces, physical and human, engaged in a given work?

This supreme regard for efficiency has been transforming our political thought and practice. Within the past twenty-five years we have rapidly been centralizing the functions of local government. Public school education is no longer left wholly to the care of towns, townships, boroughs and cities. State boards of education, with State and county superintendents of schools, administer general laws enacted by State Legislatures, and some of these go so far as to prescribe how much time shall be given to certain subjects of instruction, and what textbooks shall be used. To a great extent the care of detectives and delinquents has been taken from counties and minor civil divisions and given to State institutions and other State administrative organs. State boards of health are more and more extending their control over local boards. To a diminishing extent State revenues are obtained by the direct tax, assessed upon towns or townships, and to an increasing extent they are derived from particular taxes assessed by the State itself. In all this evolution we have proceeded in a single and straightforward purpose to secure efficiency. We have not troubled ourselves about the possible reaction of these changes upon the vitality of local self-government. We have not asked how far they have transformed the older scheme of American political life into something that the founders of our Republic would have regarded with abhorrence.

Step by step with centralization we have been adopting a new theory of the executive function. The elaborate scheme of checks and balances, whereby the executive and the legislative prerogatives were sharply distinguished, and public activities could be carried on only through a process of concurrence, has become discredited. We say that it was a cumbrous and unbusinesslike plan. What we want, we tell ourselves, is a method that will enable us to "get things done." The business man, from his experience, asserts that the only way to get things done is to find the man that knows how to do them, commit the work into his hands, give him full power and authority, and hold him responsible for results. Acting on this theory we have been developing in our cities the "businesslike" and "efficient" plan of government by the Mayor. Give the Mayor a free hand, we say, and let him understand that he is expected to conduct the city government as a people's representative, and to show the results that they demand. In short, we declare, Let us simplify our Democracy. Let the people by all means retain power; but let them not try in any clumsy fashion to do the expert work of government themselves, or be so afraid of the bugaboo of dictatorship as to deprive themselves of efficient service.

A people rejoicing in the vitality of youth, full of energy and hope, is al-

ways impatient of the "lessons of history." Nevertheless, the fact remains that every people, since recorded history began, that has tried thus to simplify the practical working of Democratic or Republican government, and to secure efficiency by delegating extraordinary powers to the one man of supreme capability, has sooner or later lost its liberties. The Athenian Democracy was swallowed up in the Macedonian Empire. The Roman Republic became the Empire of the Cæsars. The Republics of Venice and Florence became the despotism of the Doges and the Medicis. The first French Republic, proclaiming "The Rights of Man," gave itself over to the imperious rule of the first Napoleon, and the second Republic to the adoration of Napoleon III.

Historians and publicists have analyzed these lessons of history, and thousands of average citizens have reflected upon them, only to conclude that history must forever repeat itself to the bitter end, or that some mysterious combination of forces, in some way that cannot be predicted, will save the great American experiment of self-government from the fate of all Republics in the past.

We are not prepared to accept either of these conclusions, and we hold to another view because we are convinced that it is possible to secure all the advantages of efficiency, without surrendering popular control to the strong and capable man. There is one part of the lesson of history that has been strangely overlooked, and it discloses the precise point at which the pursuit of efficiency becomes a surrender to the personal ruler. It will be by clearly perceiving what that point of departure is, and by choosing then the right course instead of the wrong, that the American people will, we believe, maintain for all time the reality of popular self-government.

The point of departure is reached when the electorate begins to realize consciously and clearly, or begins by insensible degrees to forget, *what specific things* it proposes to hold its governing executives responsible for achieving. The moment that a people ceases to decide for itself *in detail* what things it wants and proposes to have, and leaves all such decisions to its government, with a merely general demand that the government shall promote the general welfare and the common happiness that moment the reality of Republicanism has ceased, and the reality of personal rule, under whatever name or disguise, has begun.

And it makes no difference, so far as the result is concerned, whether a people ceases to decide these matters for itself because of indifference, indolence, or absorption in other concerns, or ceases to make its decision unmistakably known, because in its elections various questions are so confusingly combined that it is impossible for any one to know what the mandate of the people upon any one question is. There is one, and so far as we can see, but one possible way of steering a Republic past the point at which all Republics in the past have laid their course toward despotism, and that is by maintaining and developing *a practice of popular voting upon specific questions of public policy,* as well as upon the candidates nominated for public office. In a large Commonwealth or Federal nation this can be accomplished by means of the Referendum. And on this topic we shall have something more to say.

Election Money

After the election Judge Parker returns to the charge that the Republican Committee's fund was presumably secured by blackmail extortion from trusts. Southern and Western journals are declaring that the Democratic campaign lacked vigor until Judge Parker made this attack on Mr. Roosevelt and Mr. Cortelyou. That is, the Democrats could not fight the Republicans on the issues before the people, and so were driven to criticize the methods of the campaign.

There is a monstrous exaggeration of the amount of money that has been in the hands of the National Committees of the two parties. It has been declared that in the first McKinley campaign the Republican Committee had $10,000,000. The real sum was surely scarce half that

So far as we can learn a little over $2,000,000 was spent this year, while the Democratic Committee had a little less than $2,000,000 to spend. No doubt money for the Republican fund was asked of and received from corporations interested in the policy of the Government, and doubtless the Democratic Committee got money wherever they could.

But it is well that Judge Parker has called attention to the use of money for carrying an election. It is true that large sums are required for purposes that are perfectly legitimate, for the expenses of meetings and speakers, for printing and postage, for canvassing and carriages and workers; but it is also true that a great deal of money is expended criminally to buy votes. In certain low districts the voters expect to be paid for voting. Probably this evil is not as extensive as it has been in the past, but it is practiced by both parties. It has been said that the Republicans were especially guilty of it at the second election of Mr. Lincoln, when patriotism seemed to require that they should do evil that good might come; and at a later election it was charged and proved that "blocks of four" were bought in Indiana. Indeed, except in the large cities, the Republicans in the Northern States probably made more use of money to buy an election than did the Democrats, who depended on cruder and cheaper methods of success in the South. But neither party has failed to make free use of this form of corruption where it seemed necessary to secure the desired result.

It is at this end, the expenses on election day, the distribution of crisp bills at the polls, that the real crime against the nation appears; but those who, on the plea of the necessity for legitimate expenses, which are very large, obtain further contributions which will be used illegitimately, are also in their measure guilty. Their excuse is that they cannot control their agents, that they wish the money used only for legitimate purposes, but that in order that the necessary expenses be met evils will come in which they cannot prevent. This is partly true, and the wrong so passes down from agent to agent before a part of the money dribbles to the last man, who pays the individual voter, that it ceases to be very much in evidence by the National Committee, which collects the fund. It is true that they do not see and cannot help the final bribe, but they are at fault, and seriously so, when they collect a fund which is large enough to encourage such a use.

It is well, we say, that Judge Parker has called attention to these funds, altho he has put his charges in a way that emphasizes another asserted wrong. The charge of blackmail is utterly unproved and has been indignantly denied. But the further charge that contributions were sought and reecived from trusts has not been denied, and is doubtless true. The remarkable thing is that Judge Parker declares that he insisted that the Democratic Committee should not seek contributions from these trusts. It is preternatural innocency that makes any one believe Taggart would not get all the money he could from whatever source, and he has not seemed to lack the money. Taggart *vs.* Cortelyou: we rest on their record. But the Democrats are said to have had two separate funds, one that of which a most reputable man, George Foster Peabody, was Treasurer, and the other managed by Mr. Sheehan. It is probably the first fund to which Judge Parker refers.

Absolutely no evidence and no specification has been presented as to these asserted enormous contributions from trusts. Judge Parker and the Democratic press have been careful to make only general assertions. When the proprietor of a leading Democratic paper in this city tells his friends freely that one "trust" paid in $500,000, and others $50,000, it would seem that he ought to be able to put his statements in print, so that they might be proved or denied.

But we come to this: Is it wrong for an individual, or a great corporation, to contribute largely to a political fund? That depends on the purpose. If the purpose is to buy votes the man who gives the money is more guilty than the wretch who takes it. If the purpose is to secure, by persuasion of voters, a policy which is desired by the giver of the money, it is innocent, except it be the fact that the giver, whether individual or

trust, is engaged in an unlawful and criminal business, which he wishes to maintain. But it was not wrong in the troublous times of 1864 for rich men to give large sums to secure the maintenance of the Union; and equally it is not wrong now for a manufacturer to give a large sum to maintain the policy of protection, which he knows secures him a profit, and which he also believes is for the benefit of the people; nor was it wrong for bankers to give freely to maintain the gold standard against Mr. Bryan. Equally it is not wrong for a "trust" to give large contributions for maintaining the financial prosperity of the country, on which its business and profits depend. Ordinarily prosperity is what political measures and changes are meant to secure, and they have to be paid for. Is this selfish? Certainly, but it is a proper kind of selfishness, that sort of self-interest for which all must work and on which the total welfare of the public depends. We put no credit in the $500,000 story, but that big corporations should pay big contributions for legitimate political expenses is not wrong, and is justified by the importance of the end desired; for such general financial distress as has in the past followed political changes is of untold evil to the country.

We heartily approve Mr. Cockran's proposal to introduce into Congress a bill making contributions public.

Where the Humor Comes In

NATURE is not always an artist, but she never is a clown. Left to herself she never indulges in a witticism or perpetrates a joke. There is a sober finality about the arrangements of her very stones, like periods set to stern sentences. When she erects a rock ledge it is a scar, a memorial of ancient agonies, not the grinning teeth of an earth-born levity. There is a solemn cadence in the eternal succession of her hills and valleys. Nobody ever saw a funny landscape unless a man had meddled with it. There is more decorum in a forest than in a senate chamber. No tree ever looks humorous of its own accord. To be sure, they are sometimes trained and trimmed until they resemble anything, from a lady in hoop skirts to the closely cropped head of a middle aged financier, but permitted to develop its own characteristics a tree never is droll. It suggests symmetry, grace, strength, benevolence, poetry, religion—anything rather than humor. Many of us remember some old maternal looking apple tree with low-reaching branches like cradling arms, and we have a bowing acquaintance with fine lady trees in the spruce city parks; but who ever saw a bow-legged pine or a paunch-bellied poplar? The warped and twisted trunk of a mountain oak does not suggest humorous deformity so much as it does a sort of rheumatic strength. A maple has her seasons, but she has no light moods. The gayety among her leaves is that of the sun and wind. The grave green cloak of a cedar is never absurdly out of place except in a frivolous flower garden. In the forests, upon the barren hillsides, they are like chaplets hung far and wide in memory of the soil that was once the flesh of living men, singing birds and flowing thorn. In the desert the palm is an ascetic, a tree monk in a green cowl, living out a long penance. It becomes ridiculously stagy only when potted and set in the luxurious drawing rooms of human habitations. On the prairie the coarse grass and surly sedge are like the mane and beard of a giant-breeding earth, and it would be like mistaking a lion for a nanny-goat to find a suggestion of humor there.

But from the time Adam undertook to lay off his garden and Eve rooted her first geranium cuttings we have had a perversion of nature's sanity and soberness. Now, the landscape gardener who understands thoroughly every artificial combination she will submit to has a lucrative business. She is box-bordered like my lady's ermine edged cloak. She is pieced together in little squares, terraced, with tulips sprouting out like a row of false teeth. The reason why we call these effects "harmonious" is because we lack imagination. Left alone, such a garden requires twenty years to outgrow its human angularities.

This caricaturing instinct is the absurd as well as the criminal feature about the literature of the garden novelists, who profess to write out their appetizing experiences for a radish-eating public.

They are playing paper dolls with nature, placing themselves upon a basis of social equality with dignified shrubs and plants that were never meant for such hoyden companionships.

There are exceptions, of course, to this too common disposition to deface nature. A rich man often builds his house in a grove or upon a bluff and has the good sense to leave things as they are. And there are little brown farmers' wives living far away in the country who are so near and kin to earth and violets, so wise in the fragrant love of bloom and color that they colonize their gardens so daintily with flower-folk that the effect is like a miniature paradise. But, as a rule, quite the opposite may be expected. The ability to discover and appreciate what is humorous depends largely upon the imagination, and the accident of producing what is absurd often comes from a lack of imagination. This is illustrated by the "flower yards" around the cabins of the South, where tropical sentimentality is represented by a flamboyant display of colors. The prevailing ambition is to secure as great a variety as possible. In these regions any vine may select its own support. Thus, a vagabond gourd crawls through the cemetery fence and twines about the most pretentious tombstone there without offending the bereaved sensibilities of surviving relatives. The same obtuseness probably accounted for the sodding of a little boy's grave there with Johnny-jump-ups. And while the cemetery probably shows many floral witticisms at the expense of the dead, they are not confined to such places. We recall a flower garden in a North Georgia village that at once suggested the funny page in a Sunday newspaper. The woman who designed it was a devout soul, but her taste in outdoor decorations was absolutely rakish. It appeared that her repressed worldly instincts found involuntary expression in a sort of immorality of colors. A company of bacchanalian prince feathers occupied the foreground. In an adjoining "half moon" a lemon lily stood like a forsaken bride in a rabble of phlox and peonies. A tiny harem of brightly hued poppies were grotesquely guarded by an escort of snap-dragons. Between two rose bushes a sunflower halted like Simple Simon. And near the fence there was a row of pinks and bachelor's-buttons standing together like boys and girls in a spelling class.

And if the result is not so diverting, the same indelicate sense of things is seen in more expensive gardens. Flowers belonging to entirely different realms of suggestion are set out side by side, like prince and pauper in the same bed. To garrison a colony of white lilies with a regiment of zinnias is a horticultural impropriety often committed by any lady in the suburbs.

What we need is more imagination and courtesy in dealing with that part of nature which is planted, pruned and topped.

❧

Hope for Russia

The hope that the present war with Japan, notwithstanding its defeats, will prove a great blessing to Russia in the end, appears to be in the way of accomplishment. It will be a new era to Russia if Prince Sviatopolk-Mirsky is allowed to have his way. All depends on the decision of the Czar, who would go forward, but is assured by his oldest counselors that it would be the overthrow of his dynasty and the ruin of the Empire. This is one of the cases in which the folly of Rehoboam in seeking the advice of the young men is real wisdom. The successor of de Plehve is what would be called in Russia a liberal. It is not so much that he believes that the condition of the Jews should be ameliorated, nor is it that he asks for the establishment of a constitution; all he now asks is a degree of local self-government by means of the Zemstvos. He has himself served in them, believes in them and sees that if they were allowed the power they might do much to preserve order and relieve suffering in the provinces. Then out of these Zemstvos there would be sure to come in the end some representation in the central government, even if, at first, only in the way of advice. It is a great thing that he has summoned the representatives of the Zemstvos to meet in Saint Petersburg for consultation. The old powerful leaders are doing all they can to suppress the meetings, but the mem-

bers are there, and are holding unofficial, tho not official, sessions. There is already allowed a freedom of discussion in the press on the subject such as has never been known, and it would seem that the movement cannot go backward. This little question is big with a peaceful and beneficent revolution for Russia. Repression might mean bloody revolution or assassination.

A Claim Unwisely Revived

There has been of late some talk of a revival of Rear-Admiral Schley's claim to especial reward for his services in the Spanish War, mainly ascribable to the advent of Mr. Isidor Rayner into the United States Senate; and the suggestion has been made that the appearance of the Admiral's autobiography, in which he again invites the country to consider his side of the unfortunate controversy, has been timed with reference to some action of this kind. If any such intentions have existed, the result of the election should now effectively dispose of them. While it is true that Admiral Schley has been the recipient of popular ovations sufficient perhaps in number and intensity, so to speak, to lead him to imagine that the people would favor a substantial official recognition being, even now, accorded him, he should remember that in this country popular ovations are one thing and the popular vote is another and very different thing, and that experience has long since proved that there is no necessary relation between them. However, therefore, he may have interpreted the shouts of admiring crowds, the popular vote emphatically sustains President Roosevelt's final disposition of his appeal expressed in the following words:

"There is no excuse whatever from either side for any further agitation of this unhappy controversy. To keep it alive would merely do damage to the navy and to the country."

We take it to be clear duty of every citizen to accept this as ending the whole matter, and it is so distinctly the duty of Admiral Schley thus to regard it that the public will justly expect of him not merely no further agitation, but a manifestation of disapproval if this be attempted by any one else.

A First Apostle

We fear that the head of the Christian Catholic Apostolic Church in Zion—we mean Dr. Dowie—is suffering from incipient brain degeneracy. We began to fear it when he made himself out to be the second, or third, Elijah. Now comes a new development of dignity and authority; he is "John Alexander, First Apostle," and there are only two steps above it; of which the first is the expected reincarnation of our Lord. Unfortunately with this new accession of power there has come a sad loss of impressiveness. In his pictures which flooded his journals, and which were sad evidence of his conceit, there was yet an impressive dignity. But now he has put out a new set of pictures of himself that might make the judicious laugh. He has dressed himself up in a sort of high priest toggery, except that no high priest ever was embroidered in such poor taste. He has on a sort of turban, and a long white jacket with huge squares separated by broad bands, and each square has a second square set in it by the corners, and each of these a third, as if the squares were meant to protest against a Free Mason triangle. Then on his breast is a great cross. Below the jacket falls a light, coarsely embroidered skirt that falls to his feet, and over that a darker overskirt that reaches from the jacket to his knees. The "Apostle" is represented as lifting his hands in benediction. We are not told what the colors are, but we presume they are "scarlet, blue and purple, and fine twined linen" like what was worn by the Jewish priests. But for a "First Apostle" to put on priestly vestments seems to us rather a reversion of type. It was not Peter's way. And for an inspired Apostle he shows very poor esthetics.

Pere Loisy and Rome

The fate of Père Loisy is yet in doubt. It is not true that he has been required to recant on threat of excommunication as has been stated in the press. But it seems that a new Syllabus is in course of preparation, and it is reported that he will be required to subscribe to its propositions on pain of being excom-

municated should he refuse. But, again, it is said that the propositions will be condemned without any reference to their sources, and that they may be found elsewhere than in Loisy's writings. In this last case nothing would be asked of him. It is impossible to forecast what will really happen. Meanwhile he is in peaceful retirement at Garnay (near Dreux), looking after the turnips and lettuce he planted last August, while things are moving onward about him. The Sulpicians at the close of the scholastic year will quit all the Grand Seminaries of France now in their charge. This was expected, but it creates surprisingly little excitement among the French clergy, of whom none seems to worry much over the change. If these sons of the Abbé Olier are to be domiciled only in the United States and Canada, it is not clear how they will hold on to the establishment at Issy, which is their property. We regret that Père Loisy's Commentary on the Synoptic Gospels, altho completed, is not likely to appear for several years, doubtless owing to the requirement of silence imposed upon him. It is not strange that the French people resent such ecclesiastical dictation, and even go too far in their reprisal. We much fear that the abolition of the Concordat will not mean what we know as a free Church in a free State, but sharp control of the Church by the State.

Unsectarian Philanthropy

The unsectarian character of our modern national congresses for philanthropic and sociological work was shown at the meeting of the National Prison Association by the fact that the report on the care of discharged convicts was prepared by a Catholic priest, Father Fish, of Trenton, N. J., and was signed and supported by a Protestant evangelist and major of the Salvation Army. The international character of the gathering was established by delegates from Canada, England and Japan, altho the National Prison Association does not assume to be an international organization. But Canada is always represented, and some of the most efficient prison work is now done in that country. The address of Mr. Innami, of Japan, who heartily favored the indeterminate sentence, the parole law and juvenile courts, and who is in this country for the sake of studying these subjects, is another evidence of the progressive character of his people. A new and interesting experiment is under way at the Illinois State Reformatory at Pontiac. It is an attempt to combine the efforts at self government, so successfully adopted at the George Junior Republic, in New York, with the discipline of a reformatory for young offenders. The experiment has been in successful operation for eighteen months. It is applied to 200 boys between the ages of fourteen and seventeen. These boys are organized into a self governing community, living separately from the other inmates of the institution. By means of the suffrage, the establishment of a bank and of currency, redeemable in credit marks applying to their own liberation and by means of courts of justice and other instrumentalities, they are educated into the principles and practice of civil government, and feel also the pressure of economic motives. Superintendent Mallaly thinks that they have to a great extent solved the problem of making better men out of these boys and putting them in the way of becoming good citizens.

British Nigeria

We are beginning to understand better the capabilities of what we have thought of as inferior races, which may be only belated races. Japan has enlightened us, and we may get further light from the conquest of the British in Nigeria. Sir Frederick D. Lugard, on capturing the city of Kano, 600 miles inland from Lagos, found a kingdom possessing a civilization and history, with a list of emirs, or kings, extending back eight hundred years. Kano has 30,000 inhabitants, largely a floating trading population. The city is surrounded by stupendous walls from 30 to 50 feet high and 40 feet thick at the base, and with a perimeter of 11 miles, with 13 gates, each set in a massive tower. The royal citadel covers 33 acres. The city is reached by a wonderful caravan road fifty feet wide, extending hundreds of miles, inclosed with very ancient

hedges and traveled by thousands of men and animals. On each side are villages and cultivated fields. The people are described by Lugard as brave and intelligent. There is no reason why, under the new civilization, we may not expect as much from these people as from any other race. Northern Nigeria has 500,000 square miles, with 20,000,000 population—that is, it is as large as ten States like New York. There is no likelihood that Nigeria will be ruled by the British as cruelly as the Kongo State has been ruled by Leopold.

No other yellow journal could well have frightened the people with a more ignorant and mischievous sensation than that which was published at great length as to the air in our new Subway by an evening journal which ought to have known better. It declared that the air in the Subway has lost a full third of its oxygen and that the result is most dangerous to health. The story was absurd, as the Subway is very much more spacious than those of London or Paris, where no such evil has been discovered, and the exits for air larger and more numerous, and a current of air is always to be felt. Further, this Subway is run by electricity, and there are no engines with coal to give out carbonic acid, and no lamps. Prof. C. F. Chandler has made fifty analyses of the air and finds that the oxygen is practically the same in the Subway as it is above, and the sensation is ended, with injury to some nervous people and with no apology.

We have no doubt that the presbyteries in the Presbyterian Church will by an overwhelming majority vote for union with the Cumberland Presbyterians on the conditions named, of which only one has excited comment, that which allows separate presbyteries for languages or races, "but in no case without their consent." But without whose consent? Is it the consent of both parties? Can the colored, or the white, for example, either one, go off by their own consent? So the language seems to imply, and very wrong it is. For example, suppose the white churches, which are "a particular race," ask to be set off from the colored churches in Missouri, it would seem they could do it; and all the colored Presbyterians are on this ground opposing the plan of union, but with little success. We are glad to see that the New York and New Brunswick presbyteries have on this ground rejected the union.

If Admiral Dewey becomes a member of the International Commission *de Lunatico Inquirendo* on the Russian Baltic Fleet, the real altitude of his rank will, for the first time, probably become appreciated. He is not merely an Admiral, but *the* "Admiral of the Navy." There is no exactly corresponding grade to this in any service, tho perhaps the nearest is the British "Admiral of the Fleet," which has several holders. Admiral Dewey will, therefore, outrank all his associates, and hence be entitled to preside. Altho rather diffident himself, he can be relied upon to assert his full official prerogative for the honor and glory of the United States Navy.

It would seem that there can be a steel trust where there is not a protective tariff. The steel manufacturers of Belgium, France, Germany and England have just met in Brussels and agreed to form a great European trust to control the prices and output of steel rails against America, because we are underselling them. The proportion of production is to give England, a free trade country, almost half, or 47 per cent., while Germany takes 32 per cent., Belgium 16, and France 5.

In the history of crime in Hawaii there has never been a lynching. But lately several murderers have remained long in prison untried, and the result is that in the case of a late murderer the authorities had difficulty in preventing his being lynched. Nothing tempts to lynching like the unnecessary delay of justice.

According to the report of the Judge Advocate-General the trials for court-martial the past year in our army were reduced to 4,249 from 5,275 the previous year. And yet the officers keep telling us that the suppression of the sale of liquor in the camps increases drunkenness and disorder. It is not easy to understand it.

Insurance

Mr. Lawson's Attack on Insurance Companies

If we are to judge Mr. T. W. Lawson's appeal to the policyholders of the life insurance companies, which, in his newspaper advertisements, he claims to have exposed as participants in the coterie of speculators engaged in the "frenzied finance" which he has been exploiting in *Everybody's Magazine,* we should be compelled in all fairness to say that he has promised much and delivered little. Like the weird sisters in "Macbeth," it seems to be temperamental with Mr. Lawson to keep the word of promise to the ear and break it to the hope. Reading his advertisements in the New York daily papers of November 21st, one would be led to conclude that the December number of *Everybody's Magazine* contained a revelation of reprehensible practices indulged in by four large life insurance companies that would startle the country. A careful reading of the article in question reveals a wealth of intimation and a paucity of fact. The result is disappointing to the impartial reader.

It is quite clear that if Mr. Lawson is in possession of any knowledge that would be of value to the hundreds of thousands of policyholders in these companies it is his duty to divulge it. He asserts that a number of institutions, possessing upward of a billion of dollars which must be invested, are connected, through these investments, with various financial institutions that, in one way or another, are of doubtful benefit to the people. Mr. Lawson seems to indicate that it would not be surprising to learn that the individuals who are caring for and investing this vast sum of money were studiously subserving their own financial interests and waxing rich out of the opportunities afforded them in handling what is probably the largest trust fund ever accumulated in this world. Mr. Lawson's various promises indicate that he would prove that some such diversion of the funds had been made. Up to this time he has not done so. If it were shown that the men who control the large life insurance companies of the country were false to their trusts to the extent of using their opportunities, the rather to enrich themselves than to serve the interests of the countless numbers who innocently and ignorantly confide in them, they would deserve the opprobrium of all honest men, if not a term in jail. It was presumed that Mr. Lawson was prepared to expose some such state of affairs, but this he has not done as yet. To those of understanding minds he weakens his case by attempting to buttress it with plausibilities instead of facts. For example, he accounts for the "defense" made by the New York Life—it would be more to the point to use the term hostility of Mr. McCall—on the ground that the company refused to issue policies to Mr. Lawson, and that, therefore, out of revenge he (Lawson) attacks it. He then proceeds to show, by *fac-simile* copies of typewritten letters over the signatures of Mr. McCall and his Boston agents, that not longer ago than January of this year the company was anxious to have Mr. Lawson become a member. The impression created in the mind of the reader is that Mr. Lawson was singled out to be written to, when the truth is, as every one acquainted with the advertising methods of companies knows, the letters in question were but a part of thousands issued by the company every month. This sort of thing looks on its face as intentionally misleading; it is at best weakening for Mr. Lawson's case.

As we have already stated, Mr. Lawson may be in possession of some very important information; if he is, it is his duty in the interests of the public to make it current; when he does so, The Independent will fearlessly aid him in circulating it.

The Independent holds no brief for the New York Life, the Mutual Life, the Prudential or the Equitable. We firmly believe in the benefits of life insurance and for that reason have had articles on insurance for more than a generation. We have criticised in the past the insurance companies when we believed they violated the best interest of sound life insurance, and shall not hesitate if occasion should arise to do so again. But when we criticise we wish to deal not in generalities, but in specific facts.

Financial

Mexico on a Gold Basis

It was foreseen some time ago that Mexico would soon place her currency on a gold basis. Her new 4 per cent. loan of $40,000,000, recently awarded to Speyer & Co., was so readily taken because of the prevailing expectation as to such a step, and of the confidence of the financial world in the enlightened and progressive views of her Government on this subject. With the approval of Minister Limantour's plan and the submission to Congress of a bill embodying it, on the 19th inst., the change has virtually been accomplished, for the bill will promptly become a law. Mexico now ranges herself with the forces of civilization the world over in accepting and supporting the gold standard.

She does this by establishing and by undertaking to maintain a fixed gold value for her silver dollar. This dollar, so well known in many countries, is retained, with its weight and fineness unchanged; but it is to have by law a fixed value of 50 cents in gold. Thus the present ratio is nearly observed, for the actual gold value of this dollar is now about 47 cents. Dollars of the old style will be coined, but only for export. They will not come back, for the importation of them is forbidden. Much of Mexico's silver output may go out in this form, virtually as merchandise, to be used as currency in silver standard countries. Dollars minted for use at home will, of course, have some distinguishing mark. The quantity of them, we judge from the dispatches, will be limited to the amount now in circulation. New dollars will simply take the place of the old ones, as the latter are gradually withdrawn. Thus the parity can easily be maintained. At the same time, subsidiary coins will be made, and will be given out in exchange for dollars. The old dollars will soon disappear, the new ones will be in general use, and the change will have taken place without any serious disturbance of values and probably without any marked fluctuation in the price of silver. As the metal is a prominent domestic product, Mexico naturally desires to treat it with consideration. The method adopted closely resembles that which our Government has used in the Philippines. China is now the only large nation still clinging to what is called the silver standard, but recent commercial treaties require her to prepare for such action as has been taken in Mexico.

Currency stability thus acquired in Mexico will stimulate her industries, hasten the development of her natural resources, and enlarge her foreign commerce. The fluctuations to which her money has been subjected have restricted such commerce and tended to discourage the investment of foreign capital in her industries. The friendly and the financial interest of the United States in this beneficial change is second only to that of Mexico and her people. It has been estimated that $500,000,000 of American capital is invested in that country. This investment in mines, in railways of an international character, and in other enterprises will be favorably affected, to the advantage of both nations.

We have not seen a handsomer publication of its kind than a pamphlet concerning the Louisiana and Arkansas Railway Company, published by Fisk & Robinson, the company's fiscal agents. More than 70 illustrations, admirable reproductions of fine photographs, assist the interesting text in displaying the rich natural resources, the industries and the varied attractions of the region through which the railway passes.

. . . . The hull of the steamboat "General Slocum" was sold at auction last week for $1,800. A dealer in second-hand machinery was the purchaser. Considerable doubt exists as to the possibility of recovering any larger amount than this through the suits that have been instituted by relatives of the victims who lost their lives because of the burning of the "General Slocum" last summer. If this sum be divided *pro rata* among the various claimants they would each receive something like $1.80.

. . . . Dividends announced:

International Silver Co., Coupons No. 12 are payable December 1st.

Buff. & Susq. R. R. Co., Preferred, 1 per cent., payable December 1st.

Buff. & Susq. R. R. Co., Common, 1½ per cent., payable January 1st.

Buff. & Susq. Iron Co., Coupons payable December 1st.

Survey of the World

Arbitration and the Peace Conference

Treaties of arbitration with France, Germany, Switzerland and Portugal have recently been signed at Washington. The necessary signatures will soon be attached to similar agreements with other Powers. At a Thanksgiving banquet in London Ambassador Choate remarked, in the course of his address, that the British Government had promptly given a favorable response to his suggestion that an Anglo-American treaty be prepared. It is known that this treaty will be signed in the near future. At the French Foreign Office it was said last week that fourteen such treaties had recently come into existence, so far as the signatures of diplomatic officers could make them effective. The texts of all of them are practically identical with that of the French treaty with Great Britain. France has made six—with Great Britain, Italy, Spain, the Netherlands, Sweden and Norway, and the United States. Others mentioned in this list are those of Italy with Great Britain, Denmark with the Netherlands, Russia with Belgium, and Great Britain with Switzerland. Those already signed, as well as several which are the subjects of negotiation, indicate the universal acceptance of the same principle. It may be added that a few days ago Chile and Bolivia signed a peace treaty and agreement covering the territorial and other questions so long the causes of controversy. So far as can be learned, Bolivia abandons her claim concerning a Pacific port, and Chile assumes part of Bolivia's debt, undertaking to spend $10,000,000 in constructing railways which are to become the property of Bolivia at the end of twenty years. In case of disagreement, the Emperor of Germany is to be arbiter. It is also announced that Nicaragua and Costa Rica have decided to submit their boundary dispute to the King of Spain. Reference to other recent agreements between South American countries has been made in these pages.—The President's invitation concerning another Peace Conference has already brought replies which indicate a sympathetic reception of it throughout the civilized world. On the 25th ult. Secretary Hay received from the German Government a cordial note accepting in principle. In the French Chamber of Deputies on the same day, Minister Delcassé said that the American initiative had been most sympathetically welcomed by the Government of France. Replies accepting in principle, but reserving for further discussion the date and place and exact nature of subjects to be considered, have now been received from all the Powers signatory to The Hague Conference, Russia and Japan excepted. Russia permits it to be known that she has the question under consideration; there has not been time for the transmission of a response from Japan by mail. After all the answers have been received, some months will be consumed in reaching an agreement as to the subjects to be considered. It is expected that the conference will be held at The Hague.

Mr. Roosevelt at the Exposition

At midnight on the 24th ult., after a quiet Thanksgiving at the White House, Mr. Roosevelt started for St. Louis. Extraordinary precautions to prevent accident had been taken by the Pennsylvania Railroad Company. For

every mile of the route there was a track patrolman. A pilot train preceded the President's special. At all the stations in large cities there were special details of police, and one car on the special train was given up to guards and secret service men. At several points the President came to the platform and spoke very briefly to the waiting crowds. It was at Richmond, Ind., that he said:

"Gentlemen, the election is over. I am the President of all the country, of all Americans of whatever party; and so far as strength is given me I shall try to be a good and decent President the next four years."

At Indianapolis, where he spoke of the State's plurality, some one said: "What's the matter with Ohio?" "Not a thing," replied Mr. Roosevelt; "but what's the matter with Missouri?" He arrived at St. Louis before daylight on Saturday morning. Two companies of cavalry escorted him to the grounds of the Exposition, where he sought to see all that could be seen in one day. At the French Pavilion, responding to a brief address of welcome from the French Commissioner, he said:

"At this Exposition the great Republic of France has a peculiarly appropriate part, the great nation whose people worked so much in the past for the discovery and settlement of this continent, and the people that took this infant nation by the hand to help it up into the circle of Powers. One of your publicists had used the expression, 'the peace of justice,' and I am particularly pleased at what you said as to the efforts of this country to bring about 'the peace of justice' throughout the world."

The Japanese greeted him with cries of "Banzai." An hour and a half was spent with the Filipinos. A class of Igorrotes sang "America" for him in English. When the Lake Lanao Moros gave him a silver dish, he said: "My aim is to help you increase your happiness and prosperity, and I am very glad to meet you." A Datto of the Moros gave him a knife:

"I give you my *pita*, which has been my own weapon and with which I have killed three enemies. There will be no more fighting in my country, and I shall have no more use for it; but I will give it to nobody but you."

Receiving a cane in the Visayan village, the President said:

"I want you to go back to your homes and say that this Government will do all it can for the mental and moral welfare and happiness and prosperity of the Filipinos."

Reviewing the evening parade of the Philippine scouts and constabulary, he complimented them and then asked the band to play "Garry Owen." Applauding heartily at the close of it, he said: "That is the greatest fighting tune in the world." The log cabin in which he lived when he was a ranchman drew from him expressions of delight. In the evening he was the guest of honor at a banquet. During his tour of the Exposition gifts of all kinds were pressed upon him. Among these were rare books, paintings, statuary, *bric-à-brac* and (from the Brazilian Commission) a riding outfit said to be the most costly ever made. By night the number of these presents had become so great that it was necessary to engage an express car for the transportation of them to Washington. Speaking at the banquet, the President said he had always been greatly interested in Missouri, and that "during the last three weeks" he had "grown to think of it, if possible, even more highly than before." Lincoln had said, two days after his second election, that he was gratified because his countrymen had seen fit to continue him in office, but that it did not add to his satisfaction that any one else was pained by the result:

"Those were the words of Lincoln in 1864, and I feel that any man who even tries to be fit to be President of the United States should approach his duties in that spirit; that any man worthy of serving the people not merely in that position but in any position of weight in public life should feel that anything personal in his triumph does not lessen the sense of infinite responsibility thereby cast upon him, and the weight of duty he owes to all his fellow-citizens, and he should realize that whatever the difference among our people before election, once the election has taken place the President is the President of all the people of every section, socially, of every section industrially, of all the people of the North or South, East or West, and that he is bound, again to quote the language of Abraham Lincoln, with malice toward none, with charity toward all, seeking after the light as God has given him to see the light, to strive so to conduct himself toward all of them, and toward his manifold duties as those duties arise, that the results of his efforts may be for the good of our common country."

On Sunday the President attended service at the Second Presbyterian Church and at midnight began his homeward journey.

Politics and National Topics

On his way to Panama, Secretary Taft stopped for a time in New Orleans, and was the guest of honor at a banquet of the Progressive Union. Responding to the toast "The President," the Secretary said that Mr. Roosevelt was going to visit the South. He asked his audience to say, after the President had been heard there, whether he was a man moved by sectional animosity:

"I ask you to look through his writings and find a single line that indicates hostility or sectional feeling toward the South. I am not here with a mandate from him, but I am here to say that the attacks upon him from this region of the country have only saddened him, and that I know that there is in his nature, in his courage, in his dash and in his love of a strenuous life that which appeals to the Southern nature, and that which I know will find sympathy in every one of your hearts."

It is expected that the President will pass through New Orleans in January, on his way to attend the reunion of the regiment of Rough Riders at San Antonio.—Attorney-General Moody has consented to remain in the Cabinet after March 4th. It is known that Secretaries Hay, Taft, Metcalf and Wilson are to remain, and it is expected that Mr. Cortelyou will be Postmaster-General. It is reported that Secretary Morton will retire at the end of 1905. Secretary Shaw has declined the offer of the presidency of a New York trust company, it is said, and probably will remain in the Cabinet for two years.—The President has offered to Senator Cockrell a place in either the Interstate Commerce Commission or the Isthmian Canal Commission. At the end of the present year F. E. Leupp, Washington correspondent of the New York *Evening Post*, will be appointed Commissioner of Indian Affairs. John C. Brady will be appointed Governor of Alaska for another term. The report is persistently published that Senator Cullom will vigorously oppose the appointment of General Black to be Pension Commissioner.—Official returns show that the Republican pluralities exceed the estimates published in our table on the 17th ult. Mr. Roosevelt's plurality was 153,000 in Wisconsin, 126,000 in Kansas, 85,000 in Nebraska, 72,000 in Washington, and 304,000 in Illinois. His plurality of the entire popular vote will be not far from 2,250,000.

Labor Questions

At the convention of the Federation of Labor, the following resolution, introduced by Victor Berger, of Milwaukee, representing the socialist element, caused a bitter debate:

"*Whereas,* The unprecedented concentration

Statue of Frederick the Great Unveiled at Washington Barracks, Washington, D. C., on November 19th.

of wealth in the United States and the rapid development of the Trusts in almost every branch of industry make it obvious that capitalism will soon reach its culmination point and will have to make room for another phase of civilization; and

"*Whereas,* It is evident that this nation is destined to take the lead in this grand struggle for better conditions and higher culture; therefore be it

"*Resolved,* That we hereby recommend to all organizations affiliated with the American Federation of Labor to have their members study the economic conditions; to have lectures upon these subjects in their lodge rooms, homes and in meetings set apart for this purpose, and to do everything in their power for the enlightenment and intellectual advancement of the proletariat."

The Resolutions Committee recommended that the resolution be adopted, but that the first paragraph of the preamble be rejected. To the exclusion of that paragraph the socialist delegates objected. Berger asserted that John Mitchell was a traitor to the workingman's cause. A printed slip had been distributed, attacking President Gompers and Mr. Mitchell, and alleging that they had dined in an "unfair" house with President Eliot, of Harvard, who had called the "scab" a hero. Both Mr. Gompers and Mr. Mitchell spoke in defense of their record. By an overwhelming vote the recommendation of the committee was approved. A resolution hostile to the militia, introduced by the socialist element, was defeated, as was another, from the same source, favoring the granting of pensions by national legislation to workingmen, at the age of 60 years. By unanimous vote the convention favored the exclusion of Japanese both from the States and from our insular possessions; also the universal adoption of the advisory initiative and the advisory referendum. Without a dissenting voice the convention decided to support the Typographical Union's demand for an eight hour day. This demand will be made in January, 1906. President Gompers, Secretary Morrison, Treasurer Lennon, and the eight Vice-Presidents were re-elected.—Several persons were arrested last week in Cincinnati charged with murder and other crimes in connection with the strike of the moulders at the foundries in that city and in Covington and Newport, Ky. Three union men are held for the murder of one Weakley, a non-union moulder, and others are accused of attempting to destroy several foundries with dynamite. Two of the prisoners, named Rauhauser, father and son, have confessed that they placed dynamite in the molds of one foundry. Evidence against these and others was obtained by detectives, who joined the strikers. President Valentine, of the International Union of Moulders, was arrested in Cleveland, and an attempt to connect him with the use of dynamite will be made, owing to the story told by the Rauhausers. While awaiting the arrival of officers from Cincinnati, Mr. Valentine was entertained by Mayor Tom L. Johnson, at his home. He asserts that none of the union officers had any knowledge of the unlawful acts in question.

The Philippine Islands

It is expected at Washington that the result of the recent election will tend to cause the prompt passage of the pending bill that authorizes the issue of Philippine bonds for public improvements, empowers municipalities to borrow money for similar purposes, and permits the insular Government to promote the construction of railways by guaranteeing securities or income.—Monsignor Agius, the new Apostolic Delegate, has arrived in New York, and will remain for a few weeks in the States before sailing for Manila. For twenty years he was the Procurator-General of the Benedictines at Rome.—Datto Ali, the only rebellious and hostile Moro chief, who has been resisting the American forces mainly because of his disapproval of the new law against slavery, has asked General Wood to grant him an interview concerning terms of surrender. He will be received by General Wood, who regards him as a rebel rather than as an outlaw, and hopes to make him a friend of American rule. Quiet prevails in the Moro country. In Mindanao, at Camp Vicars, Captain Devore has established a school and made a model village. Several chiefs in the adjoining Lake Lanao district have asked for similar schools and offered to erect the buildings required.—In Cebu, the Pulajane chief Dionisio, with 70 bolomen,

has surrendered to the constabulary.—The proposed changes in the tariff on goods imported into the islands have been published at Washington. They are suggested by the Philippine Commission, and the President will recommend that the Commission be authorized by Congress to revise the rates in accord with its judgment as to the needs of the islands. At present the tariff on goods imported from the islands into the States is 75 per cent. of the Dingley rates. Secretary Taft will urgently recommend that the rates on sugar and tobacco so imported be reduced to 25 per cent. of the Dingley tariff, and that all other duties be entirely removed. After July 1st, 1906, trade with the islands will be restricted to American ships. The resulting increase of freight rates will be equivalent to a protective duty.—In the report of Colonel Edwards, Chief of the Bureau of Insular Affairs, it is shown that there are now in this country, supported by the Philippine Government, 112 Filipino students, in 31 universities and schools, and 28 more are on the way. Among those now here are two young women, the winners in an examination in which nearly 400 applicants competed. Three more will soon arrive at San Francisco. These students remain four years, and for each of them the annual allowance is $500.—At the date of this report less than $2,500,000 of the $7,239,000 which the Government agreed to give for the friars' lands had been paid. The Augustinians had received $2,212,404; of this amount, $2,000,000 was in London, awaiting the demand of the order, and the remainder had been paid to the representatives of the order in Manila.

Reports of Fever in Cuba

Owing to reports that yellow fever had again appeared in Cuba our State Department, on the 23d ult., directed the attention of the Cuban Government to a failure to enforce sanitary laws in Santiago and expressed a hope that all ground for complaint would be removed. Whereupon Dr. Finlay, chief of the Cuban Health Department, asserted that there were no cases of the fever in Cuba, and that there had been only one within two years. This was found on an island near Santiago. It appears that a few cases have been brought to the island from Mexico. These were promptly isolated and carefully guarded. In a statement from the Government, based upon the reports of Dr. Finlay and Dr. Guiteras (both well known experts), it was declared that Cuba was meeting her international sanitary obligations, and that there were no cases of fever to suggest a quarantine against the island.

Japanese Finances

Premier Katsura will present to the Japanese Diet, about to assemble, a budget requiring the appropriation of $388,000,000 more for the expenses of the war and the Government. In a preliminary statement he calls attention to the fact that before the war the Diet was firmly opposed to the appropriations asked for by the Government, both the great parties, Constitutionalists and Progressives, united in declaring that the appropriations of $125,000,000 was excessive and unendurable, but the House passed readily the first war budget of $288,000,000, and he does not doubt that his new and increased demands will be cheerfully accepted.

"The war expenses reach a large sum monthly, but the Government has managed their absorption in such a manner as to affect least the normal conditions of the money market. The decrease in circulation has been very small, and our people are cheerfully meeting the advanced taxation, while every domestic loan has been oversubscribed.

"Our crops this year exceed their average value by $60,000,000. Our foreign trade shows an improvement over that of 1903, and I expect it will reach a total of $350,000,000. The prices of commodities have been slightly increased, but our financial and economic conditions remain unaffected. This has probably surprised our enemy, for it exceeds our own expectations. We are redoubling our energies, working diligently, living frugally, and going forward in this war unhesitatingly."

The North Sea Affair

An agreement between Russia and England settling the conditions of arbitration of the Dogger Bank incident was signed at St. Petersburg by Sir Charles Hardinge, the British Ambassador, and Count Lamsdorff, the Russian Foreign Minister. According to this convention the two Governments agree to submit "the task of elucidating by the means of impartial and conscientious in-

vestigation the questions of fact" concerning the firing by the Russian vessels, which resulted in the loss of a boat and death of two persons belonging to the British fishing fleet, to an International Commission assembled conformably to The Hague Convention of 1899. The Commission of Inquiry is to be composed of five members, two of whom are to be officers of high rank in the British and Russian navies, one each appointed by the Governments of France and of the United States, and the fifth member to be chosen by agreement of these four. In case of their failure to select the fifth member he is to be chosen by the Emperor of Austria. It is the duty of the Commission to inquire into all the circumstances of the North Sea incident and ascertain where the responsibility lies and the degree of blame attaching to any persons; both Governments agree to furnish all the necessary means and facilities for the inquiry. The Commission is to assemble at Paris as soon as possible, and the expenses are to be divided equally between the two Governments. The majority of the five Commissioners is to be sufficient in making its decisions. There is much dissatisfaction in England over this convention because there is no stipulation as to the punishment of any guilty parties. It is generally supposed that the American representative will be Admiral Dewey, the ranking officer of the American Navy.—The Japanese Government is making vigorous protests against the coaling of the Russian Baltic fleet on its way to the Far East at neutral ports, and it considers that almost all the nations, including the English, have been too lax in permitting infractions of the laws of neutrality. The British Foreign Secretary, Lord Lansdowne, has written a letter to the Chamber of Commerce warning the British colliers from following the Baltic fleet with coal and supplies, as they have been doing, stating that in the Franco-German War Mr. Gladstone laid down the principle that such colliers were to all intents and purposes store ships to the fleet. British subjects engaged in such work are liable to proceedings under the foreign enlistment act. Lord Lansdowne concludes: "Therefore, altho neutral traders may trade in contraband at the risk of capture, they should bear in mind the conditions of the British law."

Austria-Hungary

The sessions of the lower house of the Hungarian Parliament have been more tumultuous and disorderly than ever before in the history of this excitable body. Premier Tisza opened the session by declaring his unalterable determination to do away with the obstruction and dilatory tactics by which the Opposition have for years delayed and prevented legislative business. He asked the co-operation of all parties in adopting such rules as would prevent obstruction of legislation and thwarting of the will of the majority; but at the same time would not limit freedom of speech or prevent due consideration of all measures. If the rules were not changed so as to expedite business the Premier was prepared to dissolve Parliament and appeal to the people. The Independence party, under Franz Kossuth, refused to permit any alterations of the rules which should curtail their power, for, altho they were a minority in the Chamber, they were a majority in the nation, but on account of the electoral laws they were deprived of their rights of representation. Count Apponyi in a violent speech stated that

"in case this revision is formed by illegal means, we should consider all decisions of this chamber null and void, and we cannot suppose that the monarch who has sworn to support the Constitution would sanction them."

Amid the tumult following this remark Mr. Ugron, of the Catholic party, called out, "Otherwise I should become a republican at once," and Mr. Polonyi, "We should become an anti-dynastic party." On the following day when Count Tisza arose to speak, the disorder was so great that nothing could be heard. The Liberals, who are supporting him, left their seats and formed a semi circle about him, while directly in front of him stood Deputy Polonyi, who interrupted him whenever he tried to speak, by demanding the floor. On November 18th the House passed the Premier's motion altering for a year the rules of the House so as to allow afternoon sessions from 4 to 9 o'clock, in addition to the morning session, in order to dispose of more legislative business. Before the vote was taken the Opposition left the House singing the Kossuth Hymn. At 4 o'clock the Opposition members returned and Count Ap-

ponyi, their leader, declared that the sitting was illegal and his party was there under protest merely to exercise control. When President de Perczel tried to put a motion he was howled down. Deputy Rakosi handed to the President a paper demanding an adjournment, and, when he refused to accept it, threatened him with his shears. Members rushed to his defense and a tumult ensued, books and inkstands being used as missiles and seats as weapons.—The session of the Austrian Reichsrath at Vienna on the same date was hardly less sensational. Herr Pernerstorfer, one of the Socialist leaders, in discussing the Innsbruck riots, made a violent personal atttack upon the ruling dynasty. He said the Hapsburgs had always regarded the country as an object of exploitation and had been a burden on the people for 600 years. The women of the family were bigots and the men ignorant partisans. The Premier, Dr. von Koerber, on the following day denounced such language as an ourage on the holiest sentiments of the people and stated that "the whole civilized world has such unbounded respect for our illustrious sovereign that any attempt to cloud his august figure is foredoomed to ridicule."

On November 24th the subject was again discussed, and when a Socialist member said they could not be prevented from telling the truth about "the camarilla which ruled Austria" there was such an uproar that the President was obliged to close the session.

Macedonia and Armenia

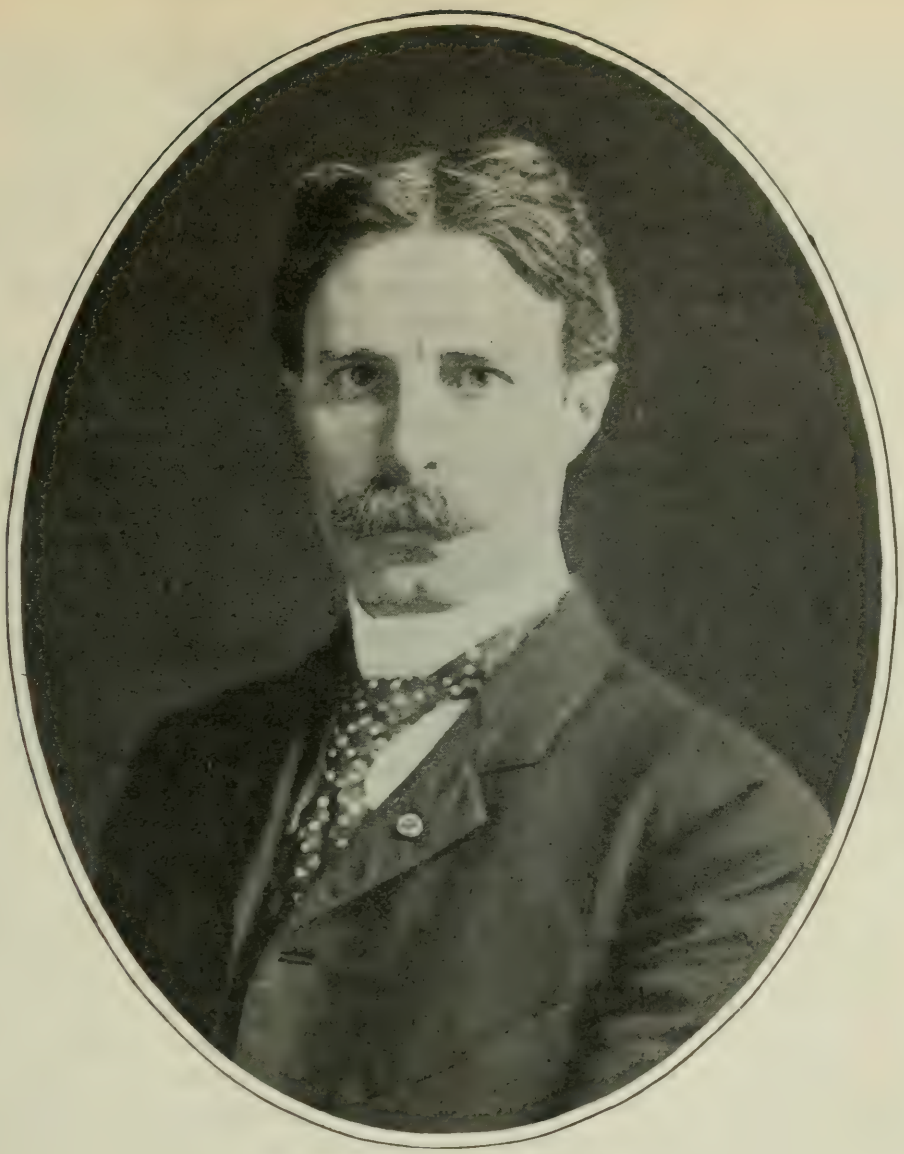
The reports of our representatives in Turkey indicate a terrible condition of affairs in Macedonia and Armenia. Fighting goes on continuously between more or less brigandish bands, and the sufferings of the people from these depredations will be very severe during the winter. The Bulgarian revolutionists have turned their attention from the Turks to the Christians who refuse to support them. These are mostly Greeks of the better class, and it is said that hundreds of them have been tortured to death or burned alive by Bulgarian bands on account of their refusal to submit to the extortion and blackmail. Since no serious efforts are made to put a stop to such crimes the Greeks have taken the law into their own hands, and over a thousand men have in the last month crossed the Greek frontier into Macedonia to revenge their murdered countrymen. The Greeks are intrenched in the mountains southwest of Vodena, and the heavy snow hinders the troops which have been sent against them. In the western part of the Vilayet of Salonika bands of Greeks and Bulgarians are trying to exterminate each other. In a village near Vodena a band of Greeks were going to attack a church in which the Bulgarian notables were assembled, when they were fired upon by fifty Bulgarian peasants and many of them wounded. The Turkish authorities took no action. The Porte has consented to an increase in the international police force, and more Russian and Austrian officers have been appointed, but, judging from its past efficiency, not much relief can be hoped for from this source.—Our Consul Norton, of Harput, Turkey, reports that there is great suffering in the Sasun district, the scene of the recent massacres. The 10,000 survivors are without both food and shelter for the winter, for their homes have been burned and their herds swept away. The Government has been paying them an allowance of one cent a day, but this is now stopped. The weather is very cold and stormy and there is urgent need of warm clothing. There is much epidemic sickness especially among the children, from exhaustion and starvation. The authorities will not permit the sufferers to desert their ruined villages to find assistance in more favored localities.

The War

No military operations of importance are definitely reported, and both at Port Arthur and at Liao-Yang there seems to be a deadlock. It is reported the Japanese have succeeded in sapping the Rihlung and East Keekwan hills as far as the center ditches and that a general and final assault is now in progress. The Japanese have possession of the outer works on both these points and have held them against sorties by the Russians from the parapets. A German ship loaded with food is said to have entered the port. It is reported that Admiral Alexieff, who recently returned to St. Petersburg, has

been removed from the office of Viceroy of the Far East.—There are rumors, affirmed and denied, of an extensive concentration of troops to the north of Samaja and Feng-Wang-Cheng for the purpose of outflanking the Russian left and cutting off the troops at Mukden or forcing them to retreat beyond Tieling, still further to the north. The division of the Baltic fleet under command of Rear-Admiral Voelkersam passed through the Suez Canal without incident and has set sail from the Red Sea toward the East.—The Committee on the Foreign Budget in the French Chamber of Deputies states that Japan has unofficially expressed a willingness to conclude the war on the conditions that Manchuria be returned to China, Port Arthur be dismantled and Korea declared independent, with the right of the Japanese to acquire land there. Russia refuses to consider these conditions.

The Petition of the Zemstvos



The memorial to the Czar asking for a more liberal administration, and a representative government was adopted by the conference of zemstvo leaders in substantially the form given last week, and concludes with "the hope that it is the wish of the Czar to summon a national assembly." It was doubted by many whether the Czar would even consent to receive a petition making such radical demand, and it was thought that Prince Sviatopolk-Mirsky was likely to forfeit his position for allowing such a meeting to be held. But on the contrary, so far the Russian Liberals have every reason to be encouraged. The Czar not only received the memorial presented by the Minister of the Interior, but asked for an interview with the leaders of the zemstvo conference. Accordingly, a deputation of four prominent members was received at the palace at Czarkoe-Selo, and explained their views and wishes at length. The Czar is said to have been greatly impressed by what was said to him, and to have asked many questions; but nothing is known of his intentions. Among the four speakers was Petrunkeivitch of Tver, who has been exiled for 24 years. The most remarkable feature of the affair is the freedom of the discussion of the subject now going on all over the empire and the fullness and frankness of the Associated Press dispatches permitted under the new *régime* to be sent out from St. Petersburg. Great enthusiasm is manifested in all the cities, and especially the universities, but every effort is being made by the Liberals to prevent any revolutionary manifestations, which would destroy all prospects of concessions. The zemstvo representatives were flooded with congratulations and offers of support from individuals and organizations, including one of the revolutionist societies. A message of greeting was received from 24 prominent Finlanders. As finally adopted, the most important of the resolutions, that calling for a national assembly, reads as follows:

Prince Sviatopolk Mirsky

"In order to secure the proper development of the life of the State and the people, it is imperatively necessary that there be regular participation of national representatives, sitting as an especially elected body, to make laws, regulate the revenue and expenditure and determine the legality of the actions of the administration."

After the passage of the memorial the zemstvo meeting discussed the subjects of primary education, the disorders of mobilization, the relief of the families of soldiers and Red Cross work, and then adjourned. The memorial was signed by the presidents of the executive committees of 31 out of 32 of the zemstvos represented; the president of the Kherson committee is the only one refusing to sign it. The representatives from the provinces of Perm and Olonets were not able to be present on account of the distance. Among the signatories are five provincial marshals of nobility, who are *ex officio* chairmen of the zemstvos.

HAYNE DAVIS

The Coming Conference of the Nations

BY HAYNE DAVIS

[We make no apology to our readers for printing so much on President Roosevelt's forthcoming Peace Conference. Indeed, we think there is no question now before the international world to compare with it in importance. Our readers may expect from now on, as in the past, to be kept fully posted on this topic.—EDITOR.]

NOW that the President of the United States, upon the request of the Interparliamentary Union, has invited the nations to send delegates to a conference, the question arises as to where this conference should convene and who should be the representatives of the United States in this first Constitutional Convention of Nations.

Some suggestions are heard to the effect that this is an imopportune time to call such a conference, because two of the Powers to be invited are at war. Tho the invitation be issued now, the conference should not convene for some time, because it is necessary for those who are chosen as delegates to prepare themselves, by study and travel, for wise and proper action on the questions to be considered. There are few, if any, men in the world ready to take seats at once in such a conference, charged with consideration of the gravest question ever proposed to representatives of the nations, and which is now for the first time in practical politics.

Even the men most experienced in the affairs of state would have to examine

known facts in the light of this idea of political organization coextensive with humanity's widest commercial activities; and the wisest of them would want a period of rest from their customary labors that they might have an opportunity without distraction to consider carefully the powers which conspired together during the past century to evolve in so many parts of the world political organizations composed of many self-governing members. A careful study of these powers and the processes whereby they co-operated to produce unions of previously independent States would modify materially the present opinions of many prominent men and their first impressions in regard to the practicability of creating a permanent Parliament of Nations. This is, in the last analysis, the great idea in the resolution of St. Louis, and the one which will be least discussed before the conference convenes, because it is least understood. The attitude of statesmen to this idea at first blush may well be the same as that of the Duke of Sully when Henry the Great first suggested it to him, three hundred years ago. And, like the Duke, they may be expected to change their opinions after careful consideration. Henry was a great man and a great king. The Duke of Sully, his Prime Minister, was a great statesman. When Henry first suggested this idea to the Duke he received it with a mixture of pleasantry and compliment, not regarding it seriously. Speaking of this idea of a great republic composed of all nations in touch with France, the Duke says:

"I even apprehended that there was some illusion in it. I recollected some of those enterprises in which we had endeavored to engage Europe. I considered those in particular which had been formed by some of our kings from much less considerable motives. And I found myself disgusted with this from the bad success of the former. . . . Strongly prejudiced by this, I used my utmost effort to undeceive Henry. . . . I could not refuse, at his solicitation, to use my utmost endeavors to gain a thorough comprehension of it, I formed a clearer plan of it in my mind; I collected and united all the different branches, and studied all its proportions and dimensions, if I may say so; *and I discovered in them a regularity and mutual dependence, of which, when I only considered the design in a confused and careless manner, I had not been at all sensible. The benefit which would manifestly arise from it to all Europe was what most immediately struck me.* . . . But the means to effect so good a design were, therefore, what I hesitated at the longest. I was at last convined that, however disproportionate the means might appear to the effect, a course of years . . . would surmount many obstacles."

He says also that none who read his Memoirs will be harder to convince than he himself was of the practicability of the plan.

But he became convinced that it was "just in its intention, possible and even practicable in all its parts and infinitely glorious in all its effects."

The "Memoirs" of Sully may be had and would interest any one who cares to follow this movement from its inception three hundred years ago to its final realization, let us hope in our own day. And certainly a study of the question as Sully studied it, in all its parts, would be of great assistance, in fact, almost necessary, to those who will sit in the conference. Like Sully, the statesmen of today will not be as capable of wise judgment of so great a matter off hand as after careful consideration.

The appointment of a man to a seat in this Conference of Nations would be equivalent to the command of Henry IV to Sully that he consider this idea carefully rather than in a confused and careless manner; that he "*use his utmost endeavors to gain a thorough comprehension of it*, form a clear plan of it in mind, collect and unite all its different branches, study all its proportions and dimensions."

The time required for this would necessitate the assembling of the conference not earlier than six months or a year from now. But aside from this great idea of a World's Congress the other two sections of the Resolution of St. Louis call for extended consideration by the delegates before they assemble. All things considered, it would seem that the conference should convene not sooner than one year nor later than two years from the issue of the invitation.

Hence the existence of a state of war should not control in this matter, for this war is liable to end within a year and another is liable to break out at any time. This conference is to consider

constructing political machinery which will decrease the danger of war, and it therefore must do its work in the midst of war, rumors of war, danger of war. If the very things it aims to destroy are allowed to govern, when will they be destroyed?

Furthermore, the delegates should be instructed not to discuss in conference any question in dispute between two or more nations, whether it has become aggravated to the point of violence or not. It would be out of order for such a conference to take any action about an existing war or even to discuss it. The conference is for constructing machinery which will prevent these questions from causing war in the future, and putting its hands into existing controversies would be to neglect its own proper work and would tend to prevent the realization of the beneficent purposes for which it is convened.

There is no good reason, therefore, why the conference should not convene even before peace is made between Russia and Japan, tho it is more than probable that the war will be over when the conference assembles.

Even if Russia and Japan are not represented, that will not prevent the conference from accomplishing its work. Rhode Island and New Hampshire were not represented when the American convention assembled at Philadelphia in response to the call issued from Annapolis in 1786. But that did not prevent the conference from agreeing on the present Constitution of the United States, nor did it prevent eleven of the thirteen States from putting that Constitution into operation, tho both Rhode Island and North Carolina failed and refused to adopt it promptly. Just so the inaction of one or of several nations should not stand in the way of effectuating the Resolution of St. Louis.

Where should this world convention be held? The President suggested The Hague. It is to be hoped that the nations will suggest the United States. Distinct advantages would arise from holding the conference in the United States, the great representative of the ideas which the conference will endeavor to apply to international affairs. The state of mind of the people among whom the conference is assembled will be of great support in the accomplishment of its work if the session is held in America; the press of America will take a higher position on the purposes aimed at by the conference than the press of any other nation. The press of America will reach much farther and exercise far more power than the press of any other country. What is published by the European press will be more advanced if it is sent out from America.

Dr. Tydeman, of Holland, told me during the Interparliamentary tour it was evident to him that the press of America can more easily send out ideas than the press of Europe, because the mind of the people is more open here. Mr. John Lund, of Norway, commented on the fact that in America the press (the Fourth Estate, as he called it) does with little effort on the part of the Interparliamentary Union a large part of what the powerful efforts of that union, directed by the great Hungarian, Count Albert Apponyi, could not induce the press of Europe to do.

I myself have given out through the press (both the papers and the periodicals) the most extreme ideas on this question, and nowhere have they met with resistance, proving that American people are prepared for these ideas. The people of America have been prepared for this by all the experiences of the past century—by the War of Revolution, the struggle for the formation of the Union, the conflict of thought in defining the rights of the States and the rights of the nation, which began as soon as the Union was formed, and which was continued in the press, in party conventions, in the halls of Congress, in the courts, and finally on the battlefield, until at last the American people know the boundaries of State rights and national rights, and do not stand aghast at the thought of having to draw the line between national and international rights. The convening of this conference in any other part of the world will cause the loss, to some extent, of the value of this experience.

In the next place, the United States is the world in miniature, a grand miniature, of course, but nevertheless, a miniature, however great we may esteem ourselves. There is no race or nation unrepresented in our body politic. All the nations of

the earth have poured their people into America, so that this nation stands to all the nations of the world as the ocean does to all its waters—the place into which they all empty themselves and where they are all made one. The delegates to the Interparliamentary Union felt and were affected by this fact. So would be the members of the World's Conference.

It may be objected that the United States is a long way from most of the nations that would be represented, and that the cost and inconvenience of this ought to be considered. In a matter of such great moment these things deserve no consideration. If this conference does its work properly it will prevent the outbreak of war, perhaps of many wars. If this fact is fully realized, who will dare to raise a voice against the expenditure of any sum of money necessary for the most effectual accomplishment of its aim? The nations of the world are now groaning under the tremendous expenditures in preparation for war. The United States Government alone, by appropriating for the session of this world convention ten per cent. of its proposed war and naval appropriation for the year 1905, might revolutionize the political history of the twentieth century and save inconceivable billions of dollars by bringing the war era to an earlier close.

In the next place, the delegates to this convention ought to be appointed long enough before it assembles to give profound and exhaustive consideration to every phase of every question which should be considered by the conference, and in doing this they should have opportunity for private consideration of these questions, ample consultation with leading minds in their own country, both with official and unofficial people, and every delegate, either alone or with some others, or collectively in company with all the others, before the convention opens, should visit every nation which announces its intention of being present. So the question of distance does not enter in at all.

It is impossible for me to see any sufficient reason for prefering The Hague. Holding this conference elsewhere would not in any way amount to an abandonment of The Hague Court or a departure from the work of The Hague Conference. If the conference convenes in Europe I would prefer to see Switzerland chosen as the place of meeting. Switzerland, like the United States, is a demonstration of the wisdom of the ideas contained in this call for the constitution of a World Parliament. There is a connection between hight and great human efforts. It is not alone on Sinai that lawmakers are inspired, and assembling on the hights of Switzerland would regain some of the advantages lost from not assembling on the hights of the American mind.

If the conference assembles in the United States, where should the session be held? At Washington? Why not at Philadelphia on an anniversary of the assembling of the American Constitutional Convention, which convened in that city on the 29th day of May, 1787. Anniversaries and centennials are mountain peaks in human experience from which man looks before and after and is inspired to noble undertakings. Both imagination and sentiment would be powerfully appealed to by assembling under such circumstances, and when guided by right reason they work the wonders of the world. It was not an accident that the Interparliamentary Union assembled for its twelfth session at St. Louis and took this memorable action, upon the centennial of the transfer of Louisiana to the United States by France, and three hundred years after Henry the Great of France conceived and worked out in all its parts a practical plan for accomplishing what the Resolution of St. Louis aims at. And it will be in harmony with the past, in furtherance of the best interests of the present, and for the realization of the best hopes for the future if the conference should assemble in the United States and upon an anniversary of the assembling of the American Constitutional Convention. The events which have occurred at Philadelphia in the development of the American Union, the very name of the city itself, its past traditions and present character make it a fitting place for the assembling of this most important conference in the political history of the world, if it assemble in the United States.

But be the place of meeting here or in Europe, in Switzerland or at The Hague, or elsewhere, within the year 1905 or

later, the question of questions now is who shall be sent as delegates? The three sections of the Resolution of St. Louis call for three distinct classes of men in the delegation of each nation. The first section of the Resolution calls for the consideration of certain questions raised at The Hague Conference. These questions are: The rights and duties of neutrals, the status of private property during the war, the use of floating and submarine mines, limitation of armed forces and war appropriations, the bombardment of ports and villages, and the revision of the Geneva convention. All these questions contemplate the existence of a state of war, and for proper consideration of them men who are familiar with war would be necessary. Therefore each delegation should contain an army and a navy officer.

The second section of the Resolution calls for the consideration of treaties of arbitration. This is a very much more important question than any of those coming under section one, and there should be at least two members of each delegation who are thoroughly informed about all the arbitrations which have taken place in the past and who are thorough students of the general question of international arbitration. In America we have a very distinguished professor of international law, who is also author of the standard work of the world on international arbitrations, and whose published opinions show that he has the correct view of a treaty of arbitration which would be fit for a model. And as this conference ought to result in the formulation of such a treaty and the general acceptance of the same, it is of vital importance that the United States be represented by men who can lead the thought of the conference on this subject. There will be no difficulty in selecting suitable men for this department.

It is a question whether the Arbitration Department or the World's Congress Department of this conference will be the more important. My opinion is that the latter is the more important, and that the formulation of a plan that will meet with the approval of a substantial number of the nations, so as to bring this World's Parliament into being is one of the greatest pieces of constructive political work ever proposed. The United States should send delegates who are devoted to the idea of an International Parliament, and who are conversant with political and constitutional history.

Students of international law, of political and constitutional history, the real statesmen and the greatest diplomats will be favorable to this idea, for they will understand its practicality and the folly of counting on perpetuating peace or effecting disarmament or limitation on armaments other than by international political organization. If the United States sends a strong delegation devoted to and able truly to represent the idea of an international governmental system to take the place of war this conference should become for the world what its American counterpart became for America. If so it will usher in the dawn of the day at whose meridian peace will become permanent.

NEW YORK CITY.

This My Life

BY JOHN VANCE CHENEY

I STRIVE to keep me in the sun;
I pick no quarrel with the years,
Nor with the fates—not even the one
That holds the shears.

I take occasion by the hand;
I'm not too nice 'twixt weed and flower;
I do not stay to understand;
I take mine hour.

The time is short enough at best.
I push right onward while I may;
I open to the winds my breast,
And walk the way.

A kind heart greets me here and there;
I hide from it my doubts and fears.
I trudge, and say the path is fair
Along the years.

NEWBERRY LIBRARY, CHICAGO.

Young Wives in Industry

BY SIMON N. PATTEN, A.M., PH.D.

[The author of the following article is Professor of Political Economy in the University of Pennsylvania. He is generally reckoned in the foremost rank of living economists, especially in the field of economic theory. Among his best-known books are "Heredity and Social Progress," "Theory of Prosperity," "Theory of Social Forces," etc.—EDITOR.]

THE American home, springing from an agricultural life, has been erected on two principles: The one states that men and women of all ranks must marry, and marry young; the other that the wife must remain under her husband's roof because he is the natural money-maker for his family. These principles maintained a joint supremacy until they were caught the other day in our fermenting industrial revolution and swept to the fore on the very issue of their validity. They are aligned there now by organic changes with society in flat opposition to each other and to economic realities as well.

If one is to give way, which shall it be? Where lies the fundamental necessity—in marriage for all and early marriage, or in the husband-support of the semi-secluded wife? Scores of thousands of young men and women are unable to marry in the sharp turn of events; other thousands frankly say they do not wish to. Shall we approve a celibate class as the sacrifice to our principle, or shall society permit such structural alterations in the home and a reconstructed ideal of it as shall bring thither the excluded and the unwilling? Before we can broadly answer we must recall for a moment the commonplace knowledge that, the pre-urban period of our growth being ended, we have suddenly swung into its most unlike form—that of great manufacturing towns.

The problems of colonizing empty land have been settled; their antitheses, the problems of socializing, of finding place and well-being for congested city masses, are set before us. To their solution we bring, together with other concepts, our ideal of the American home as it was constructed by the closed agricultural epoch, with which to standardize the conglomerate groups and, by giving them what we have found profitable, assimilate them with our institutions.

But we are halted upon our first steps. Most of us were born under the influences of the period which has no weight with the new city industrial type. We came from country or spacious town life, of professional, agricultural or independent merchant parents, who were never so poor as to be stripped of radiating communal opportunities in the locality where each had his responsible and individual position. Home was the complete unit, a beloved feudal power, walled about decently by lawns, pastures and wide village streets. Within were the income earning husband, the income dividing wife, and the income dependent children, who found full expression in work and play within the independent boundaries of home activity. The men were glad to marry young, because a wife has a valuable factor in the kinds of work they had to do, and desire ran hand in hand with self-interest. The wife, placed at once in the current of production, broadened with the power which the education of the time denied to the non-producing girl. She was the quality in this order around whom the home ideal revolved. She is still the base and center of our sentiment, and we think of her as the type of home-maker by which to test the right and wrong of other married women's activities. She retains the title won generations past because of her economic usefulness in her husband's house, because of her function of director of its necessary businesses taken over by her to the general convenience. They have been taken away from her now for the same reason and given to the market gardener, dairyman and poultry dealer. Will the modifications of her utility which must follow the new classifications imperil her supremacy as home-builder

or insure it? Can it, indeed, be threatened while her economic status alters in consonance with shifting industry? We are brought back forthwith to the two fundamental static principles, and admit that tho they are antagonistic to each other yet transitionals are also fraught with dangers and deprivations; we fear them; but we doubly fear the maladjustments in the increasing class of non-marrying whose social relations are not conforming to their industrial lot. Current comments on the celibacy of marriageable youth but skim the surface situation. None pierces the disorder to this foundation fact: hundreds of thousands of young wage-earners, American and foreign, find themselves in a situation which, on the one hand, cannot be solved for them by the experience of a different era, and which, on the other, they dare not meet in their own way because they are hindered and intimidated by that experience itself.

What then? They realize the need of caution clearly enough, for the home, as they interpret it, means a doubling of expense and the halving of income, the accountability of one person for the welfare of another, and the certainty of no resource if the sole wage earner falls by chance into the abyss of the unemployed. The predicament, moreover, is not without its apologists, who assert that the postponement of marriage to early middle-age will raise the standard of living and improve the type. They add that home is a sacrifice as well as a privilege. Their choice would be to preserve intact the idea of nineteenth century America, enshrined as it is in noble traditions, rather than to jeopardize it by radical experiments to bring about the union of the army of men earning $8 to $12 a week to the other army of women fighting for breath on a wage of $5 to $8. The foreign born and unskilled native immigrants to cities are the material of these swelling armies, which shift from street to street, with small inkling of "attachment," as they wander in search of better landlords, lower rents, more light. They are frequently so ashamed of their shelter that they do not welcome their friends there. The machinery of eating and sleeping is there, but the functions of social intercourse and amusement have been taken over by other agencies. The small room in the boarding or lodging house is as resourceless as the tenement. Who can defend it as the focus and reward of work to its lonely lessee, condemned to live in it until wages go up to a point that will support two?

Under so adverse conditions of time and space we use appropriately enough the verb "to house"; nor will low-paid workers be well "homed" again until society sanctions a reconstructed ideal which shall make the unmarried less advantageous than the married state. The low-paid employee to-day can succeed as well alone as with a wife, which his ancestors could not do. At the same time his selfish enjoyments are greater without her, for he may live irresponsibly, without a motive to save, and with all his surplus available for wayside pleasures of an anti-social sort. The disintegrating forces of a great city upon homeless youth are too obvious to need emphasis. The wage-earning girl, on her part, is likely to acquire the taste of fragmentary, pointless and unproductive spending. Both form habits harmful to the altruistic motives of group-living—of the home idea. A man who goes from the saloon, street corner, or cheap pleasure club; a girl who leaves the dance hall and pavement glitter to make a home for him, the bare necessities of which are hardly met by his wages, are not qualified by their experiences to bring to a successful issue the supreme test of character that makes stable a high standard.

Their years of waiting and the postponement of marriage until they have had the good time that the city offers have harmed, not helped, them—have been a disrupting interval of irresponsible self-centered living. The artificial gap in Nature's sequences should be bridged; the two should go from the bonds of their parents to their own home at the moment when their joint productive energies are sufficient to maintain at the moment when their joint producent. Delay beyond this point is dangerous to both and a waste to society. If $800 will support a home, in no other way can two people spend their money so well.

How may a family income be swelled to $800 for those hundreds of thousands the upper limit of whose earnings during their youth is not more than $15 a week —even in this era of high prices—and whose average is about $10? Not by such executive power as our grandmothers brought into action to augment the total resources, for now the prime necessity is ready money, since the industries which produced commodities at home are no longer carried on there even by the most energetic and capable of "income dividers." The wife of the man with $10 in his pay envelope must buy her chicken, not raise it; she must buy her butter, not churn it; buy her carpet, not weave it. Yet poultry raising, dairying, weaving, which are now productive industries, were classified formerly as married women's work, so that wives and mothers were, in fact, primarily income-earners, and only in a subsidiary way income-savers as utilizers of chicken bones, curd and cotton scraps.

Society remained unalarmed at this intrusion into the money-winning businesses, because as farm-yard industries —which have no more to do with the essence of home-making than has the coal-mining which fills the kitchen range —they were carried on in the seclusion of the husband's property. In the Massachusetts cities no outcry followed when the married woman became a shoemaker; she took the shoes to her house, and her observers may have urged that home-making was not interrupted while she stitched her employer's uppers. Her public probably was no more concerned with what she did than is our own with the sweated garments trade which the wife carries on in her tenement; but united resistance would have met the exodus of either from the industrial anarchy of their living room to the organized forms of the factory.

The reason of the opposition lies in the distinction that the one does not menace the time and place stability of the married relation, while the other, involving a routine absence from the home, threatens to destroy it. Therefore, married granddaughters of the buttermaker incur censure if they cross the street to employ themselves in the dairy store there, even while their grandmothers are praised for thrift and energy. The truth is that woman's work has been taken away from her home, and she must follow it out into the world. If society will stand back of her in the attempt to regain it in its new forms she will be able to convert the cheap lodging as she changed the wilderness hut into a costlier home. The obstacle that stands between, to state it in terms of race instead of national psychology, is our Occidental concept of the seclusion of aristocratic women, borrowed from the Orient and slowly filtering downward to blight the energies of half the wealth-producing world.

Beyond the economic wastefulness of this far-fetched code is the moral discord of the false poses that people take who want the rewards of work but have been taught to conceal labor. The pitiful subterfuges of many a woman's wealth-production must be hidden under a feint of secluded idleness. There is a chapter of such dissimulation in the history of a "social leader," ordinary enough to remind us of others in our own experience: Her husband, a well-to-do corporation lawyer, was earning $10 a week twenty years ago. He could not support his wife and mother on it, smart New England "managers" tho they were. The wife had a gift for catering, decoration and supervision which now makes her own entertainments notable, but she was intimidated from using it for hire in rich women's houses by public opinion. Instead she made cheap bakery cake, which she sold for a stipend to a baker in a distant part of the city, and laundered other people's fine clothes, smuggled into her house after dark. The secrecy of those early years of struggle has marred her whole life, for, altho her acquaintances have the story, she tries to conceal it from them, and only her enemies dare allude to it. She is by nature outspoken, democratic and unassuming, but she was subjected to an anomalous test of conduct, and we slightly dislike her, without being able to say what she ought to have done under the code, and we hold her responsible for the falsity and maladjustment of the seclusion method of maintaining an ideal home.

Another woman, of Russian Jewish birth, attempting to lift her standard to

ours, has had an experience which typifies the costly extravagance of the sentiment against gainful occupation. When nineteen years old she was earning $8 a week as skirt designer in a dressmaker's shop, and her fiancé was earning $9 in the employ of a traction company. She lived with seven brothers and sisters under conditions of dirt, crowding and apathy which irked her more and more as she became roused by the precept and example of a nearby social settlement. On one hand was the Jewish pressure toward early marriage; on the other the American pressure toward delay until she could have a better home than $9 a week could achieve. When she was twenty she yielded and married on an income of $10. Altho very happy, she was often worried, nervous and occasionally critical. She apologized for the house they rented at $8 a month and for the reluctance and fatigue with which she did the washing and heavy cleaning. After some months her former employer asked her to return temporarily; a customer had inquired for her skilful hand. The young woman was enthusiastic—her workman's pride was touched and the extra $8 weekly opened the way to the improved living conditions which were her ideal of a good home. She explained how smoothly her program would move; her husband's working day was from 8 a.m. to 7 p.m.; hers would be from 9 to 5, so that she could give him breakfast and supper as usual, besides doing the light housework. She said, "To think that I can earn enough in one day doing something I like to pay another woman to do the washing that I hate!" But her husband forbade it. "I want to know you're right here all the time," he explained. "People would think I couldn't support you. And that would look bad."

Still later, an old patron brought a dress to be made at her home. This time she said she would not tell her husband, but would surprise him with the sewing machine they had long wanted when she had earned it by the secret application of her trade. But she was too pleased and eager to keep her secret. "He said I could finish the suit," she recounted, "but I'm afraid I can never make another skirt. He's ashamed to have the neighbors see customers coming into the house. Such neighbors, too! What I want is to have enough money to move away from them. He's buying the machine on the installment plan—I felt so bad—but you pay a good deal more in the end that way." There first baby was not born until three years later, while the man was still worth but $10 a week, nor has the woman ceased to regret the period of enforced idleness when she might have built a home the simple beauties of which would have fulfilled her ambitious ideals. More specifically, however, what home could these two have made if their friends had urged her to follow her inclination and had pointed out to him the motley stuffs of his borrowed code?

Their joint income would have been $864 instead of $480. They would certainly have rented a four-room house, with bath and laundry tubs, which is easily found at a rent of $10 a month in the newer quarters of Philadelphia. In their courting days the girl had inspected many of these trim, fresh, gas-lit, plumbed houses, but her husband's final conclusion was that a bathtub was not worth 50 cents a week on a $10 income. They would have hired a washwoman and a scrubwoman to replace the wife in the sudden hard work which put her in the physician's care for two years and for which her substitutes were her overworked mother and a little sister. They would have improved and varied their food, according to the doctor's orders, and used meats which, costing more than six or seven cents a pound, would have been edible in other forms than a thick Russian stew. Fuel, light and clothes might cost $150; car fares and other incidentals, $30.

Rent	$120.00
Service—housework	104.00
Food at $5 a week	260.00
Fuel, light, clothes	150.00
Carfares, etc	30.00
The higher life	200.00
	$864.00

This final appropriation, large tho it may appear in the scale of expenditure, will continue to be steadily expanded by the multiplying activity of civilization. Music, travel, books, vacations, donations, organization dues—these are parts

of economic consumption which grow by what they feed on and demand for their own satisfaction an ever-swelling proportion of the total income of advancing people. It is because the young Judeo-American's consumptive needs of the higher life are proportioned differently from her husband's, or because they are too numerous to be met by his wage, that she refers to the home she devotedly serves as "this dirty, old house," and fails to wholly identify herself with the neighborhood. With $200 they would have resumed the group relation interrupted when they could no longer pay membership dues. The lodge, benefit associations and bicycle club, the settlement dances, picnics and over Sunday trips to the country house would have given them the stimuli of broad affiliation. But, more than all, the home-maker could have expressed herself in her home, not through the loom, the kettle or the plow her mother used in Russia, but by the direct road of purchase of commodities. What most irked her industrial sense of values was the mode of indirection which wasted and deflected her skilled workman's energy.

Improvement by roundabout, slow, extravagant methods is the only mode possible to the non-producing wife of the poor man, and even then she fails without the heavy complement of housekeeping qualities—tact, patience, nerve-control, submission, thrift and health. As we have progressed by legislative refusals to regard anything with a roof as sufficient housing, so shall we progress further when we cease to accept as home any shelter in which a woman finds herself after marriage. The master-key to family unity is not found in the division of function into supporting husband and supported wife; nor is unity in the near future as likely to be endangered by preserving, until the struggling family is on its feet, the independent industrial status of the pair before marriage, as it is by the sudden removal of one person into a position of semi-unoccupied dependence upon another's grinding wages. On the material side, is not the home likely to sustain in the natural outgo of events the uniform uplift that we demand in housing? The minimum standard indeed is in process of being more sharply defined with an increasing number of exclusions. Society says: "This is not the right kind of home for a delinquent or defective child. It is not up to the average," and the child is taken out of it by process of law. When, now, we shall standardize the economic consumption in the household, and the subtle values of contentment and of aspiration dependent upon it, we shall measure by possible advantages to the husband and wife, just as the courts measure to-day for the benefit of the mishandled child. In short, we will take the next step, and fix a new and broader limit to home activity. The city home of the immediate future will be unique in that it will be built by two who are educated, side by side, in the public school, whose industrial careers are side by side in the factory, whose plans of life, formed by the same city outlook, have resulted in like powers and parallel interests. For such a pair the logical home will be an equalized expression of their inter-related pasts and their approximating futures.

The men and women of the poorer classes in American cities are the first in the history of civilization to mature in a common environment; the similarity so brought about between their ambitions and equipment is certain to influence institutions which have been hitherto the result of their different inheritances. The lack of any precedent to govern so recent a social phenomenon leaves us without ground upon which very accurately to measure the ultimate social loss and gain when married women continue in industry. The immediate question, however, is not that. It is: Given these novel conditions of education and the fact that young people are not marrying on the prevailing wage scale, what inducements to do so shall be offered them that will not lower the ideal of a high standard home? The answer is that the wages which the young Jewish matron might have earned if they had not been withheld by the educational negations of a past era would have meant the investment of her complete self in society and in an upbuilded home in place of the partial and reluctant absorption of her vitality in a meager, inexpensive home at the margin of utility.

It is plainly bad economy to assign a

person who has proven capacity to be a producer of world-goods to the sole task of spending an income so low that no choices or saving can be made on it; it is adding another expensive middleman to distribution. The point at which withdrawal from outside industry to the extension of activity within the home is good economy is not reached until the husband's wage makes possible options, saving, investment and the rewards of capital wherein the future has to be balanced with the present and its returns. When the house can be conducted on a scale which will utilize the faculties of one mind, with room for growth besides, then the natural home-maker is more valuable there than in industry.

At the present cost of living the husband must earn at least $20 a week before that point of vantage is reached. This income can be distributed to the best advantage by the woman who now reassumes, to her own and to her family's gain, the position, tho not the occupations, of her grandmothers. The concept of seclusion, with its attendant train of evils, vanishes, and the wife in honest freedom incorporates into her home variety in a dawning esthetics the culture of cheap books and papers and the general furnishings of leisure. Breadth of field and the supervising capacity have returned to her, the pioneer of the industrial age, as naturally and effectively as they came to her forerunners, the pioneers of the agricultural.

The query that our altered economic life has raised will be rightly answered if a sympathetic consideration is fixed upon the present and immediate future of urban life as it is molded by a single type of education and of industry for young men and women. We are called upon to reconcile the advocacy of a static home—which is all the young husband can for a long time maintain through his own productive power—with our vigor-our dynamic program of improved housing, more space, artistic development, and, in brief, increased consumption of world goods. Since we cannot reconcile these warring ideals, we will soon find ourselves actively sustaining and cheering on the energetic workingwoman who chooses to be a supporting rather than a supported wife.

PHILADELPHIA, PA.

Uncle Sam in Samoa—A Woman's Point of View

BY GENE H. UNDERWOOD

[Mrs. Underwood is the wife of Captain Underwood, U. S. N., the present Governor of American Samoa. Our readers will remember an article from him which we printed about a year ago. Among other things, the following article shows the progress that has taken place since then.—EDITOR.]

VOYAGERS traveling around the world via New Zealand and Australia tell us how it thrills their hearts to wake in this beautiful harbor of Pago-Pago on a fair, sunny morning to be greeted by the dear Stars and Stripes of home—some thousands of miles away. For we are fast becoming a world-wide power with dependencies all around the globe.

It is not my place even to attempt to judge whether this is right or best for our country or not; but rather how much this other country—American Samoa—has profited or lost by yielding her allegiance to Uncle Sam and his flag.

Surely nowhere else in all his smiling lands does that relative of ours protect a more beautiful spot than this. A much-traveled Englishman, paying his first visit here recently, said to me:

"I woke in this harbor yesterday morning, and when I looked from my port I soliloquized: 'Well, I have always hoped to go to heaven when I died. Now I have undoubtedly died, and find myself there.'"

The land-locked Bay stretches for three miles in length to less than one of width, and as the blue water flows

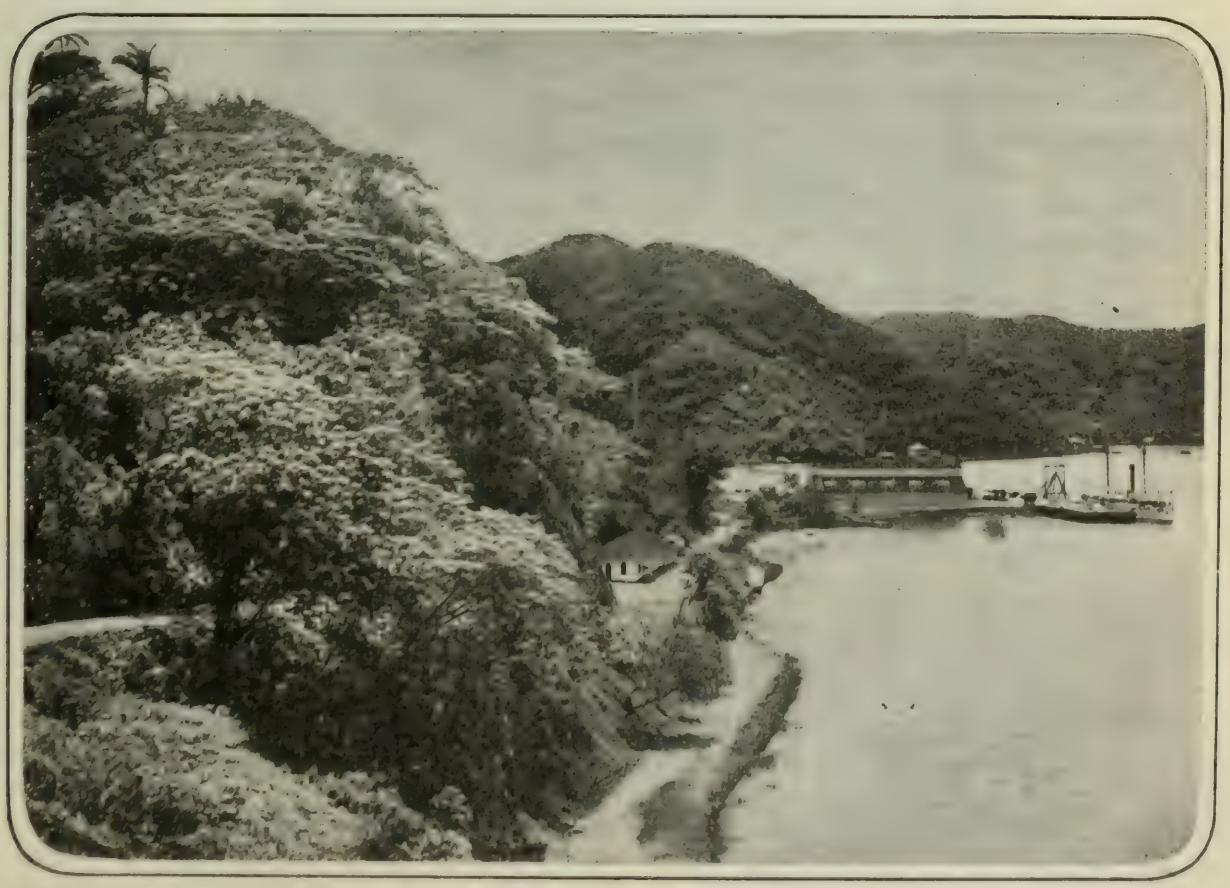
over many multi-colored coral-reefs, one feels at times that a harvest of rainbows has been imprisoned here, especially when one sees brilliant red, green and violet fish darting in and out of the holes under the coral. The hills are steep and high, rising so precipitously from the water's edge that they often have to be cut away to make a narrow footpath. These hills are, indeed, clad in living green. Outside the tropics one never sees such green, so intense, so glistening, so rich. The soil is volcanic, but with a surface layer of such fertility that all plant life grows with the fabulous vigor of Jack's immortal beanstalk. Flowers revel in it, yielding blossom after blossom in quick and glad profusion, but from a housekeeper's point of view, this is not quite desirable, when in a few weeks' time one find one's cucumbers all leaves, one's tomatoes all vines and one's onions all tops. It is very difficult to raise vegetables here, partly because of this fecundity and partly because of the frequent torrents of rain that occasionally embarrass the gardener by washing the garden down a steep hillside into the sea. However, the worst of these condition prevail just here, away from these hills which lure to us every rain-cloud in this part of the South Pacific Ocean, much that is edible is produced. To be sure, the lettuces will not "head," but they are quite wholesome otherwise, and cabbages, egg-plant, cucumbers and tomatoes are all possible with care, while coffee, cocoa, nutmegs, limes and the always delicious native oranges, bananas and alligator pears grow in abundance.



It was a beautiful morning in early March of last year when we found ourselves sailing into this earthly paradise just at sunrise, and as I rubbed the cobwebs of sleep from my eyes and looked about me, I felt convinced that I was a figure in one of the old pictures which in my childhood made vivid and readable the missionary tales in the Sunday School library.

Our steamer was simply surrounded by swarms of boats—many of them canoes, with only one or two occupants—many of them huge galleys, with thirty oars, and nearly twice that number of people. All these boats were decorated with green vines and

branches, brilliant red and yellow hibiscus blossoms, the red pods of the pepper-tree, and in some cases with entire palm trees. But *the people!* They gave the picture its last touch of savage wildness, their brown bodies glistening with cocoanut oil, and nearly all of them nude from the waist up, except for wreaths on head and breast. All were shouting or dancing—some twirling savage looking head-knives like a juggler's club—for no Samoan ever yet did anything quietly. The childhood of the race is evident in its delight in noise. Some of the twirlers of the hideous head-knives were leaping into the air, with shrieks that fairly froze one's blood. All this display was for the reception and welcome back of the Naval Commandant, who had gone home two months previously on leave. Some of the natives who could speak a little English were calling out his name, or what passed for that with them, when the first officer of the steamer put his head over the rail and shouted: "Captain S—— did not come back! This is Captain U——." Instantly the answer came: "Captain U——! Captain U——! *All same-y!*" It reminded us of the complaisant courtesies of other days: "Le Roi est mort! Vive le Roi!"

Before landing, we, too, had been decorated with wreaths, and we made the short trip to the wharf in a Government boat manned by a most picturesque crew of "fita-fitas." These are the native soldiers employed by our Government, and their uniform is a dark-blue *lava-lava* (kilt), with red stripes, a white shirt and bright red turban and sash. This, with the bare brown legs, and the dark smiling faces, makes a most attractive addition of color to a landscape so largely green as this one is. Our landing boat was attended by a perfect flotilla of small craft, the occupants eager to know the newcomers without loss of time.

Ashore, drawn up beside the pretty little bungalow of a custom house, we found awaiting us some fifty stately brown men in clean white lava-lavas and white coats, each one wearing red or blue shoulder straps, with brass but-

tons, denoting his rank as Uncle Sam's servant. These are the native rulers of the islands under American jurisdiction, District Governors, District Judges and minor officials, and all are men of some ability, while a few are of marked quality. They are grave and dignified when in uniform, of which they are very proud, and each stage of our reception as it proceeded was marked by an adhesion to form and ceremony hardly to be surpassed in one of the Courts of Europe. Just so many speeches of welcome must be made by the "talking men," who carry long wands to indicate their office, just such and such women of high rank must make and serve the kava,—a native drink not intoxicating, which cheers all meetings here of whatever kind,—just so many minutes, which finally grow into hours, must mark each step of the formal acceptance of the new white man sent out to be their *Kovana*—the native's attempt to say "Governor." They do not attempt to say "Commandant" at all, as it has no fluency in the native tongue.

And now, what of these people whom we have taken under our great Eagle's wings, and among whom we raised our flag four years ago last April?

Of course, they are yet a race of children, with many of the virtues and vices that belong to immaturity. They are laughter-loving, indolent, happy *likable* people, without too much stability and yet with the leaven of the few aspiring souls that has always, from Abraham's day down to ours, "saved the city."

They are wonderfully quick of perception, and so keen to turn a point that it behooves one to know one's ground well before entering a controversy.

Not long ago one of the schools belonging to the English Mission found itself rapidly losing pupils. Upon inquiry, the teachers learned that the report had spread through all this island that a "devil" (ghost) was often seen about the place, and that this apparition was certain to be followed by sickness and death. Knowing the absorbing power of superstition over these people, Miss F—— at once set out on a walking tour, visiting a half hundred villages, and in each flatly denying the devil story. Of course, you told them that there was no such thing as a ghost, did you not? I asked.

"No, indeed!" she replied, "how could I? They would at once have quoted the Bible to me—Samuel's appearance to Saul, the evil spirit from the Lord, etc." They have a verbal acquaintance with their Bibles little short of marvelous, as a large part of the adults read and write their own language, and, of course, their libraries are limited. A little missionary paper and the Bible form the staple of their literature, and both are much read. Now, since the navy occupation here, a small secular sheet, called by the Samoan words indicating *The Adviser*, is published in Samoan once each month. It is paid for out of the customs funds, and distributed free of charge all over American Samoa.

This paper is, as its name signifies, an adviser on simple, every-day matters, such as the care of newly-built roads, the means of preserving health through cleanliness, the benefits of vaccination, the value of steady labor, etc. It also gives full accounts of the customs funds and their use; and in lighter vein, of all athletic sports celebrating certain holidays, such as Flag-raising Day, Fourth of July, and a few others, and aims at a few articles which shall be both instructive and interesting on the great world outside of Samoa.

As I write the natives are much interested in the Russo-Japanese War, and tho their facts are often muddled and their geography always helter-skelter, yet the broadening of their horizon is most evident in the newly awakened interest. The United States has become their country, and they speak of it with pride as such and listen to endless tales about it with growing pleasure. Articles in *The Adviser* about Washington, D. C., the White House, President Roosevelt, etc., have been found most acceptable, and perhaps you will be surprised when I add that not only will they read about the

wonders of the St. Louis Exposition with delight, but are even interested in the plans for the Panama Canal.

The Island Government has just opened a school here, principally for the teaching of English. This seems to us all, now, the crying need of the islanders. The school is of necessity small, but even to instruct fifty or sixty children is to plant the seed for the future harvest, and perhaps Congress will this year consent to do—what each Naval Commandant has in turn recommended—make an appropriation for several teachers, so that there may be schools in different parts of the islands that are now ours.

The Samoans are naturally a bright, quick people, but indolent as most tropical people are. We who are householders have plenty of experience in keeping our tempers against an amiable persistence in doing things the wrong way, because that is the easiest way and the old time-honored way in Samoa.

Our laundress, for example, irons on a straw mat on the floor, and the utmost persuasion has not as yet succeeded in raising her from that lowly position. The results are most unhappy, in a country of universal white gowns and white uniforms, nor does her constantly smoked cigaret—which frequently burns holes in our light muslins—add to our happiness.

Samoan Types

The Civil Engineer reports that labor hired and paid by the piece is not only well, but quickly done, while work by the day is slighted and neglected.

Recently a neighboring village which is building a new church found itself without funds for the roof iron, some three hundred dollars being needed.

The natives of the village made a contract to complete a certain piece of road, and did it with surprising ability and energy, in order to earn this sum. The work was done by men, women and children, and the hours were from 5 a.m. to 6 p.m., with an hour's rest at noon. When you recall the fact that this was done in the heart of a tropical summer, with the fierce sun beating down upon them, it is evident that energy is not wholly dead here, and needs only ambition to wake it from its long sleep.

This, it seems to me, is exactly what Uncle Sam is doing here, and if any motto could be honestly appropriated by us, it would be, "Samoa for the Samoans," for in no smallest instance yet has our Government failed to consider the good of the Aborigines.

In a recent visit to the German Islands of this group, tho they claim to be doing the same thing, I could not help being struck with some differences. The town of Apia—their capital—well governed as it is, gives the impression of a German trading post. Not a native house is in sight along the beach—all having been moved back inland—and as one walks the streets one feels that one is in a European outpost. Here, we foreigners are distinctly the outsiders, while the islands belong to the natives and in every way are being administered for their interests. Of course, prices are much higher here than in German Samoa. I believe that result always follows the free-handed American administration, and that is by no means always the best or wisest thing. To the Samoan who, until recently, knew little of the value of any kind of money, it comes so easily here that perhaps he has grown to think too little of its real position. In a recent purchase of land by the Government, the native owner demanded $1,500.00 for a piece of about one acre.

"Why!" laughed the Commandant, in talking with this astute native salesman, "I did not know you had a gold mine on your place!" The bargain was finally consummated for less than a third of the sum demanded.

The Samoan's quick appreciation of humor is one of his most enjoyable qualities. His language—a very difficult one grammatically, by the way, never written till the missionaries came to these islands—is full of words of possible double meanings, and some extremely bright speeches are made in their long "fanos" (talks), which are quite spoiled by translation.

At a "donkey party" given not long ago at the house of the Commandant, a huge six-foot-four Chieftain was presented with the booby prize for having pinned the donkey's tail farthest from the animal. The prize was a large pair of tin glasses, and tho the recipient knew no English, he at once understood the joke, passed the cord around his neck and frequently smiled at us from behind the big tin rims during the rest of the evening. To this same Chieftain it seemed neither laughable nor discourteous to retire into the hall in the midst of the festivity, and remove his shoes and socks, returning with huge bare feet quite simply—and evidently much more comfortable. The native choir in church frequently divests itself of its stiff white shirt collars, which, I infer, are only a badge of office, as they are never worn save on Sundays, and then only by the choir. But the imitative faculty is paramount in these children of nature, and that is why our present position among them is so important. We are pre-eminently their teachers whether we know it or not, whether for good or evil.

Do we eat meat instead of taro and bread fruit? Then they must earn money and buy meat. Do we enjoy ice from the ice machine? Then they must eagerly seize fragments of the strange cold glass and try to like it as they lay it on their shrinking tongues. Do we sit upon chairs and eat from tables? Then they must do likewise, and slowly their customs will inevitably yield to ours.

This no doubt has its sad side, its undesirable side, but is it not the inevitable advance of civilization everywhere, and must we not be content to lose the less in the greater good?

The missionaries—who are for the most part blessed with rare good sense as well as devotion—never interfere

with any old customs or long-established usages, unless behind these there lurk great abuses and immoralities, as is sometimes the case, unknown to the casual traveler. Tattooing, once universal, is now much less common, and there are reasons why it should be discountenanced, as it is by many even of the natives themselves.

The Governor of Manu'a—one of our islands in this group—is a fine, strong character, a sort of native John Knox, and he has set his face so sternly against the custom of tattoo that it is an offense with an accompanying fine of five dollars on that island. It is not so on this island Tutuila—hence young men sometimes come here for the painful ordeal and then go back to Manu'a and pay the fine.

Wisely, our Government leaves all such questions as this to the management of the natives themselves, tho there is a constant influence, we hope, in the right direction.

The work of Uncle Sam's navy surgeons down here can never be too highly praised. Men of unusual ability have fortunately been sent here and some really remarkable things have been done —eyes straightened, crooked legs and arms made strong, tumors removed, etc. One piteous looking man had his lower jaw broken and the lower lip torn away by the bite of a horse. This seems the more remarkable as there are hardly half a dozen horses on Tutuila. Perhaps it was ignorance of the animal that led to the disaster. However that was, the victim was always known by the native word signifying "what the horse left"; it is needless to say that one of the child-like traits of these people is an utter lack of delicacy as to any deformity. When Dr. S—— came here he was asked if he could help this poor creature, and before he left the man had an almost restored face—marked by some scars, of course, but far from being the revolting sight it had been.

When it is possible for them to pay for these services it is considered better for them to do so, but in no case is the pay-

Chief Manga and His Wife. This Chief is One of the Three Big Chieftains of the American Possessions in Samoa

ment a large one. The Doctor said to me not long ago, "Yes, such an operation cost me twenty dollars. My fee for it was five, because the man was poor." Of course, in these cases it is the surgeon's private pocket that suffers, not Uncle Sam's, as there is no allowance made for the care of any but enlisted men. This covers the *fita-fitas*, who at times are as sharp as boys at boarding-school in their efforts to hoodwink the doctor, feign illness and get on the sick list to escape the tedium of guard duty or drill in the hot sun.

Neither sickness nor death seems appalling to the Samoans, in reality. They bear pain with stoicism and recover quickly from all grief. The *fita-fitas* frequently ask three times in one year for leave to go home to bury their mother, and on being reminded of this inconsistency, they exclaim, "Oh, this is another mother!" The truth is the tie of relationship, tho patriarchal in its tribal bonds, is yet very loose between individuals, and sisters, cousins, aunts and mothers are interchangeable.

If any communist wishes to see the evil results of these patriarchal customs, let him visit Samoa. No wage earned ever belongs to the earner, but to his family, of which the chief may be his grandfather. No fine inflicted ever falls upon the guilty party, because the whole tribe joins in its payment. This kills individual responsibility and individual ambition, and it always must till it is uprooted.

And yet, when told of our great coal strike a year ago, one of the chiefs, after listening gravely, exclaimed: "What, some people had plenty and let others suffer for want of it? That could never happen with us!"

Perhaps, we, too, have something to learn.

The Samoans are not a warlike race and never have been, according to the standards of other primitive people. Their anger and volence are short-lived, and the free shedding of blood has never been one of their characteristics. If one village offends against another—as it often does because of their complicated social laws—civil war is threatened, but generally averted by an apology. The offending village, headed by its chief, followed in single file by every villager down to the smallest naked baby who can toddle, and each one bearing in his hand a small green twig (the Biblical olive branch, no doubt), walks slowly and with great dignity to the insulted village and there sits down upon the ground, while the chief, talking man and servants, bearing gifts as peace offerings, meet in a sort of council, with the chief and talking man of the injured ones.

The gifts usually take the form of very beautiful, fine mats. Sometimes the interview is long, with many loud speeches on both sides. Indeed it is never short, for the Samoan feels that to be dignified demands time and words—like our own courts of law, perhaps.

But if the apology is finally accepted, as in these days it generally is, the offense is quite wiped out and the two villages are again on friendly terms.

The barbarous head-knives and heavy war-clubs of old times now hang as bits of history in the houses, we all hope never to be brought forth again.

The houses themselves are fashioned with such care and are so beautiful that their wanton destruction in war would be deplorable. No photograph of what appears to be a thatched hut can give any idea of a fine Samoan house. One folds up like a jack-knife to enter under the low-hanging thatch of cocoanut leaves, and fancies one's self entering a den. Imagine, then, the surprise upon standing up and looking around in a lofty, light, airy room built of straight, carefully selected bread-fruit wood and put together, thatch and all, without the use of *one single nail*

The workmanship is exquisite and the airy space of some thirty feet from the ground to roof broken only by a few cross-beams, on which lie bundles of fine mats, representing the wealth of the family.

The Governor of German Samoa told me that he had known these houses valued at two thousand dollars, tho he admitted the difficulty of setting a price, as they are mostly paid for in the coin most valued still by the natives, fine mats.

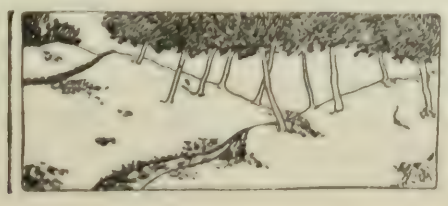
Not much is manufactured here except these same fine mats, woven with great skill and infinite patience, by hand, from the leaves of the pandanus tree, and at

The Oceanic Hotel, at Pago-Pago, Samoa The Wooded Hills are Immediately Back of the Hotel

their best most beautifully fine and silky.

The very finest are family heirlooms and have no market value, because no family would dream of parting with one for money, tho, perhaps, very rarely for love.

I have seen them of marvelous texture like softest silk in pliability and luster and bordered with the feathers of a small red bird, very rare in this part of the South Pacific Ocean.



The tapa-cloth made here was originally only used for clothing, but now it is an article of export to curio dealers in Honolulu and San Francisco, and makes odd and striking wall decorations. It is made of the fiber of the mulberry tree and painted with soft colored native pigments, or, I regret to say, in these latter days with horrible aniline dyes. This is the only article of export except copra, the dried meat of the cocoanut, which is the principal wealth of these islands. This is used in large quantities in the manufacture of certain soaps and oils in Europe and America.

The missionary schools are latterly attempting to teach more handicraft, wood carving and even simple lace making, with already some degree of success.

None of the missionaries in Samoa are American except the Mormons. Those of the Protestant Church are English, and of the Roman Church, French.

The Samoans are wholly Christian in name, and perhaps as much so in practice, after only seventy years of teaching, as we, who know our own failings after two thousand years, could expect. If those who represent to them all that is good and desirable in the great unknown world outside are faithful to the trust imposed by Uncle Sam's occupancy in these beautiful islands, it will, indeed, be a blessing to them not only physical but moral, and one step more in the great march of progress that is marking a pathway around the globe.

PAGO-PAGO, SAMOA

A Matter of Sentiment

BY GRACE DUFFIELD GOODWIN

"NOT again?"

"Yes, again. Just what I always said. Men's hearts are mostly like cabbages, anyway; pull off one of the leaves and the next is just as green and perky as ever."

"Well," responded the older woman, shifting her very obvious bundle of groceries to the unwearied arm, and folding her shawl more closely about her ample person, "Deacon Hawkins has what you might call a real gift for matrimony—always gets a good wife, lives contented with her, buries her decent and respects her memory. I've neighbored with all three of them Hawkins women, living next the Deacon like we've done for forty years. You bein' so much younger and sort of new to the town, likely don't remember Harriet, nor Sarah, tho you knew Jane pretty well." The other woman gave a derisive sniff as she quickened her pace somewhat, evidently under the spur of recollection.

"S'h'd think I did know Jane Hawkins; her and me had one awful tiff when we were getting up Brother Ketcham's donation. She gave me such a meachin' little pie that I up and spoke my mind. I told her that seein' all the money she and the Deacon wasted on dead folks' graves, I thought they'd a sight better buy bigger pie plates to feed the livin', and she never passed the time of day with me from then till she was took off, and not then, as you may say, because I was to Maine, and she died here in New Jersey."

"Well, I must say, Elviry Smith, you always have had a pretty lively flow of speech. I don't doubt you've tied many a knot with your tongue you couldn't untie with your teeth. But Jane Hawkins was a good woman and a dutiful for all that, and so was Sarah; Harriet come first and so, of course, she hadn't no call to complain. I've seen the bride, because I was to the store when they drove past, and she looks more skittish than Jane. I should say she favored Harriet more in looks, sort of chirky and bright."

"I'm sure I wish her no harm; if she makes as good potato risin' as Jane she'll do pretty well. The Deacon must have had to learn to like all kinds in his day. Good-by. This is my corner; come over when you can"—and Elvira Smith disappeared with long, angular strides up the lane. Mrs. Bascom looked after her with a smile on her round, good-natured face. "Guess it's about true," she murmured; "folks do say Elviry was fixin' to be the Deacon's fourth herself. She's always had an idea she'd like to show him a thing or two about his cranky notions."

Up at Deacon Hawkins' comfortable house the woman who had caused all this discussion was going from room to room, examining with interest the stiff but handsome old furniture in the parlor, the warm upstairs rooms flooded with sunshine, the spotless kitchen with its yellow painted floor and multiplicity of cupboards and conveniences. Mrs. Hawkins was a plump, solid little person of middle age, with shrewd gray eyes, a merry smile and an undefined air of capability in every line of her brisk figure.

"It's evident that I'm not the first housekeeper in this kitchen," she remarked to herself a little grimly, but with a gleam of humor in her face, "tho I'm real thankful for it all, and the Deacon's a good man. It's considerable better than school-teachin' and boardin' round, and I always did want to have my way in a big sunny kitchen. I'll put Dickey in this south window and Tabby can have this old rocker to sleep in."

Just as the tour of inspection ended the outside door opened, and Deacon Hawkins came in from the barn. He walked over to his new wife with the vigor of a boy and gave her a sounding kiss. "Are you makin' yourself at home?" he asked, his pleasant square face beaming through its fringe of gray whiskers. "That's right. You'll find sights of conveniences here in the kitchen—seems like I'd spent more money here than on all the rest of the house; each one of the others was always a-thinkin'

of some different arrangement to make things easy, and I never denied any of them nothin'. No wife of mine could ever say she couldn't have pretty near what she wanted for the askin'. Folks said I was a pretty fool to let them do the way they done, Sarah especially, she was so sort of high-flown ('twas her fixed all them flower-racks); but I always said it was a matter of sentiment, and I believe in sentiment myself, even if I be a plain sort of man—with a tarnal set of teeth that come out every washin'" —this last in sputtering incoherence, as he plunged his dripping face into the tin basin and heard the ominous clatter in the sink. The intricacies of his toilet forbade a divided mind, so he failed to note the varying expressions that chased each other over the face of his fourth wife, "Mary Black as was," as she had gayly told the butcher that morning. But the close of the Deacon's speech restored the smiles, and she answered cheerfully, "Seems as if there wasn't much left to do to make this room the handiest I ever saw." "That's so," assented the Deacon, who had recovered his vehicles of articulation and had scrubbed his face to a rubicund warmth on the roller-towel, "and you'll find it just so everywhere in the house. I declare it's a real pleasure to me to go round and see all the things and think this was the way Harriet wanted it, or Sarah—lots of the notions was Sarah's—or Jane, only Jane wasn't much given to spendin' money; she was some of a comfort that way, but Sarah kept the purse-strings untied, I tell you! And I want you to have every single thing you want, Harriet—I mean Mary—you see you favor my first wife some—so don't you be backward about askin'."

Mary Black smiled dryly. "Don't you fret, Deacon Hawkins; I guess I stand as good a chance as the others. Now let's look at the house together and then I'll get tea."

The good man was overflowing with happiness and smiles; it seemed "so natural to have a woman pokin' round again," he said to himself almost gleefully, as he struggled into his coat to escort his wife in state over her new home. Upstairs and down they went, he explaining, she admiring, as well she might, for the great house, while plainly furnished, in matters of comfort left little to be desired.

"Is this a moth-closet?" she inquired, turning the handle of a small room which she had just noticed; "it hasn't any light in it, and it smells of camphor."

"Not much," and the Deacon gave his rafter-raising laugh; "that's the thunder-and-lightnin' closet. Sarah made me fix that, she was so terrible scared of storms. She had a feather bed in it, too, so's she could get under; but Jane jerked it out for the spare room—Jane was thrifty, I tell you, and she had lots of sense."

Mary Black snapped the key in the lock somewhat viciously; "I shan't need it," she said.

"Why, what's the matter?" asked her husband in mild surprise; "you're as short as pie-crust; don't you like the things?"—this with evident anxiety.

Mary's face recovered its serenity and she put her hands on his shoulders: "Deacon Hawkins," she said seriously, "you're a good man, and I'll do my level best by you."

They left the parlor until last; Mary had seen that in part before. She had no dread of country "best rooms"; with her, as with the people among whom she had come to live, they were a matter for respectful pride, fit only for marriages and funerals, or for the minister's half-yearly visit, when he opened the brass-bound Bible and "had prayers" with the family. Mary was quite prepared for it all; the huge-flowered carpet, the horse-hair sofa and chairs ranged at regular intervals around the white walls; anything else would have savored of disappointment. "Is that your mother?" she asked, stepping across the room in the dim light to examine an oil painting in a heavy gilt frame.

"No," said the Deacon, gravely, as he threw open a shutter; "that's Harriet, but twan't never a speakin' likeness; the artist painted it from a tin-type, and the colors don't resemble Harriet, somehow.

"The next one is Sarah; that's one of them colored crayons; she had it done herself for my Christmas by one of these traveling artists. He done the picture free, and we paid five dollars for the frame if we liked the picture; I didn't like it so well's I might, and I told the

artist-fellow so; but law, he made such a terrible time about it, come here one day when I was gone, and talked so fierce he'd like to scared Sarah into fits, that she paid for it, and, after all, it's about as good as any, I guess. Seems like Sarah didn't use to look so glum, somehow," and the Deacon peered with a troubled expression up at the hair that resembled cardboard pasted around the face, at the purple lips and the wonderful elaboration of collar and breastpin.

"I decided he must have took her one day when she had neuralaga, or her bread didn't raise. This one's Jane. It only come home last week; it's real good of her; she was a well-looking woman, if I do say it as shouldn't. Her hair was sort of curly, and she never wore specs up till she died. Those flowers I put there on her birthday, last week. I always do—it's just a matter of sentiment. I treat all alike. Next week will be Harriet's birthday, Wednesday. I've got to go to the State Fair, and I thought mebbe you'd remember to fix 'em for me; Jane used to, and so did Sarah."

Mary Black was looking out of the window, which she closed slowly as she turned to her husband. She had succeeded in banishing every particle of expression from her face. "I will do whatever you like," she said calmly.

Back to the kitchen they went, the garrulous and happy Deacon still chattering away like a woman, and Mary rather more silent than usual. Suddenly he looked at her anxiously: "I mean to hang you on the end wall, if you like," he said.

On Sunday Deacon Hawkins escorted his wife to the village church and proudly ushered her into the pew. "Same slip I've sat in, man and boy, nigh sixty years," he whispered. The church was such an one as Mary had expected to find in Medford, unpretentious, comfortable, and to-day filled to the doors with the farmers and their families from the surrounding country, and with the villagers, many of whom had come on purpose to see Deacon Hawkins' "last."

Soon Mary's eye was attracted by the unusual beauty of three fine windows, so out of keeping with the simplicity of the building as to be noticeable at once. She did not need the Deacon's enthusiastic whisper at her ear to explain to her what they were; she understood perfectly. Harriet, Sarah and Jane were risen again before her, Harriet as Rebecca, Jane as Ruth, and Sarah, the "high-flown one," as Miriam, dancing. "Seemed fittenest so," commented the Deacon; "she didn't resemble no other Bible woman as either the minister or I could pitch on."

Harriet's window bore a handsome wreath of fresh roses, and Mary recalled the birthday next week, only to receive her husband's further illumination of a subject beginning to be somewhat dark.

"'Taint for her birthday; to-day was our wedding anniversary. I keep flowers in the *house* on birthdays, and in the *church* on wedding days, and on the *graves* on the days they died. I always have their favorite flowers; it's some confusing if you don't just give your mind to it. Jane always used to tend to it, and so did Sarah. I hope you'll learn pretty soon; I'll mark them down on the calendar in the kitchen, and you can take your time about learnin' them."

Mary Black's eyes held a rebellious flash as she put her hand gently on her husband's knee, to warn him that service had begun. Afterward, with some inward struggle, she followed him to the churchyard, there to see the white headstones in the Hawkins plot, each "Sacred to the memory of" Harriet or Sarah or Jane, "beloved wife of Deacon Israel Hawkins."

Her husband was pointing out to her eagerly the beauties of the granite shaft in the middle, three sides of which were inscribed. With his sleeve he polished off the uncut side, remarking in a tone of sincere affection, "here's just one place left for you, Mary. I'm goin' on that plain place up above, and then it will all be full. I don't calculate there'll be any one to follow you. I've been blessed beyond most men," he added, simply.

It is well for the profession of school-teaching that it demands self-control, for only that saved Mary from giving away to a wild impulse of laughter, which she realized that the good man, here among the visible reminders of his joys and sorrows, would never understand nor forgive. She walked away, and her husband followed slowly.

True to his purpose, on reaching home,

he took from his pocket a stubby pencil and marked on the kitchen calendar the cabalistic signs that were to be Mary's future guide:

Jan. 3d, H. b. h. l.
Aug. 19th, S. m. c. r.
Aug. 2d, H. d. g. l.
Oct. 10th, J. b. h. p.
Sept. 12th, J. m. c. p.
Apr. 12th, J. d. g. p.
Oct. 22d, S. b. h. r.
Sept. 15th, S. d. g. r.
Sept. 18th, H. m. c. l.

"There," he said, with a great sigh of relief, "that's as plain as a pike-staff; the first letter is for the name, the next means whether they were born or died or got married, and the next where the flowers go—g grave, h house, c church; the last is for their favorite posies if you can get 'em; l lilies, r roses, p pineys. It may seem dreadful foolish, but I'll do as much for you, Mary; it's just a matter of sentiment."

Everything ran along smoothly in the big house. Mary was in reality perfectly content; she had not been young and romantic, and so she got even more out of her marriage than she had expected. The Deacon was unfailingly cheerful, kind, considerate. "I don't doubt he's been a good husband to us all," she said one day to herself, with a little choking laugh, as she flicked the dust from Harriet's severe countenance, Sarah's superior collar and Jane's curly hair, "and I declare I hope I'm doin' as well by him as you did."

The first ripple that occurred to mar their absolute serenity was in August. The minister had announced that on the first Sunday in September he would take the regular annual collection for foreign missions. Mary came home full of interest. She had always been an earnest church-worker, and had given out of her scanty salary many times more than she could afford to her beloved missionaries. Her heart danced for joy to think that this year, in her altered circumstances, she could give more than ever, and she laid the matter at once before her husband. His kind face grew grave. "I'm dreadful sorry, Mary," he said, "to seem to deny you anythin', but the truth is I'm always a little short about now. You see there's so many anniversaries come along in September and October, Sarah's and Jane's birthdays, Harriet's and Jane's wedding days, and Sarah's death day, and I calculate to spend about a hundred dollars then to show proper respect. I'm awful sorry. Perhaps I can spare you a dollar when I sell the calf."

Mary's lips tightened in a thin line. "You needn't put yourself out," she replied, stiffly; "I've saved a little; I'll give that. That plate never went by me yet, and it's never going to."

But the Deacon was troubled; his bright face wore a cloud. "I've got to be gone about six weeks this fall," he told his wife that night, "just through part of September and October, and I'll have to leave that money with you, and let you see to those flowers. You're a master-hand to remember things. I never see a woman to beat you in that unless perhaps it was Sarah; she had a powerful memory, had Sarah."

September came, and Deacon Hawkins departed, leaving renewed instructions about the flowers, to all of which Mary gave cheerful assent. He had been gone but a day or two when she decided, somewhat reluctantly, to look at the calendar and arrange her plans. But no calendar was hanging on its accustomed nail, nor did a thorough search of the entire house reveal its hiding-place. The calendar was gone, and with it all hope of disentangling those alphabetic mortuary puzzles over which she had shed already more than a few angry tears. But now she was panic-stricken. For two hours she sat over the fire that evening, growing hot and cold by turns as she realized her predicament. The shadowy kitchen grew darker. Harriet's table, Sarah's flower-racks, Jane's shelves became accusing ghosts in the gloom. But Mary Black was once more to give thanks for her training as a school teacher; she had learned the value of common-sense; so at last she sat up straight in her chair like one who has taken a great resolution, defiantly arose and lit her candle and marched to bed.

The next week she called on the minister, and then she went calmly about the necessary preparations for her lord's return.

Meanwhile, Elvira Smith and Mrs. Bascom had much to say to each other

and to other people. "She looked like a flighty thing when first I see her," said Mrs. Bascom. "I always mistrusted a woman who wears nateral crimps after she's forty."

"She ain't near as neighborly as Jane," said Elvira, with bitterness. "She's dretful close-mouthed. I hope the Deacon will give her her come-uppance, that's all."

When Deacon Hawkins came home Elvira Smith made it a point to meet him. "Queer doin's since you've been gone, Deacon," she said significantly. "Jane never done so; not a flower to be seen in church or on the graves since you left. What there may be in the house nobody knows. Mary Black never had no reputation for bein' neighborly."

The Deacon heard in bewildered silence, and when Mary met him in the hall she knew that the declaration of independence awaited her trembling signature. He brushed by her hastily and opened the parlor door. The affronted and undecorated likenesses of Harriet, Sarah and Jane gazed at him reproachfully through the gloom. He turned to his wife and his face was full of the question his lips refused to frame.

"Israel," said Mary, with gentle decision, "You come here and set down and hear what I've got to say. There ain't goin' to be any more such sums of money spent on dead folks in this house, while live folks are achin' and sufferin' and dyin' for something more fillin' than flowers. I gave that money to the minister every single mite of it, to be spent on poor folks this winter, and I told him it was in lovin' memory of Harriet and Sarah and Jane Hawkins."

The Deacon sat in absolute silence for many minutes; then he leaned over and took his handkerchief to wipe away the tears that were streaming down his wife's face. "It's all right, Mary," he said, tenderly. "You all have your own way, but you're all real good women, if I do say it. It was just a little matter of sentiment."

Mary's tear-wet eyes overflowed with laughter. "So it was with me, Israel: just nothin' in the world but a matter of sentiment"—but she added as she went out of the room, "I don't know as I ever would have had the spunk if so be Providence hadn't willed I should lose that calendar."

PAWTUCKET, R. I.

The Rime of the Valiant Hearted

BY RICHARD BURTON

Hail to the valiant hearted one
  Who ne'er gives up the fight;
With a courage high he meets the sun,
  And his faith is firm at night.

Though you lay him prone, he is up again,
  And his front is to the foe;
He finds some joy in the touch of pain,
  And he looks beyond the wo.

His life is warfare, scarred his face,
  But his spirit cannot die;
He is martial born, and he seeks a place
  Where the battle-bugles cry.

There is never a noble cause but he
  Helps it by deed and word;
Defeat to him is but victory
  For a hidden gain deferred.

When luck is darkest he only laughs,
  And he strives for seven times seven,
For he deems the years are but epitaphs
  Of the things that hinder heaven!

WALTHAM, N. H.

Two Portraits of William H. Crane. The one at the right shows him made up as Millionaire Lechat in "Business Is Business"

The Old School and the New

BY WILLIAM H. CRANE

[There are few American actors more dear to the American public than Mr. Crane, and anything he says about the theatre is necessarily of much interest. His present play, "Business Is Business," we recently praised very highly in our "Music, Art and Drama" Department.—EDITOR.]

I CAN think of nothing better to illustrate the difference between the old school of acting and the new than the tradition known as the "center of the stage." This expression, so significant in the old days, and now one of the most expressive phrases of the slang vocabulary of the public, has happily become obsolete so far as the stage is concerned. Formerly it described literally the prerogative of the star—the exact location on the stage in which he was to execute his strongest scenes. The star himself held it sacred and would tolerate no violation of his rights by any presumptuous aspirant. I rebelled against this hard and fast tradition from my first experience on the stage. I felt that it distorted art to the point of ludicrousness at times. When I assumed leading rôles my manager used to say indignantly, "Why do you let so and so crowd you off the center of the stage?" to which I invariably used to reply, "He didn't crowd me off. I went there of my own accord." Supposing the star of the company were playing the part of an heroic army spy and were shot in the act of making his escape through a window, wouldn't it be more natural for him to drop in a heap either immediately inside or outside of the casement than that he should pull himself together and for some unaccountable spectacular effect stagger back to the middle of the room, swing around and fall heavily to the floor?

Who was to blame for those old, incompatible conditions, you ask? The vanity of the actor? Perhaps. But primarily it was the position in which he was placed by his very skill, which had

won applause, adoration, and had caused the public to elevate him above the part that he played. As an illustration, a tragedian might play Hamlet, Macbeth, Richelieu, or Othello, characters as different as black and white, yet all with tremendous success. Why? Not that the public was interested in any one of these historic men, but that it loved the actor's portrayal of them. Can you wonder then that the actor who was human, susceptible, should finally come to accept the elevation which the public accorded him as his right?

The traditions of the stage held fast, like a glacier on the mountainside, long after the supporting traditions of all other professions had been swept away by the onrush of progress. But the glacier was gathering force, which, when once it started, swept it ahead almost of all other movements. I think the Shakespearean plays were the anchor that held the drama fast more than anything else. The public had raised the great dramatist into a realm that was supramortal. It had never thought of his creations as real flesh and blood, but only as images that moved to the will of the master and through whose mouths he hurled his dramatic philosophy at the world. The actor who would play Shakespeare must go into a loftier realm, apart from man, and must on no account drag the sacred characters down to earth.

I remember Clara Morris, always original, trying to change Lady Macbeth from a cold, sexless creature of stone and iron into a feminine, seductive, yet withal overwhelmingly ambitious, woman, and receiving scant praise for her pains. No, no! the tradition-bound, hard and fast public conception of the character was not to be changed.

"Why," said an old lady to me apropos of Miss Morris's attempt, "Lady Macbeth isn't a woman; she's a Shakespearean heroine."

That was the kind of stone wall that faced the man who would make an innovation. But the stage was destined to yield to the irresistible spirit of progress that within the last quarter of a century has revolutionized the world. The manager realized that he must have new plays, or, at least, new methods for old plays, and from this realization sprang the present natural, or realistic, school. It may have been difficult for the manager to convert the actor to his ideas of progress, because it is hard to give up applause, even in the interests of art. It was necessary to convince the actor that the part of the villain must be consistent, that he must have no redeeming or generous qualities. On the other hand, the hero must be a human being, and not a god all through, without any weaknesses or vices. This would necessitate the sacrifice of applause. But the public was beginning to testify through the box-office more emphatically than by applause its appreciation of player or play. Thus the change was indispensable—imperative.

But the actor was not the only one to suffer by the change. The public demanded innovations in management and stage effect quite as much as in the art of the actor. In those days they would act an ancient play, Greek, Shakespearean tragedies and what not, with precisely the same scenery—the same stage setting for everything. To-day such an incompatibility would arouse the jeers of the whole house. Now no play is produced for which new and special scenery is not painted. A manager wouldn't dare to use the same scene twice. It will be seen, therefore, that it now costs the manager incomparably more money to feel the public pulse than it did forty years ago. When I went on the stage the wooden door was unknown. Everything was pasteboard. Apples and goblets and pies were made of that material, and if perchance one fell upon the floor it made no sound that could be heard beyond the footlights. To-day every device must be employed to supplement and promote the artistic effort of the actor. Stage setting and scenery must conform to real life. The actor of earlier days had but a single gas jet in his dressing room; to-day he has a mirror encircled with electric lights and every contrivance to facilitate a perfectly artistic make-up. The funny man used to require a big red nose and a plaid suit. The Englishman had sandy side-whiskers and walked with a strut, and the Frenchman was not considered the real thing unless he had a mustache and imperial, a straight up and down plug hat, and a coat that drew in at the waist and bulged at the skirt.

One of the most distinguishing and significant features of the advance from the theatric to the realistic school is what might be termed "physical fitness" for the part. In the old stock companies each actor was engaged for a certain "line of business"—the leading lady, the leading man, the first old man, the first and second comedy, the low comedy, etc. The rule was inviolable. Each played the "business" and that only for which he was engaged. To illustrate the absurdity of this custom let us say that the man who played low comedy was a little bit of a fellow physically. Now, a great star, with a large repertoire, comes to the theater to play, depending upon the stock company for support. Some of the low comedy characters in her repertoire might be physical giants. What a figure, then, does our little comedy friend cut trying to stretch up and puff up to do the "part"! To-day physical fitness is one of the first essentials of dramatic art, and even the star who can overcome it must be a genius indeed. So far is this rule observed that for the personation of the characters of foreigners actors of the same nationality are sometimes employed.

Forty years ago the actor ranted to make his effect theatrical; the star always took the center of the stage in a climax. It didn't matter whether any human being ever did such a thing or not, so long as it was theatrical. In this way he won applause and demonstration, particularly from "upstairs." If one of the plays that were acted in all seriousness half a century ago were performed by the same people to-day and in the same manner it would be regarded with wonder. The same audience that raged and bellowed in sympathetic exultation at the crushing of vice and the triumph of virtue in an old Bowery melodrama would to-day regard the whole blessed business as a burlesque. If only the moving picture machine had been in vogue forty years ago and had caught their methods it would teach a lesson in human progress more wonderful than that of its own existence.

I mean no reflection upon actors of that period. They adapted their methods to public demand. So far as intellect is concerned, the men who were great then would be great to-day, for genius never changes. The world now is just as theatrical as it was then, only it manifests the fact in a different way. It is more practical; it must be appealed to through channels that it best understands. The actor must adhere to real life—the logical, the probable—even at the expense of applause. This is peculiarly true in the acting of what we call modern plays: the star must be a natural, real human being, even if he doesn't get a handclap. Some persons, in defense of ancient ideas, claim that plays may be spoiled by overacting and overdressing—that is, by a too minute observation of detail. This is true. There is danger of realism running riot. It might be urged that Shakespeare is sometimes produced on a scale of magnificence unknown in old times. But, on the other hand, if historically correct as to detail, would it be artistic? Would not the great Shakespeare—the ideal that stands for all ages—better be conveyed by modern methods to modern appreciation? The danger line between the sublime and the ridiculous is more finely drawn to-day and the actor's danger of overstepping it greater. But there is one absolute and simple safeguard—common sense. I have always said that the successful actor must have intelligence, some dramatic ability, and a heap of common sense. The common sense feature is also the safeguard of the stage manager, the scenic artist, and all who are artistically connected with the production. The actor must be natural in his make-up and his speech. He must express his deepest feeling in the simplest way instead of in the maniacal, grotesque manner of the old school.

Once the change from the old school to the new began, the manager, actor and playwright found that they had created a veritable artistic Frankenstein monster. The public devoured, as it were, every innovation and clamored wildly for more. It was a generous paymaster, but a very hard driver, working its favorites up to their full capacity at all times and constantly demanding more than human beings can supply. Its theatrical education was rapid, it grew more and more exacting, and soundly resented any tendency of its favorites to "fall off" or retrograde. Likewise its taste became more and more omnivorous as well as epicurean. Twenty-five years ago the

manager could tell with a tolerable degree of certainty what the public would like in the matter of star and stage effect. Nothing of the sort can be done to-day. The public at once demands great variety and high quality.

The actor to-day must almost take his stage character into his home life. He must rehearse off as well as on the stage. When I was playing the part of "Peter Stuyvesant" I used to wear a cork leg. The realism of the thing was promoted by a large cloak which fell loosely over my foot, which stuck out behind. In this costume I used to stump up and down the front porch of my summer house at Cohasset for hours at a time. One day a carpenter came to see me about repairs to my stables. We spent some time examining the buildings, and he left me with an appointment to call the next morning. When he came I was stumping up and down the porch, with cork leg and great cloak.

"Good morning," said the carpenter; "is Mr. Crane here?"

"I'm Mr. Crane," said I, wondering at the man's lapse of memory.

He looked puzzled. "I guess I mean your brother, then," he said.

"Brother?" said I, nettled. "I've no brother."

His look of perplexity deepened. "But I mean the gentleman that climbed around the stables with me yesterday," he persisted.

"Well, that was I. What of it?" I rejoined, and then, following his glance at my cork leg, I realized. So did he, and he was embarrassed.

The influence of the new school is reflected in the management of the theater. Stage directors are now keen and exact business men. No laxity on the part of an actor is tolerated. Forty years ago a stage favorite might get drunk and fail to play. When he did appear the indulgent public seemed the more pleased at the episode. The star is no longer regarded as an irresponsible good fellow whose vagaries must be winked at. He must keep his faith with those who have paid for seats or give place to some one more reliable.

The public in a way is capricious. While it exacts great things of the actor it still binds him with chains of tradition. He must advance, but not expand. The ambition of the comedian to play tragedy is resented as presumptuous. I was severely criticised for playing Isadore Lechat in "Business Is Business," not because I didn't play it artistically, but because I played it at all. It is tragedy, I admit, and I have always been associated with laughter, but I saw no reason why I should not attempt a strong characterization, even if it were serious, almost tragic, in a powerful play by a great writer. The assumption of this part has cost me more study and work than any other character I ever personated. Mr. Frohman asked me the other night why I could not play the closing scene without so terrible a wearing effect. I explained to him that I had to use methods that were wholly foreign to my experience, to uproot tendencies of forty years' growth. In "David Harum" it was an easy matter to produce either laughter or tears from the audience. In the great scene in that play I had but to sit back calmly in my chair and tell the story about the ten-cent piece and give the Widow Cullom her deed to her house. The larger the audience the easier it was to influence—to make them cry or laugh; it was a question of temperament. But in the last act of "Business Is Business" I have to act with almost frenzied energy to produce an effect, to tax my physical and mental efforts almost to the point of collapse.

I love to play comedy parts, because the people love me for playing them, but it's difficult to find a play good enough with a strong character like "David Harum."

During the transition from the old school to the new every resource of genius has been taxed to satisfy advancing public taste. The actor and the manager have succeeded fairly well. Rehearsals are more carefully done, stage settings arranged with the most careful observance of detail, and, on the whole, plays produced with immeasurably higher artistic effect. The majority of playwrights alone have been unable to keep pace with the profession in the quality and quantity which the public exacts.

New York City

Contemporary German Drama

BY FRIEDRICH SPIELHAGEN

[Friedrich Spielhagen has enjoyed universal fame as a novelist and critic for fifty years. The intimacy with aristocratic manners shown in his famous novels, "Problematical Natures" and "Hammer and Anvil," was thus due primarily to his occupation as a tutor in the family of a Pommeranian nobleman; while the artistic insights found embodied in other works were gathered similarly from actual experiences on the boards as an actor, or in his capacity as a reporter and critic among players and painters. As a veteran in German contemporary literature he still keeps abreast of the times and is the sole representative of the old romantic school of fiction, who is beloved as a mentor by the younger realists and is sought as a critic by their organs of the press. —EDITOR.]

FRENCH writers complain of the competition which German plays are successfully making with their own. The same complaint might well be echoed in other countries also, for the theatrical handbills of England, Italy, Russia and America constantly present the names of German authors. Wherever a great actress travels she plays a *rôle* in some German tragedy, while lesser players, following this example, display their talents by acting German comedy and farce. There never was a time when German drama enjoyed such universal reputation as it is now enjoying.

At home in Germany the popularity of the theater is still more prodigious. The stage entices the pens of young and old, and by so doing has brought about a literary period in modern German history of an altogether novel character. For in old times the great names in our literature were those of poets; in recent times those of novel writers. We had our Gustav Freytags, Gutzkows and Paul Heyses, or men who wrote romances, poetry, essays *and* dramas, and one with as much painstaking devotion as the other, whereas to-day we have writers primarily for the stage. Poetry goes begging for bread; the drama wins champagne. Five thousand dollars is paid for the best novel, five hundred thousand may be the reward for the best play. Prestige has shifted, and the laurel is no longer worn by the poet wandering in shadow solitudes with frenzied eyes rolling, but by the playwright stepping before electric lamps with lips smiling.

Now, how has this change come about in our stolid Fatherland? Why has our literary ideal become thus unbalanced? There must be causes for the innovation.

Indeed, yes; but they are obscure; very obscure and very complicated. Authors and the public are alike involved in the problem—for to say the reason is simply that the public demands dramas and therefore authors supply dramas is to beg the question. Why the change in *the public?* In Goethe's times it demanded poetry, a few decades ago and yesterday it was demanding romances and novels. Why is it now demanding plays?

The easiest explanation, I think, may be found in the general quickened spirit of the people, which finds them thronged together, moreover, into cities, to an extent never before known.

In America, where the strenuous spirit I speak of has held its sway a long time, there abound writers of short stories, and short story writing has become the art that is not only the most predominant in your country, but the most polished.

Well, the advent of this same spirit here has given impetus to the analogous act of dramatic writing. We long had literary theories that lauded the drama, and the disposition of the people becoming favorable, the talent of the country threw itself into play writing as if by one accord.

There is less difference between short stories and plays than most folks think. They are both concentrated, condensed forms of composition. Both limit the number of personages involved in the fable or plot, as well likewise as the number of scenes presented. Above all, both deal with a single case or problem; something that is possible chiefly because the *dramatis personæ* are matured individuals, with habits fixed, passions at their hight, and idiosyncrasies become unyielding. No painting of the evolution of character from youth to manhood is permissible in either one. A conflict comes up and runs a brief course; and short in consequence are both forms of composition that handle it.

Then, too, authors are not only exposed along with the public to the general spirit of the times, they also feel events and respond more keenly than other people to current social, political and moral ideas. "Youth is prompt with words," says Goethe, and as "poets are ever young," it comes to pass, furthermore, that the subjects which our dramatists handle are either phenomena of contemporary life or those of old history suffused with modern sentiment.

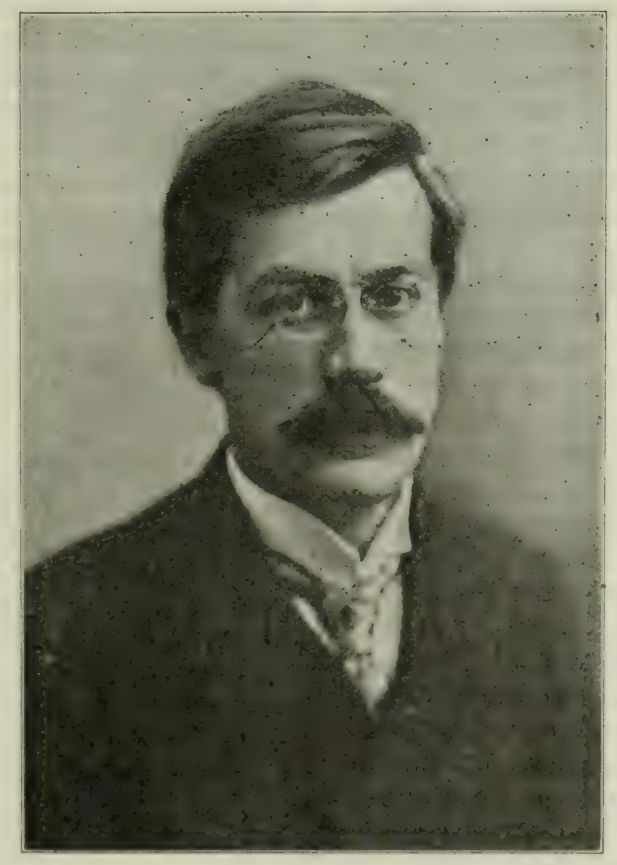
Many catch even at passing incidents, and turn their opinions upon the matters involved into personages. And the public, on its side, appears to like seeing such opinions dressed up and gesticulating before the footlights, making propaganda for all they are worth; the play serving it as a lively sort of pamphlet.

To be sure, a ticket to the theater, good for one night only, costs as much as a book or half a dozen brochures, that may be held at one's disposition during a whole lifetime. But herewith we run against another reason for the change observable in the practice of our population respecting the theater. Germans have become richer. They can afford now to patronize the playhouse, and playhouses in their turn may venture to multiply in numbers.

I cannot pretend to give statistics, but the increase is very great. Our large cities possess each a large number of theaters and every town supports of late years at least one permanent playhouse. Many are endowed houses—that is to say, are supported by contributions from the privy purse of reigning sovereigns, allowances from the state treasury (Germany still consists of over thirty sovereign states), or from the municipal purse. All these theaters are free to purchase whatever plays the manager may approve, the only interference to be feared being that of the police censors or the ruling princes averse to radical ideas. And, as a matter of fact, they present so many competitors for new pieces, the managers being eager each to prove his discernment, by discovering "dramatic talents"; and as an author is paid a percentage of the profits from every representation, and, furthermore, has every chance of seeing his play, if successful in one city, put upon the boards of all other towns, manager and author seek each other to their mutual benefit.

The report runs among us that Americans are inclined to care more for the actor than for the play; well, the Germans, too, have their star actors; but it redounds to the advantage of our dramatic literature that the play nevertheless receives their first consideration.

To pass, however, from the reasons why drama has attained to chief importance, let us look for a moment into the quality of the plays it affords. Has this also undergone a change? The adherents of the younger school of writers invite us to believe that it has undergone a most radical change; and I concur in the opinion that sees in the theories proclaimed by these adherents much, indeed, that is revolutionary, from a literary point of view. The old drama was ideal or heroic; the action of a piece crystallized about a central figure. Contemporary dramatists, on the contrary, seek to banish this hero, and they do so on the assumption that "heroes are untrue to real life."



Triumphant, therefore, are the professed disciples of naturalism; altho, fortunately, most fortunately, extremer doctrines are promulgated under this term "naturalism" than appear in actual writings, in the dramas, I mean, that win and hold a place upon the stage. Among these doctrines the one that is put in evidence most constantly is the scientific interpretation of characters. The old practice of showing up the personages of a play according to the individual divination of the author's genius is quite tabooed. Studies in psychology, heredity, pathology and in the social surroundings of personages take the place of inspiration. Fate, divine Providence, necessity, —that residuum of the inscrutable, the imponderable and the demoniacal which enveloped the old tragedy in a mystical haze of poetry—is sought by this means to be excluded; human passions and their consequences being exhibited as the workings or the reactions of a given environment on certain conditions of nerves and viscera. I need not go, I think, into further details; these few traits will suffice to characterize our dramatic productions as being eminently true reflections of the modern spirit.

BERLIN, GERMANY.

Literature

Mass and Class

MR. GHENT'S first book commanded attention by his clever satire, "Our Benevolent Feudalism," so clever, indeed, that he twisted the interpretation of the trade union movement from its real significance, as a movement toward representative government, into the support of its exact opposite, feudalism, or personal government. He now gives us* his serious convictions, which show him to be, not the benevolent feudalist whom unimaginative readers supposed, but a socialist. Taking his stand on the "economic interpretation of history," he proceeds to the class struggle, the analysis of economic classes in America, and class ethics, closing with his prediction of a final victory for the producer class and the producers' ethics. Whatever may be said of his predictions, there can be no doubt that in describing existing classes and their ethics he speaks the sentiments of the mass of wage-earners, and he who would truly understand the labor movement in its bitterness and distrust, as well as its persistence and self-sacrifice, will find it here. Certainly the book will strike the non-wage-earners as extremely one-sided, but it is the literary and philosophical dress covering the crude one-sidedness of many American citizens. It expresses what they feel and act upon, and it is worth while for those sitting in high places to read it. They will learn in their own language what the wage-earner thinks of them.

W. J. GHENT

The bulk of the book is devoted to Graft. Miss Tarbell selects Rockefeller as a perversion of business ethics; Mr. Steffens finds graft wherever "big" business touches politics; but Mr. Ghent finds the "ethic of deception" intrinsic in all "trading class" morality. The trader is the manufacturer, the dealer and the financier. The dualism of ethics, which anthropologists discover in primitive society, Ghent applies to social classes. The moral sense "had its origin in the instinct of group safety," and the "paramount economic interest of a class becomes the basis of the conscience of the individuals composing that class." These beliefs are generally sincere, and "are held, in the main, unconsciously of their determining cause." Thus the trading class ethics is the right to make any bargain, the duty to keep the agreement, and the propriety of deceiving the members of other classes. These he supports by a fearful cumulation of adulteration, political corruption, child labor, financial swindles, and so on. The traders resist the prohibition of these frauds by legislation, and only as the "producer class" has gained political power have they been in part restrained.

The "ethic of the producers"—usefulness and fellowship—is just as much the result of their economic conditions as

* MASS AND CLASS. *By W. J. Ghent.* New York: Macmillan. $1.25.

is the ethic of the traders, and is no more to their credit than is the other to the traders' discredit. Both follow from economic needs. The graft of a few trade union leaders, the petty tips of waiters, are exceptions caused by association with and dependence on the traders. The farmer is part producer and part trader, and his ethic is hopelessly mixed. These are the leading classes. There are also the idle capitalists, whose funds are managed by the traders; the retainer class — lawyers, clerks in financial establishments, employees in domestic and personal service, and politicians—who protect and serve the traders, the social servants—teachers, ministers, writers, physicians, artists, employees of public institutions—whose normal function is to increase the productiveness of the workers and foster the general welfare, but who generally exercise the perverted function of retainers to the trading class.

The trading class is the dominant class, but it has failed in its trusteeship. But this is not because the individual trader is bad. "In general they are honorable, according to the ethics of their class; disposed to be fair, as they understand fairness. A great number of them are men who are faithful to the last degree in every engagement, expressed or implied; public-spirited, in accord with their understanding of public needs, and willing to spend time and money for such public interests as seem to them right; good-hearted, also, and eager to help, with sympathy and means, a human being in distress." But their virtues are strong only in their sense of *individual* obligation and not in their sense of *social* obligation.

While Mr. Ghent's distinctions are keenly and suggestively drawn, and he has guarded some of his sweeping generalizations by qualifying clauses, yet it is certain that he has distributed his praise and blame with no even hand. The services of the capitalist and trader as a producer are belittled even denied; and the wage-earner is raised to a pure ethical empyrean where he cannot be recognized. When one ventures to bring under a single epithet the motives of all the millions who happen to belong to a single class, and to denounce them as dishonest, even tho politely conceding that they are unconsciously so, he passes from the realm of proof to that of assertion. The trader class has many rascals, but the class as a whole strives to get rid of them, tho it needs the help of other classes to do so. But neither can the labor class of itself rid itself of its rascals, and one might even hold that the ethic of shirking is entitled to its place in the great social ethic of deception. As men come to know better the individuals in other classes they are surprised to find that they are very much like themselves. In the long run, it is better for human progress to hunt for the common ground on which the right-minded of all classes can unite against the rascals within each class than to strengthen the already ominous class distrust on which the rascals rely most for control.

Howells's Latest Novel

In reading Mr. Howells's last novel, *The Son of Royal Langbrith*,* one is frequently brought up against the fact that this is startlingly like Ibsen; the same terse, Titanic dialog, the same complication of plot resulting from wrongs of years before, the simple setting forth of the situation in the intimate, almost gasping conversation. Then, just as one is speculating and wondering whether it was Ibsen or the times that has done it, he is suddenly dropped back into Howells with the old, drolling, half-indolent Americanisms; he is at home again and reads on content, more comfortable with the friend than with the master. The gossip about the characters is refreshing, the lowering of the tragedy has lifted.

But even in the comforts of old friendships there are some points that will not bear excusing. For example, the scene among the young folk, where the girls are popping corn in the parlor, when James Langbrith and his friend come to call on them. The author himself feels the boldness of the talk and makes apology with the fact that the characters are young. No doubt they would have said things just as stupid, more stupid in probability among such people. None the less it is bad art to chronicle; it is cheap-

* The Son of Royal Langbrith. By William Dean Howells. New York: Harper & Brothers. $1.50.

ening, it is weakening and tiresome. For the day of such realism is past, and when the artist wishes to give an impression he must nowadays give it through description and never through bad writing of cheap dialog. If youthfulness and good spirits are the subject and the conversation will not bear repetition, the end must be attained through other measures, through youthfulness and buoyancy of the writing. Such dialog, on the contary, falls flat and the reader turns away from the chapter, not refreshed and inspired by the youth, but enfeebled and depressed by too close contact.

None the less the book is strong and well worth writing. It is a novel of middle age, not of young folk, and those characters are masterfully handled. Dr. Anther, Judge Garley and John Langbrith, and, perhaps, best of all, Amelia Langbrith—these are the people that live, these make the book and make the story. Amelia Langbrith is a study worth a million, and were there a little bit more labor on the setting she would shine out well among the gems of fiction. She will do very well as she is, for the first conversation with Dr. Anther is a masterpiece only equaled by his scene with old Judge Garley. The portent of the theme, the triviality of the surroundings, are all there, and done with a word, with a touch, that lifts Howells to the highest form of dramatic writing, and makes us all more proud of him than ever.

Irish Literature

THE present is an eminently opportune time to bring out an extensive anthology of Irish Literature,* for all the English speaking world at least is just now very much interested in things Irish and there is a widespread desire to know more definitely of the achievements of the race that has never been behindhand, as one of its own members might say, in claiming credit for the origins at least of a good deal of what is best in our modern literature. Those who may have doubted of the existence of serious basis for such supposedly magnified claims will find much to modify opinions, if not to persuade, in these volumes. Our good friend, Mr. Justin McCarthy, formerly of THE INDEPENDENT, and his associate editors have made an excellent set of selections from what is best in the literature of all times that is due to men and women of Irish birth.

Anthologies always and apparently inevitably exaggerate the comparative importance of contemporary authors by giving them more space than will eventually prove due them, and in this this Irish anthology is no exception. Indeed, this fault might well be said to be emphasized here. Men and women who have done little more than write a few clever verses that happened to fit particularly well into a political situation or who penned a successful pamphlet and some editorials on one of the many passing phases of the numerous Irish movements of the last half century are given a place. In some cases authors that we are inclined to think of as little better than ephemeridæ, the literary fireflies of this generation (tho, of course, they may yet be shrined in the imperishable amber of fame with their little lamps multiplied many times in power by posterity's interest), writers who are still living but whose genius is not universally recognized, are given the opportunity to shine over as many pages as such immortal compatriots as Swift and Goldsmith and Burke.

The extent of the collection, some 4,000 pages, is large, yet there are some omissions noticeable. We miss, for instance, the name of Edmund Bailey O'Callaghan, the historian and archivist of New York. Surely his writings would have afforded at least one or two excellent selections, and as for his importance, tho always in opposition to England and with all his work done here in this country, the English National Dictionary of Biography, because he was born in Ireland, gives him nearly two pages of a biographical sketch. Some of us at least would have been pleased to have had

* IRISH LITERATURE. A cyclopedia of Irish authors and their works issued under the direction of the following Editorial Board and Advisory Committee. The Hon. Justin McCarthy, M. P., Editor-in-Chief; Maurice Francis Egan, LL.D., of the Catholic University, Washington; Lady Gregory, Standish O'Grady, D. J. O'Donoghue, Prof. F. N. Robinson, of Harvard University; W. P. Ryan, Douglas Hyde, LL.D.; James Jeffrey Roche, Editor of the *Pilot;* G. W. Russell ("A. E."), Stephen Gwynn, Prof. W. P. Trent, of Columbia University; Prof. H. S. Pancoast, John E. Redmond, M. P.; Charles Welsh, Managing Editor. Nine Volumes. Philadelphia: John D. Morris & Co.

some examples of Denis Florence MacCarthy's wondrous translations, probably the best that have ever been made into English, and we would have willingly sacrificed some of the pages given to his living namesake, Huntley McCarthy, in order to secure the space. There is, too, a sense of incompleteness about the volumes for an American critic because of the absence of selections from Irish-American writers, some of whom are distinctly more Irish and national in their spirit than not a few of those whose accidental birth in Ireland gives them entrance to the volume.

Accompanying the selections and biographical sketches there is a series of essays on phases of Irish life and literature that make a notable addition to the value of the work. These essays are by authorities on the special subjects treated, and tho all too brief, are very opportunely informing. The editor-in-chief, Mr. Justin McCarthy, has treated the general subject, Irish Literature; William Butler Yeats, Modern Irish Poetry; Douglas Hyde, Early Irish Literature; Dr. George Sigerson, Ireland's Influence on European Literature; Maurice Francis Egan, Irish Novels; the managing editor, Charles Welsh, Irish Fairy and Folk Tales; the late J. F. Taylor, K. C., The Irish School of Oratory; Michael MacDonagh, The Sunniness of Irish Life; D. J. O'Donoghue, Irish Wit and Humor; Stephen Gwynn, The Irish Literary Theater, and Charles Welsh, A Glance at Ireland's History. Most readers familiar with other literatures will be apt to turn among these to Mr. Douglas Hyde's Early Irish Literature, Mr. Stephen Gwynn's Irish Literary Theater, or to Dr. Sigerson's Ireland's Influence on European Literature. They will not be disappointed, for tho the essays are almost necessarily so compressed as to preclude anything like adequate treatment of their subjects, they are eminently suggestive and furnish just the information on which at least a preliminary judgment can be formed by one who has not the time for further investigation. In this matter Mr. Hyde's essay is especially valuable and is, of course, on a subject of special interest to all those who have longingly seen the Gaelic movement assume shape without being able to keep up with the procession.

In general it may be said that the *Irish Literature* promises to be of very valuable aid for the understanding of the present Gaelic movement on the part of those who have not realized how much men of Irish birth have stood for in human progress, in culture, and who have been inclined to think that most of the claims made must be attributed to the very praiseworthy patriotism that, in combination with the Celtic temperament, inevitably led to exaggeration.

The Queen's Advocate. By Arthur W. Marchmont. New York: Frederick A. Stokes & Co. $1.50.

A really thrilling blood and thunder novel is rare in these days of discretion *versus* valor. But that is what this story of the Balkan mountains is. The hero rides thirty miles through the initial chapters, shoots half a dozen men at different times, rescues a lovely woman from a band of ruffians, gets half killed himself, and pales no more at the shedding of blood than the lady would at the tearing of her lace fichu. Besides, it is all written out with the sincerity of a man who is telling the truth, not in a boastful spirit, but ingenuously, as if it were the most natural thing in the world for a man to ride and tie up his enemies in this fashion. And the recent disturbances in the Balkans give just enough color to his exaggerations to make them seem true.

The World's Best Poetry. A Classified Anthology, in Ten Volumes. Edited by Bliss Carman. Philadelphia: John D. Morris & Company.

Who can say that people nowadays do not care for poetry when a publisher finds it profitable to issue so extensive a collection as this? Here we have 2,500 selections from the works of nearly a thousand poets, enough one would say to satisfy every reader. But it is impossible to include all the favorites of all the people, and each poetry lover will find some omissions, conspicuous to him, and wonder why. Foreseeing such unavoidable dissatisfaction the publishers have kindly placed at the end of each volume a few blank pages whereon the reader may copy his neglected friends, or write poems of his own for a future edition to incorporate. Since some one must make the selection, it is well that Mr. Bliss Carman

should have it to do. He used to select the poetry for THE INDEPENDENT from the flood of verse that pours into the editorial office, and our readers know he did it well. Besides, in these volumes he has had the help of John Vance Cheney, Charles F. Richardson, C. G. D. Roberts, F. H. Stoddard, F. B. Gummere, W. D. McClintock, Lyman Abbott, Washington Gladden, Richard Le Gallienne and J. R. Howard, each of whom contributes an introductory essay. The work is well printed on heavy, unglazed paper and there are some good illustrations in each volume. It is a work that any one would be glad to own, and to public libraries it will be especially valuable for a reference book.

Old Love Stories Retold. By Richard Le Gallienne. New York: The Baker & Taylor Co. $1.50.

Mr. Le Gallienne has added two stories to the six printed some time ago in the *Cosmopolitan Magazine*, and now publishes the whole series in a tastefully printed and illustrated volume. Herein are the love stories of Dante and Beatrice, Aucassin and Nicolete, Sir Philip Sidney and Penelope Devereux, Shelley and Mary Godwin, Keats and Fanny Brawne, Heine and Mathilde, Lassalle and Helene von Dönniges and Abélard and Héloise. Mr. Le Gallienne has small patience with the sordid conventions which in so many life-tragedies have interposed barriers between true lovers, and particularly in his account of von Dönniges's conduct he inveighs against such interposition. The stories are charmingly told and will doubtless find a large audience.

Sweet Peggy. By Linnie Harris. Boston: Little, Brown & Co. $1.50.

"Linnie Harris" probably knows her own business, but some one should advise her not to undertake another novel until she has some fresh way of snaring the hero and heroine for one another. No matter how "sweet" Peggy is, she does not atone for the worn-out way the hero sprains his ankle in the first chapter and grunts and writhes like a cad to get female sympathy through the balance of the tale. The sprained ankle has been resorted to so often in stories where the man must be detained until the girl in the pink shirtwaist and white sunbonnet trips upon the scene that we can no longer be vitally interested in his torture or his convalescence. But, of course, for some young readers the story is not without its little morning glory charm.

The Jewish Encyclopedia. Vol. VIII. Leon-Moravia. Large 8vo, pp. xx, 685. New York: Funk & Wagnalls. $6.00.

This eighth volume of a monumental work contains an immense amount of historical, biographical, geographical and religious matter, interesting all of it to Jews, and much of it to Christians as well. For example, Christians would find a great deal of interest in a very complete treatment of the doctrine of the "Messiah" in early Hebrew literature. Other interesting topics are "Marriage," "Monogamy," "Monotheism," "Music," "Martyr," "Magic." We are glad to see an increased number of illustrations, especially of ceremonies, and we must commend the careful accuracy of the work. Four more volumes, it is expected, will complete this work, which is essential to a good library.

Union Seminary Addresses. By Thomas S. Hastings. New York: Charles Scribner's Sons. $1.50

Dr. Hastings was President of the Union Theological Seminary of New York City from 1887 to 1897, and the addresses of this excellently printed volume include his Inaugural Address, his Addresses to successive graduating classes and a number of short talks at morning prayers. Dr. Hastings is master of a clear, vigorous English style, and his discourses abound in apt illustrations and literary and historical allusions.

The Farm of the Dagger. By Eden Phillpotts. New York: Dodd, Mead & Co. $1.50.

Mr. Phillpotts's readers will be disappointed in this story. The Dartmoor scenery, which has become so familiar to us through his books, is portrayed with his usual power of description, and he has not omitted the pathos and humor of the peasant character and peasant dialect, but the story itself is lacking in substance. It is too far fetched. There must be an

element of real tragedy in a drama staged among surroundings so terrible, but the tragic features at the *Farm of the Dagger* are so incredible as to become preposterous. It is an interesting story, of course, but a sad falling off for Mr. Phillpotts.

Literary Notes

Miss Elisabeth Luther Cary has collaborated with Miss Annie M. Jones in the preparation of a book entitled "Practical and Tested Receipts: One for Each Day in the Year, for dishes mentioned by the best English authors, with an appropriate quotation for each recipe." The book is published by Rohde & Haskins.

....The St. Louis Exposition affords an almost unprecedented opportunity for the study of styles of house furnishing and decoration, and we are glad to have pictures of some of them for reference and remembrance in Clifford and Lawton's Portfolio of American Interior Decoration (New York, $2.50). We do not understand, however, why they chose their examples of Art Nouveau from the French and German buildings instead of the more daring and original rooms of the Austro-Hungarian building. The Portfolio includes fifty-five views, ranging from Louis XIV to Colonial, from Japan to Egyptian.

....He would be a bold artist who would venture to improve upon Elihu Vedder's illustrations of the Rubaiyat of Omar Khayyam In the new editions of the Persian poem, brought out by Thomas Y. Crowell & Co., New York, 50 cents, the illustrations are hopelessly inadequate. The figures are Persian in dress, but the people in the picture evidently have not read the poem. When Omar bids them "Turn down an empty glass," the lady pours out a libation, and the "Angel of the Darker Drink" is grotesque instead of dreadful.

....The Rubaiyat of Omar Khayyam has been a favorite theme for parody, but we have seen nothing quite so comical as Oliver Herford's "Rubaiyat of a Persian Kitten," illustrated by the author (Scribner's, $1.00):

"And that Inverted Bowl of Skyblue Delf
That helpless lies upon the Pantry Shelf—
Lift not your eyes to It for help, for It
Is quite as empty as you are yourself.

"The Ball no question makes of Ayes or Nees,
But right or left, as strikes the Kitten, goes;
Yet why, altho I toss it far Afield,
It still returneth—Goodness only knows!"

JAPAN'S first serious reverse in Manchuria has come in the departure of Viceroy Alexieff. —*The Detroit Free Press.*

....New York is making as much fuss over her new Subway as tho underground affairs were novelties in that city.—*The Washington Post.*

....AFTER THE WAKE.—*Mrs. Cassidy:* "'Twas very natural he looked." *Mrs. Casey:* "Aye! shure he looked fur all the wurld loike a loive man layin' there dead."—*Illustrated Bits.*

....*Hat-check Man:* "Here, here! What on earth are you doing—smashing in those hats?" *Club Member:* "I'm trying to find my own. It's an opera hat and shuts up. None of these seems to be mine."—*Chicago News.*

...."The old, old story," exclaimed the husband with a long drawn sigh, as he laid down his paper. "Another man committed suicide because his home was unhappy." "And did that make his home any happier," asked his wife, "or doesn't the paper say?"—*Woman's Home Companion.*

....A Japanese writer in THE INDEPENDENT informs us that General Nogi is the author of "a classic Chinese poem" which "men do not seem able to repeat with dry eyes, without chokings in their throats." The first line runs like this: "Sei ba susumazu hito katarazu."—*Literary Digest.*

STATELY VERSE.

If Mary goes far out to sea,
By wayward breezes fanned,
I'd like to know—can you tell me?—
Just where would Maryland.

If Tenny went high up in air
And looked o'er land and lea,
Looked here and there and everywhere,
Pray, what would Tennessee?

I looked out of the window and
Saw Orry on the lawn;
He's not there now, and who can tell
Just where has Oregon?

Two girls were quarrelling one day
With garden tools, and so
I said, "My dears, let Mary rake
And just let Idaho."

A friend of my mine lived in a flat
With half a dozen boys;
When he fell ill I asked him why.
He said: "I'm Illinois."

An English lady had a steed,
She called him Ighland Fay.
She rode for exercise, and thus
Rhode Island every day.

—*Life.*

Editorials

The Position of the Zemstvos

THE importance of the recent petition presented to the Minister of the Interior asking for free speech, legal justice and a parliament is due not so much to the numbers and characters of the men back of the movement as to their peculiar position as the elected heads of the zemstvos, or provincial assemblies. For over twenty-five years it has been the hope of the Russian liberals, as stated by Leroy-Beaulieu in "Empire of the Tsars and the Russians"—a work that ranks with Bryce's "American Commonwealth" as an accurate picture of a nation—that in some national emergency such as a disastrous war the Government would improvise an assembly of public representatives, as it easily could, without charter, constitution or election, by simply summoning to St. Petersburg the permanent boards of the various provincial zemstvos.

In a way this has now been done, for altho the St. Petersburg conference met in a private house and was permitted but not authorized by the Government; and altho it was careful to state that it considered itself an informal gathering, of which the members express personal views, it is more nearly a true national assembly of regularly elected representatives of the people than any ever before held in Russia. So-called "commissions of experts," composed of members of the zemstvos, have been called together by the Government for consultation on several occasions, as, for example, by Alexander III in September, 1881, to discuss measures for the regulation of the liquor traffic and peasant emigration; but in such cases the members have been chosen by the Government, instead of being elected by the zemstvos themselves. Every attempt of the zemstvos to act together for the purpose of securing uniformity of action in local matters, even in the collection of statistics, has been constantly checked by the bureaucracy. It was hoped by the Russian liberals when the zemstvos were established by Alexander II in 1865, soon after the emancipation of the serfs, that these bodies would gradually come to take a part in national affairs, but these hopes have been grievously disappointed. The power of the zemstvos has been curtailed rather than enlarged, especially by the reigning Czar, and they have been severely restricted to questions of local administration. The zemstvo of St. Petersburg was abruptly dissolved and its president banished because it passed resolutions similar to those adopted by the recent conference. The zemstvos are not allowed to petition the Government directly, but only through the bureaucratic governor and on local subjects alone. Such requests as they do present are rarely considered and still more rarely granted. Checked by the veto power of the governor, and still more by their dependence upon him for carrying their will into action, overburdened by debts and taxes, thwarted by the power of both Church and State in their efforts to reform the schools, the roads, the houses and habits of the peasants, limited in the power to tax themselves for local improvements, viewed with suspicion by the Government above and the peasantry beneath, it speaks well for the vitality of republican institutions in Russia that the zemstvos have been able to accomplish as much as they have and to retain so much of the buoyancy of hope that they can rise to an occasion like the present and risk their lives and fortunes in another attempt to secure a representative government.

The zemstvo is composed of representatives of all classes of the people; peasants elected by the village commune or mir, townsmen and merchants, landowners and nobility, the three classes meeting together in accordance with the lesson taught by the French National Assembly in 1789. The strength and vitality of the zemstvos has been largely because they are allowed to have a permanent board or executive committee, *zémskaya uprâva,* a privilege not obtained by the French General Councils until 1871. The zemstvo meets only annually for a limited session. The members are not

paid, but are subject to a fine of $38 for non-attendance. The president of the zemstvo is *ex officio* the Marshal of the provincial nobility. But the executive committee is freely elected, altho it must be confirmed by the Minister of the Interior. Its members hold the office for three years and receive a salary for their services.

It is the fact that the St. Petersburg conference, just closed, was composed of about one hundred members of these executive committees, the most influential, responsible and representative men in the zemstvos, that gives it its special significance. Thirty-one of the thirty-two presidents of the zemstvo executive committees have indorsed the memorial. Before dispersing a joint meeting was held with the editors of the principal Russian papers to secure their co-operation. The municipal councils will take similar action and the universities and learned bodies will give their support. Their determination and purpose is best given in the words of one of the prominent members:

"We are not revolutionaries. We do not believe the people are prepared for a republic. We support the monarchical idea, but we believe it must be a constitutional monarchy, and that the Emperor must choose between the moderate program we offer and eventual revolution.

"If there is no result now we shall continue the work of agitation and education. There will be a larger and a stronger meeting next year. If the meeting is forbidden in St. Petersburg it will take place in Moscow, Kieff, or in an open field if necessary. The movement will gather headway as time elapses. We have risked our liberties, and we will not retreat."

Commissions of members of the zemstvos called together in 1902 by Witte, the Minister of Finance, to advise with the Government as to remedies for the almost chronic state of famine under which parts of Russia were suffering, took advantage of the opportunity and demanded constitutional government in quite as bold language as they have now used, but just then De Plehve got the Czar's other ear and they were dismissed with harsh words and punishment for thus getting above their business and meddling with politics. They were censured in the name of the Czar who had selected them for speaking freely as he told them to. Witte was removed by promotion from the office where he had rendered such efficient service. The prominent members of the committees were deprived of their offices and in some cases exiled and in others imprisoned. Nevertheless, the officials so disgraced were received by the people with ovations and banquets wherever they went. Now that De Plehve is dead it remains to be seen whether Prince Sviatopolk-Mirsky, his successor as Minister of the Interior, will be able to hold the favor of his fickle sovereign long enough to save from punishment those whom he has encouraged to meet and give expression to Russia's needs.

Charles and Richard

CHARLES leads the simple life; Richard led a double and twisted life. Those who deduce their sociology from philology say that the French have no idea of home because they have no word for it, but a very indefinite preposition. Therefore, it is worthy of note that Charles, the home-maker, is a Frenchman, and Richard, the home-breaker, was a German.

Richard was a poet; Charles writes pure prose.

Richard was artistic; Charles is nothing if not practical.

Both the player and the preacher must have his patron. Richard had his Ludwig; Charles has his Roosevelt. If that be treason, make the most of it. Ludwig went mad and drowned himself. Roosevelt still lives and reason holds her throne.

You can buy the works of Charles on the curb for five cents; you cannot get a footing in the topmost loft to overhear Richard for less than a dollar. Measured as all things are by money, it takes, then, twenty of Charles to make one of Richard.

Their popularity is in the inverse order. Originality attracts attention, but to be truly popular one must be commonplace. Sky rockets are good for the Fourth of July, but kerosene lamps are preferable for the household. No doubt it is a merciful provision of Providence that Tupper was more popular than Swinburne, and that the readers of Will Carleton outnumber those of Omar Khayyam. What a world this would be

to live in if, of the Merediths, more people liked George than Owen, and if Pater sold better than "Pansy." Be esoteric and you will be admired; be trite and you will be adored.

A world full of Charleses would be a dull gray world, safe, sane and salubrious. A world full of Richards is inconceivable. For a world so loaded with centrifugal sentiments would fly from the orbit of civilization into anarchistic space.

On the whole it would probably not be safe to exceed the empirical ratio of twenty men of the type of Charles to one of the style of Richard. The best tasting cakes as well as the most wholesome contain more flour than spice.

Richard was a revolutionist; Charles is a conservative. The one labored to make us dissatisfied; the object of the other is to keep us contented. We need both. We should both grow and keep, so the innovator and the conservator are alike necessary.

Charles is a Protestant; Richard a ritualist. Some people take their religion straight. Others prefer it diluted and flavored. It is a matter of taste. It is of no use to appeal directly to a man's sense of duty till you find out if he has one, nor to waste good music on dull ears. There are many who would be deaf to the pulpit who will listen to "Parsifal." To hearts barred to Charles, the moralist, Richard, the musician, may find entrance, and, moving him with a concord of sweet sounds, as well as by other sounds neither concordant nor sweet, render him less fit for treasons, stratagems and spoils.

"Charles and Richard, Robert and Paul,
God in his wisdom has use for them all."

A Practicable Referendum

Doubtless many thoughtful persons admit the contention of The Independent, that to maintain the vitality of republican institutions it is necessary to have popular voting on questions of public policy as well as on candidates for public office, but, nevertheless, question whether the referendum can be made a practical feature of our governmental system. They have not sufficiently examined all the possibilities of the referendum idea.

As the term has usually been employed, the referendum means a practice of enacting law by popular voting. In Switzerland, for example, the Federal Assembly passes a bill which then goes to the people for adoption or rejection, very much as a bill passed by our House of Representatives goes to the Senate for concurrence. In like manner, an American legislature not infrequently passes a resolution in favor of a constitutional amendment, which is then submitted to the people for a Yes or No vote. Adopted by a popular affirmative vote, the amendment thereby becomes a part of the Constitution.

This is the referendum in a technically perfect form, but it is quite possible to carry out the essential idea of a popular decision upon questions, without thus obtaining the actual enactment of law by popular ballot. Thus, some years ago, in the State of Washington, the legislature gave the people an opportunity to vote on the question of woman suffrage, in the understanding that the popular vote would not enact a law, but that the legislature itself at its subsequent session would consider itself bound to act in accordance with the popular judgment.

It is quite possible that this Washington plan would be more feasible in America than the technically thoroughgoing referendum of the Swiss Republic. What we should aim to secure is an unmistakable popular decision upon each of the great questions of public policy. It is not desirable and it would not be practicable to have popular voting upon every bill of minor importance that may properly come before a legislative body.

By the great issues of public policy we mean those questions that are important enough to be set forth in a political party platform, or that, in a parlimentary country like England, are important enough to be made Cabinet measures. We should not forget that in England not every law is enacted upon the initiative of the Cabinet. Thousands of minor bills are introduced by individual members of the House of Commons, and a tendency toward consideration by committees, as in the American Congress, has already appeared in the British Parliament. Legislative bodies will always have their use as convenient or-

gans for the transaction of a vast amount of minor and routine business that inevitably arises in the governmental life of a complex and busy people. But on the really great issues the people themselves should speak.

There are two or three ways in which the questions that are propounded by political platforms could be directly answered by the people.

A legislative body, for example, could adopt a resolution calling for a Yes or No popular vote on any issue made prominent in the platform of either political party, in the understanding that the legislature would be governed by the popular will so expressed. This would be a simple procedure, raising no question of constitutionality. It would be simply an acquiesence of the legislature in the mandate of public opinion.

A more cumbersome and probably less satisfactory method of obtaining substantially the same result, could be put in operation through party machinery without the initiative of a legislative body. The party could submit a set of questions to be voted on by the rank and file of the party at the nominating primaries. The results could then be tabulated and promulgated by the State and National party committees. The verdict so rendered would be a sufficiently unmistakable declaration of public opinion, and the legislative body would probably not wish to defy it. A possible incidental effect of this plan, that might have most salutary consequences, would be a steadily increasing attendance of public spirited citizens at the primaries.

It is true that fewer votes are cast for a constitutional amendment, and usually fewer votes on such a question as that of license or no license in States having local option, than are cast for the leading candidates for public office; for it is unfortunately true, as THE INDEPENDENT has pointed out, that fewer voters are interested in questions of policy than are interested in political personages. This fact is sometimes made the premise of an argument that the referendum in any form is a useless bit of trouble. The argument is fallacious. A popular government is a government by public opinion, and not every man in a miscellaneous population contributes his individual share to the making of public opinion. Public opinion is created by those individuals, be they few or many, who care enough about public questions to think about them and to vote upon them. These individuals as a matter of fact do vote whenever a question is submitted to the electorate for popular decision. Under the practice of the referendum the number of such complete and responsible citizens would steadily multiply, and the supreme value of any working plan of popular voting on public questions—its value, namely, as an educational discipline—would, year by year, become more clearly manifest.

Reciprocity with Canada

THE people of the United States are in danger of losing a fine opportunity for establishing relations of close and enduring friendship with Canada, and for largely increasing, at the same time, their trade with their neighbors on the North. At our recent election there was disclosed in several States lying on or near the boundary much popular sentiment in favor of reciprocity with the Dominion. It has gained in force during the last three weeks. On the other hand, reciprocity with the United States was not an issue at the recent Canadian election. In the past, a majority of the Canadian people have desired more intimate commercial relations with us. Probably this is true of a majority now. But our treatment of such advances as they have made has been so discouraging that self-respect restrains them from showing any interest in the question. If there are to be overtures, they must come from this side of the boundary.

Overtures should now be made by our Government, and should be made promptly. The situation offers forcible arguments against delay. Either we must begin negotiations for reciprocity within the next few months, or such negotiations will be barred by changed conditions, that will not only affect seriously our exports to the Dominion, but also tend further to separate and estrange the two peoples. Sir Wilfrid Laurier, originally a free trader and inclined to favor the greatest liberality in trade relations with the United States, has been constrained by the course of

our Government and the attitude of our dominant party to become in some measure a protectionist. He must stand by the manufacturing industries which our own policy has tended to create and foster, and he cannot ignore that Canadian public sentiment which resents our unfortunate and selfish treatment of his country's trade overtures. Undoubtedly he is to some extent in sympathy with that sentiment, but we have reason to believe that he would gladly entertain a proposition from our Government for a commercial agreement.

Let us look at the situation in Canada. Sir Wilfrid and his Ministers are committed to an early revision of the tariff, but this is to be preceded by a Commission's investigation of Canadian industrial needs. The next session of Parliament will probably begin in January. Both the course of the investigation and the character of the ensuing revision would surely be affected by negotiations for reciprocity, if such negotiations should be in progress, upon our initiative. Mr. Fielding, the Minister of Finance, said a year and a half ago that the Government, before undertaking a revision of the tariff, should know whether a reciprocal agreement with the United States could be made. Since that time there has been no overture from this side of the line.

The Laurier Government's plan of revision, soon to be carried into effect, involves a tariff of three grades: (1) Maximum rates upon the products of countries which, like the United States, impose high duties upon products imported from Canada; (2) minimum rates for countries that place low rates on Canada's goods; and (3) a preferential tariff for goods imported from Great Britain (it is now 33 1-3 per cent. of the general tariff), and from such British countries as shall give a similar preference to the Dominion.

Undoubtedly the blow for which provision is made in the maximum schedule will be aimed at the United States. The interests of both peoples require that it shall never be permitted to fall upon their international trade. But such a schedule will be enacted and enforced, if there shall be no attempt to agree upon a reciprocal modification of the two existing boundary tariffs; and, in view of all that has taken place, Canada may reasonably ask that the overtures for a modification shall come from us. We understand that the imposition of maximum (and virtually retaliatory) duties upon our exports will be supported and approved by Sir Wilfrid with great reluctance, and that he hopes it will be prevented by an expression of a desire in Washington for negotiations in the direction of reciprocity. Now is the time for the expression of such a desire.

A large majority of the Canadian people have no liking for Mr. Chamberlain's program, but they are willing to preserve the one-third preference now granted to imports from Great Britain. It is due mainly to that preference that British annual imports into Canada have grown, since the beginning of the preferential rate, by the addition of about $26,000,000; but in the same time, and in spite of the discrimination, the addition to Canada's imports from the United States has been $66,000,000. It is this increase of the shipments from a country commercially unfriendly that the Dominion Government has sought to check by the new special tax on "dumped" goods, sold at prices much below those prevailing in the States, and that it intends to check hereafter by a maximum schedule. At the same time it has attempted, by subsidizing steamship lines and in other ways, to find new outlets for exports which our high tariff excludes, and it is now negotiating for reciprocal agreements with Mexico and South America. All this tends to make higher the wall separating two peoples that should live side by side on terms of intimate friendship.

It is no time now to haggle about the prospective demands of each party, or to talk about the horrors of an untaxed interchange of butter and eggs. No one expects that at the beginning Canada's views as to what products should be made free and what duties should be reduced would exactly agree with those of our Government. Nor is it a question of great importance whether the work should be undertaken by reconvening the Joint High Commission, or by direct and fresh negotiation. As it would be necessary to reconstruct the Commission, two members having died and several others being disqualified, and as it was ap-

pointed to consider twelve questions, only one of which has been settled, we should say that the other method is to be preferred. What is needed is that the two countries shall in some way meet and consider the subject, by means of trusted representatives, and that both sides shall be guided, as President Roosevelt and Sir Wilfrid Laurier are, by a regard for the broad principles of justice and comity.

There is in this something more than the duties on lumber and eggs, coal and fish, wheat and machinery. Our people ought to see that the friendship, as well as the trade, of Canada, should be earnestly and persistently sought. The Canadians are intelligent and prosperous. They are growing rapidly. Immigrants of an excellent class are developing their great wheat districts in the Northwest, whose products will astonish the world. There are vast resources in the Dominion's forests and undiscovered mines. Neither the commercial nor the political relations of the two countries can ever be too intimate for the good of both. For us to excite Canada's hostility by narrow trade restrictions is blind folly. Tariff walls on the long boundary from ocean to ocean are always at war with geographical and other conditions that should make the two peoples one—in friendship, if not in political organization. We should like to see those walls entirely removed.

The Metropolitan Museum

THE Metropolitan Museum of Art is in a fair way to become one of the greatest collections in the world of the treasures of art and archeology. It will be for the United States what the British Museum is for Great Britain, and the Louvre for France. Indeed, it has made amazing strides in the less than thirty years of its history. It began, after the Centennial Exposition at Philadelphia, in a private house on Fourteenth Street, with loans of the Castellani collection of majolica, a collection of old paintings gathered here and there in Europe, and the Cesnola statuary and pottery from Cyprus. Those were days of comparatively small things. The Museum failed to secure the Castellani majolica, but the paintings were bought, and also the Cypriote objects, and, more important than all, General di Cesnola was secured as Director of the Museum. It found a most generous body of trustees, men of wealth and public spirit, and the city was persuaded to provide building and maintenance, the trustees being wholly responsible for its collections. This was followed by the establishment in the same way of the splendid Museum of Natural History, and now the great consolidated library; and these will provide for New York what the British Museum and South Kensington supply to London.

The Metropolitan Museum of Art has been most fortunate in its Presidents, John Taylor Johnston, Samuel P. Avery and Frederick Khinelander. They were all men of unusual culture, devoted to art, and all distinguished collectors who had enriched the Museum. The last of these men, after a short service following the long and brilliant period of Mr. Avery, has lately passed away.

The Museum has almost from its beginning had but one Director, General L. P. di Cesnola, for whose energy and executive power too much can hardly be said. He was an Italian officer, who had seen active service, and who commanded a regiment in our Civil War; was a wounded prisoner at Richmond, and was afterward breveted brigadier-general. He then obtained an inconspicuous position as American Consul in Cyprus, and improved his opportunity to excavate and make a wonderful collection of antiquities, which he sold in part to the British Museum, and the larger portion to our own Museum. He had charge of the transfer of the Museum to Central Park and of the creation of the great buildings and the installation of the rapidly increasing treasures. One who now looks over the spacious rooms and halls, with dozens of departments of paintings, ceramics, jades, gems, embroideries, armor, antiquities, musical instruments, etc., the treasures of many private collections, can hardly bring himself to believe that only a few years ago there was room in a single private house for all the Museum possessed.

Before the Museum had recovered from the loss of President Rhinelander it was called to deplore the death of Di-

rector di Cesnola. The trustees have chosen a new President, Mr. J. Pierpont Morgan, who will nobly maintain the succession. He is not merely a man of wealth and public spirit, but has had unusual experience as a collector of choice objects of art, and has been through the delightful and the unpleasant experiences that beset such a pursuit. He has learned how to appreciate and how to beware. It will be his ambition to make the Museum worthy of the greatest city in the world.

It was easy to select a President; it may be more difficult to find a Director. He should have a scholar's sense for both archeology and art, for ancient history and modern production; but he must first be a man of broad executive power. It is well, but not absolutely necessary, that he be a collector and expert in some one department; it is more important that he be able to see the gaps in a collection made up so largely as this one is of private collections; that he have the large view that can co-ordinate the whole; and that he see the importance of finding and securing the very ablest men as curators in charge of the several departments. He should be able to do what President Gilman did for Johns Hopkins when it was first organized, or what President Low did for Columbia University when it was reconstituted. A man of the type of President Low would see to it that not three or four but a dozen men of the highest qualification should be in charge of their departments, such men as the British Museum has secured in the late Dr. A. S. Murray, for Greek art; Drs. Birch, Budge, Pinches, Thompson and King, for Egyptian and Assyrian antiquities, and Dr. Head, for numismatics. Such men can be had; our country now supplies them, as it did not thirty years ago. Our universities now produce them as competent as the men from European schools, and our American schools of archeology in Athens, Rome and Jerusalem are giving them the best training and experience. The Museum now has a fine but not large endowment. It can make important purchases and need not rely wholly on the generosity of living friends and the bequests of collectors. What it needs is a body of trained experts under the control of a strong, wise, efficient Director. With its new President and under a new Director we expect that the growth of the Museum will surpass its past magnificent record. To be sure, it can hardly expect ever to match the Elgin Marbles in London, or the paintings of Raphael and Michel Angelo, already forever consecrated to the public; but of the treasures yet to be dug from the earth, and of those which genius has more lately created, we believe that American wealth and enterprise will obtain their full share for our great Museum of Art.

Georgia and Wisconsin

An interesting and significant incident of the new educational awakening of the South occurred last week in the visit of the Governor of Georgia, members of the Legislature and members of the Board of Trustees of the State University of that State, Supreme Court judges and others to Madison, Wis., to inspect the Wisconsin State University. A special train, provided by Mr. George Foster Peabody, of New York, and Mr. Samuel Spencer, President of the Southern Railway Company, carried the party.

Wisconsin was selected as a typical Northern State university, and its significance for the Georgians was thought to lie in the large expenditures made for the State institution, amounting to some sixfold as great as that of Georgia for higher education, and also in the concentration of all the higher State institutes at one locality and under one management. Georgia's technical school at Atlanta is justly famed, and her university at Athens is the oldest State university in this country, the charter dating from 1785 and active work from 1801. The agricultural college at Athens is such merely in name, and a part of the land scrip fund and Morrill fund of the Federal Government was diverted to the support of branch colleges in various parts of the State and the establishment of a negro college near Savannah. The agricultural experiment station is at Dahlonega and the medical department at Augusta, while the women's college, established in 1890, was located at Mil-

ledgeville. This policy of extreme disintegration has prevented concerted effort toward building up a great State institution, and the State universities of the Northwest which, like Wisconsin, have made the largest advances during the past fifteen years are those where all these institutions have been brought together.

A State like Georgia, whose wealth depends almost solely on the fortunes of the cotton crop, and whose land devoted to cotton is worth for taxation scarcely one-tenth the value of land devoted to the widely diversified crops of Wisconsin, is not able to grant correspondingly large sums to higher education. As a basis for diversified agriculture the research work of a great agricultural college is needed, and the Georgia delegation learned that a single invention, the Babcock milk test, made by a professor in the Agricultural College, brings to the farmers of Wisconsin yearly a larger return than the appropriation for the entire State University. The prosperity of Georgia, through high prices of cotton, has in recent years been unprecedented, and this has opened the way for a campaign on the part of the friends of education which has already borne fruit. In 1897, for the first time in forty years, the Legislature appropriated a sum beyond the usual $3,000 for additional buildings at Athens, and in the last year or two the State has increased the fund for meeting the running expenses of the institution. The question has now arisen, along what lines shall the university be developed? On that question there has been a good deal of discussion, culminating in this trip to Wisconsin. Within the past two years Georgia has begun the correlation of secondary and higher education through the appointment of an officer to inspect and accredit high schools. The next step, that of concentrating the State institutions, will require strong and enlightened statesmanship on the part of her politicians, for localities which now have these scattered parts will naturally resist their removal. Furthermore, in two respects there is no intention whatever of carrying the concentration to the extent that it has been carried in the Northern State universities—namely, co-education of sexes and of races.

Good Stories

There is a temptation to repeat tales of crime—the sensational press is full of them—and to overlook examples of brave or kindly deeds. President Roosevelt told one the other evening when introducing Charles Wagner to a Washington audience. He said he had been interested in inquiring the facts about a pleasant incident. Downey, the colored livery man, wanted to enlarge his stable, but it would bring it close up against a colored Baptist church and shut off their light. They asked him to sell them six feet next to their church. He wanted the space, but still more he did not wish to injure them, and he consented. A few days later they came to him with the report that with their debt they found it impossible to raise the money and must submit. Thereupon he gave them outright the land they needed. A few days later Downey's stable caught fire. The congregation were at worship, and the minister bade the women and children remain and pray, while the men were to go out and save the horses and carriages; and this they did. Another delightful case is told from Columbia, S. C. Rosina Randolph is very aged, wizened and sick. She is an old-time black "mammy" who cared for a large number of children in a well-known family before and after the Civil War. They moved away from Columbia and reared children of their own. She lived apart in her old age, and the negroes suspected her of being a witch. In her sickness she was cared for by some friends of the family where she had been a slave, and one of them wrote of her necessities to some of her "children" far away. The next day a telegram came from the wife of a prominent railroad official in Richmond: "Take every care of Aunt Ina. I will arrive to-morrow." The next day, Monday, she came, having left the preparations for her own daughter's marriage on Wednesday. She found "Aunt Ina" removed to a hospital, and the meeting of the two after 24 years' separation was most affecting, and she sat by her old nurse's bedside for hours talking of old times until she had to return for her daughter's wedding. The son of the family telegraphed from his home in Louisiana that the nurse was to have at his expense everything she needed. This

is far from being a bad world. There are other things than lynchings. Life has a sunny as well as a shady side.

Inverted Patriotism

Ambassador Andrew D. White, in telling some experiences of his service in Berlin, has a word to say about certain pestilent maligners of their own country which we cannot forbear to quote. Referring to misrepresentations of conditions in this country which for a period made America very unpopular, he says in *The Churchman:*

"As a matter of fact, no nation washes so much of its dirty linen in the face of the whole world as does our own, and, what is worse, there is washed in our country, with much noise and perversity, a great deal of linen which is not dirty. Many demagogs and some 'reformers' are always doing this. There is in America a large class of excellent people who see nothing but the scum on the surface of the pot—nothing but the worst things thrown to the surface in the ebullition of American life. . . . The shrill utterances of such men rise above the low hum of steady good work and are taken in Germany as exact statements of the main facts in our national life."

Such men make even virtue and liberty odious. Their inverted patriotism may be discounted at home, where it is understood, but it does us much hurt abroad.

Remarkable Thanksgiving Service

Can the worshipers of one and the same God worship together in peace? It seems strange to us, but it ought not to be. On Thanksgiving Day there was a great union service at the World's Fair. The Catholic Archbishop Glennon presided and spoke with no fear of such a rebuke as Archbishop Ireland received from Rome for taking part in an interreligious discussion at the Chicago Fair. President Francis, of the Exposition, read the President's Proclamation, and the principal other speakers were the Jewish Rabbi Harrison; Dr. Niccols, Presbyterian; Dr. Garrison, Disciples; Dr. Rhodes, Lutheran, and Dr. Lee, Methodist. The meeting was as fraternal and as full of gratitude to God for his blessings on our country as if they had never in the past imagined that they worshiped different Gods. It would be well if those who are surprised and pained to see Catholics, Protestants and Jews coming together would formulate a definite reason why the children of one Father should not dwell together and now and then worship together in unity.

A New Antiseptic

Simple and harmless antiseptics are more and more demanded for household use by modern ideas of cleanliness and hygiene. Great interest, therefore, attaches to the report made by M. Henri Moissan, the man who makes diamonds, to the French Academy of Sciences, in which he describes a new chemical compound, sodium perborate. This is a white crystalline salt, made from boric acid and sodium peroxide, which, when dissolved in water, gives off over a hundred times its volume of nascent oxygen and leaves sodium borate, common borax, in solution. Nascent oxygen is extremely active and a very powerful germicide and disinfectant, while the cleansing and antiseptic properties of borax are known to every one. The new substance seems likely to be of use in the home as well as the hospital, since it would not have the disagreeable and injurious odor of chlorine or formaline, and would not, like carbolic acid, be the cause of accidental and intentional poisoning. It could be kept dry and made available for use at any time by simply dissolving in water.

A Small Challenge

We do not wish to enter into a discussion, but how can we avoid a few words? The Charleston *News and Courier* says:

"The Independent cannot point to one example in American or United States history of a negro who has measured up—to use an overworked phrase which we hate—to the standard of white men, who had not a considerable infusion of white blood. We trust The Independent will treat this statement as a challenge."

Why confine the challenge to America? Is it to exclude Menelek, King of Abyssinia, who is a black kinky-haired negro and who lately killed 30,000 Italians; or the Zulu chief Cetewayo, who "measured up" pretty well to the British officers; or Sebituani, king of the Makololo? But it does not exclude Toussaint l'Ouverture and Jean Jacques Dessalines, who

drove the French out of Haiti. But probably our questioner wants men of peace, who have come in the first generation out of slavery. We would mention Richard Allen and Richard Varick, founders of the African and the Zion Methodist Churches; Robert B. Elliott, Member of Congress from South Carolina; Joseph C. Price, late of Salisbury, N. C., one of the ablest speakers we have ever heard; Paul Laurence Dunbar, the poet, and Edward W. Blyden, scholar and diplomat, all undiluted negroes, and a multitude more could be mentioned. But the game is not worth the powder.

The Jesuit Point of View

There are two points of view in the Catholic Church, one of which may be called the Jesuit. What it is in this country may be judged from an utterance in *The Messenger*, which is the organ of the Jesuits in this city, if not in the country. In the November number is a note upon the International Congress of Old Catholics, which was held at Olten, Switzerland, in September last. We read:

"Dr. Friedrich [the author of a history of the Vatican Council, and a very close confidant of Döllinger] made a violent speech against the Catholic Church, full of insults and invectives against the Pope. He ridiculed the idea that there was a difference between Catholicism and Ultramontanism. 'These terms,' he said, 'are merely a journalistic catch-word.' This statement we can accept, as well as the words of the following speaker, Dr. Woker, of Bern, who spoke of the folly of constructing an opposition between religious and political Catholicism."

This is an unhappy frankness. So orthodox an organ states its distinct acceptance of the doctrine that Catholicism and Ultramontanism are the same. And more illuminating is the statement that in the eyes of the American Sons of Loyola there is no difference between political Catholicism and religious Catholicism. Boniface the Eighth still lives—and the Catholic University refuses to have anything to do with the Jesuits.

We commend the practice of the Supreme Court of Pennsylvania to the courts of other States as to the matter of appeals in criminal cases. Justice Brewer has suggested the limiting of the right of appeal, for the sake of reasonably speedy punishment of criminals. The Pennsylvania Supreme Court never delays the final determination of criminal cases. A murder case is promptly set down for hearing wherever the court may be in session, and does not wait like civil cases to be reached in its turn; it must be disposed of at the time appointed. This prevents the abuse of the right of appeal for the purpose of delay, and might have considerable effect in preventing lynching.

This country is not *the United States*, but *the United States of America*. There have been various United States, for example of Colombia, and we call the people *Colombians*, just as we call our people *Americans*. We did not assume the name *Americans;* it was given to us from England before the Revolution, and the people of no other country use it. They are *Mexicans* or *Brazilians*. The name *Usona* is not needed.

Other Dutch authorities declare that the name *Roosevelt* does not mean *Horsefield*, which is also a good English name, but *Rosefield*. It is a matter for the philologists, and a matter of old spelling. In Browning's "How They Brought the Good News from Ghent to Aix" we read the line:

"Your Roos galloped bravely, the fault's not in her."

It is not a great thing to make a fuss about that Union Theological Seminary has gone back to its old constitution and no longer requires its trustees and professors to profess their acceptance of the Westminster Confession. It is an independent seminary, tied to no denomination, servant to all, and it should be tied to no bond beyond the search for truth.

A Southern correspondent wishes that we would revise our opinions on racial questions, on this ground: "All you know is the ethics, and the ethics is one thousand years ahead of the facts."

Insurance

Some Causes of Defalcations

THE *Insurance Press* has been making a very interesting series of investigations as to the moving causes of defalcations and breaches of trust. The various surety companies have furnished such information as they have gathered together in the conduct of their peculiar business in response to the direct query, "What are the principal causes of the downfall of men who occupy positions of trust?" The formulated opinions of the managers of the companies, whose business it is to issue bonds on officers, clerks and employees generally, of firms, banks and other concerns, as to the inspiration are by no means a unit. According to Henry D. Lyman, President of the American Surety Company of this city, the more important causes of defalcations in this section of the country are four in number and are to be found in speculation in Wall Street, betting on horse races, high living and dissipation. These causes are named in the order of their relative importance. In the South card playing is exceedingly harmful as leading to defalcation and embezzlement.

Charles H. Hall, superintendent of the fidelity insurance department of the Employers' Liability Assurance Corporation of Boston, has not had exactly the same experience as has Mr. Lyman as to the causes which lead to the crime of defalcation. Mr. Hall assigns as causes for breaches of trust the following: Women, speculation, high living and expensive hobbies. Under the head of expensive hobbies he classes horses, yachts and things similar. Additional assigned causes by other insurers are speculation in stocks, produce, cotton, etc., intemperate habits, immoral associations, extravagance, due sometimes to the social aspirations of the employee's dependents; gambling, as at cards, on horse races and the like; outstanding indebtedness, resulting in pressure from creditors; using employer's funds (but with the present intent of only "borrowing" same) to advance or protect the employee's interest in some outside business venture, intemperate habits, inadequate compensation, as compared with the cost of maintaining the employee and his dependents in comfort, especially during illness; the New York Stock Exchange, Chicago Board of Trade and New Orleans Cotton Market. The results of experience in many fields seem to indicate that rarely will an employee embezzle money in bulk and abscond. Nineteen defalcations out of twenty accumulate through a series of thefts extending back for weeks, months or years, according to whether the employer's method of supervision and audit of accounts has been prompt and efficient or lax and infrequent. If the supervision be inadequate and loose, the employee will soon recognize the fact and perhaps fall because of his opportunity to do so. Ninety per cent. of those who default originally get into trouble through mere moral weakness.

THE Comparative Exhibition of Native and Foreign Art, under the auspices of the Society of Art Collectors, which began at the galleries of the American Fine Arts Society in this city on November 14th, brought together paintings of enormous value. Insurance policies aggregating $2,000,000 have been written upon the 200 odd canvases included in the showing, in spite of the fact that the Fine Arts Building is rated as fire proof. The insurance covers loss resulting because of theft, damage by water and injury during transportation, as well as any possible damage because of fire.

....Edward W. Scott, President of the Provident Savings Life Assurance Society, has won a notable victory in the decision recently rendered by the New York Court of Appeals because of his contention regarding the franchise tax. The decision of the Court of Appeals reverses that rendered by the Appellate Division in the case of Mr. Scott's company against the State Comptroller, that the franchise tax of 1 per centum, decreed by the tax law of 1901, shall be upon all the premiums received by the company in the State, instead of upon premiums on new policies, as contended by the Provident Company. The application of the decision is, however, limited to domestic companies, and all foreign companies continue liable for the tax on all premiums, both new and old.

Financial

From New York to Boston

It is admitted by the President of the New York Central that for some time past his company has had engineers in the field making a thorough investigation as to the feasibility of connecting the Harlem road with the Boston & Albany by a new line extending from the vicinity of Brewster Station across the northwestern part of Connecticut to some point west of Springfield. Such a line would give the Central (which controls the Boston & Albany) a new through route from New York to Boston and invade the field which is now virtually monopolized by the New York, New Haven & Hartford Company. The Harlem has recently been double-tracked as far north as the point at which such a new line would diverge from it, and the double-tracking is to be continued to the end of the road. The question whether the new line shall be built has not been decided; the decision will depend mainly upon the engineers' report. From New Haven to Boston the New Haven Company uses three lines, one of them including the Boston & Albany from Springfield. Recently the company has shown a tendency to develop and to use as far as possible the other two routes, which are wholly its own property. Whatever the Central may decide to do, no quarrel or severe competition with the New Haven Company is to be expected, as the Central owns more than $1,000,000 of New Haven stock, and William Rockefeller, J. Pierpont Morgan and H. McK. Twombly are directors of both corporations.

Chicago Subway Sold

The Chicago Subway Company, organized in New York, with a New Jersey charter and a capital of $50,000,000, by capitalists representing 90 per cent. of the railroads having terminals in Chicago, has obtained possession of the new freight subway in that city by acquiring all the stock of the Illinois Telephone Construction Company and two thirds of the shares of the Illinois Tunnel Company. This purchase means that the subway will be used at once for distributing freight brought to the city by the railroads. The subway, which was constructed for the moving of freight and is not adapted for passenger service, was fully described in The Independent a few weeks ago. There are more than 15 miles of it, under the principal streets, and it is said that 40 miles more will be made. It is understood that the leading men in the new company are E. H. Harriman, James Stillman, Jacob Schiff and P. A. Valentine, of Armour & Co. Freight of all kinds, coal included, will be carried from the great railways to the cellars of business houses and factories. Material excavated in the construction of buildings will be removed. The subway will also be used for the transportation of newspapers and the mails. Incidentally, it is expected that much trouble caused heretofore by the frequent strikes of teamsters will be avoided and that the streets will be freed from the congestion of traffic. The annual cost of trucking in Chicago is said to be $65,000,000.

The shares of stock of the Steel Corporation which were taken by employees under the plan proposed by the company now show a profit of more than $400,000.

....Spencer Trask & Co., the investment bankers, are distributing among investors copies of an illustrated booklet describing the properties which secure the first consolidated mortgage 5 per cent. bonds of the Georgia Railway & Electric Company of Atlanta. The illustrations include views of the power stations, cars, engine rooms, etc., enabling investors to form a good idea of the value of the properties.

....Dividends and coupons announced:

U. S. Leather Co., Preferred, $1.50 per share, payable January 2d.

International Paper Co., Preferred, 1¼ per cent., payable December 31st.

Southern Pac. Co., various Coupons, payable December 1st.

Iowa Cent. R'way Co., Coupons of First Mortgage 5's, payable December 1st.

Minn. & St. Louis R. R., Coupons, payable December 1st.

The Independent

Vol. LVII NEW YORK, THURSDAY, DECEMBER 8, 1904 No. 2923

Survey of the World

Tariff Revision and Reciprocity

The President has discussed the question of tariff revision with all the Senators and Representatives who have called upon him. There seems to be conclusive evidence that he thinks the tariff should be revised, but does not intend to insist upon revision if the leaders of his party in Congress do not agree with him. It was quite plain, last week, that a majority of those exercising influence in Congress were opposed to a special session for revision, and there were indications that those who have been accustomed to determine the legislative action of the party were unwilling that a revision should be made for at least two years to come. This appears to be the attitude of Senators Aldrich, Allison, Spooner, O. H. Platt, Foraker and Scott, and Speaker Cannon. It is expected that the question will be considered at a caucus in January or February. A long statement from Senator Hale attracted much attention. He emphatically opposes revision:

"The election was remarkable in the extent of the Republican triumph, and, as is not unusual in such cases, some question has arisen whether the party shall enjoy the fruits of its victory. It is no rare thing, after a political battle has been won, to find the weak sisters coming in and urging the successful party to lower its colors and in whole or in part give up what it has won. I do not propose to let this be done, except in face of all the opposition to it which I can help to muster."

The position of the party on the tariff, he continued, had been sustained, and the people had a right to expect that the party's tariff policy would be considered settled "during the next four years." He did not expect to see any movement by the Administration either for tariff revision or "for any form of reciprocity that will give away the benefits of trade, which are now in our favor, with any country whatever." The President was wise, and no one should fear that he would do anything "to weaken or disrupt the party; and an attempt at tariff revision will certainly do both":

"We can have no partial or piecemeal revision of the tariff. Whenever it is undertaken it will go to the bottom. Should the President follow the advice of the few revisionists who are now making so much noise he will at once find two things before him: First, the Democratic party will be solidly with him, clamoring for revision and for all the free trade it can get out of it. Secondly, he will find facing him a divided party, with the most of its leaders and the great masses of the people bitterly hostile to any such move. There is not an industry in the country that would not be alarmed, and the uncertainty which would forthwith set in would halt and cripple labor and its results everywhere. Nothing but wo will follow the man who is instrumental in bringing on a tariff war in Congress."

Mr. Douglas had been elected Governor of Massachusetts, he asserted, neither on the question of tariff revision, nor on reciprocity. Trade at present with Canada was satisfactory to all reasonable men, the balance being nearly two to one in our favor; and reciprocity with Canada was a subject that, like revision, "should be severely let alone." At a dinner in New York, Senator Scott said an extra session for revision would be an apology which the party did not owe to the people. Speaking at Boston, Senator Fairbanks remarked that the Republicans would not

hesitate to revise if revision were needed. Ex-Secretary Long argued that a readjustment of the tariff was needed now. George E. Foster, a Canadian Conservative leader, asserted that Canada neither wanted nor needed reciprocity. Senator Proctor points to the unanimous vote of the Vermont Legislature against reciprocity. It is reported that Senator Fairbanks is striving to bring about another meeting of the Joint High Commission, of which he was a leading member. Several prominent Republican journals favor tariff revision, but those Republicans in Congress who would like to see a general revision are saying very little for publication. Statements on that side of the question are, as a rule, in favor of a readjustment of a few duties or of the rates in certain schedules, and are not made by members whose influence has been powerful in Congress.

Other National Topics

Russia accepts in principle the President's proposition concerning a second Peace Conference, but adds that the present time is not regarded as opportune for such a meeting. Formal and complete acceptance is deferred until after the end of the war. Admiral Dewey has declined an invitation to become a member of the International Arbitration Commission which is to consider the attack of the Russian fleet upon the Hull fishermen. As he would outrank the other members, he foresaw that he would be called upon to preside, and that as presiding officer he would be required to decide questions by breaking a tie. He believed it was inexpedient for the United States to seem thus to act as an umpire. Rear-Admiral Charles H. Davis has been chosen in his place.—William R. Willcox will be appointed postmaster at New York. He is a lawyer, was Park Commissioner under Mayor Low, and has been actively interested in plans for the social and economic benefit of the poor. Ex-Governor Black, of New York, is a candidate for the seat in the Senate now held by Mr. Depew, and he appears to have the powerful support of Governor Odell. Senator Platt, who desires the re-election of his colleague, says that the Governor (who is chairman of the State Republican Committee) promised that he "would not interfere." John A. Merritt, postmaster at Washington (a resident of Lockport, N. Y., and one of Senator Platt's friends) is to be reappointed.—Representative Hemenway, chairman of the House Committee on Appropriations, will be elected to succeed Mr. Fairbanks in the Senate.—An investigation is in progress concerning the charge that the Rural Carriers' Association in the recent campaign demanded pledges from candidates for Congress that they would support bills increasing carriers' salaries, and sought to defeat candidates who would not comply.—It was ordered at the White House, on the 29th ult., that the persons responsible for a series of misstatements in the Boston *Herald* should be excluded at the Departments "from all facilities for information." The cause of this order, as explained in a statement signed by Secretary Loeb, was the publication in the *Herald's* Washington dispatches of a story, containing "not one word of truth," that the turkey sent to the White House by Mr. Vose, of Rhode Island, had been chased, maltreated and tormented in the White House grounds by the President's children, while Mr. Roosevelt himself "looked on and laughed." "This is not exceptional," wrote the Secretary; "it marks the culmination of a long series of similar falsehoods, usually malicious and always deliberate, which have appeared in the news columns of the Boston *Herald*." Copies of the order were sent to the Departments. At first the weather maps and forecasts were withheld from the *Herald* at the Boston weather station, but the order that had caused this to be done was countermanded.—The President has appointed Stonewall Jackson Christian, of Georgia, a grandson of General "Stonewall" Jackson, to be a cadet at West Point. He has also so amended the civil service rules that the classified service will include Deputy Collectors of Customs and the chief collector at each subport, in all about 400 offices.—The Woman's Christian Temperance Union's convention passed a resolution "deploring the action of our Government in fos-

tering the spirit of militarism by increasing the army and the navy." The Women's Army and Navy League has resolved to ask Congress by petition to restore the canteen.

An Agreement with Panama

The conferences of Secretary Taft with President Amador and his Cabinet have resulted in an agreement, and all differences have been settled by an executive order, issued on the 2d and approved by the two Presidents. There is to be absolute free trade between the Panama Republic and the canal Zone. At present the high duties of our Dingley tariff are imposed upon goods entering the Zone from the adjoining country. Hereafter, nothing but canal supplies or goods in transit will be entered at the two Zone ports. The effect of this part of the agreement is to give all customs receipts and port fees to the Panaman Government. The Republic agrees to reduce its tariff from 15 to 10 per cent., except upon wines, liquors, alcohol and opium; and to reduce its port charges by 40 per cent. It also will reduce its postage charge to 2 cents, and will supply all the stamps used in the Zone, the Zone Government buying them at 40 per cent. of their face value. The United States will have complete jurisdiction over the harbors of Colon and Panama, so far as sanitation and quarantine regulations are concerned. The Zone Government undertakes to keep certain suburban roads in repair, to maintain a hospital for insane persons and lepers and to receive at this hospital such persons as the Republic may send to it, if the Republic gives land for the building and pays for the support of the patients so received. The agreement is not to be effective if President Amador does not establish the gold standard, in accordance with an agreement made at Washington on June 20th, and under authority of a law passed at Panama on June 24th. Satisfaction with the terms of the new compact is expressed by the people of the Isthmus.—Upon his arrival at Panama, Secretary Taft said to President Amador:

"The United States has no intention on the Isthmus other than to build the canal for the benefit of Panama, the United States and mankind. There is no desire to exercise further power."

At a banquet given in his honor by the Panaman President on the 1st, General Davis, Rear-Admiral Goodrich, Minister Barrett and the Bishop of Panama were among the 150 guests. In his address, the Secretary urged the Panaman people to preserve the rights of the minority:

"A government where the minority, after an election, retires from its country into exile to await the result of the next revolution, is no government at all, but is tyranny. . Unless respect for individual rights is shown in your country, you will have no government worth supporting. Much depends upon honest elections; for if the men in power control the elections, making the people's votes worthless, then the Government is unlawful and should fall. Your future is bound up with that of the United States. You may depend upon us to help you maintain law and order in carrying on a work that will bring prosperity to your country and that will otherwise inure to your benefit."

Senator Dietrich argues in favor of employing American convicts in the canal work, saying that probably there are in the prisons 10,000 men who could be so used. He would have the service optional, and would permit work on the Isthmus to be counted for a reduction of a prisoner's term.

Labor Disputes and Decisions

Published reports from the little mining village of Zeigler, in Southern Illinois, have asserted that something like war, on a small scale, was to be seen there; but recent investigation fails to confirm some of the assertions that have been made. At Zeigler, Joseph Leiter (a well-known speculator and a brother of Lady Curzon) owns 8,000 acres of land and a coal mine. For nearly five months the union miners originally employed by him have been on strike, and a few of them have remained in camp three miles from the village. Leiter has imported a considerable number of non-union men. The trains bearing them have been fired upon from ambush. To protect these miners a stockade has

been erected, together with block houses, on which Gatling guns are mounted. On the top of a tower 150 feet high a searchlight is operated throughout the night. For a long time Leiter has been employing about 100 sheriff's deputies, and now there are two companies of militia at Zeigler. According to published reports, hundreds of shots were fired every night last week at the stockade, and the Gatlings occasionally responded with a fusillade. But reporters sent from St. Louis declared, on Sunday last, that the stockade showed no bullet marks. The union miners say that they have used no violence. Only one person has been killed—a non-union miner who was shot while coming to Zeigler on a railway train. Leiter has been indicted for bringing armed men into the State, these being the guards employed on trains conveying non-union men to the mine.—Delegates representing the strikers at the Youngstown and Girard mills of the Steel Corporation asked President Roosevelt last week to take measures for a settlement of the controversy. He replied that he saw no way in which he could properly interfere.—Two interesting decisions are announced in New York. The Court of Appeals holds that the eight-hour law (which forbids a contractor to employ his men for more than eight hours a day on work for the State, a county, or a city) is unconstitutional. The reason given by three judges is that the law deprives men of property without due process of law; two others say that it is an unwarrantable interference with the rights of municipalities; one judge dissents. In Brooklyn the Appellate Division of the Supreme Court decides that a contract between an employer and a union to maintain a "closed shop" is unlawful, being in restraint of trade and against public policy; also, that it is in violation of the Constitution. An employer had broken such a contract and the union sued to recover the penalty provided in the agreement. One judge dissented.—At Telluride, Colo., the miners' strike has been called off, the employers having ordered an eight-hour day. It is said, however, that the mines have been filled with non-union men, and that there will be an "open shop." Union men have been driven out of town, and eight were deported even after the formal ending of the strike.—Several thousand employees have gone to work in the Fall River cotton mills, but a large majority of the skilled workmen are still on strike.

Convention for the Open Shop

Several hundred employers, coming from twenty States, attended the second annual convention of the Citizens' Industrial Association last week, in New York, and many addresses were made. The Association opposes the "closed shop" and the restrictions imposed by unions. Its president, D. M. Parry, in an address setting forth his well-known views on labor questions, traced the recent progress of the movement for the association of employers. He asserted that during the past year not less than 1,000 manufacturing concerns (250 in Chicago alone) had abandoned the "closed shop" and opened their doors to non-union men, one result being an increase of from 25 to 50 per cent. in the output of their factories. The unions, in his opinion, could not long maintain a monopoly of labor in any industry if the laws against intimidation and violence were enforced. With practical unanimity the decisions of the courts were against the "closed shop." Frederick W. Job, of Chicago, confirmed Mr. Parry's assertion as to a large increase of output following a rejection of the "closed shop," giving numerous instances within his knowledge of an increase ranging from 25 to 50 per cent. and even exceeding 50 per cent. One subject of discussion was the attitude of unions toward apprentices. A resolution was passed recommending the establishment by boards of education of artisan schools whose diplomas should be evidence of the right to begin to work at a trade; also that employers establish training schools for apprentices in their own shops. Daniel Davenport, counsel for the Anti-Boycott Association, told what that association had done in the courts and in opposing the Injunction and Eight-hour bills at Washington. C. W. Post, a well-known manufacturer of Battle

Creek, Mich., narrated the history of the attempted boycott against his business and advertisements. The Civic Federation was sharply attacked by Percival De W. Oviatt, of Rochester, who remarked that it had come to hold "a position of contented uselessness and universal unconcern," ignoring "the vital problems of the closed shop and the boycott," and pointing to "the blessings of the trade agreement, which is the closed shop by contract." Resolutions were passed in favor of the "open shop," the freedom of the apprentice, the right of private contract, the right to work (with hours limited only by mutual agreement), and the enforcement of the law.

Recommendations for the Philippines

In the War Department's annual report much space is given to questions relating to the Philippine Islands. Bonds issued in furtherance of "the national experiment of assisting the Philippine people to stand upon their feet," Secretary Taft says, ought to be exempt from State, county and municipal taxation. The cost of improvements now in progress or soon to be undertaken should not be charged wholly to present revenues. Therefore authority to issue $5,000,000 in bonds should be granted to the insular Government. With a population of 8,000,000 and an area of 130,000 square miles, the islands have only 120 miles of railway. This explains, the Secretary says, why the archipelago's resources have not been developed, and also why twelve languages are spoken by the 7,000,000 Christian Filipinos. The construction of railroads should be encouraged by guaranteeing a net income for 30 years, as provided in the Cooper bill, which was passed by the House and is now pending in the Senate. Concerning the objection made by some that this guarantee for 30 years would tie the islands to the United States for that period, he says that it would not prevent separation if our people should decide that separation ought to take place:

"Any one familiar with conditions in the islands may be reasonably certain that the bond of union must continue for that period. If there is an issue upon which the American people have emphatically expressed their judgment it is that the policy of the Administration with respect to the retention of the Philippines until such a period has elapsed as will enable our Government by education of the people and the material development of the islands to elevate them into a self-governing community shall stand approved."

He recommends that the Philippine Commission be empowered to amend the present tariff (three years old, and defective) on imports into the islands. "Within a little more than two years," he says, "it is quite certain that the Philippine Assembly, a popular, representative assembly of Christian Filipinos, will have an equal voice with the Commission in the legislation of the Philippine Government." He asks whether Congress cannot safely intrust the insular tariff first to the Commission and then to the two branches of the Philippine Legislature, its own power to amend or repeal being, of course, reserved. He urges that all Philippine products, tobacco and sugar excepted, be admitted into the States free of duty, and that the duties on those two products be reduced to 25 per cent. of the Dingley rates.

England's Opportunity

Evidently Great Britain is determined to take advantage of Russia's embarrassment to extend her influence over disputed territory. Following closely upon the expedition into Tibet and Lord Curzon's visits along the Persian Gulf, there are rumors of active movements along the Indian frontier of Persia and an increasing control of the coast of Arabia. The financial power which Russia has gained over Persia and the rapidity with which her railroads have been pushed into this region have for some time been a source of disquiet to England, and probably some active measures to counteract this influence are in contemplation, altho the dispatch of a harmless deputation to Persia is all that so far appears. On the other hand, it is rumored that Russian troops are being massed on the Afghan frontier, and some significance may be attached to the unusually enthusiastic reception accorded in St. Petersburg to Riza Khan, former Minister to Russia, who heads a deputation from the Shah of Persia, ostensibly to congratulate the Emperor on the birth of an heir. In Arabia the British are re-

ported to have practically cut off Turkey from that part of the country east of a line connecting Koweit and Aden, since the trade route through the Nejd to Koweit is under their control. The Turkish Ambassador in London has protested against the presence and activity of the British representative at Koweit, the Sheik of which is in rebellion against the Sultan. Lord Lansdowne, however, refuses to withdraw him until the boundary of the British "sphere of influence" about Aden is satisfactorily adjusted. Mohammedans of Egypt are said to have asked the British Government to protect them in their pilgrimages to Mecca and Medina.

German Finances

The report of Baron von Stengel, Minister of Finance, to the Reichstag shows a very unfortunate condition of affairs. The revenues from almost all sources have decreased and the present and prospective expenditure is much greater than ever before. He stated that a loan of $73,250,000 must be raised in consequence of $19,250,000 expended in suppressing the native uprising in German Southwest Africa and $11,625,000 for rearmaments for the army. A further appropriation for the war in Africa may be needed later. In paying military pensions $70,000,000 has already been consumed from the principal of the capital set aside years ago with the intention of using only the interest on it for this purpose. At this rate the whole of the capital will be gone by 1910. The interest on the public debt has risen from $26,000,000 to $28,250,000. The revenues from wine and tobacco have fallen off $975,000, owing to the fact that during the first six months of the fiscal year 6,000,000 fewer bottles of champagne were drunk and 800,000,000 fewer cigars smoked than in the corresponding period of the year before. This does not, however, prove any increase in national sobriety, since the receipts from distilled liquors, such as whisky and brandy, are increased by $2,500,000. The customs receipts are less by $3,000,000, owing to a diminution of grain imports. The naval budget calls for $59,000,000, an increase of $4,125,000, to be expended in part in the construction of eight battle ships, two cruisers, two gunboats and one mining vessel, which, it is said, "has been rendered necessary by the experience of the Russo-Japanese war." Additional torpedo boats are to be built and $375,000 expended on experiments with submarines. The Prussian army budget for the coming year is estimated at $116,000,000, an increase of $11,250,000. The Saxon army budget is placed at $11,000,000, an increase of $425,000, and that of Würtemburg at $5,500,000, an increase of $125,000. About $3,250,000 is for the creation of reserve field artillery, being one-ninth of the $29,250,000 necessary for this purpose.

The Siege of Port Arthur

The Japanese have made an important gain through the capture of 203-Meter Hill, a promontory so called on account of its hight, which is greater than that of any of the other fortified positions except Golden Hill and Liau-Tie-Shan. It occupies a dominant position to the west of the harbor, two miles from the railroad station, and it is believed that the Japanese can destroy the city and the fleet whenever they are able to mount heavy guns on this point. Ever since September 19th it has been the object of attack and the loss of life in the numerous assaults has been terrible. The fort on 203-Meter Hill measured 100 by 500 yards. The bomb-proof shelters were covered with two thicknesses of half-inch steel plates above which were timber and earth. On the sides of the hill were trenches protected by sandbags and steel wire entanglements defended by machine guns. It was practically impossible to charge in the open, so the approach had to be made by saps. On one occasion about 120 men attempted to run in open order across a space of 300 yards, but every man was killed by the shrapnel from the fort. The final attack from trenches was begun at dawn on November 30th, but all the charges were repulsed until 5 o'clock in the afternoon, when a point about thirty

GENERAL STOESSEL

yards from the summit on the southeastern side was attained, and by 8 o'clock the whole fort was captured. The garrison of Port Arthur, with marines from the fleet, made six desperate attempts to regain the position, lasting all night and the following day, but failed. For the first time in the siege an armistice, lasting six hours, was declared for the purpose of burying the dead. It is reported from Che-Foo that the Japanese lost 4,000 men in an hour during the assaults of the day. The general progress of the siege can be followed on the accompanying map. In the center the Japanese forces first pushed

shan, so frequently occurring, means "hill" or "hight."

Disorders in Morocco

The weakness and inefficiency of the Sultan of Morocco are becoming every day more apparent, and the country is practically in a condition of anarchy. Brigandage is increasing and trade decreasing. The Government forces sent against the Pretender were withdrawn without a battle, because their commander feared that they would join the enemy. A troop of cavalry going to the frontier were kept unarmed,

Japanese Guns are shown thus:

Map Showing the Fortifications of Port Arthur

down the valley, taking Fort Kuropatkin, the water works and the lunette forts, then attacked the Antszshan forts on the west and the Urlung forts on the east. The left wing began by capturing Takushan and Shakushan, and from these directed an attack upon the Keekwan forts. From the surrounding hights, as indicated on the map, the Japanese artillery bombarded the fortifications, the fire being directed from balloons, which accounts for their success in hitting arsenals and storehouses. The termination

because they could not be trusted, and as a result they were attacked by robbers a few hours outside of Tangier and their horses, clothes and belongings stolen. Kaid Sir Henry Maclean, the English commander of the Sultan's bodyguard, who was going to Tangier from Fez with his daughter, was attacked on the road and forced to take refuge at Arzila and wait for a steamer to take him to Tangier. The Ben M'Suar tribesmen attacked the house of Walter B. Harris, correspondent of

the London *Times*, but failed to find him. Two guards were killed and others made prisoners. Mr. Harris was a year ago captured, like Perdicaris and Varley, by Raisuli and held as a hostage for the safety of some of the imprisoned bandits. The plans of the French Government for a "pacific penetration of Morocco" are not likely to be carried out smoothly, for the people are incensed at any foreign interference. A French Mission, under M. Saint-René Taillandier, the Minister at Tangier, was to be sent to Fez to reside at the court of the Sultan for six months, in order to convert him into a firm ally of France, but the mountain tribes are assembling in force to prevent the Mission from going to the capital. It was the policy of the French Government to gain the friendship and confidence of the people by encouraging trade and works of public utility, such as the establishment of hospitals, schools, roads, bridges, etc. A French schoolmaster and French doctor were to be put into each of the Moroccan towns along the Algerian frontier. But in the present temper of the people it seems evident that such measures must be indefinitely postponed.

The Italian Elections

The results of the second balloting in the Italian elections confirm the previous one and indicate that the Government will have a substantial majority. The losses are chiefly on the extreme left and due to the increased clerical vote, to popular dislike of the general strike, and to the division of the Socialists into those favoring such revolutionary measures and those who aim to carry out their program through a succession of moderate reforms. Nevertheless, the Socialists, having a compact and efficient party organization and definite aims, have suffered less than other radical parties. In the former Chamber the left numbered 105 members, comprising 46 Radicals, 33 Socialists and 26 Republicans. According to the returns so far reported the same wing will be composed of 84—that is, of 33 Radicals, 29 Socialists and 22 Republicans—a loss of about 20. The Government will have a majority of about 180 in the new Chamber. The Clericals took part in the voting more openly and more extensively than in the first part of the election, and supported Governmental candidates even of anti-Clerical sympathies. The Socialists endeavored to excite a mutiny in the army, and a general strike of the reservists was planned for November 18th, but only a few reservists attempted a demonstration, and these were quietly disarmed.—Meetings have been held all over the country to protest against the Innsbruck riots and attacks on the Italian students there. Race feeling runs high and finds expression in street mobs, which burn Austrian flags and hoot the embassy.—The Crown Prince of Italy was baptized at the Quirinal December 4th, amid a brilliant assemblage of courtiers and diplomats. Queen Dowager Margherita was godmother and Prince Nicholas of Montenegro godfather.—King Victor Emmanuel opened Parliament November 30th with a speech from the throne, in which he declared his intention of granting ample liberty and strongly defending the law. He announced that bills would be introduced for the benefit of the working classes, and substituting co-operation and arbitration for strikes and conflicts. The speech concluded with the following statement as to the prosperity of the country:

"The economic condition of Italy is making evident progress, as demonstrated by the high quotations of State bonds, which have reached figures never before attained; the disappearance of exchange on gold, the large amount of capital coming in, the increase in the deposits in the savings banks, the growing commercial activity, the development of the industries and the unlimited credit enjoyed in the Treasury of the State. This happy condition has been reached chiefly through peace, assured by solid alliances and sincere friendships and emphasized by the affectionate demonstrations which occurred at the time of the visits to Rome of the German Emperor, the King of England and the President of France. Arbitration treaties have been concluded with France, Great Britain and Switzerland, while negotiations for similar accords with the United States and other countries are well advanced. Thus Italy continues her mission of peace."

Three Poems

BY MUTSUHITO

EMPEROR OF JAPAN

I.

My heart's at peace with all, and fain would I
Live, as I love, in life-long amity;
And yet the storm-clouds lower, the rising wind
Stirs up the waves; the elemental strife
Rages around. I do not understand
Why this should be.

II.

'Tis surely not our fault.
We've sought to be sincere in deed and word;
We have exhausted every means to press
A clear and truthful case, but all in vain.
Now may the God that sees the hearts of men
Approve of what we do!

III.

They're at the front,
Our brave young men; and now the middle-aged
Are shouldering their arms; and in the fields
The old men gather in the abundant rice,
Low stooping o'er the sheaves: all ages vie
In cheerful self-devotion to the Land.

KYOTO, JAPAN.

[The above translations of poems by His Majesty, the originals of which appeared in the *Kokumin Shimbun* for November 7th, 1904, seem to have been composed at different periods. No. I evidently was written before the war, when the Emperor saw himself surrounded by ominous signs of a coming conflict. No. II dates from the actual commencement of the war, when all peaceable means had been exhausted and the declaration of war had become inevitable. No. III is what we see in Japan to-day. Only this afternoon I passed a gang of women taking their husbands' and brothers' places in the building of a bridge. His Majesty has every reason to be proud of the ready self-sacrificing spirit of his people.—ARTHUR LLOYD.]

Kitchen Dirt and Civic Health

BY CHARLOTTE PERKINS GILMAN

Author of "Woman and Economics," "The Home," "Human Work," Etc.

EVERY educated citizen knows that the diseases of a city are mainly due to its dirt; to coal dust and street dust; to the vast deposit of excreta, brute and human, and to the masses of food exhibited and transported, with its inordinate proportion of garbage.

Every city of advanced intelligence labors mightily and expensively to rid itself of this load of dirt, by systems of sewage, by collection and removal of garbage and ashes, by the Sisyphean labors of the street cleaners, and by some futile efforts toward smoke consumption.

The most successful department of this sanitary task is that of the sewage system, especially when this waste matter is used ultimately to fertilize the land, as in Berlin.

The initial expense is great, but once established, this part of the city's work of cleaning is by far the most efficacious.

In the cities of old times, and still in those of the slow Asiatic peoples, the major death rate rests on the lack of proper sewage. The "Black Death" of the Middle Ages, and many a minor "filth disease" arose from this source.

We, to-day, in a splendid leap forward of sanitary science, have grappled successfully with this form of civic dirt, and largely escaped its resultant diseases.

We should note that the superiority of the sewage system over that of the ash-cart and garbage cart lies in its being done comprehensively and mechanically by the city for all its houses together. There is no attempt to meet their needs privately and separately. We are relentlessly strung together by a vast plexus of pipes, so that if this venous system of the city could be uncovered it would lie like some immense horizontal tree or vine, with the huge trunk of the big sewer, the boughs of street mains, the smaller branches and twigs of lessening pipes, and the houses standing like leaves upon their stems; all bound together by this network of lead and masonry. This is far simpler, easier, cheaper, safer and more sanitary than the old night cart system. But the day cart system is still in use for our other forms of dirt. Through our streets pass thousands upon thousands of horses, and after them toil thousands of men, performing labors which Hercules would have fled from.

No Augean stables could compare with these square miles of daily defilement. This kind of dirt is swept up, scraped up, blown about by every wind, shoveled into carts, and carried off, every day, under the eyes, noses and lungs of the passer-by, and under the windows of our homes.

The ashes from our myriad fires are similarly carried off in wagons; first standing along the sidewalk in huge cans, then poured out, spreading clouds of dust, and carted away. The garbage again from the same myriads of doorways, stands similarly on the sidewalk or beside it, and is similarly poured out, reeking, into other carts, and carried along like the rest of the dirt, under our eyes, noses, lungs and windows.

The patient efforts of the Health Department are directed solely toward removing this enormous and daily renewed mass of injurious and offensive matter; no one seems to think of any way of checking the production and reducing its amount.

We know that there must be a certain amount of sewage in proportion to the population, we build for it, and flush our pipes with an abundant water supply. Then we unconsciously assume that there must be the same proportion of other offensive matter as at present to be struggled with, and we struggle with it accordingly.

Let us now consider from what source comes this vast amount of air dirt, street dirt, ashes and garbage, and if there is not a way to reduce it. Here is a New York block, in the residence portion of the city, not quite a hundred houses, but

near enough to take that number for illustration.

In these hundred houses are one hundred kitchens, one hundred chimneys pouring forth their contribution to the city's smoke, gas, soot and cinders; one hundred stoves and furnaces, each with its heap of ashes; one hundred greasy garbage cans. Also internally from these hundred kitchens comes the worst complication of the sewage system—the grease and solid matter from the servant-managed sink.

Then, further, to maintain these hundred private cook-shops, come to the hundred area doors each day droves of horses; the milkman's horse, the iceman's horse, the baker's horse, the grocer's horse, the marketman's horse, the horse from the coal yard and hardware store.

Five horses a day at the least, to each door, even if one firm supplied the hundred houses—which is by no means the case. For each block there are numbers of competing milkmen, marketmen, icemen, bakers and grocers; going up and down and around; and their horses, together with the horses of the ashman, garbage man and street cleaner, continually soil our residence streets with a vast deposit of animal excreta.

The sum, in tons, would astonish the casual reader; and the sum, in dollars, which it costs the city to remove this heap of dirt is a heavy tax upon us.

This refers only to the residence part of the city. I am not considering the business section, where ill-smelling industries are carried on, and where the enormous traffic of congested streets makes the cleaning of the residence portion seem a light task in comparison. But the residence portion should be wholly clean. This is where we *live*, where men sleep at night with their families, where the families stay all the time, where the children—for whom our homes are primarily intended—struggle through the "diseases of infancy"—*i. e.*, the diseases of parental ignorance.

The really unavoidable dirt of the residence part of a city is entirely taken care of by the sewers.

All the rest of it is made, first by our fires, second by our food, third by our horses, and fourth by such cleaner waste as paper, rags, bottles, etc.

Let us now consider whether it be necessary for us, in the business of living, to make so much dirt; to live in such a profusion of daily waste, and to suffer from the evils arising therefrom, not only in offense to the senses and injury to the health, but in the dulling and coarsening of the perceptions sure to follow such degraded methods of living. In contrast to the present condition, suppose we make this change. Let the whole block be heated from one plant, as an office building is heated, or a great hotel or apartment house; a gas grate could add personal choice in extra heat. Let the one main fountain of dirt, the kitchen, be entirely removed from the dwelling house—where it has no more place than a soap vat—and one food laboratory for the block take its place, supplying to the families cooked food by their own dumb waiters; cooked food perfectly prepared and ascending into the butler's pantry as it now ascends, so that the man of the house need notice no difference in his meals, save maybe in superiority. This article is not to urge such a measure, but merely to state it as a mechanical possibility, a financial, culinary and domestic possibility, and to discuss its effects on this problem of civic dirt and civic sanitation.

The result would be, first, one chimney instead of one hundred. This one firing plant could consume its own smoke, and thus the air of these home blocks would be cleansed at a stroke of coal, smoke, soot and cinders, and much of the gaseous evil also. We have begun to object to "the smoke nuisance"—call it "smoke poison"—"smoke murder," and we shall object more. No one has a right to poison public air any more than to poison public drinking water.

The one hundred ash cans, littering the sidewalks, clouding the air when emptied, requiring to be carted slowly and dustily through the streets, would give place to the one large deposit, properly dampened and delivered in one place, at one time, for removal.

The food supply, instead of being in ceaseless process of delivery at a hundred doors, would come in bulk to one door. Being there delivered it would be prepared, not by clumsy, careless, ignorant, cheap labor (think how ignorant

and how cheap is the labor to which we now intrust this so primally important business of feeding ourselves and our children!), but by well trained and well paid experts. Thus prepared we at once reduce the garbage output enormously. It would be reduced in bulk, because there is less waste in handling large quantities; again because there is less waste in skillful handling; again because much that is waste in a small amount becomes valuable in a larger one, as grease, which instead of clogging the drain and smearing the garbage can would become marketable soap fat.

Thus lowered in actual bulk it would be reduced in handling nearly 99 per cent., being delivered at one door in "sealed packages" if necessary.

The street dirt would be minimized about as much, for the horses tributary to the kitchen would disappear entirely from the side streets. The one center of the food industry would be, of course, on the avenue, and its bulky supplies would come in huge vans from the wholesaler—motor vehicles preferred.

The same large mechanical conveyances could take away the waste. This is conceivable, of course, for the private delivery system from small retailers, but is far more remote for economic reasons.

Nothing could more rapidly eliminate the horse from our streets than this reduction of home service, an unmixed good.

No more dumb straining agony under our eyes. No more the crack of the lash, the harsh, loud cry of the driver.

The big traffic motors run quietly, and their drivers do not yell. Thus we should escape the street dirt of the whole regiment of daily supply horses, not only those which come to the kitchen doors, but those which feed the retail markets of all sorts; and also those of the garbage and ash carts.

The street cleaner would remain, but his task would be reduced to a very low degree, only the horses of those who ride for pleasure, and of the dry goods and furnishing stores would remain.

With this flood of traffic would disappear not only most of the dirt and dust of grinding wheel and hoof, but most of the noise which so injuriously affects our health. The residence part of the city could be as clean and quiet as heart could wish; the children who play in the street—and, rich or poor, they have no other place save the few parks—would have far safer streets to play in.

The portion of frontage now devoted to stony areas, inlets of food and outlets of refuse, breathing places for melancholy cooks, could be given to banked earth and blooming flowers.

The homes could be more blessedly irregular in outline, and trees and vines rise greenly, softly, against their rigid fronts. There is no reason whatever why the streets where we live should be coarsened and defiled by the traffic of a swarm of clustering kitchens.

They could be made flower-sweet and quiet, healthful, beautiful and clean, if we will but give up our ancient relic of precivilized times—the private kitchen. If this is important in the already comparatively decent residence portion of the rich, see how much more it is so in the poorer quarters. There the people are thicker, and the processes of living crowd horribly together. The children are thicker, more noisy and less strong. The horses are thicker; the whole group of functions we so gracefully refine away in our wealthy and fashionable quarters are here forced into shameless prominence. With so much more dirt there is less street cleaning withal, for that costs money, and less space for ventilation.

A kitchen is bad enough tucked away in the lower rear of a rich man's home. Even a rich man's kitchen he seeks to live as far from as possible, and to shut out from him in every way its smells and sounds and sights. Yet his kitchen is large, light, airy, beautifully fitted and furnished with every convenience, provided with first class food materials, and served by comparative competence. The poor man's kitchen is small, dark, close, poorly fitted and furnished, provided with low grade food, served by incompetence—and he has to live in it. Now the rich man, for all his tender sentiment about the domestic hearth, does not wish to spend the evening in his kitchen, nor does his wife. The sink and the stove are dirt centers; to keep them fresh and clean is constant labor, to keep yourself fresh and clean after cleaning them is further labor—and the poor have labor enough

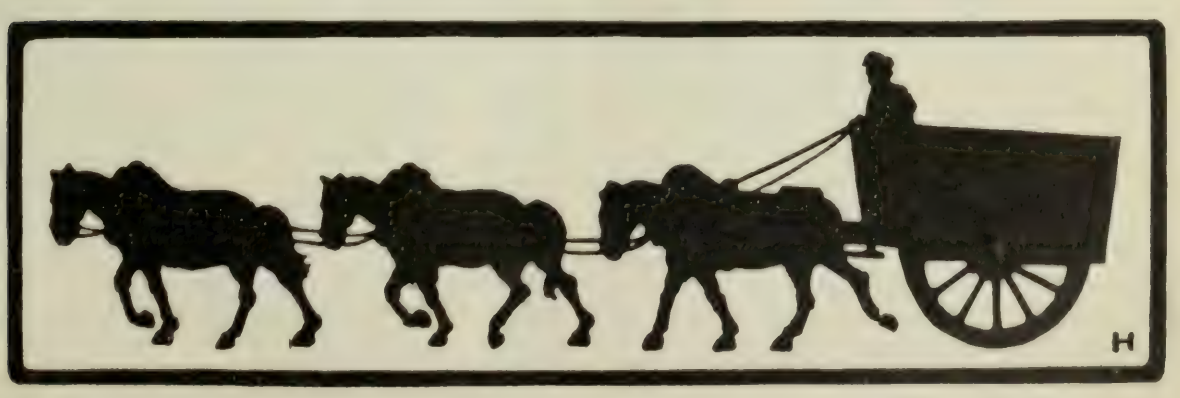
without these added. Yet the poor man, if he says at home, and the poor woman all the time must live in the kitchen. They are not able to buy food as good, as fresh and wholesome, nor to keep it as well as are the rich. They buy in smaller quantity, their retail suppliers are smaller and more numerous.

In " the crowded warrens of the poor " the smoke, soot, gas, cinders, ashes, grease and garbage are continually in evidence; and the streets are foul with the slow stream of inferior food supplies.

The cry of the street venders is continually in their ears, the sight and sound and smell of food they have always with them—tho they may be hungry also—revolting paradox! and the dirt of their innumerable kitchens—not one kitchen hid behind and below each house, but the big tenements honeycombed with kitchens—mere swarming nests of kitchens—the meager yet cumulative deposit of ash and grease and garbage from all these kitchens is never cleared away.

If from the worst of New York tenements—and earth has no more evil habitation for human life—if from there you eliminate the kitchen you clear out at one stroke the main dirt supply.

If all food was prepared in clean laboratories, open to sanitary inspection, required to conform to a given standard, recognized as the very centers of the cities' health and guarded as such, we should strike a tremendous blow at our death rate. With a two-edged sword, for on the one hand we should have only good food to eat, and on the other hand the dirt diseases would lose their main source of supplies.



Expense? Is any one so ignorant as not to know that the poor pay more for their food than the rich, that the more minute is retail distribution the more costly it is? The poorer people are the more they need to have proper food at reasonable prices, and the less able they are to get it.

To rich or poor, a large, scientifically managed food laboratory would give better food for the money they now pay.

Then will rise up the voicer of traditional sentiment, " bearded with moss and in garments gray, indistinct in the twilight," as it were, and proclaim that the family life of the poor is going to suffer if it is deprived of its kitchen. That the wife, to be a wife, must boil, bake and fry—mostly fry—for her husband; that the mother, to be a mother, must gather her young about the stove, to their imminent peril and great discomfort.

Father, mother and child will be far happier together in a clean, quiet room that is not a workshop of any sort. Let them eat together by all means if they so desire, and in their own apartments if they so desire, but eating is one thing, cooking is quite another. We have learned to object to a soap factory as a public nuisance, and live as far away from it as we can. A kitchen is a private nuisance, and their immense numbers in a city make them a public nuisance, and a serious injury to the public health.

NEW YORK CITY.

Influence of State Boundaries on Water-Right Controversies

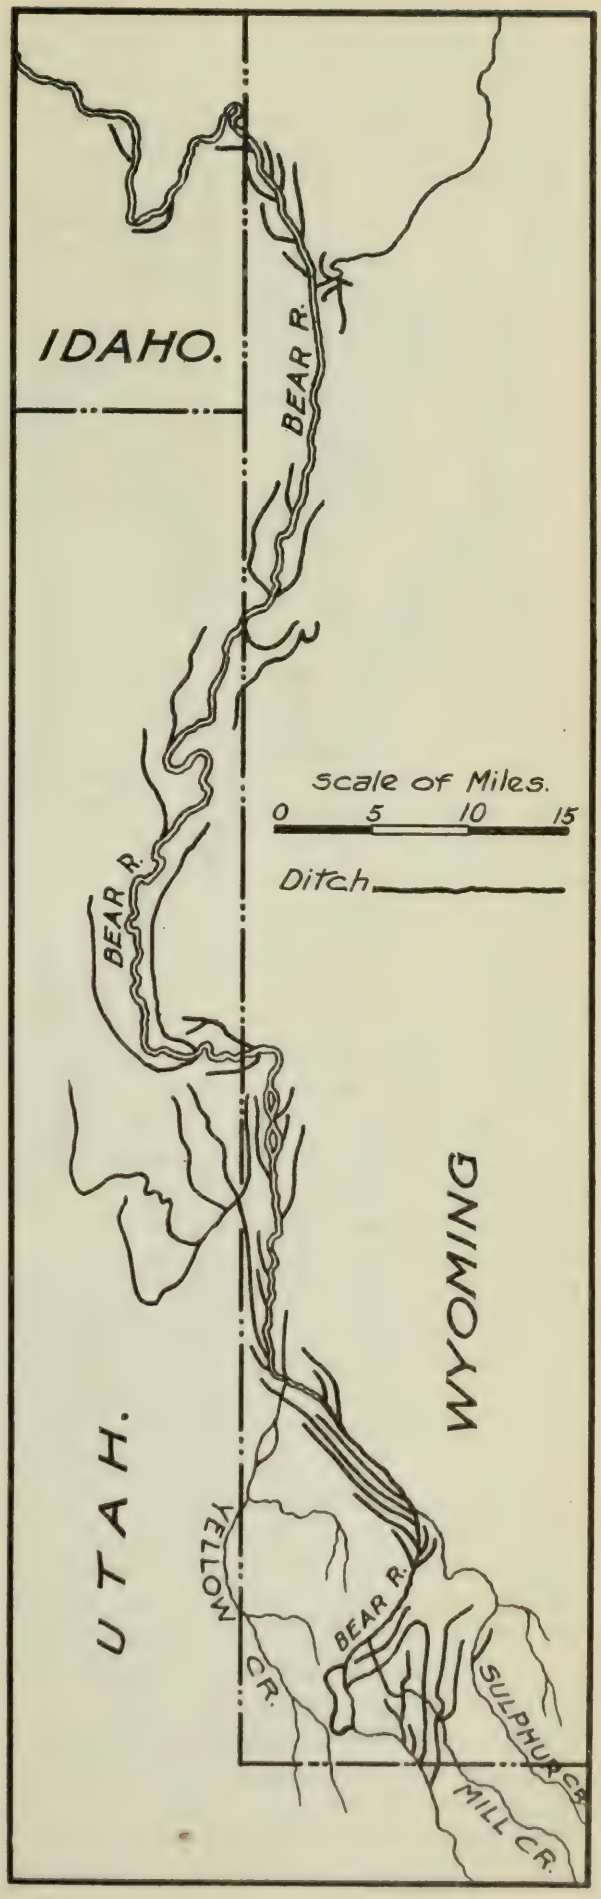
BY ELWOOD MEAD

[Mr. Mead is the Chief of the Irrigation and Drainage Investigations undertaken by the Department of Agriculture. He is now assisting the Government's attorneys in the hearings of the Kansas-Colorado water-right controversy.—EDITOR.]

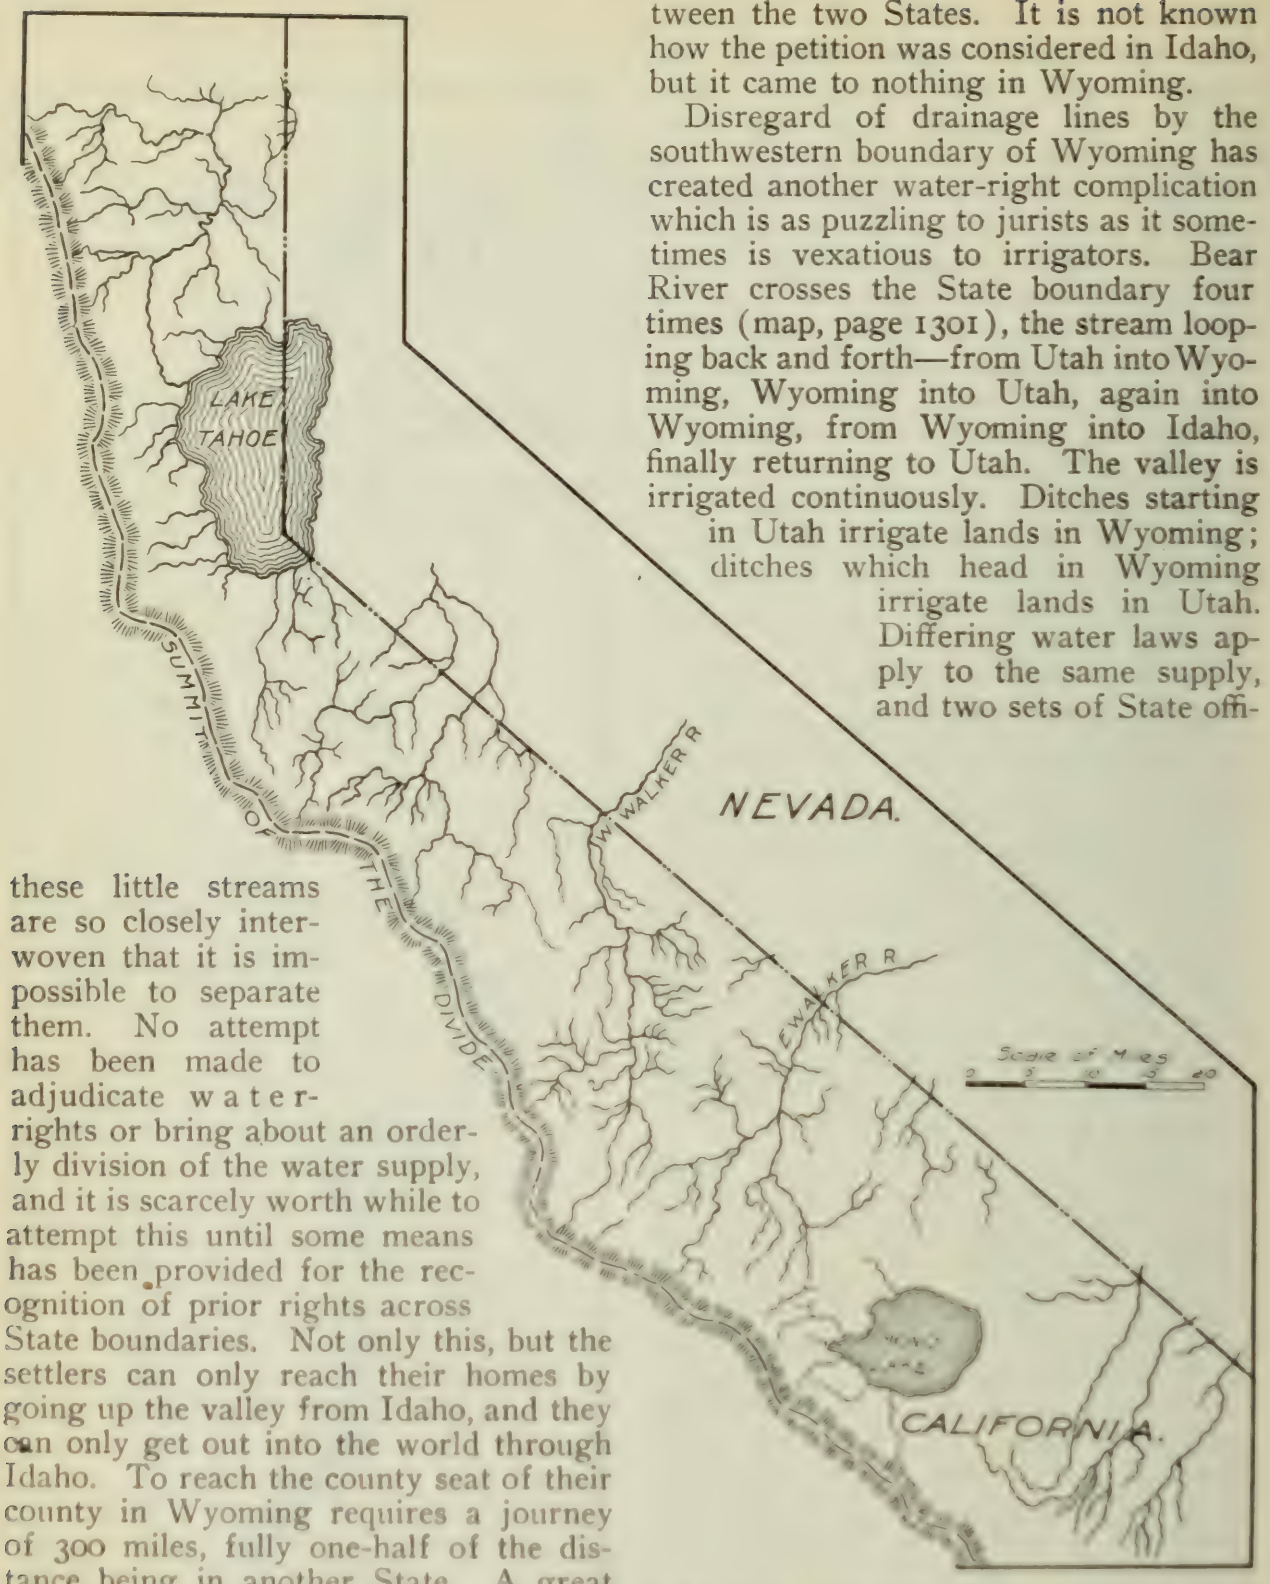
THERE is now pending in the Supreme Court of the United States a suit wherein the State of Kansas seeks to enjoin the State of Colorado against any increased diversion or use of the Arkansas River. The filing of this suit has brought to public attention the overshadowing importance of streams in the development of Western agriculture, and is causing legislators and economists to ponder over the measures needed to settle the complex questions created by the conflicting claims of different States to the same water supply.

So far as the need for irrigation or the use of the river by irrigators is concerned the State boundary amounts to nothing. The land is as dry east of this imaginary line as west of it. The 200-mile strip of irrigated land in Colorado continues without a break, when the boundary is reached. Canals heading in Colorado cross into Kansas and irrigate land in both States, and Kansas canals begin where those of Colorado end. In one essential feature, however, the State boundary marks an impassable barrier across the irrigation of this valley. The rights of Kansas ditches are not considered in the division of water in Colorado. The rights to water of the 1,900 ditches along the Arkansas in Colorado have been established and are protected under State laws under which the earlier users of water can call on the State water police to close later ditches if the river does not carry enough for all. But the numbering of rights and the authority of State water officials end with the Colorado boundary. There is no record in Colorado of the Kansas rights nor statutory method of protecting the older ones in Kansas against the encroachments of the later Colorado ditches. The litigation in the Supreme Court has grown in part out of the belief of the Kansas water users that their rights should be placed on an equal footing with those of the State above, altho the leading contention of Kansas is for the establishment of the doctrine of riparian rights.

From conversation with numerous appropriators in Colorado there does not seem to be any objection to a recognition and protection of prior appropriations in Kansas. What is feared is the establishment of a doctrine that will prevent the best use of the stream in either State, or such disturbance of existing conditions in Colorado as will bring chaos and ruin before a new order of things can be worked out. The importance of the Colorado irrigation interests dependent on this stream makes this apprehension not unreasonable. The 1,900 ditches and canals have cost about $9,000,000. They irrigate land worth $30,000,000, which is cultivated by 8,000 farmers. Not only the prosperity but the very existence of these farmers depends on the continuance of their right to use the stream for irrigation.



One method of protecting Kansas priorities is to shift the State boundary far enough eastward to include within Colorado all of the Arkansas Valley in which irrigation is a necessity. If this were done, Kansas water-rights would be included with those of Colorado in the order in which water was first used, and certain troublesome questions regarding the respective spheres of State and national authority over the stream would be averted. Bills for this purpose, it is stated, will be introduced in both legislatures next winter.

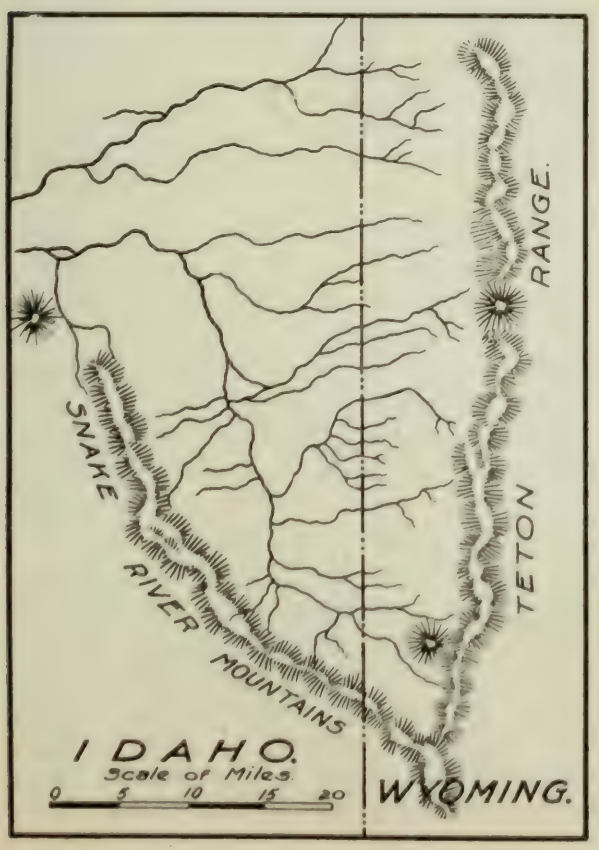


While interstate water-rights have as yet little importance compared to the vastly greater interests affected by the

administration of streams within the arid States, misfit State boundaries have created many curious water-right complications and led to a number of attempts of settlers to be made citizens of another State. When the boundaries of the arid States were carved out the influence of mountain ranges or of watercourses on industrial development, or the social and political relations of settlers, were not taken into consideration. A straight line was a simple way of marking out the borders of a new Commonwealth and was the one generally followed. In many places this has resulted in making settlers voters and taxpayers in States in which they have or can have no other interest.

Judging from the attempts made to improve them, settlers have found the four straight lines which form the boundary of Wyoming and which pay no attention to the influence of mountain ranges crossed on travel, agricultural development and schools unusually unsatisfactory. This dissatisfaction is found in some places on one side of the State boundary and in others on the other, settlers in some parts of Wyoming wishing to leave the State and settlers of adjacent States in other localities wishing to become a part of it.

The first attempt at their reform began about ten years ago by some settlers who live on the western slope of the Teton Range of mountains. Its snowclad and precipitous summits run parallel to and a few miles east of the western boundary. At the southern end of this range a spur leaves it at an acute range and runs westward into Idaho. The Wyoming-Idaho boundary runs at the foot of the Teton Range so as to include in Wyoming, between the spur and the main range, a strip of country about 10 miles wide and 50 miles long. (See map, page 1303.) It is crossed by mountain streams whose valleys are settled and irrigated. These ranchmen are cut off from the rest of Wyoming by the mountains. Agricultural settlement began in Idaho and worked its way up the stream, so that most of the Wyoming settlers have neighbors and relatives in Idaho. Many of the ditches which irrigate Idaho land start in Wyoming. Irrigation interests of the Wyoming and Idaho settlers along



these little streams are so closely interwoven that it is impossible to separate them. No attempt has been made to adjudicate water-rights or bring about an orderly division of the water supply, and it is scarcely worth while to attempt this until some means has been provided for the recognition of prior rights across State boundaries. Not only this, but the settlers can only reach their homes by going up the valley from Idaho, and they can only get out into the world through Idaho. To reach the county seat of their county in Wyoming requires a journey of 300 miles, fully one-half of the distance being in another State. A great many of the schools that the children attend are in Idaho. All their interests except that of voting and taxpaying are with Idaho, and the desire of the settlers to be citizens of Idaho is a natural if not inevitable one. To bring this about, about ten years ago they prepared petitions setting forth the hardships of their present situation and the great benefits that would come to them if the summit of the Teton Range was made the boundary between the two States. It is not known how the petition was considered in Idaho, but it came to nothing in Wyoming.

Disregard of drainage lines by the southwestern boundary of Wyoming has created another water-right complication which is as puzzling to jurists as it sometimes is vexatious to irrigators. Bear River crosses the State boundary four times (map, page 1301), the stream looping back and forth—from Utah into Wyoming, Wyoming into Utah, again into Wyoming, from Wyoming into Idaho, finally returning to Utah. The valley is irrigated continuously. Ditches starting in Utah irrigate lands in Wyoming; ditches which head in Wyoming irrigate lands in Utah. Differing water laws apply to the same supply, and two sets of State officials have authority over parts of the same ditch. It is impossible to divide the stream so as to protect rights in either State. Wyoming can determine the area entitled to water in Wyoming, but not the amount of water needed to irrigate lands in Utah. In the same way Utah can define rights on a loop of the stream that is within that State, but this would have no effect on diversions above in Wyoming. In two States noted for the

perfection of their administrative systems this territory is a veritable no-man's-land, where every irrigator diverts and uses water without protection and likewise without interference with wasteful or extravagant use.

There has been litigation on the northern boundary between the Wyoming and Montana irrigators from Sage Creek, controversies on the eastern boundary between the Wyoming and South Dakota irrigators from Sand Creek, and Nebraska farmers in the North Platte Valley have petitioned for a shifting of the boundary which would make them citizens of Wyoming. This petition grew out of the fact that the head gate of their ditch is in Wyoming, while the lands irrigated are in Nebraska. They wished a title to the water diverted. It could only come from one or the other of the States. Wyoming could not grant it, because the State had no control over the land to be watered. Nebraska could not grant it, because the State had no control over the head gate or the amount of water turned into it.

The Colorado-Wyoming boundary cuts across the irrigated valleys of Sand Creek and the Laramie River, leaving the upper end of both streams in Colorado.

The enterprising irrigators of that State have built canals to carry the surplus water of these streams across divides to supply other Colorado canals. The Wyoming irrigators have brought suits to stop this. Farther west this boundary cuts across the bends of Little Snake River, crossing the stream twelve times. Seven sections of the stream are in Colorado and six in Wyoming. Colorado has adjudicated the rights of the Colorado section and Wyoming has determined those of the ditches which head in Wyoming. These adjudications are, however, of little practical value. The irrigators in each bend of the stream take what they need or what they can get.

If the California-Nevada boundary was moved up the mountainside ten miles, where it crosses the headwaters of the Walker, Carson and Truckee rivers, it would greatly simplify the water-right problems of irrigators along these streams (see map, page 1302). Then all the rights would be in one State. Because they are in two, litigation over them in the United States courts has been a frequent source of anxiety and expense to the citizens of both States.

The boundary cuts across Lake Tahoe, and its waters have been claimed for use in both States. Truckee River, which rises in this lake, irrigates a large tract of valuable land in Nevada. The Nevada irrigators believe that they own the stream. On the other hand, the purity of the water and its large volume has made it a possible domestic supply for San Francisco, and a number of enterprises have been inaugurated by California appropriators for tunneling the Sierras and carrying the water over to the western slope.

As has been said earlier, the greatest irrigation problem is to secure the just and stable establishment of water-rights within States. These involve the welfare of hundreds of homes to every one affected by division across State boundaries. It is the difficulty of reaching any conclusion now and the uncertainty as to what the future may bring forth, rather than existing ills, which have given importance to the severing of irrigated districts by State lines.

WASHINGTON, D. C.

Workingmen and Their Organizations in Australasia

BY ARTHUR H. WARNER

[Mr. Warner has recently returned from a year's visit to Australasia, where he made a study of political and social conditions, not only as an observer, but also engaging in work among the Australasians. Mr. Warner is now in newspaper work in New York City.—EDITOR.]

THERE is an impression in this country that organized labor is the controlling force in Australasian government. This is quite unsupported by facts in New Zealand, and based upon exceedingly slender foundations in Australia.

It is true that the workingman is a greater power in politics in the Antipodes than here, but that is because government there is more responsive to the popular will than in the United States. The political developments of the last decade have been the result of a genuine people's movement, in which trade unions have been an element, but never anything more than a minority representation.

Organized labor has never had a majority in any parliament in Australasia, and the nearest to control it has come has been in the State Parliament of New South Wales and the Federal Parliament of Australia, where it has exercised the balance of power. The prominence it has secured has been due partly to its solidarity, and partly to lucky divisions which have made it the fulcrum of a two-handled lever in the community.

Viewed from the standpoint of industrial influence as distinct from political power, trade unions in Australasia are weaker than in the United States. This is particularly true in New Zealand, a condition directly traceable to the Arbitration Court. With the regulation of wages, hours, conditions of apprenticeship and of work by the State, the character of labor organizations there has inevitably altered. They have lost the militant aspect almost entirely, and are principally concerned in bringing grievances before the Arbitration Court and in seeing that its awards are enforced. It is necessary for the workingmen to organize in order to obtain a standing before the court. Hence the inauguration of the system led to the formation of many new unions and a rapid increase in membership for several years after it first went into effect a decade ago, but, altho the labor organizations have grown since then extensively, they have declined intensively.

In Australia arbitration courts are of more recent origin, so that their influence thus far has been smaller. Nevertheless, labor unionism in Australia has been less aggressive in an industrial way than in the United States, and far less fortunate. It is estimated that more than half the strikes in this country have been successful. In Australia nearly all the important strikes have been disastrous failures; an appreciation of which was what led the Australian unions about fifteen years ago to organize as political parties.

Taking the registration under the arbitration law as a basis, with a slight allowance for unions outside, the membership of New Zealand labor organizations may be estimated at about 25,000 persons. The population of the colony is, roughly, 800,000 (excluding the Maoris or native race), which would give a proportion of 1 in 32. By the latest census, 1901, the wage earners of New Zealand are given as 224,446. This would mean that 1 in every 9 was in the ranks of or-

ganized labor, or about 11 per cent. No statistics are obtainable upon which to base an accurate estimate of the strength of the labor movement in Australia as a whole. At the recent meeting of the Trades and Labor Congress the president estimated it at 250,000. Australia's population is nearly 4,000,000. This would give 1 in 16, or double the proportion in New Zealand. It is likely, however, that this estimate is largely exaggerated, and, in any event, the wage earning population in Australia bears a higher relation to the whole than it does in New Zealand, which is pre-eminently a country of one-man enterprises and small producers. Other evidence seems to indicate that in its actual relation to the number of wage earners the strength of organized labor is about the same for both countries.

In the United States the American Federation of Labor has a membership of 1,605,593, and, with other bodies, the entire strength of organized labor in the country is estimated at about 2,000,000. This is 1 in 40 out of a population of 80,000,000; but the United States is largely an agricultural country, and of its total inhabitants Hon. Carroll D. Wright, the Commissioner of Labor, estimates that only about 18,000,000 are wage earners. This gives a ratio of 1 to 9, or the same as that of New Zealand. England has about 1,900,000 union members in a population half as large as the United States. Prof. William Z. Ripley in a recent comparison concludes, however, that in England the "industrial class," which he presumably uses synonymously with wage earners, numbers just about the same as it does in the United States, so that the proportional strength of unionism in the two countries is about equal. Taking all these facts, it seems likely that the relative strength of organized labor is about alike in New Zealand, Australia, England and the United States.

New Zealand's labor unions lack centralization. The intention is to bring all individual unions into relation with the Trades and Labor Councils of their respective localities. As yet, however, a large number of organizations remain unaffiliated. There is an annual conference of delegates from the various councils, but as there is no permanent headquarters nor staff officers devoting their time to the work, the conference is important more as voicing the sentiment of New Zealand trade unionism than in making it effectual through definite action. Among the measures advocated by the Trades and Labor Councils in recent annual conferences are:

"Periodical revaluation of Government leased lands.

"Workingmen's homes built by the State.

"State ownership of land, oil and mineral wealth.

"Increase in land and income taxes, protective duties on all goods made in the colonies, and reduction of tariff on necessaries not produced in the colonies.

"The referendum and initiative.

"Municipalization of street cars, gas, electricity, baths, lecture halls and amusement places.

"Abolition of upper house.

"Increase in the amount of old age pensions.."

In each of the Australian States except Tasmania there is a general body (three in West Australia) with which the individual unions are largely affiliated. In their interstate relations the Australian workers, like those of New Zealand, are weak. The first conference of an interstate character took place in 1879, but after several unsuccessful attempts in that direction labor federation came to be looked upon as impracticable until political federation had been accomplished, owing to wide differences in the tariff and immigration laws of the six colonies, which made a united policy for Australia illusory. When these barriers were removed by the establishment of the Commonwealth in 1901 the way was opened, and in 1902 a Commonwealth Trades Union Congress took place in Sydney, which inaugurated a Federal Council of the Australian Labor Unions, made up of delegates from the State labor councils and independent bodies, to sit at least once in three years, and to elect an Executive Committee to act for it from session to session.

Resolutions were passed at the Congress in favor of the following:

"Compulsory arbitration courts or wages boards in each State, and one for the Commonwealth to have control in interstate disputes.

"Day labor on all Government work.
"General use of the union label.
"Equality of pay for men and women doing equal work.
"Government ownership of coal and iron mines.
"Government control of the liquor traffic."

"Free education.
"Abolition of upper house.
"Initiative and referendum.
"Cessation of sales of Crown lands.
"State bank.
"Amending legislation relative to Taff Vale decision."

The declarations of the trade union conventions in Australia and New Zealand are fairly illustrative of the principles underlying these organizations in the Antipodes, and do not differ materially in the two countries. In their effort to carry them out, however, New Zealand and Australia have so far proceeded upon diametrically opposite lines. In New Zealand trade unions have avoided entering politics as organizations, believing it wiser to combine as individuals with others having the same views to secure their ideals of democratic government. The political upheaval of 1890, which brought the present forces into power in New Zealand, and has kept them there ever since, found its principal support among wage earners, but not from trade unionists except in their individual capacity. It was a fusion of all those opposed to the big land owners and privileged interests, a fusion which continued unbroken as the Progressive Party for twelve years—not that it can be said in any practical way to be broken to-day, but in the last Parliamentary elections, held in the fall of 1902, five separate labor candidates were put in nomination—two in Auckland and three in Christchurch. Two of them, Messrs. Ell and Taylor, of Christchurch, were elected. Insignificant in its immediate effect, this incident is important in its potential possibilities, because it possibly foreshadows a movement to put a third party in the field in New Zealand on a trade union basis.

Labor's first appearance as a tangible force in Australian politics dates from 1895, when thirty-five labor members were elected to the Parliament of New South Wales, enough to hold the balance of power between Government and Opposition, a position which they have occupied ever since. The Political Labor League is the body in New South Wales through which trade unionism is politically organized. Its future policy, as stated in recent platforms, includes:

More important than the influence of the labor party in New South Wales, however, is the position gained with the advent of the Commonwealth. Curiously enough, the labor party distrusted the effects of federation upon its interests, fearing that an all Australian representative body would be strongly conservative, not to say reactionary, in its tendencies. Nobody was more surprised, therefore, when, as a result of the first election, twenty-four labor members entered the first Parliament in 1901, 16 out of a total of 75 in the House and 8 out of a total of 36 in the Senate. It was enough to give the labor members the balance of power, a position which they used with great effect during the three years of the first Federal Parliament, under the leadership of John Watson.

"There is, of course," he said to me, in speaking of his party in Parliament, "a limit to the use of the balance of power. We believe, however, that so long as we can maintain our position we have a right to use it to the fullest extent possible in labor interests."

That this policy was successful, from the party standpoint at least, is evidenced by the gains made in the second Commonwealth elections, held December 16, 1903. As a result of those the labor party now has 21 seats in the House and 14 in the Senate.

Last summer, by withdrawing its support from the Government the labor party caused the downfall of Sir Edmund Barton's Cabinet. Mr. Watson was selected as Premier, but was unable to maintain his position, and has since been succeeded by the Opposition leader, George H. Reid.

Before the Commonwealth there was, of course, no room for united political labor action for all Australia. During the first year of federation, however, the initial annual conference was held by delegates from New South Wales, Victoria, Queensland, South Australia and West Australia, while the following year

Tasmania came in and made the representation complete. At these conferences a platform is drawn up to which labor candidates for the Commonwealth Parliament must subscribe. On the tariff question they are left free, but otherwise are under the following pledge:

"I hereby pledge myself not to oppose the candidate selected by the recognized political labor organization, and, if elected, to do my utmost to carry out the principles embodied in the federal labor plaform, and on all questions affecting the platform to vote as a majority of the parliamentary party may decide at a duly constituted caucus meeting."

Among the demands which the federal labor party has adopted as fighting ground for the immediate future are:

"The maintenance of a White Australia.
"Compulsory arbitration.
"The nationalization of monopolies.
"Old age pensions.
"Federal life and fire insurance.
"Federal railroads."

The political labor party in Australia is frankly a trade union movement. True, it has a separate organization, but even this fiction is violated to the extent of allowing trade unions to affiliate as such direct. When a union joins in this way all its members are thereby enrolled. In the Political Labor League of New South Wales the membership is almost wholly unionist.

"A man would be expected to belong to a union if there was one in his work," President Lamond told me. "If he didn't his standing would, to say the least, be doubtful."

Two questions in connection with the organization of labor which will be of increasing interest with the growth of the movement, and must eventually be settled in every country, were forced to the front in Australia during my stay there. The association of locomotive engineers on the Government railroads of Victoria, which had existed previously as an industrial union only, decided, for the sake of assistance in pressing certain demands, to affiliate with the Trades Hall of Melbourne, an association actively political in character. The laws in Victoria do not say that civil servants shall not belong to political organizations, but provide that they shall not hold office in them. Premier Irvine, as the responsible head of the Conservative Ministry, accordingly gave notice that the officers of the union should either give up their places as such, which virtually meant withdrawal from the Trades Hall, since the union could not exist without somebody at its head, or leave the employ of the State. The men met the issue by declaring a strike on the entire railway system of Victoria.

With a clear-sightedness which has not always been so evident in colonial affairs, Australia as a whole rallied to the support of the Irvine Government, and the strike was beaten by public sentiment from the start. Putting aside all incidentals, Australia expressed unhesitatingly her belief that a strike against the Government was rebellion, because it was an attempt to coerce Parliament and ride rough-shod over the popular will as expressed in the State. In Melbourne the *Age,* altho opposed to the Irvine Government, and a tolerably consistent advocate of labor's rights, came out on the first day with this utterance:

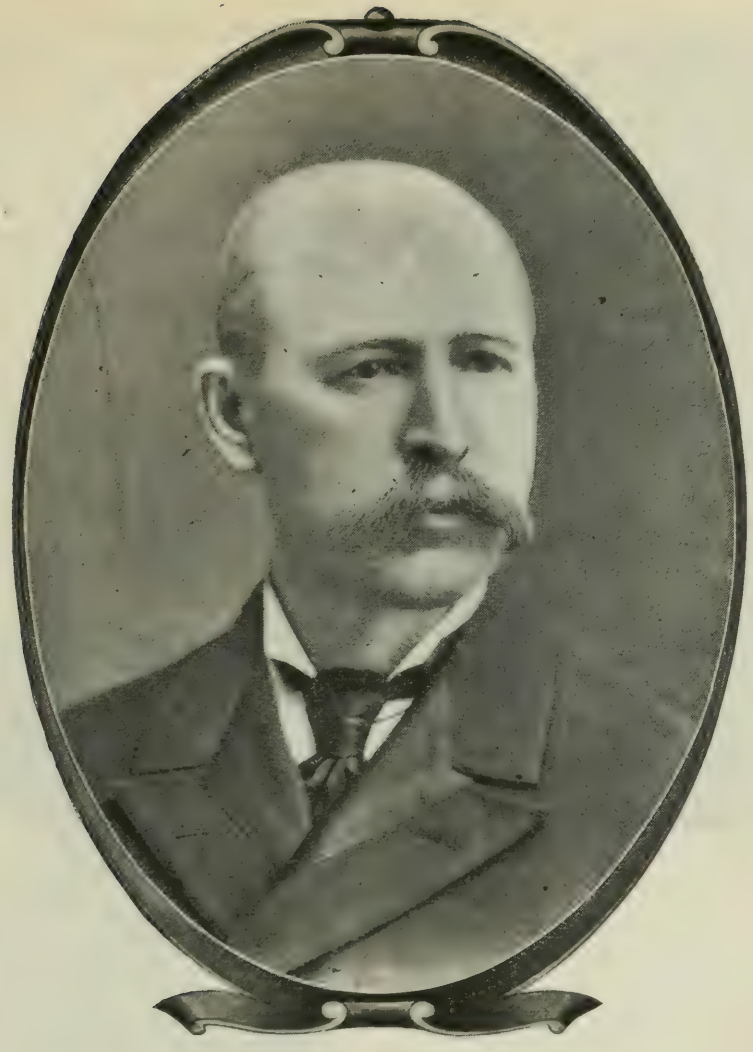
"It is a contest of the men to exalt themselves in authority above Parliament and the Government of the country. . . . They have deliberately calculated the amount of suffering they could inflict as a means of establishing their permanent power over the free exercise of ministerial and parliamentary authority. . . . A triumph for those in revolt would be the overthrow of responsible Government."

The question of the relation of Government to labor organizations is a wide one, several aspects of it having already been given prominence in this country. Only last fall the attempt to force a non-union man out of the Government Printing Office at Washington brought forth an emphatic stand in defense of the open shop from President Roosevelt. It was a simple expression of the inherent quality in government which makes it impossible to recognize differences in industrial belief any more than differences in religious belief, yet it failed to find acceptance at the convention of the American Federation of Labor held subsequently, a resolution going through there in favor of the union shop for all Government work.

Nor is the incidental issue involved in

the Victorian railway strike without importance. The question as to how far Government service ought to act as a disability in political activity is one that is yet to be threshed out here as well as in Australia. In the main the law in the Antipodes is similar to that which prevails here, to the effect that a civil servant may vote and hold membership in a political organization, but may not hold office in the latter, nor take an active part in campaigns. The ethics of this principle are not evident, and the question arises as to who will be left, if Government employ ever comes to include the great body of citizens, to lead the parties or conduct the campaigns. The labor party of Australia seems to be unanimous in its belief that a civil servant should be as unhampered in his political activity as any one else, and it is likely that modifications of the law will have to be made.

In apportioning to organized labor its real share in shaping events in the Antipodes it may be said that its influence everywhere has been used and has proved largely successful in securing a widened franchise and more equitable systems of taxation. It has extended the day labor system and done much toward the practical establishment of a minimum wage. With the balance of power in New South Wales for nearly ten years, it may be fairly credited there with the old age pension system and compulsory arbitration. In the first Commonwealth Parliament its efforts centered about the maintenance of a "White Australia," and it succeeded in securing drastic and in some instances ludicrous legislation restricting immigration and abridging the rights of Asiatics already in the territory.



The great advantage which the workingmen of Australia and New Zealand, particularly the latter, have over those of England and the United States is social rather than industrial. Wages probably average about the same there as here, with a purchasing power substantially equivalent, but the difference in the pay of skilled and unskilled labor is less. A day's wages in New Zealand for work which would usually be classed here as unskilled labor runs from $1.75 to $2.25 a day, with an average of $2. On the other hand, no such high wages as here paid to skilled mechanics are known in New Zealand. A wage of $2.50 is common in many trades, and $3.50 is practically the limit. It is not so much the money a man gets, however, as what he gets in comparison with the earnings of others that secures him a place in the community and content in his own mind. Judged from this standpoint, the position of the Australasian laborer must be conceded to be the best in the world.

Organized labor, both in Australia and in New Zealand, has committed itself to compulsory arbitration, and in the development of that system its industrial future must largely lie. In its political aspects an instructive comparison is furnished by the two countries, in one of which trade unionists have worked simply as individuals, and in the other as a third political party. The former method appears to have accomplished most and to give the greatest promise for the future. The progress and position of organized labor as a third political party in Australia illustrates two of the great dangers which seem inseparable to such an attempt anywhere.

The first is that such a party is inevitably a class party, with a tendency to go to extremes and ignore the interests of others in the community, which, when it has gone just so far, arouses against it a coalition of all other forces and is swept away.

The second is that, altho for a time the party may hang together, questions will eventually arise upon which it must divide, and altho this would be of little consequence if it were merely a political body, it is sure to cause a cleavage in industrial relations also, a result suicidal to the purposes and ideals of trade unionism.

New York City.

W. L. Douglas, Governor-Elect of Massachusetts

BY F. A. WALKER

Managing Editor of the Boston "Journal"

SIMPLY earnest and earnestly simple. No other four words in the English language could more graphically describe the most interesting and most unexpected product of the political season of 1904.

William Lewis Douglas, Governor-elect of Massachusetts, and the first Democrat to become Executive of the Bay State since the days of the late William E. Russell, is the most striking example of the result of business methods in politics that this country has ever known. His election, however, is only the logical result of the application of one of his business precepts that "practicability is the first essential for the success of any undertaking." This belief he has applied to every part of his life since as a boy of seven years he started out toward the goal of success. To-day his hair is white, but his figure is as erect, his step as elastic, his tone as clear and as firm as in the days of his youth. Neither success in business nor the proof of his tremendous political popularity has changed him from the simple straightforward man who, saving his money until he had accumulated a thousand dollars, put the whole of it into one shoemaking ven-

MRS. W. L. DOUGLAS

ture, because he believed that the plans which he had made for manufacturing and marketing his product were practical.

Mr. Douglas gives no evidence in manner of speech or living of the great wealth he has accumulated, for while his home in Brockton is one of the most substantial in the city, it might easily be afforded by a man of much smaller fortune. His stables, which contain blooded horses and handsome carriages, are maintained almost altogether for the use of his family, for Mr. Douglas himself seldom rides.

Every laboring day of the year he walks to the station, where he takes the train for his factories, and often for the sake of the exercise, of which he says he obtains too little, he walks the entire distance of three miles, arriving red-cheeked and not in the least exhausted from the efforts so unusual for a man of his wealth.

In dress he is modest to the extreme. His clothing, which varies in style neither summer nor winter, and which has been cut from the same pattern for many years, consists of a moderately long single breasted cutaway coat of modest American materials; his hat a derby, which always has the appearance of being slightly too large; his collar a plain turnover style adorned with a simple bow of unobtrusive pattern; his shoes, of his own make, are taken directly from factory stock, and are always of the roomy, comfortable, substantial style. His only jewelry is a modest gold watch chain.

Walking along the street he would impress one as a prosperous farmer, who had lived for years on the outskirts of the city, and who because of his dealings with the people had been well known as a visitor.

Men, women and children in Brockton

MRS. RICHMOND, DAUGHTER OF W. L. DOUGLAS

know him and speak to him as he passes daily on the streets, always receiving in return a cordial answer to their greetings.

Mr. Douglas has little of humor in his make-up, tho tell-tale wrinkles about his eyes and mouth show that he is not unaccustomed to smiles and laughter. Aside from his business he is most emphatically a home man, and his love for his family and for the household enjoyments have been in the past and were in

the recent campaigns large arguments with him against accepting political preferment.

Mr. Douglas is a man without fads, and almost without recreation. He is not an enthusiast in any of the sports, owns neither yachts nor fast horses, is not a golf player nor a disciple of Isaak Walton; drives no red devil wagons, and would have buck fever at the first sight of a deer.

"Work is my only recreation," he said recently to an interviewer, and there was a marked air of pride as he made the expression.

Mr. Douglas is a man of strong conviction and quiet obstinacy. Had it not been for these two characteristics he would undoubtedly have acceded to the pleadings of Mrs. Douglas that he should not enter the gubernatorial campaign, for no wife of a candidate was ever more desirous of her husband's success than was Mrs. Douglas of her husband's defeat. She believed that his election meant the temporary end of all that home life and home association which had characterized the years of their marriage, and she openly declared that the sweetest election news for her would be the news of the success of the Republican candidate.

BABY RICHMOND, GRANDSON OF W. L. DOUGLAS

In his business Mr. Douglas is a thorough disciple of method and system. Despite the enormous output of his factories and the great variety of his product he would be able to tell you instantly the cost of any particular style of shoe, the relative selling value of the different lasts and the profit paying possibilities of any one of his hundreds of stores. In politics he is a man who does not make promises nor gain ends by pyrotechnic displays. Early in the State campaign his campaign managers mapped out an automobile tour of the eastern part of Massachusetts and planned a campaign of show and glare. Mr. Douglas immediately vetoed the whole arrangement, announcing that he believed it undignified and ill advised. As a public speaker he is earnest and straightforward; not oratorical, but convincing; not flowery, but persuasive. His term on Beacon Hill may be looked forward to as businesslike above everything else, thoroughly honest, and in a large measure devoid of obnoxious partisanship. He will not tolerate an army of hangers-on, and an honest workman with an honest project will gain as quick an audience as any Democratic leader in the State.

Mr. Douglas's only absence from business for years has been an annual outing in the South, which he is enjoying earlier than usual this year on account of exhaustion from campaign speaking.

His inaugural address, which will be made public on the 2d of January, is expected to be a document of unusual interest and importance, characterized by brevity and businesslike arguments.

The publicity which his election has brought is in a very large measure distasteful to Mr. Douglas, and he frowned upon rather than welcomed the wild suggestion that his name and that of Governor-elect Folk of Missouri would be coupled with the national Democratic ticket in 1908.

BOSTON, MASS.

Autumn's Topics in England

BY JUSTIN McCARTHY

ONE of our topics just now in England is the sudden and severe illness of Mr. Arthur Balfour, the Prime Minister. Mr. Balfour's illness has kept him for some time almost entirely out of public work and out of as much Ministerial work as can well be done by other members of the Cabinet. It is not too much to say that every one, no matter what may be his political convictions or his political party, has heard with sincere regret of the physical trouble which has come on Mr. Balfour, and earnestly hopes that he may soon be enabled to return to political work and to his duties as a leading statesman. Mr. Balfour has made many friends among those who are most distinctly opposed to his policy as Prime Minister, and cannot, I think, have made personal enemies anywhere. His illness just now is a serious disadvantage to the Ministerial party, whose prospects do not seem in any case to be very auspicious. Of course, the Government have still a great majority to support them in the House of Commons, and they may, therefore, unless some strange political catastrophy should intervene, put off the General Election yet for a long time. But in the meanwhile the Conservative party is becoming more and more broken up into unmanageable sections, and the Ministers have to think very carefully before bringing in any new measure in order to make sure that it is one for which they can confidently reckon on the support of their majority.

R. BARRY O'BRIEN

All the elections which have lately taken place, elections caused by some sudden vacancy brought about in this or that constituency, have ended in distinct encouragement to the Liberal Opposition. In some instances a seat has actually been captured by the Liberals, and the latest election, about which we are all talking just at present, has shown a surprising increase in the number of the Liberal voters. The Government party did, indeed, succeed in carrying the seat, but the majority by which they won is only half what it was on the former occasion, and on most other occasions in the past the Liberals did not even think it worth their while to venture on what they saw must be a hopeless contest.

The general impression is that Ministers will put off, if they can, the General Election until the early part of the year after next, and that next Session they will bring in a measure for the redistribution of seats among the constituencies of Great Britain and Ireland. Now, if there ever was a question sure to stir up trouble here, there and everywhere throughout these constituencies, it is just this question of a redistribution of seats. It must be understood to mean the recasting of the whole Parliamentary system and the allocation of seats in proportion to the number of the constituents. Now, this would seem in itself to be an equitable and a reasonable measure, for there can be no doubt that the

proportions numerically of the various constituencies have undergone many surprising changes since the latest great Reform bill was carried. But, then, my readers will easily understand the indignation which will be felt by every constituency whose representation is to be diminished or whose political individuality is to be effaced in order to create a fairly proportionate system of representation, and it would need a very strong Government, indeed, to carry such a measure in the face of a resolute Opposition. Probably the idea in the mind of the Government is that such a proposition embodying as it does the principle of fair representation would give them a happy chance of appealing to the country at a General Election against the opposition of those who might thus be made to appear as mere obstructionists fighting against a great scheme of electoral reform.

There will be one great difficulty at least in the case of Ireland, when the question of Irish redistribution comes up. If the Government should propose to reduce Ireland's representation they will be met at the very outset by the fact that the Act of Union provides that Ireland shall have not less than 100 men to represent her in the House of Commons. Therefore, in order to reduce Ireland's representation to any extent worth noticing it will be necessary to begin by repealing the Act of Union to that extent at least. Now, if any Government should attempt to go to work for the repeal of any part of the Act of Union my fellow countrymen, the Irish Nationalists members, will see that the work of their lives is on the eve of accomplishment. Once touch the Act of Union and the Home Rule movement may already be said to have won its success. I for one, therefore, should be only too glad to welcome any redistribution bill coming from any Ministry, which attempts such a work. My only fear is that the present Government will think once, twice, or three times before they give us such a chance.

A profound gloom has suddenly been cast over English society by the suicide of Dr. Allingham, one of the most successful and celebrated surgeons of his day. Dr. Allingham was a specialist who devoted himself to the treatment of diseases which attacked the internal organs of the human frame, and especially to that one which has given so much widespread trouble in our times, the malady known as appendicitis. My own interest in Dr. Allingham's beneficent career is one of deep personal nature. He came down from London specially to attend my daughter, who was suddenly afflicted with this most dangerous ailment, and, owing to his skill as an operator, she was fully restored to health and strength and to the companionship of those who love her. Only some six months had passed away from the time of her full recovery when we heard the news of Dr. Allingham's suicide at Marseilles on his way to Egypt. He had been suffering deeply from the death of his beloved wife and he seems to have made it known to some of his friends that he did not believe he could long endure life without her. Apparently, as the days went on he grew less and less reconciled to his solitude, and, at last, he appears to have put an end to his life.

"LUCAS MALET"

So early and sudden an end to such a beneficent career would have been tragical, indeed, even if it had come about in the ordinary course of nature, but, coming as it did, from the sufferer's

own deliberate resolve to put up with his bereaved life no longer, it seems to illustrate the lowest depths of a sad soul's despair. It appears strange, indeed, and out of keeping with an age and a society understood to be especially prosaic and unromantic to find such an instance of love's extreme devotion. Perhaps the event is only all the more strange when we read of it as closing the career of one whose whole work in life-time must have made him familiar with death and might have prepared him to bear up all the more bravely against such a calamity when it came home to himself in the person of one dear to him. If the story had been told in a work of fiction most of the critics would probably have insisted that the grief of the bereaved husband was morbidly overdone and that practical life does not exhibit to us such sacrifices on the altar of conjugal love. This would be only one other illustration of the fact that real life is often more romantic than romance.

"Irish Memories" is the title of a volume by Mr. R. Barry O'Brien, which has just been published by Fisher Unwin. My American readers will well remember Mr. Barry O'Brien as the author of a "Life of Charles Stewart Parnell," and more lately a memoir of Lord Russell, of Killowen. The volume which I have now before me is less pretentious in its effort than was the "Life" of Parnell, and it seems to me that it is according to its measure a more satisfactory work. Perhaps the name of the book may be apt at first to mislead readers and make them expect to find the volume filled entirely with Mr. Barry O'Brien's personal recollections of his native land. The volume, however, takes a more expansive range and is made up for the most part of certain chapters in Irish history and figures in Ireland's most stirring periods of life selected and arranged according to Mr. O'Brien's own choice and described in his picturesque style. Thus, we have chapters on "King Brian," "Hugh O'Neil," "Sarsfield" and "Fontenoy," and thus we come later to "Wolfe Tone" and coming down later still to "Sir Charles Gavan Duffy," who passed away from this world in which he had played so conspicuous a figure only a short time ago. Finally we have a chapter on "Irish History and Irish Politics," and one on the present political situation. I can cordially recommend the book to all readers who take an interest in the development of Ireland's history, and I think Mr. Barry O'Brien's plan of arrangement is admirably suited to the object which he has in view. He takes the central figure of some great epoch or the central event in some chapter of history and around the man or the event he calls up the life of Ireland at that period and thus gives to his pages the charm of the story-teller and the practical instruction of the historian.

A book which is sure to have an immense popularity in the United States as well as in the British Empire is the work just published which bears the title "Fifty Years of Fleet Street," and is, in fact, a memoir of the late Sir John R. Robinson, who was for more than quarter of a century the manager-in-chief of the London *Daily News*. The book is compiled from a vast number of notes, letters and memoranda left by Sir John Robinson at his death, which occurred but a short time ago, and after he had been living for nearly two years in retirement. Sir John Robinson was most diligent and methodical in the notes which he made of interesting daily occurrences, and in the preservation of important letters and memoranda, and he had a keen sense of the picturesque and the humorous and a happy insight into human character. He was devoted to London and had traveled but little outside the British Islands, and the title "Fifty Years of Fleet Street" effectively illustrates the meaning of the book. Robinson worked under Charles Dickens as a contributor to *Household Words*, and under Thackeray as a contributor to the *Cornhill Magazine*. When he became manager of the *Daily News* he was naturally brought into acquaintanceship with most of the leading men of the day, for everybody comes to London, and everybody worth knowing was sure to be brought into the society of the manager of the *Daily News*. Robinson was the first to discover the peculiar genius of the late Archibald Forbes as a war correspondent and to give him opportunity after opportunity of proving his splendid capacity for such work. He was well

acquainted with Gladstone, with John Bright, and with most of the great literary men of his time. I may perhaps remind my New York readers that during the Civil War in the United States the *Daily News* was one of the only two London daily papers which from first to last maintained the cause of the Northern States. Harriet Martineau, one of the most brilliant, and at the same time most thoughtful, among women-writers, used to contribute leading articles to the *Daily News* for many years during Robinson's early management of the paper. I had the honor to count myself among his friends, as I was a regular contributor of leading articles and literary reviews to the *Daily News* for close on quarter of a century. The book is rich in all manner of characteristic and entertaining anecdotes, and the reader gets delightful, and at the same time highly instructive, glimpses into the inner life of English politics during the long period over which the memoirs extend. It is not too much to say that in addition to all its amusing and, indeed, fascinating qualities, the book is an important contribution to the history of the late century's closing quarter.

The sea-side village in which I have been lately spending most of my time, has just now a distinguished and a very interesting visitor in the person of Mrs. Harrison, who has won fame as a novelist under the literary name of "Lucas Malet." She has given to the world such novels as "Colonel Enderby's Wife," "A Counsel of Perfection," "The Wages of Sin," and, more lately, that powerful, painful, and yet high-toned romance which has Sir Richard Calmady for its hero. No woman-novelist of our day holds a higher position than "Lucas Malet." She is the daughter of the late Charles Kingsley and comes of a family steeped in literature and literary traditions. She has been for some years a widow and has been a great traveler in four at least out of the five divisions of the world. Mrs. Harrison has lived in very retired fashion during her stay in my neighborhood, and likes to keep as close as possible to her literary work and not to spend much of her time in making or receiving visits. She and I have, however, some close friends in common, and we had met already in London, and, therefore, my family and I have had many opportunities of enjoying her society here. I may say that she would be one of the most interesting women who could be found in any social group even if she had never won fame as a novelist. She is staying here in order to recruit her health and is, I think, already much the better for our sea and our breezes. Indeed, our weather has been singularly gracious to her for here in this English November we have lately been enjoying days which except for mere length alone might compete with the best and sunniest days of any temperate clime.

London, England.

Music, Art and Drama

The Opera

THE most noteworthy thing regarding the operatic situation is that adverse criticism of Mr. Conried's methods, so frequent last year, has almost entirely ceased. Last season that ambitious manager had evidently undertaken more than he could carry out, and he was also hampered by the fact that the carpenters did not finish the new stage in time and that he had a prejudice against the all-star casts with which his predecessor had won his big successes. For this season Mr. Conried has engaged an abundance of first-class sopranos, contraltos, tenors, baritones and basses, and he has been able to commence rehearsals several weeks before the beginning of the season—an innovation imported from Germany—with the result that he succeeded in giving in eight days performances of no fewer than seven different operas, all of them on the highest level of excellence—performances that could not be duplicated on the other side of the ocean, for the simple reason that no European opera house can afford to have half as many world-famed singers as Mr. Conried has on his list.

It has been decided that Monday is to be the "fashion" night, when no opera is to be staged that appeals more to the intellect than to the senses, or the love of pomp and display. This does not mean that the box holders and the other fashionable folk in the house do not care for good music, for some of them certainly do; it simply means that it is desired to have one night when the society women need not sit in a darkened auditorium listening for three or four hours to music which many of them do not understand. It must be said that the beautiful scenery with which "Aida" was decked on the opening night suffered somewhat from the bright light maintained in the auditorium to please these box occupants. In all other respects the performance was admirable. It brought back, in the three leading *rôles*, Mme. Emma Eames, the most winsome of all operatic singers, with a voice more beautiful than ever and a rare art of sympathetic interpretation; Miss Edyth Walker, whose Amneris is incomparable and who is becoming as great a favorite here as she was in Vienna, which still mourns her loss, and the great and only Signor Caruso, coveted by all foreign managers, but secured by the highest bidder for the Metropolitan Opera House.

"Lucia" brought forward the greatest living representative of the *bel canto*, Mme. Sembrich, who keeps her voice fresh and unimpaired by resting all summer and taking daily walks in the mountains. This opera and "Traviata" presented her in familiar *rôles*, involving no great effort on her part. Much more difficult were the tasks allotted to two other singers, Mme. Nordica and Miss Fremstad, Mme. Nordica having been called on within five days to make her *début* in two such diverse rôles as Kundry in "Parsifal" and Gioconda in Ponchielli's opera of that name, while Miss Fremstad had to appear as Carmen and Kundry within eight days. The verdict of the audience, which recalled her enthusiastically a dozen times after the second act of "Parsifal," was that in that act, at any rate, she surpassed her predecessors, bringing to it charms of personality, voice and facial expression that gave the scenes a new meaning and verisimilitude. In "Gioconda" it was her splendid vocal art that was chiefly admired, and she shared the chief honors with Mr. Caruso, and, be it said, with Mr. Conried, who had staged this Venetian opera in the most sumptuous and picturesque manner, with a pantomimic ballet of rare beauty. As for Mme. Fremstad's task, she also acquitted herself well by presenting a Carmen which, if less coquettish than that of Mme. Calvé, excelled in conscientious adherence to Bizet's lovely music, and in the emphasizing (in the first act rather too much) of the gipsy element. Her Kundry was equally successful—an imper-

sonation replete with personal charm and giving evidence of careful study of the subtle and varied traits of this strange character. It is worthy of note that of the four Kundrys so far heard at the Metropolitan three are Americans.

Concerts and Recitals

WITH the coming of brisk November weather the "musical season" of this metropolis started in with a rush, the aim of the managers and financial agents of the music makers being, evidently, to crowd in as many musical entertainments as possible before the beginning of the grand opera. Concerts and recitals by artists of cosmopolitan fame were numerous enough to provide one for every day in the month and still have a dozen or so left over.

The Boston Symphony Orchestra's first concert of its nineteenth season here served to introduce its new leader of the violins, Professor Willy Hess, as a soloist, and also a new work by a little known composer, Paul Dukas, of Paris. This latter, an orchestral scherzo called "The Sorcerer's Apprentice," and founded on a ballad by Goethe, while not an important composition, is an unmistakably clever piece of descriptive writing, and shows its author to be an able disciple of Saint-Saëns, with a gift of imagination and considerable skill in orchestration. Mr. Hess played the "Hungarian Concerto" of his old preceptor, Professor Joachim—about as uninspired, long-drawn-out and tedious a show piece as is to be found in the modern repertory of violin concertos. He dazzled the audience with its pyrotechnics, surmounting its bristling difficulties as only a master of all the tricks of violin playing can, and proved himself eminently qualified technically for his place with the Bostonians, a man after Mr. Gericke's own heart. Whether he deserves high rank as an interpretative musician as well as for his virtuosity it will require other music to disclose.

The Boston Orchestra, it can only be said, again played with that rare and wonderful precision, that clarity of tone, firmness of touch, delicacy of shading, elegance of style, that polish and brilliance—and that sheer, unemotional coldness, with which we have long been familiar under Mr. Gericke's baton. Its concerts always bring delights of a high order, Yet how much more delightful those concerts might be if only the conductor could find something, somewhere somehow, to arouse in him a wee spark of enthusiasm.

At the second concert by the Boston players Vladimir de Pachmann, the Russian pianist, made his reappearance before a New York audience after an absence of several years. He is still the Chopin specialist, still the master of a wonderful technic and of a delicate and exquisite touch no words can describe, and still, alas! marred by his unfortunate mannerisms.

To open the Philharmonic Society's sixty-third season Gustav F. Kogel, one of the "star" conductors of last year, journeyed all the way from Frankfort on the Main, and his coming was worth while. The veteran orchestra never played better. The program was one skillfully made to show forth the personal qualities of the conductor, and Herr Kogel made even a better impression than he had created a year ago.

The soloist at this concert was Josef Hofmann, that wonder-child of only a little while ago, who returns to us now in his young manhood, grown also in musical stature. He made a deep impression, which he proceeded to fix more firmly by several recitals. He is certainly one of the foremost of living pianists, astounding and enthralling his hearers by his command of technic, his ease and assurance, his brilliancy, his beauty of tone, and occasionally by an unexpected depth of expression.

Mr. Walter Damrosch, who in the exploitation of novelties is the most enterprising conductor this side of Chicago, placed two new works on the program of his first concert of the year with the New York Symphony Orchestra. These were Sir Edward Elgar's latest overture, "In the South," and the fourth symphony of Gustav Mahler, a young composer whose praises have been loudly sung in Germany of late and who has even been pitted against Richard Strauss by some of that musician's injudicious enemies, but of whose work nothing had hereto-

fore been performed in America. The Elgar overture was not of any special significance. The Mahler symphony is a curiosity. It satisfies no conception of what a symphony is or should be, for it is in four slow movements, the last of which is a soprano solo. It is founded on a Bavarian folk-song (the solo of the last movement) descriptive of the peasant's dream of heaven. There are some happy mood pictures in it, some fascinating details, and it shows a musicianship of no mean order, but of a genuine creative gift there is hardly a trace. Details, interesting and uninteresting alike, are piled up to an inordinate length—it lasts a full hour—until the writing for mere writing's sake becomes dull, monotonous, wearying, soporific.

The Russian Symphony Society, which last year began its propaganda for the popularization of Russian music rather tentatively in the old Cooper Union crypt, has moved up to Carnegie Hall. Its first concert there, with an orchestra augmented to ninety-five players, was one of the most interesting of the season thus far. It produced for the first time here two excerpts from "Incidental Music to the Drama 'König Kristian II,'" delightfully tuneful and brilliantly written by Sibelius, a Finnish composer, and Act III of the Opera Ballet "Mlada," by Rimsky-Korsakoff,—a wonderful piece of orchestration.

RUDOLF FRIML

Most interesting of the month's newcomers among virtuosi was Rudolf Friml, a young Bohemian pianist, who made his bow as a composer also by playing his own concerto with Walter Damrosch's orchestra. This piece was rather long, but there are some beautiful and original things in it and it was worth hearing. Mr. Friml is undoubtedly a young man of exceptional talents.

A curious and interesting contrast to all this modern music was afforded in a series of recitals by Arnold Dolmetsch, of London, devoted to the music of the seventeenth and eighteenth centuries played on the virginals, the harpsichord, the lute, the viols and other instruments of the time. Quaint, far-off, otherworld music it is, mostly as thin and attenuated in character as the tone of the ancient instruments for which it was written. Its appeal to the present-day auditor is slight. Mr. Dolmetsch is vastly entertaining and his work has an educational value, tho nobody can take quite seriously his enthusiastic prediction that the music of the future will revert to his antiquated models.

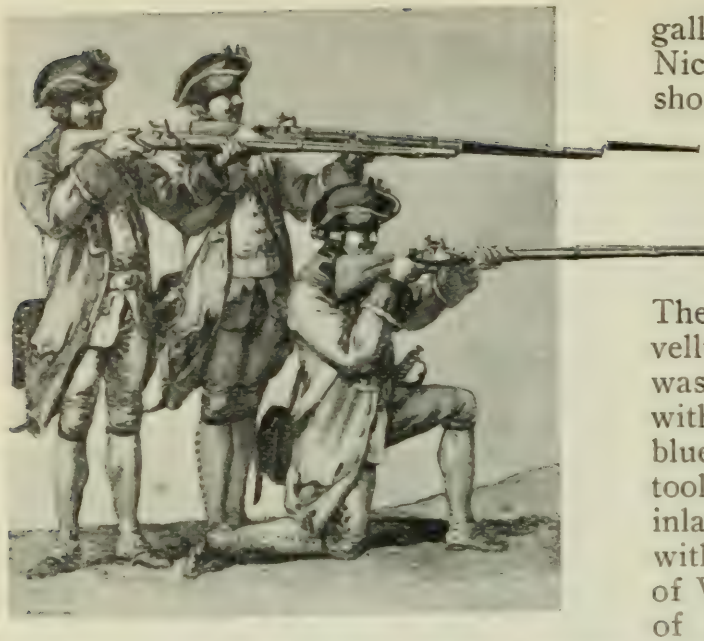
The Comparative Exhibition

THE collection of nineteenth century pictures gathered in the Fine Arts Galleries by the new Society of Art Collectors, and shown for the purposes of comparing American with foreign painting, and also benefiting through the receipts the Eye and Ear Infirmary, will remain on view until December 11th.

The comparative side of the exhibition is least important, for the society did not, naturally, have all of the great works of the nineteenth century in either America or Europe to choose from. There are no Daubignys to compare with Martin's "Westchester Hills," or Inness's "Sundown," or some of the six Wyants shown. Corot, of course, stands by himself.

More than comparative, the exhibition is expository—a showing of the unity of attainment of a century in which the Old World lent to the New and regained a lit-

tle development of its own idea perhaps. Never before have some two hundred pictures been hung together that so emphasize the point in painting in which the nineteenth century excelled the Renaissance, and which is its strongest characteristic. Tone—under Whistler's brush a matter of closest cadences; under Blakelock's, a stronger play of vibrations; under Monticelli's, Dewing's, Degas's, La Farge's—always present in as many varying degrees of sensitiveness to it or consciousness of it as there are personalities. Methods as different as Ryder's and Robinson's are yet unable to hide the quality of tone present in the works of both. If one takes to comparisons it is patriotically pleasing to be able to enjoy the impassive oxen of Horatio Walker more than those animals by Troyon, which seem less differentiated from other animals by the essential characteristic. Walker's "Harrower" is as romantic as a Millet. The lateness of the evening and the weariness of horse and man are enhanced by the almost aggressive color contrasts, yet all is kept in tone. Thayer's work keeps its nobility with the years. It is good to see Ranger, of the younger men, holding a high place in good company. His "Noank" has wonderful breadth. Arthur Davies's "Two Step" is among his most successful canvases. Michel is the patriarch among the foreigners, with serious and interesting William Morris Hunt and George Fuller and Wyatt Eaton forerunners of American interest in Barbizon enthusiasms. One of George Brushe's family groups, less successful in composition than some of the others, is shown. English art is only represented by one Lawrence, the well-known "Nature," while the modern school of Holland is characteristically illustrated by works of Israels, Maris, Mauve, Jongkind and Neuhuys. There are no unworthy pictures in this memorable exhibition.



La Farge's Work for St. Paul, Minn.

MURAL paintings were excluded, for obvious reasons, from the Comparative Exhibition, but a few fortunate New York artists and their friends were allowed to see last week at the National Arts Club the nearly completed lunette (one of four projected) which John La Farge has painted for the Supreme Court of St. Paul. It represents "The Moral and Divine Law" and embodies the mature beliefs in color and decorative massing of the greatest living mural painter. Here we have Moses, Joshua and Aaron wonderfully expressive, exalted, revential in the flood of color that comes from no visible mountain, but from heaven itself. Not a touch of wearying detail of incident—the Moses on the summit of the Mount over a door space that cuts up into the lunette from below, kneeling, almost fainting with awe; behind and below him to the right the commanding Joshua, warning with his left hand and a mighty dignity the assembled people, who might be imagined in the spectator's place; Aaron, kneeling with bowed head, in the remaining corner of the curved space. Balancing the figures of Aaron and Joshua are entirely dissimilar forms on the left, where the Mount ends in an abrupt precipice, and we look past it to the awe-inspiring volcanic peaks, over which purple waves of shadow play to weigh with values in the figures on the right. Only the Presence of God is expressed—no tables descend toward Moses' clasped hands. By sheer mastery of his color science La Farge makes us conscious of the sublime moment, and we come nearer to partaking of it than we have ever before been led through art. A certain violence in the color is planned to increase "carrying" quality—a thing so many decorators lack. The topography of the scene was studied at Martinique soon after the eruption of Mont Pelée, but the realism never in any way affects the force of expression of the idea.

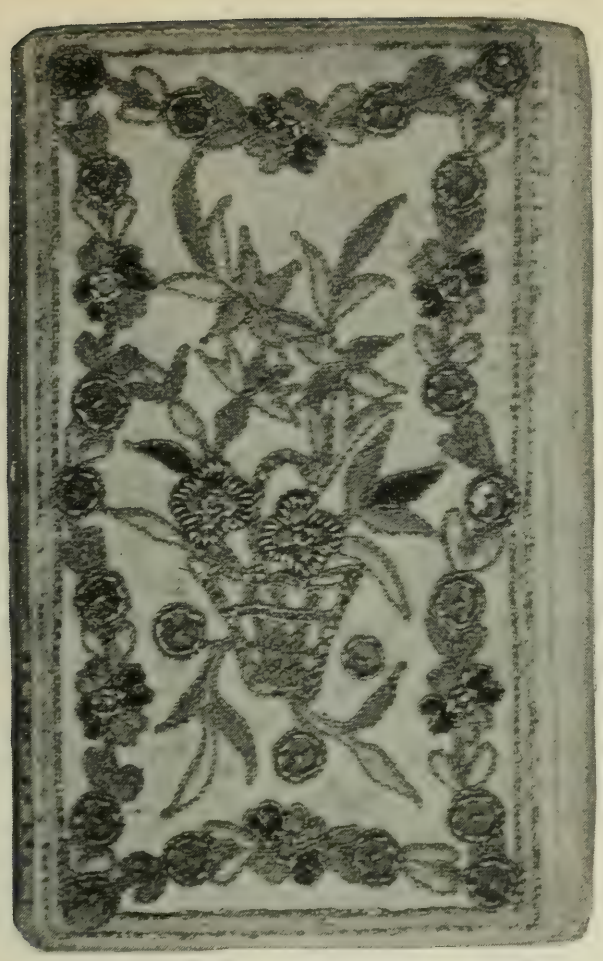
Book Binding Exhibitions

THE SCRIBNER EXHIBITION

Charles Scribner's Sons' annual exhibition of fine book bindings this year was in striking contrast to the bindings they have usually shown. The strength of the exhibition lay in the eighteenth century illustrations with which the books were embellished. A considerable number of the volumes were in contemporaneous bindings and included books

Engraving of De la Haye After Design by Gravelot. From volume printed in 1766. In Scribner Exhibition

bound by Derome, Padeloup, Douceur (the successor of Padeloup) and Bisiaux, as well as a number of others, whose names are not given. A few modern binders were included. The collection contained a number of books printed on vellum, among which was the Horace printed in 1799 by Didot for Marshal Junot. A copy of Lucain in two volumes, printed in 1776, was originally in the library of David Garrick and contains his well-known bookplate. Some of the books were formerly owned by Marie Antoinette, Louis XV and Lord Cornwallis. A title-page from a book of fables is reproduced in connection with this notice, and gives a very satisfactory idea of the art lavished upon them by bookmakers during the eighteenth century.



In connection with the books just mentioned the Scribners had on view a collection of original manuscripts, autograph letters and many rare documents. These included many autographs and portraits of the Bonaparte family. Another feature of the autograph exhibition was a unique assembling of autograph letters, poems and essays by Dean Swift, consisting of thirty-two items, including many unpublished manuscript poems.

THE BONAVENTURE EXHIBITION

Possibly the most interesting number of the exhibition at the Bonaventure galleries this year was a manuscript by Nicholas Jarry. This consisted of a short list of the navy of Louis XIV and was dated 1681. It contained a finely painted miniature wherein were represented Neptune and certain water nymphs offering gifts to Louis XIV. The cipher of the King was painted on vellum as a frontispiece. The volume was bound by Capé in full red morocco with silver-gilt clasps. The doublé is in blue, sprinkled with the King's cipher, tooled in gold. The same cipher is also inlaid in blue and green on the cover with outlines in gold. Some bindings of Vale Press books by Margaret Lahey, of Brooklyn, were remarkable for the results of her parallel line gold tooling. The only other American binder represented was Stikeman. Some interesting contemporaneous silver bindings of the fifteenth and sixteenth centuries attracted much attention. Several tortoise shell bindings of early German and French workmanship, as well as certain embroidered volumes, were likewise features of the Bonaventure Exhibition. There were also a number of miniature books shown, mostly of European derivation.

THE NORTH EXHIBITION

Mr. Ernest Dressel North exhibited early in December about 100 examples of fine bindings at his shop, No. 18 East Twentieth Street. Binders whose work has not hitherto been shown in American exhibitions were Miss Hay Cooper and Sangorski and Sutcliffe. One of the most interesting bindings in Mr. North's hands was a copy of Walton's "The Complete Angler" (London, 1844), as bound by De Sauty, with gauffered edges and fore-edge painting that introduced two churches with which Walton was identified and the river Dove, where he fished.

The Print Collections of the New York Public Library

HUNT'S impressive but impassive creation, The Lenox Library, is wonderfully affected by the presence on the right of its entrance of a bulletin board on which are announced from time to time the different groups of prints shown in the halls within. The basis of the collection of prints owned by the public library was in Avery's gift of Nineteenth Century Masters, from which there are at present shown about 200 of the 800 works of Felix Bracquemond (1833-78). Bracquemond ranged from reproductions in carefully produced values of painters' works to such portraits from Nature as that of Edmond de Goncourt, in which the gravity of academic painting is imitated, and from hard and fast portraits like that "official" one of Carnot to wonderfully vital ones like that of Meryon. In landspace likewise he was impressionistic and he was realistic in different moods. He combined methods, he experimented, he was never merely facile, and was a very great workman, but not a great creative artist. For a while he was artist director at the Haviland ceramic factory, and this exhibition includes many designs for plates which have grace and charm, but are never free from suggestion of the Japanese.

In the lower hall of the Library building are shown a number of etchings and a few sketch books by the late Robert Blum, whose best known works are the two long wall decorations in the Mendelsohn Hall. Some of the first thoughts for those decorations are here to be seen in the form of tiny pencil drawings. All Blum's pencil and etched work has a delicate sensitiveness to impressions of almost Spanish color effects. There is nearly always decision in regard to the color idea even when the work is a trifle slight as etching. The largest plate is that showing Chase in his gorgeous old Tenth Street studio etching in solitude. The one reproductive plate—the "Lady with a Rabbit," from the Yale Art School, is very beautiful of its kind.

The Progressive Stage Society

FOR a good many years we have heard criticisms of the commercial spirit that dominates our theaters. The public and a part of the theatrical profession have joined in denouncing the methods of the "trust." But except for individual revolts by a few dissatisfied actors and managers, the opposition had until recently expressed itself only in words.

The first practical protest has come from the Progressive Stage Society. The management for the organization of the society was begun last spring, and on November 6th the society was founded. The charter membership consisted of about two hundred persons. A young man, Julius Hopp, had come to them with tales of the People's Theaters of Europe, and they had decided to try the experiment here. The society is co-operative in form, and its object is to present to its members dramas of artistic merit, and, having a social bearing. It is not a money-making venture, but rather a cultural enterprise.

There is a wealth of dramatic literature that has never been presented to the American public. Only a few of Ibsen's plays have been staged here, many of his most virile ones having been neglected. Sudermann is fairly well known among us, but Hauptmann, Maeterlinck and Bjornsen are almost unknown. It is the hope of the Progressive Stage Society to present dramas such as these writers have produced at a moderate cost.

The success of such ventures in Europe seems to prove that this hope is well founded. It is only a few years since the Free People's Stage (Freie Volksbühne) was founded in Berlin. Its success has been notable. The members pay a few pfennigs initiation fee and small monthly dues. The membership is now over 10,000. The society presents modern literary dramas and has had a decided influence on the German stage. Hauptmann was one of the many who were brought into notice by this organization. Other German cities also have successful independent theaters. The same kind of movement has been successful in Paris, under the leadership of M. Antoine. The work of the London Stage Society is well known. During its short career it has introduced the Bernard Shaw plays. In all these cities there is strong competition among ambitious actors to secure *rôles* in the plays given in these progressive theaters.

The Progressive Stage Society was founded primarily to combat the evils of the capitalistic stage, and secondarily to give entertainment to its members. Its founders are largely social reformers, Socialists and other radicals, who believed that the public should have an opportunity of seeing presentations of the real drama of life as they understand it, instead of the flimsy caricatures generally given. Any one who so wishes can join the society. The initiation fee is twenty-five cents, and there is a charge of fifty cents for each performance.

The society gave its first performance on November 27th. Two one-act pieces were presented. The first, "The Scab," by Elsa Barker, was professedly Socialistic, and the second, "Miner and Soldier," from the French of Tola Dorian and J. Malafäyde, dealt with the conflict between strikers and the military. The actors were all professionals, and, while the acting was far from finished, owing largely to the lack of rehearsal practice, it was generally sympathetic.

Since the organization of the society the membership has increased to more than three hundred. Those active in the movement expect a membership of two thousand. If the movement is successful in New York there is no reason why it should not spread through all the principal cities of the country.

The Drama

Our readers must keep in mind that in this department we only attempt to notice the plays that have been brought out during the preceding month; for our criticism of the best plays that have been running for longer periods previous issues of the magazine containing this department must be consulted. As nine-tenths of the plays produced in America first appear in New York, our readers who happen to be in other cities of the country can determine what plays they wish to hear when they come to their own cities by reading these New York criticisms. This department is meant more to give advice—as one friend would to another—as to what plays are worth seeing than to contain long and elaborate criticisms of theatrical technic. As we said before, we shall for the most part notice only those plays which a cultured man would enjoy seeing with his family. We are under no obligations to say something about everything.

The best plays produced this month beyond question were: Classical, Mar-

MRS. FISKE

lowe and Sothern's revival of "Hamlet;" society drama, Mrs. Fiske's "Hedda Gabler," and sentimental, Warfield's "The Music Master."

Last month we spoke in most glowing terms of Mr. Sothern's and Miss Marlowe's rendering of "Romeo and Juliet" and "Much Ado About Nothing." This month they produced "Hamlet"—unquestionably the greatest drama that has ever been written. Last year Professor Phelps, of Yale, wrote in THE INDEPENDENT a long and appreciative account of Mr. Sothern's interpretation of Hamlet. Professor Phelps then said that during the two years that Mr. Sothern had been playing "Hamlet" he had improved so that his acting was then uniformly good and in certain passages superb. This year Mr. Sothern has greatly bettered his former efforts, so that we have not the slightest hesitation in saying that he is to-day the greatest living Hamlet. Miss Marlowe as Ophelia was supreme. Her beautiful voice was never heard to better advantage and in the "mad scene" she was incomparable. If Miss Marlowe was better than Mr. Sothern in her parts in "Much Ado About Nothing" and "Romeo and Juliet," Mr. Sothern certainly outshone Miss Marlowe in "Hamlet," and that alone is very remarkable praise for Mr. Sothern. The play on the whole is the best thing that has been given, or probably will be given, in America this year, and in seeing it the present critic (who, it is only fair to say, has never seen Booth in Hamlet) spent the most enjoyable evening he ever remembers at a theater. Except for the fact that Mr. Sothern has cut a little too much of the text of the libretto, there can be no fault found with the whole production. Every one should see Mr. Sothern and Miss Marlowe in "Hamlet" this winter. The rest of the cast is more than excellent.

It can no longer be said that "the serious drama" cannot find a hearing in America. There are no more serious actresses than Mrs. Fiske and Miss O'Neil, and for a month now they have presented similar and in some cases identical *rôles* of the most serious of dramatists, Ibsen and Sudermann. Naturally Miss O'Neil suffers by such direct comparison with the older and more finished actress, but she is entitled not merely to applause for her courage in essaying the difficult parts in which Mrs. Fiske has so long reigned supreme and unchallenged, but for a real success in accomplishment. Miss O'Neil lacks the graceful sinuosity and delicate modulation of her rival, but has a clearer enunciation and at times shows equal force in both expressed and repressed emotion. Where Mrs. Fiske shows temperament, Miss O'Neil shows temper. Both have a fondness for that incarnation of feminine selfishness and love of intrigue, Hedda Gabler, the cat-woman, or rather the tiger woman, who delights to flesh her claws in every one who approaches her, and to feel them writhe under her power. Both, too, find a good opportunity for the display of their powers in Magda, who personifies the perpetually recurrent revolt of the young against the old, nowadays especially intense since our young women as well as our young men are demanding the right to independence of personality.

To Miss O'Neil we owe thanks for giving us an opportunity to see for the first time here Sudermann's "Johannisfeur," a play without interest of plot or action or wording, but which in her hands showed unsuspected possibilities

for the expression of intense and natural emotion. The play is an eruption of pagan passion in a commonplace Christian household. Miss O'Neil has excellent support in Mr. McKee Rankin for tyrannical fathers and Miss Gertrude Binley in ingenue parts.

Ibsen has taught even French dramatists that love is not the only thing in the world suitable for dramatic purposes. Among the new playwrights who are using the stage to pillory social and political abuses is Brieux, and it is fortunate that Madame Rejane interrupted her salacious series of Zazas and Saphos long enough to give us his exposure of political graft, *La Robe rouge*, in which she was the original Yanetta. Unless the play is a gross exaggeration of real conditions, judicial corruption through political favoritism has reached a far worse stage in France than in the United States. In their evenness and finish of execution and in the perfection of every minor byplay the French company give us some much needed lessons.

That the discovery of unsuspected wickedness in high places is no better as a dramatic motive and is not half so pleasant a discovery either, as unsuspected goodness in the lowly, is demonstrated to us by David Warfield in "The Music Master." A sweeter and more thoroughly wholesome play is rarely seen, and we need not feel pessimistic over popular taste when such a play packs the house from garret to basement. Mr. Belasco has no reason to fear the power of the trust so long as he gives such good plays and players. Mr. Warfield is, like Walter Crane, a recently reformed comedian, and takes the part of the old German musician with a humor which does not detract from its pathos and strength.

Those who want to become acquainted with all the good plays of the season should see Sir Charles Wyndham and his English company in T. W. Robertson's well-known play, "David Garrick." But there are a dozen other plays more worth while now being played in New York or touring the country. Sir Charles Wyndham is an actor of very high quality and "David Garrick" is a good old English historical play of love, tears, kisses and laughter. The cast is good, and yet the play somehow as a whole is not very taking. Miss Mary Moore, whose name appears on the bills in the same large type as Sir Charles Wyndham's, comes very near being a stick, and is anything but the attractive, wheeling, bewitching girl she is evidently intended to be. The play seems to have no difficulty in drawing large houses. We take pleasure in saying that Sir Charles Wyndham is the only actor we have ever seen who takes a drunken part without offense to the decencies.

The new comedy opera entitled "The Two Roses," now at the Broadway Theater, affords Fritzi Scheff an excellent opportunity again to demonstrate her singing abilities. Her performance in this work is characterized by a charming musical voice of wide range, pleasing recitative, as well as beauty of person and adornment. The plot of the play hinges upon the star's assumption of two characters—viz., Rose Decourcelles and Rose Marie—hence "The Two Roses." As musical comedies go it is above but not way above the average.

A great many people think May Irwin in her comedy, "Mrs. Black is Back" (by George V. Hobart, the creator of "Dinkelspiel"), is one of the funniest things that could possibly be seen. To our view it does not compare with "The College Widow," now running so successfully in New York, either in wit, grace, or in those things in which a comedy should excel. It is, however, very humorous and is made up almost entirely of that very exaggerated American fooler y whose delightful inanities keep one in convulsions of laughter from the time the curtain rises until it falls. Mrs. Black is Back" is not a rare comedy in any respect, tho it affords May Irwin numerous chances to sing some of her illimitable topical songs.

"Humpty Dumpty" is one of those gorgeous spectacular affairs that one wants to see once every five or ten years. There must be two hundred female parts in the play and they assume myriads of costumes, each more dazzling and brilliant than the preceding one; indeed, were it possible, the spectator would become color tipsy. The plot is *nil*, but the humor is fairly good. "Humpty Dumpty" appeals to both young and old.

Literature

The Romance of Lady Burton

Isabel Arundell was a descendant of one of the oldest families among the English nobility. A few months before her death, and three years after she published the biography of her distinguished husband, she began an autobiography. But ill health and death intervened, and the volume has been completed by Mr. Wilkins.* The initial chapters are devoted to her childhood and youth, and besides portraying her ardent nature and splendid mind they give the manner in which the young nobility were trained and educated in those days. In Boulogne in 1850 she met Richard Burton, of the Indian Service. He was a wanderer by inclination and a linguist and explorer by profession. The young girl was magnetized by this oriental Englishman from the first moment his eyes rested upon her until the day of her death; but not until four years later was Burton himself attracted to her. And the chapters relating to the honorable secret of her love could only have been recorded of a woman capable of the noblest virtue and the most delicate self respect. This, she would have said, was where heredity came to her support, for she believed that the blood in a man's veins determined the quality of his spirit; and tho she might never have love requited, as the daughter of a gallant race she would not suffer the humiliation of even a tacit confession.

Now, it is a curious fact that even women, who have a higher conception of love than men, are apt to lose the *inspiration* of love with the saying of their marriage vows. Their powers of illusion are apparently destroyed by the humdrum realities of an existence which is fixed and fully revealed to them. They lack in many cases the romantic enterprise to develop the marital relation further than mere nature and a forced association demands. But Isabel was not of this class. We find that at the beginning of her married life she wrote out certain rules "for my guidance as a wife," so good that if any woman followed them, whether her husband were an erratic student or a fishmonger, she could not fail of happiness or self respect, two things which many wives lack in the depths of consciousness:

"Let your husband find in you a companion, friend and adviser, and *confidante*. . . . And let him find in the wife what he and many other men fancy is only to be found in a mistress. . . . Improve and educate yourself in every way . . . that he may not weary of you . . . try to look well and to dress well to please his eye. . . . Perpetually work up his interests in the world. . . . Hide his faults from *every one* and back him up through every difficulty and trouble. . . . Never permit any one to speak disrespectively of him before you. . . . Never permit any one to tell you anything of his conduct in regard to other women. . . . Do not bother him with religious talk; be religious yourself, etc."

This was a hard task my lady set before her, one which only a gifted, good woman could have accomplished. And her success has made her biography read like a thrilling romance. She developed all that was good and possible in her marital relation. In England, where her husband had many enemies, she was his fortress; in the desert, or wilderness, on any foreign shore, she was his resourceful comrade when difficulties threatened. She worked his will with a diplomacy and perseverance which he himself lacked, and reckoned herself compensated with his fame.

The fashion now is for a married woman to emphasize her right to an existence distinct from that of her husband. She guards jealously against his infringement upon her privileges as an individual differing from him in tastes, sympathies and ambitions. To such wives this volume will be a revelation if not a reproach. No two people ever were more widely estranged by temperament and point of view than Lady Burton and her husband; yet she made their union perfect and his life a success. She is the

* The Romance of Isabel Lady Burton. *Told in Part by Herself and in Part by W. H. Wilkins.* New York: Dodd, Mead & Co. $3.50.

pedestal upon which his fame will rest in history. She had a naïvely feminine way of working out the most astounding contradictions, to her eternal weight in glory,—as when she labored to find publishers for his books, altho she disagreed with every sentiment expressed in them. Women of this day are often too narrowly adjusted to the right and wrong of things to do such a thing; but as a wife Lady Burton conceived that it was her honorable duty to further her husband's interest in every undertaking. And it was not until after his death, when such service was no longer necessary, that she burned his manuscript translation of *The Scented Garden,* at a great financial sacrifice, because she imagined the sensuality of the work would give color to rumors about Burton's life in India and Africa.

The book contains many interesting descriptions of foreign countries, delightful stories, and letters from distinguished people (especially from Gordon, the martyr at Kartoum). But its great attraction is the involuntary contrasts which the reader makes between the biography of a gifted man and the biography of an equally gifted woman. One is the calendar of scholarly achievements, of ambitions happily fulfilled, or bitterly defeated; the other is a testament of love, loyalty and sacrifice.

Chancellor and Hewes's History of the United States*

Histories of our country are pouring forth from the American presses in such quick succession and are being advertised with such wealth of diction and extravagance of self-praise that the wise man will buy none of the wares until he has sought the advice of "one who knows."

The new volume is the first of ten prospective volumes, in which the authors say that they hope to present the results of the latest investigation by trained scholars. They propose that each volume shall treat of four topics: First, Population and Politics; second, War and Conquest; third, Industry and Commerce, and fourth, Civilization, the last to treat religion, morality, literature and art, education and social life. The third division, which is under the care of Mr. Hewes, who is called the "author of *Statistical Atlas of the United States*"—ignoring Mr. Gannett, the chief *compiler*—is regarded as the "peculiarly distinct feature of the work." The whole conception of the new history is, therefore, mechanical, rather than artistic. In a word, the "parts" might well appear as separate history, for they are not related to each other as parts of an organic whole. This failure to develop the story, to increase the interest of the reader in the unfolding tale, is the greatest defect of the work. Mr. Chancellor attempts on his part by a lively, allusive style to hold the attention by rhetorical effect. There is some fine writing, where the "lure of the Southland," the "lion nature in the blood of the English race," and some sententious truisms take the place of real thought and accurate statement of fact. There is too great fondness for overworked figures of speech and trite quotations. Mr. Hewes is less rhetorical, tho we cannot approve of tobacco as "a striking spectacular product of colonial years."

Even if the work were not authoritative in the scientific sense, it might have a value as a popular history, but that the deliberately chosen form precludes the possibility of holding the ordinary reader. Mr. Hewes's work, which alone offers any new ideas or facts not found in former well-known histories, is characterized by much interesting information not presented in a logical form. The references and notes, which are relegated to the back part of the book, to the end that the ordinary reader may not be annoyed thereby, serve only to publish the authors' ill command of their bibliography and utter ignorance of the best critical work that has been done. The work is not only not based on the sources as the authors frankly state, but it is not based on the *exclusively* best secondary authorities. It is rather a hodge-podge of good and bad hopelessly interwoven. In spite of all these facts, however, the error is honest error and there is no trace of the historical mountebank that may be so clearly seen in a big historical series that made its first appearance a few

* The United States. A History of Three Centuries, 1607-1904. *By Wm. E. Chancellor and Fletcher W. Hewes.* G. P. Putnam's Sons.

months ago. There are, moreover, some very praiseworthy things to be said for this work. First, it clearly shows that American history up to the Revolution must be viewed from the point of view of expanding Europe. Again, the energy of the illustrator has been devoted to maps, diagrams and charts to explain the text, instead of portraits and imaginary pictures to amuse. There are 18 large maps and diagrams, besides 132 smaller maps placed where they are of service. In fact, the book has many real uses, and with greater care on future volumes, the series may become a contribution to American history.

The New Pelléas of Maurice Maeterlinck

A Modern Mystic

It is a curious transformation by which the young Belgian who was introduced to us not so many years ago as "the Shakespeare of marionettes" has become—shall we say?—the Emerson of marionettes. Who could have foreseen that he would escape the narrow and esoteric circle of the Symbolists and become a popular writer in many languages; that his writings should meet us in daily papers side by side with political prognostications and directions for cultivating the biceps? In *The Double Garden** he tells us again of Pelléas, but it is shocking to find that this Pelléas now is not the lover who played with the living hair streaming down on his face from the balcony, but is only a bull pup. However, the new Pelléas is quite as human as the old.

Maeterlinck is possessed of the fairy wand of the story books and is able to make human at a touch not only the lower animals, but insects, flowers and inanimate things. Such magic has not been seen since Ruskin wrote the "Ethics of the Dust" and made the crystals live. There are many authors nowadays who make animals stand on their hind legs and talk, but Maeterlinck's method of making us recognize our poor relations is quite different from this easy and mechanical one. His theme is the unity

* The Double Garden. *By Maurice Maeterlinck.* New York: Dodd, Mead & Co. $1.40.

of nature. He opens for us the bee-hive and, behold, it is an insect state. Every object becomes a microcosm. He takes out the flower from the cranny and uses it as a key to unlock the universe. The chrysanthemum, as he shows, "bears flowers impregnated through and through with the thought and will of man, flowers already human, so to speak." All nature for him is aglow with an inner and spiritual life. He does not presume to explain the "riddles of the universe"; he rejoices in their mystery and in their beauty. Fourteen years ago he made us all feel saddened that we were all "sightless," groping along the walls of a room we could never see and trying in vain to touch each other. Now, Maeterlinck is a grown man he is no longer afraid of the dark. He has come to love it, to feel that it is a kindly obscurity, not filled with the specters and hippogriffs of ancient dreams; but mystic, wonderful and throbbing in accord with human pulses.

To those of feeble faith who thought that science and machinery would banish poetry, Maeterlinck must give surprise. No one is more imbued with modern science or more in touch with the workaday world, yet what writer is there who is fuller of poetry? He takes it as his task to show to the world the poetry in the commonplace, and surely nothing is now more needed. Even the rattling, buzzing and gasoline burning automobile does not frighten off so courageous a poet. He boldly mounts it as tho it were Pegasus and thus sings the song of Speed:

"I give a slow turn to the mysterious 'advance ignition' lever, and regulate carefully the admission of the gasoline. The pace grows faster and faster, the delirious wheels cry aloud in their gladness. And at first the road comes moving toward me, like a bride waving palms, rhythmically keeping time to some joyous melody. But it soon grows frantic, springs forward and throws itself madly upon me, rushing under the car like a furious torrent, whose foam lashes my face; it drowns me beneath its wave, it blinds me with its breath. Oh, that wonderful breath! It is as tho wings, as tho myriad wings no eye can see, transparent wings of great supernatural birds that have their homes on invisible mountains swept by eternal snow, have come to refresh my eyes and my brow with their overwhelming fragrance! Now the road drops sheer into the abyss, and the magical carriage rushes ahead of it. The trees, that for so many slow-moving years have serenely dwelt on its borders, shrink back in dread of disaster. They seem to be hastening one to the other, to approach their green heads, and in startled groups to debate how to bar the way of the strange apparition. But as this rushes onward, they take panic and scatter and fly, each one seeking its own habitual place; and as I pass they bend tumultuously forward, and their myriad leaves, quick to the mad joy of the force that is chanting its hymn, murmur in my ears the voluble psalm of Space, acclaiming and greeting the enemy that hitherto has always been conquered but now at last triumphs! Speed."

The Infant Muse

At first thought there is something uncanny and disquieting in the sight of these two volumes of verse* written by two little girls between the ages of six and ten. But on examinaation the wonder abates a little. For it may be remarked, in the first place, that many of these "poems" are poems only metaphorically or by courtesy—that is to say, they are rhythmically indistinguishable from prose:

"Walking on the hill I saw five little dandelions with their yellow dresses on.
They thought it was summer.
Six of them had gone to seed, and had their white dresses on."

Surely it requires no great discrimination to perceive that this, tho it may be very precocious indeed of young Miss Cooley, is not exactly poetry. And, in fact, it is in general true of her work that while it is intimately "felt," the most of it, yet it consists very largely of mere transcriptions of nature, a turning over of direct observation into language, and is therefore poetical only as a child's use of language is always naturally poetical—that is, in the employment of simple sensation and in the broader pictorial faculty:

"It was an autumn day;
The leaves had turned brown and yellow and red,
And were gently falling.
It was an autumn day."

* The Poems of a Child. By Julia Cooley. With an Introduction by Richard Le Gallienne. New York: R. H. Russell. $1.00.
The Sea Gulls and Other Poems. By Enid Welford. New York: G. P. Putnam's Sons. $1.00.

And, furthermore, it is well to remember that, tho children have been improvising for generations, or even centuries, it is only lately that any one has begun to attach sufficient importance to such matters to preserve any record of their performances. And truth to tell, we rather suspect, in the absence of any exact standard of comparison, that very much of Miss Julia's work differs from the linguistic experiments of many another child only in being more deliberate and self-conscious and in being fixed in print. And yet with all these abatements there remains a good deal that is curious and admirable in her ingenuous little volume. When she writes, for instance, as tho in deprecation of being taken for a precious little prig:

"I'm not the silent one.
I'm not the one that sits and reads the livelong day.
I'm not the stone, the nesting-bird or the shadow of the stone"—

she displays an observation which is very unusual and a figurative application of it which is very happy.

The case of Enid Welsford, the little English girl, is rather different. She has certainly an amazing sense for poetic form. But at the same time what she writes is very largely reminiscent, no matter how or whence she may have absorbed it. A poem on the passion of love by a young lady of eight or nine is not likely to contain a very strong first-hand inspiration. And while the following verses are a very extraordinary performance for a child. it will be seen that the conception and figures are assimilated rather than originated:

TIME, DEATH AND LOVE.

"Time looked into his Hour Glass,
And proudly raised his head;
'Even the Kings of Nations
Must kneel before me,' he said.

"'I rule mankind with my Hour Glass.'
But Death, he looked up then
And spake, as he worked his glittering Scythe,
Blighting the lives of men.

"'Tis true you rule mankind, Time,
While they walk beneath the sky,
But when they pass from the earth, Time,
They bow to me and die.'

"As he wove a maiden's wreath of flowers,
Love spake so bold and free,
'Time and Death, ye are very great,
But ye cannot compare with me;
For thou art Time and thou art Death,
But I am Eternity.'"

A Daughter of the Revolution. By Catherine M. Bearne. New York: E. P. Dutton & Co.

Most truly is the book's title descriptive of its subject. A genuinely typical product of the first French Revolution was Mme. Junot, Duchesse d'Abrantès. The offspring of an aristocratic mother and of a father belonging to the socially much lower grade of the upper *bourgeoise*, whose death at an early stage of that troubled time left his family with expensive tastes and a small income, beautiful and receiving the usual training of the French *jeune fille*, Laure Permon was fitting material to become the wife of the semi-well-born, and one of the most widely distinguished of Napoleon's Generals, and to become one of the brightest ornaments of the brilliantly chaotic court of the first Empire. The mingled wisdom and unwisdom, the elevations and the degradations of sentiment, the purities and the impurities of mind, the noble self-sacrifices and the acts of appalling selfishness, the greatness and the littleness which characterized the times, are all frankly, almost unconsciously depicted in these pages. The present volume has been greatly abridged from the eighteen volumes which framed the original memoirs and for the hasty modern reader who has little inclination to wade through such a mass of frequently unimportant details the work has been improved thereby, as it has not been by the many interpolations of the editor's own opinions and those of others.

Falaise of the Blessed Voice. By William Stearns Davis. New York: The Macmillan Co. $1.50.

The scene of this historical novel is laid in France during the early part of the reign of "Saint Louis." The plot turns upon the jealousy of the Queen Mother toward Margaret, the wife of

the young King, upon a flaw in the marriage ceremony which united them, and upon the effort of the Monk King to achieve an earthly sense of sovereignty. It is well written and interesting. Falaise, the blind girl, is the pathetic instrument which the author uses to work those miracles which are always the feature of medieval romances. Doubtless an investigation, by the way, would prove that blind people and hunchbacks have figured more conspicuously in French fiction than any other. The French mind has something of the Caliban humor in it. It is malformed somewhere in the psychic regions, and these morbid types are literary expressions of this singularity. They carry upon them the red birthmark of the Gallic under mind.

Readings from Modern Mexican Authors. By Frederic Starr. Chicago: the Open Court Pub. Co.

The political and industrial development of Mexico since its independence has, doubtless, overshadowed the importance of the growth in its literature, but it must be remembered that Mexican literature is as much the heir of Lope de Vega and Cervantes as American literature is heir to Shakespeare and Sir Walter Scott. Its growth, therefore, is well worth watching, and it is seemly that attention should be called to living Mexican writers who are making names for themselves in the history of their Republic. Mr. Frederic Starr has provided material for such a study in *Readings from Modern Mexican Authors.* The book contains short notices of twenty-nine writers and translations of extracts which Mr. Starr offers as specimens of their productions. They comprise descriptions, history, fiction and the drama, and will be read with interest.

Recreations of an Anthologist. By Brander Matthews. New York: Dodd, Mead & Co. $1.00 net.

"Bitrelling," as the practice is now called, about the byways of literature, Professor Matthews turns up a mass of half-forgotten quatrains, epigrams and satires in verse, and discourses pleasantly concerning them. Most of them, it must be said, have little value other than as curiosities. A rather dreary field is that surveyed in the chapter on "American Satires in Verse," while that on "American Epigrams" reveals but few examples worthy to endure. There is, of course, Lowell's felicitous stroke at Ben Butler:

> "B—, taught by Pope to do his good by stealth,
> 'Twixt participle and noun no difference feeling,
> In office placed to serve the Commonwealth,
> Does himself all the good he can by stealing."

But it is splendidly isolated from its fellows. The chapter on "The Uncollected Poems of H. C. Bunner" recalls many of the once well-known creations of that gifted author, and reproduces the famous chant royal on the delinquent boarder locked in his room, "Behold the Deeds."

The Constitutions and Other Select Documents, Illustrative of the History of France, 1789-1901. By Frank Mallory Anderson. Minneapolis: The W. H. Wilson Co.

What stone that is still unquarried and timber that is yet standing in the forest might be to the architect, are these documents to one who would make a comprehensive study of France and her progress upward through the long and oppressive course of an unconstitutional monarchy which succeeded the feudality of earlier times to a republic. As records of the swiftly succeeding changes which distinguish the history of France during the last dozen of decades, these documents are valuable, but taken alone they are far from being history, and this volume of them will hardly be found very interesting in any but the most earnest of students. The latter will find it worthy of careful, comparative study, beginning with the long chain of "abolishments" of this, that and the other feudal privilege, or extortion, or oppression, which was the first expression of the popular revolt against the nobles and continuing through the reconstructive acts of the Consulate, the Empire,

the Restoration and their succeeding forms of government.

Guide to the Archives of the Government of the United States. Compiled by Dr. C. H. Van Tyne and Mr. W. G. Leland. Published under the direction of Prof. A. C. McLaughlin, of the Carnegie Institution, Washington, D. C.

This guide to the Government archives is the first serious attempt to give historical and scientific workers information as to the vast quantity of historical documents collected in various Government offices. Every department, every bureau and every division has been carefully examined and many historical treasures that have been forgotten for years have been brought to light. Often even the officials had forgotten them, for the records of the day alone interested them, and the past was heedlessly buried deeper and deeper. Many chapters of our national history will have to be rewritten when the truths hidden in these old papers have been brought to light by the investigators who will now be attracted to work in our archives. The size and nature of the collections, their location and the rules governing their use are all set forth in this valuable manual. The admirable arrangement, index and bibliography give the work great utility as a work of reference. This book is another of the aids to science that we owe to grants made by the Carnegie Institution.

The Power of Silence. A Study of the Values and Ideals of the Inner Life. By Horatio W. Dresser. New York: G. P. Putnam's Sons. $1.35.

There is little need to do more than simply refer to Mr. Dresser's *The Power of Silence.* Since it first appeared, in 1895, it has been reprinted annually, and this is a sufficient indication that it has won its way to the hearts of the readers to whom its exposition of the value of testing experience by meditation especially appeals. The author has now rewritten the book and enlarged it with six new chapters. The present edition fully maintains the clearness of style and treatment which characterized its predecessor, and, indeed, the first three chapters would form no mean introduction to philosophy for the student, who often enters upon that study with a very inadequate notion of its scope and object. As a *vade mecum* on experience and a guide to concentration of thought the volume will commend itself to many, and it can be specially prescribed for those who are bitten by the anopheles of those forms of religious belief which arrogate to themselves the name of science.

God and Government. By J. Martin Rhode, A.M. New York: Eaton & Mains. $1.00.

In *God and Government* we have a very earnest, very inspiring effort to aid in bringing about that time seen in vision by the seer of Patmos, when "The kingdom of the word is become the Kingdom of our Lord and of His Christ." Nothing can be better than the spirit shown in Mr. Rhode's treatment of the "Sovereignty of God" and "Divinity in Government." Few indictments could be more scathing than those which he makes against the corruption which exists, too manifestly, in every phase of national, municipal, social and individual life. Loyal to his church and patriotic toward his country, it is evident that Mr. Rhode is grieved, as thousands of earnest souls are, to see evils existing which are hostile to both. But does not this very earnest grief sometimes becloud the mind? It was all very well for Hercules to cleanse the Augean stable by turning Alpheus and Peneus into it. Would legislation, to which Mr. Rhode is constantly appealing, make as clean a sweep in our case? Legislation is already at work, but the evils remain. The real source of mischief in the majority of our political, municipal, social evils lies not in the lack of safeguards and standards of right, but in the want on the part of the individual of a realization that civic responsibility is as much a necessary part of a man's religion as the—too often absolutely selfish—provision for a future beyond the present life. Here the question arises: Has the Church done its part faithfully? Has it inculcated the necessity

of living uprightly equally in our political, social and individual capacities? Do pastors and people proclaim the necessity of conscience in citizenship as well as in transactions affecting the churches of which they are members?

Goss's Journal of the Lewis and Clark Expedition. Reprinted from the edition of 1811. With an introduction by James K. Hosmer. Chicago: A. C. McClurg & Co. $3.50 net.

Goss's journal is a valuable part of the records of the great exploration and has aided materially in straightening out doubtful matters related in the other journals. Unfortunately, it is not in Sergeant Goss's own words. It was written out for him in somewhat pedantic language by a schoolmaster, David McKeehan, and thus most of the naturalness and spontaneity in the original notes have been irretrievably lost. Published in Pittsburgh in 1807, the appearance of this journal antedated that of the Commanders by seven years. It was promptly pirated and other editions were published in 1810, 1811, 1812 and 1847, not to speak of a London edition of 1808 and a French edition of 1810. Between the present and the last previous edition a period of nearly sixty years elapsed. Goss had a long and, in many respects, notable history. He was at various times a soldier and fought at Lundy's Lane and other engagements in the Niagara campaign. He died at Wellsburg, W. Va., in 1870, at the age of ninety-nine.

Journalism and Literature. By H. W. Boynton. Boston: Houghton, Mifflin & Co. $1.25.

It is a broad field and oft furrowed that is turned over again in the essays entitled *Journalism and Literature*. They are not teeming with a marked personality, nor are they alive with burning ideas. On the contrary, they are curt, practical, matter of fact; in short, just the kind of lectures one might hear in a conservative business college. If a great novelist must have a great theme to produce a work of import, a critic to command attention must have something to say, and his strength must lie in his powers of analysis. The message of a Saint Beuve, Taine or a Brunètiére is sadly lacking in the essays of Mr. Boynton. The general trend of his papers is marked by a self-forced optimism, and his statements are weakened by intermittent apologies. He indulges in generalities and feebly disguises his personal criticism of living writers—a case where a suspicion is more tantalizing than the bald printing of a name—a subterfuge for which Americans have little toleration. In "Effusions of Fancy" the author speaks of a certain novel dealing with a Scotch farm as a decidedly morbid work. He has reference to "The House with the Green Shutters"—with out doubt a morbid story. With a false minor premise Mr. Boynton hastily and illogically concludes that a book of this kind "is not the material of art. It will be useful to the reporter rather than to the story teller who hopes to have his work last." If the author has no liking for the unpleasant, that is a matter pertinent to himself, but such a statement that morbid themes are not fit material for art is not taking a wide view of the scope of modern literature. The main objection to these essays is that Mr. Boynton has endeavored to handle too many subjects.

The Love of Azalea. By "Onoto Watanna." New York: Dodd, Mead & Co. $2.00.

In her latest book "Onoto Watanna" continues her mistaken career as a Japanese novelist. Her local color is as erratic, her characters as impossible and their manners as reprehensible as in her previous stories. The hero, an American missionary, and the heroine, a poor but proud daughter of the samurai, are equally lacking in the characteristics of their respective classes. Mrs. Babcock has, however, made a distinct gain by deserting the dangerous path of the historical novel, so full of pitfalls for the unwary, and cutting herself conveniently loose from all hampering conditions of time and space. The scene of the missionary's labors and of Azalea's love is a little Japanese village called Sanyo. Here the young man, who has been working for some time with no gleam of hope or success, makes his first convert, a samurai's daughter; courts her with a haste and

impetuosity that sweep all before them, marries her with the same lightning speed, and leaves her alone, and almost without money, when he is recalled by his board for an indefinite time. It is then that a wicked stepmother and a rejected Japanese suitor get in their deadly work. Through the machinations of the stepmother Azalea on her wedding day threw away her ancestral tablets and became an outcast from her own people. Consequently, when the rejected suitor, from whom the guileless missionary had borrowed what little money he had left with his wife, forecloses on the house and furniture, tearing the frail structure down about his own ears when Azalea refuses to marry him during her husband's absence, the deserted wife with her baby become houseless beggars, and, after wandering about for months in a starving condition, drift at last into the clutches of the rejected suitor. The samurai blood comes to the surface in the end, however, and Azalea, with the sword left her for suicidal purposes by her jealous maid, gives her importunate lover a very bad quarter of an hour, and is dragged in a swoon into the little deserted church in which her husband had officiated so fruitlessly. Then all goes merry as a marriage bell, for, of course, the husband returns at this moment and finds her, and tho we are not permitted to see the punishment of the guilty and the final prosperity of the righteous, we are sure that these are accomplished in the good old way.

Literary Notes

Two valuable bibliographical bulletins have just been issued by the Library of Congress, a "Select List of Books (with references to periodicals) Relating to the Far East" and a "Check List of Large Scale Maps Published by Foreign Governments" (Great Britain excepted).

....The "Worth While Series" of small books in attractive bindings, published by Thomas Y. Crowell, New York, adds to its list a practical piece of advice on "How to Bring Up Our Boys," by S. A. Nichol; a discussion of "The Lost Art of Reading," by Dr. W. R. Nichol; a thoughtful essay on "The Inner Life," by J. R. Miller, and "Bethink Yourselves," by Lyof Tolstoy. The series has justified itself, and, at the uniform price of 30 cents a volume, is a favorite with holiday book buyers.

....The making of that excellent collection of the world's best music, "The Musician's Library" (Boston: Oliver Ditson Company; paper, $1.50; cloth, $2.50 a volume), continues apace. The latest issues sent to us are: "Ten Hungarian Rhapsodies of Franz Liszt," edited by August Spanuth and John Orth; "Wagner Lyrics for Tenor" and "Wagner Lyrics for Soprano," edited by Carl Armbruster; "Modern French Songs" (two volumes), edited by Philip Hale, and "Songs by Thirty Americans," edited by Rupert Hughes. Some of the earlier volumes of this notable series have been reviewed at length in THE INDEPENDENT. Each of the new volumes here enumerated is just as meritorious, both as an example of tasteful and artistic bookmaking (no more beautiful piece of music-printing has yet been achieved in America) and also as a result of careful and able editing.

Pebbles

WE opine that it is to the credit of the St. Petersburg press that it has generously refrained from claiming the loss of the Japanese Minister's vermiform appendix as a Russian victory.—*Louisville Times.*

The eagle is a noble bird,
And wings its flight on high.
The pigeon is of lowlier mold,
But makes a better pie.
—*Browning's Magazine.*

OH, MY LANNED!

There was a young woman who planned
To get herself held by the hanned;
That she met with success,
Is a very good guess,
Because she exclaimed, "Ain't it granned!"
Cleveland Leader.

....A wooden wedding surprise party was perpetrated on Mr. and Mrs. F. Bulman Monday night. The party found the couple, so we were informed, in a terrible shape. Frank was cooking water to wash his feet and his helper was sharpening the razor to cut off his long toe nails that had been troubling affairs around home in the knitting and scratching department. The party went right in and told Mr. and Mrs. Bulman their mission. George Johnson made a speech that Dan Webster would not have felt bad over and presented a fine chair, also mouse traps and clothes pins were used like calling cards and given to the married ones. Refreshments were served and the water and razor put away for future use. The wooden party were composed of the following, etc., etc.—*Mt. Sterling, Ill., Democrat.*

Editorials

The Democrats of the South

MUCH advice has been given to the Democratic party, since the election, by Democrats, and most of it has been addressed to the Democrats of the South. This advice, and the explanations and exhortations associated with it, should be considered in the light thrown upon the situation by facts which the count of votes has disclosed.

Mr. Roosevelt's enormous plurality, exceeding 2,500,000, was due to Democratic losses in much larger measure than to Republican gains. That is to say, his vote exceeded Mr. McKinley's in 1900 by less than 500,000, while Judge Parker's fell below Mr. Bryan's by more than 1,200,000. The entire number of votes cast, so far as it can be ascertained now, appears to have been a little less than the total in 1900, or even in 1896. It is plain that while a considerable number who were counted with the Democrats in those years voted this year for Mr. Roosevelt, and while others cast their ballots for the Socialist ticket, a great number did not vote at all. For example, in Ohio the Republican gain over Mr. McKinley's vote was 54,700, but Judge Parker's vote was less than Mr. Bryan's by 128,000, and the Socialist and Prohibitionist gain was only 40,000. There were dull times at polling places in the South on election day. Less than 55,000 votes were cast in Louisiana; Alabama's returns show only 109,000; Virginia's total was less than 130,000, and Georgia's official count was less than 131,000.

One of the advisers is President Woodrow Wilson, of Princeton University, a son of Virginia, who perceives that the South has a unique opportunity to perform a great national service by "thrusting out of the party utterly and once for all the radical theorists and populists, who ought never to have been admitted," and by uniting with the conservatives of New York, New Jersey, Connecticut, Indiana and some other States. The old-time Democrats, he says, have revolted, and will act with no organization that harbors the radicals. An obvious comment upon this advice is that in the recent campaign the South did unite with the conservatives of the Northeast, with disastrous results; that those who revolted, as the returns show, were not the old-time Democrats, but the radicals, who went out in hosts without being ordered out, and that a party whose total vote, as proved by the returns, has been reduced by 20 per cent. since 1900, is more in need of recruits than of expulsions.

Colonel Harvey, of New York, in an address at Charleston, also saw an opportunity for the South, which, being "the mainstay and living reality" of true Democracy, should now, he said, assume leadership, altho he found in the party's record "a reasonable justification for a deep-seated conviction in the minds of thinking men that it had not in recent years demonstrated a capacity to govern wisely and well." Still, he thought the Democrats of the North and West would follow Southern leadership.

Mr. John Sharp Williams's remarks in South Carolina last week deserve consideration because of his prominence last year as a Democratic leader of some sagacity in Congress. The causes of the recent defeat, as he saw them, were the association in the public mind of Democratic rule with industrial and commercial depression, the popularity of the proposition to "curb the South" by reducing its representation, and the personal popularity of Mr. Roosevelt. The cry went up, he said, that "one white man in the South should not have as much voting and electing power as two or three white men in the North." He warned the South that it must give up its burnings at the stake. "Things like the Statesborough affair must stop."

Mr. Williams is oppressed by a conviction that the Republicans are about to reduce the South's representation without applying the same rule to their own States in the North. This is a thought unworthy of his brains. It is not likely that Congress will pass any Crumpacker bill, and it is impossible that it should enact any law that did not equally apply to Massachusetts and Rhode Island. Mr. Williams would accept the reduction if it should be accompanied by the repeal of the Fifteenth Amendment. But, as he sees it near at hand without this concession, he

advises passive resistance. The Southern States, he says, must ignore the reduction, must elect their Representatives as they do now and send them to Washington. When they are excluded they must take the question to the courts on suits for their salaries. By the Supreme Court's decision he would abide. While the Southern States should continue to be unrepresented they would be an object lesson of which in time the North would be weary and ashamed. Then justice would be given to the South. In this curious address he devised other courses of action to be pursued in certain contingencies. All of them are proofs of the melancholy aberration of a man whose service as leader of his party in the House led us to expect better things of him. Alas! if John Sharp Williams thus wanders, where is the Democratic party of the South to look for leaders whom Northern Democrats will gladly and submissively follow?

Will the Democrats of the North accept the Gormans, the Carmacks, the Vardamans and the Tillmans? To such leaders as these, to the injustice and dishonesty of the South's treatment of the negro, and to their own intense provincialism the Southern Democrats owe their political weakness, which also saps the strength of their party in the North. What has become of the South's chivalry? There is none of it in counting negroes for representation and not allowing them to be counted for anything else. There is none of it in laws dishonestly framed to disfranchise an illiterate negro and at the same time to place the ballot in the hand of an equally illiterate white.

It must be a very small Democratic party in the North that will consent to be led by the Democratic party of the South in its present condition. One thing that has been driving Northern Democrats out of their party is the attempt of their Southern associates to obtain partial control of the Government by means of injustice at home and an alliance with more reasonable men in States where freemen are not tricked out of their votes because of their color, and where elections are not an empty farce. Such alliances, whether they be with Bryan radicals or Parker conservatives, will come to nothing so long as the South, honoring its Tillmans and despising its Booker Washingtons, shall refuse to attempt a solution of its race problem with a decent regard for the principles of justice.

To-Day's Golden Jubilee in Rome.

To-day is commemorated the fiftieth anniversary of the first promulgation of a dogma by any Pope independent of a Council. It was a bold step. On December 8th, 1854, Pius IX, fully sixteen years before the decree of Papal Infallibility in the Vatican Council, declared *ex cathedra* that the Virgin Mary was conceived immaculate—*i.e.*, without the taint of Adam's sin.

In a different strain had Bernard of Clairvaux written to the Canons of the church of Lyons. What he told Pius overlooked—namely, that a miraculous conception alone, like that of Jesus, could escape the stain of original sin. The theological principles of Clairvaux were not those of the Vatican or Manresa. There was, moreover, no thought in those early days to upbuild the dogma of the Immaculate Conception upon arguments from Scripture. The later scholastics first ferreted them out. Thomas of Aquin, the great guide of Catholic theology, followed in Bernard's footsteps and rejected the Immaculate Conception. He held that, like Jeremiah and John the Baptist, she was sanctified in her mother's womb. Again, in explaining the word "conception," scholastics like Thomas of Aquin, Bonaventure, Durandus, taught it meant Mary's sanctification. While the Liturgy of the Church is now brought forward as an argument, yet in the time of Thomas of Aquin the Mass of the Conception was unknown in Rome. Probably it had its origin in France, and was brought Romeward after the seventy years' stay of the Popes in Avignon.

In his history of "Positive Theology" (Paris, 1904) the Abbé Turmel, of Rennes, refuses to blot his pages with "*tous les pieux mensonges*," which from the thirteenth century onward were invented to help on the Immaculate Conception. These pious frauds include a number of visions which cannot be au-

thenticated and forgeries by the wholesale. To Anselm, of Canterbury, was attributed a work in its favor; the writings of Thomas of Aquin were interpolated. Bernard's letter to Lyons, above referred to, was made out a forgery. Says Turmel, page 400:

"It was a common practice up to the close of the Middle Ages to interpolate texts, to bring out apocryphal works, to allege genuine writings to be apocryphal."

In 1854 Pius IX dreamed that his new dogma would insure Mary's protection. She, we read in the Roman breviary, had always overcome all heresies. Before her Immaculate Conception the powers of darkness would be vanquished. What are the facts? The Papacy has shrunk more and more into its narrow shell. Its nunciatures are disappearing. France is a foe to the Church. The Temporal Power ended in the breach of Porta Pia, never to be restored in all likelihood; Italy is a kingdom in spite of Pope and Jesuit; the "*non-expedit*" against the Italians' voting has proven a boomerang; a free Church in a free State holds the ground; Cavour has outlasted Antonelli; Socialism is rampant in Latin Europe; Austria, thanks to the hostility of Leo XIII and Rampolla, is on the brink; Austria and Italy are still in union with Protestant Germany; the Catholic revival in England has faded out among the children of Rome, and has its only vitality in the Anglican Church.

Of the four Catholic universities created since 1854 Kensington and Dublin were practically still born, while the other two, Freiburg in Switzerland and that of Washington, are in serious danger. Of the home university we need say nothing; it has had more prominence than it wants during the past few months. Freiburg, however, is noted for its controversies among its Dominican professors and between them and the Jesuits, to whom it must be an open sore that they have no professorships outside of Rome in Catholic universities. The bitterness of the two religious orders found vent in theological tracts about Grace, but chiefly in the book "*Les Origines des Jesuites*," by a Dominican of Freiburg under the pen-name "A. Muller." In buildings, faculty, attendance and equipment Freiburg compares very poorly with Geneva, Berne or Zurich. After the *Kulturkampf* there was a revival in Germany, but signs of a reaction are many. Denifle's attack on Luther is not the least significant of them, while another is the Munich monthly, *Zwanzigste Jahrhundert*. The spirit of Döllinger still lives in Bavaria, which has gathered fresh strength from the condemnation of Schell of Würzburg's writings.

In the United States alone, and perhaps in Canada, has the egis of the Immaculate Conception seemed efficacious. How really protective it has been can only be known when immigration ceases, and American Catholicism must grow of its own strength.

A Warning and a Gift to Panama

THERE was a serious warning in the speech which Secretary Taft made the other day to the leading men in the Republic of Panama. He said:

"You should have a government in which the minority will enjoy equal rights with the majority, for an alleged government where the minority, upon a successful election by a majority, retires from its country in exile and awaits the results of the next successful revolution is no government at all, but tyranny. Despotism is as possible by a majority of the people as by an individual. Unless respect for individual rights is shown in your country you will have no government worth supporting.

"I know you do not mean that the government you have solemnly established should go down through disagreements. All depends upon honest elections, for if the men in power control the elections, making the people's votes worthless, then the government is unlawful and should fall."

This warning applies to some other small island and continental republics about the Isthmus. Our nation may have to consider more closely its duty to maintain order and the performance of international obligations by these unstable governments. We should feel no such concern if these more turbulent countries had the steadiness and character of Brazil, Argentina and Chile.

Particularly may this warning apply to Venezuela. Citizens of Germany and Italy as well as of the United States are complaining of unjust exactions by the

Venezuelan Government, and our Government is being asked whether it will choose itself to protect foreigners there or would prefer that again European fleets should exact reparation. Venezuela guaranteed payment of interest to German investors in the bonds of the railroad from Caracas to Valencia, but has refused for some years to pay it. The Italian Government has intimated to Washington that its subjects have suffered cruel exactions from President Castro, and it waits to know whether we will assume the duties as well as the privileges of the Monroe Doctrine.

We are not anticipating any such particular complications in Panama. There we are too close to allow revolutionary movements. We both protect and subsidize that Government. The agreement which Secretary Taft has made with the Panama Government by which there shall be in the Canal Strip no port of entry, so that all imports shall come under the Panama tariff, is generous as well as just, and the other provisions are to the benefit of the little Republic and at the same time put it more closely under our care and protection. Thus Secretary Taft's words are to Panama a kindly warning and not at all a menace.

But there is danger in Venezuela, in Colombia, in Haiti and in San Domingo, and it is likely that, with the extension of European commerce, and the complaints of European nations against oppressions, exactions and the failure to maintain obligations, we may be compelled to intervene in the interests of peace and good order. It may be that President Roosevelt's coming Administration will find here some of its most serious problems.

Socialism and Socialism

How far we are from the attainment of clear popular thinking on the subject of socialism is daily revealed in speeches, editorials, essays and novels, hailing from many quarters. The other day a Western correspondent of a New York evening newspaper, in offering his advice upon the reorganization of the Democratic party, remarked that "some of the working class have been deceived by the fallacies of socialism, but the realization of socialistic hopes would mean the establishment of the worst of all tyrannies—the tyranny of the many over the few."

It would be interesting if we could trace the workings of a human mind that arrives at so preposterous a conclusion. In its intrinsic quality all tyranny is infinitely bad. There is no good tyranny, and no tyranny that can be conceived as morally better or worse than any other. The only discrimination that can be made between tyranny and tyranny is quantitative and in that aspect tyranny is bad in exact propertion to the number of human beings that are made to suffer by it. The tyranny of the few over the many has had its innings in this world for a very long time and it has "made countless thousands mourn." It sent the Christians of Rome to the arena and to the stake. It invented the monstrous horrors of the Inquisition. It scattered the Huguenots of France to the four quarters of the world. It desolated England through the implacable zeal of Bloody Mary and then of Queen Elizabeth. It is still consigning political exiles to Siberia. Just once in the whole history of the Western world has the tyranny of the many over the few become a carnival of slaughter, and even that was incidental to a revolution that left the whole Western world immensely better off than it was before. That revolution swept away intolerable abuses. It was like a tornado that devastates a narrow track but leaves the air sweeter. The Republic of France, to-day a great nation of prosperous people, enjoying liberty and equality, could not have existed until that work of destruction had been wrought.

No one can really believe that a tyranny of the few over the many is better than a tyranny of the many over the few, unless in his secret heart he hates democracy and cherishes the aristocratic idea that the few have the divine right to rule. That idea is on its way to the shades of extinct things. It is destined to go to its own place, along with the *eohippus* and the *pithecanthropus*.

But there is another absurdity in such thinking as that which we have here quoted. The socialism that is bruited by the little socialistic party that cannot see

beyond the interests of a wage-earning proletariat is not the only socialism. Indeed, it is a travesty of socialism as that great scheme of human organization was conceived by its founders—by minds like St. Simon and Robert Owen, and by its great protagonists, Rodbertus, Karl Marx and Ferdinand Lassalle. The Socialist Party leaders talk of a world in which the workingmen shall run things much as they imagine "the magnates" run things now. The state, of course, is to own all land and capital and direct everybody's labor, but the proletariat is to be the state. Over against this narrow program lies the conception of a self-conscious people organized as a true republic; controlling not only those *res publicæ* that make up the categories of politics and law, but also *res publicæ* of economic significance; controlling the land, the one original base of supplies as the New England community controlled it in the early days of colonization; controlling the means of transportation and communication as the New England town controls its roads and bridges; controlling the means of education and popular culture as the New England town controls its public schools, as the Western commonwealths control both their common schools and their State universities. This is socialism in its highest and noblest conception, a conception which differs from the American conception of a republic only by putting great economic interests into the list of *res publicæ* along with political, legal and educational interests.

To belittle this conception, to say contemptuous things about it, to sneer at it, is to betray an inconsequential mind. No republic has yet endured, no constitutional monarchy even has endured, that has not to some extent brought the economic life of man under control and regulation by the public thought, the public conscience. If we are to have a republic at all the only possible question that can be raised about the public control of economic interests is the question of expedient limits. Is it wise to leave land to private ownership subject only to the eminent domain of the state? Is it wise to create great artificial personalities—the public service and industrial corporations—and leave them substantially free to manage transportation and industry at their discretion? Or should we get on better if land, or at any rate certain particular lands, like mines, water fronts and terminal points, were publicly owned; if railways were publicly owned and managed, and if the greater industries were state enterprises instead of private undertakings?

These questions cannot be answered by the narrow minds of agitators that dream of a merely proletarian socialism. Neither can they be answered by self-constituted publicists who are incapable of distinguishing between widely different things that happen to be spelled by the same combination of letters.

Walking

An essay by Emerson, never before published, is given us in the November *Atlantic*. It is as fresh as if the ink were still wet in Mr. Emerson's pen. It has the freshness of his stoutest youth, and bubbles over with playful life. It is an apotheosis of walking. Emerson loved walking because he was a good seer. We do not intend a play on words, for to be an intellectual seer requires first that one should have keen and unstinted vision. Emerson's insight was not at variance with an abounding outsight.

Walking is the best charm of land ownership. The agriculturist is compelled to be a great pedestrian. Under his own apple trees he finds the whole world and all of evolution in its branches. There is history here, far richer than that which tells of the struggles of emperors and armies. The struggle for existence was a stout one between apple trees and forest long before man became the cultivator. Now the orchard rows take in a vast amount of brain work as well as limb work and sap work. The owner does not have to go to a World Exposition to learn what nature and human nature can accomplish, when harmonious. But what an infinite zest is there about a common country farm! The contact with animal life, the discovery of individualities. A particularly good writer says:

"Not only my collie, but my pet hen takes long walks with me. She picks along the way where I think—occasionally having some

thoughts of her own. But the companionship is what we both enjoy. When I take out my plow, and run long furrows up and down the land, do not think that my tramping is at all dull. The birds hop around me, and have much to say. There is life in every square inch of the sod. It is glorious to go on one of these voyages of discovery about one's own acres, throwing open the leaves of nature's book, and finding new truths on every page."

Dr. Johnson said that " few men in the world know how to take a walk." Emerson thinks Johnson was not one of the few. The growling lexicographer preferred Cheapside to the fairest countryside—where he rumbled along, growling at everybody and hitting things with his staff. In the country he declared that everything looked alike. When some one praised Lord Abercorn's trees and their rapid growth, he answered that they " had nothing else to do but to grow." When Nero advertised for a new luxury, Emerson thinks he should have tried a walk in the woods. He despises a house set at the roadside. He would have it approached through a bit of forest, if possible—certainly by an avenue of trees. Let us not get into our houses and out again without a good walk. One should live where one can shout and not disturb his neighbors. He should be able to get out on a lawn of his own and roll with his children.

The American highway is the very ideal road for a pedestrian. If the driveway is not as perfect as those in Belgium, certainly the variety of plant life exceeds that of all other countries. A mile of highway walking will reveal more flowers than a king's garden. Its brooks gurgle and chuckle under little bridges. It is strung with villages and crossroad hamlets. It goes from New York to Chicago, and then to Portland or Duluth or San Francisco. Farm houses look at it, and farmers' daughters and sons consider you the event of the day. You carry novelty as well as find it. You are yourself the most curious growth abroad. The highway is a rare one that will not give you a dining table where you may eat your parched corn and sandwiches, and where a sweet brook will not give you better water than a city reservoir. We have not yet learned that we own all the roadways in America. They are for us to walk in, discourse in, and, if we please, to live in—that is to do our best living.

Emerson wishes that our colleges and schools paid more attention to walking. Well, there was a short spell when they did. Students tramped the country geologizing. They carried well-tempered hammers, and while they pounded the rocks they secured cleaner blood, as well as a few facts. Some walked all their vacations as colporteurs, in this way trying to excuse their zest for walking by doing a little good. In that day one could not live honestly for this world without bestowing more or less attention on another world. Others went West, until they found the Mississippi, and they got very foot sore—but they knew where to go when they graduated. Just now the college boy, with all his athletics, is a poor walker. You cannot start one of them up without he starts off on a trot. Unfortunately one cannot sprint it all the way through life. It would be well should every college have a walking section in its curriculum. Draft off a little of the physical force that goes into football, and distribute it with more individuality.

We do not wonder that Emerson insists that botany is much the better study compared with astronomy. It is not possible for every one to find a new star—hardly a new comet, or even a meteor. But almost any day you may find a new plant or a new fruit. In the New England States and New York, where the first orchards were of seedlings and where new apple trees are always springing up about the fences and the roadsides, Downing tells us that we may at any time discover a better fruit than is found in the catalog. The Seckel pear came up by the gate of a Dutch farmer in Pennsylvania. One should know a little about botany, however, before he starts out for a long ramble; otherwise he will not see what he is looking at.

When Charles Kingsley was in this country he said the one thing that most amazed him was that Americans walked so little, and as for American women, he believed they were incapable of walking. Yet he thought there was no country in the world better got up for long strolls. We ought to get up with the dew and make ten miles before breakfast.

"Ah! that will give you appetite; but it will also give you lungs; and after breakfast you will know the luxury of a siesta in the orchard or balcony."

He thought the moral result would be as good as the physical. Tobacco would not be thought of.

"Tobacco is simply a makeshift, essential to sedentary life—an effort to get out of our stolid surroundings, our stupidities. An athlete never smokes."

Walking is good for all seasons. It always has something new to enliven us and quicken the pulses, without disturbing the balance of our forces. Naturally Emerson honors the morning as the best time of day for the pedestrian—a part of the day as undiscovered to most people as the North Pole. It is then that one finds the world in its native condition. The night has washed it of human contact. There are no rumbling wagons about and the plow lies on its side in the furrow.

"Get up, son of man, as the sun looks over the horizon, walk abroad, and know that in thy soul the surveyor has never run his lines. The whole world is thine own."

Our Mistake in Santo Domingo

LAST Tuesday, December 6th, was an anniversary of an event which should have been more important than it proved to be. On that date in 1869 the American flag was raised over Samana Bay, then leased to us in perpetuity, and Uncle Sam, like a good tenant, paid in advance his first year's rent, $150,000. But through opposition in the Senate, in part of a purely personal and partisan character, this opportunity for acquiring a valuable foothold in the West Indies was rejected, and for a generation the island has been left to neglect and ruin. Now it appears by the dispatches from Washington that we are attempting to retrieve our mistake and put back the American flag on Samana Bay, where it once was legitimately raised and where now it belongs. They say it is never too late to mend, and we may yet pick up this dropped stitch. But no action at this late day will completely rectify this national blunder, which has had such injurious consequences to us and our sister Republic. At that time it was estimated that the $1,500,000 which by the treaty the President agreed to give to Santo Domingo would pay off all the debts of that country and sufficiently compensate those whose interests would suffer by annexation. Now the national debt of Santo Domingo is $32,280,000, and we have been forced to place a financial agent, John T. Abbott, in charge of the customs at Puerto Plata in order to insure the payment of interest to foreign investors on their loans. Apparently it is inevitable that we shall soon have to take charge of Samana Bay and perhaps other ports in the future. If we had taken possession of Santo Domingo at the time when its people voted almost unanimously in favor of it our foreign policy would have had a smoother course. To say what might have been is as impossible as to say what will be, but it is not too speculative to believe that others of the islands would have followed her example, that the Panama Canal would have been dug long ago, that Cuba would have been freed without her long and terrible struggle, that the Spanish War would have been prevented, and that peace, order and prosperity would have reigned in many tropical lands which now are suffering under the triple tyranny of ignorance, poverty and revolution.

The Washington dispatches state "on the highest authority" that "the United States will not purchase, annex or even accept as a gift the Republic of Santo Domingo." This is a very rash, useless and unwise statement to make. It is made anonymously probably for the very good reason that no "authority" could be found who would make such a statement as applied to the indefinite future. It is the fear of some and the hope of some, but it is the belief of almost all of us, that the United States has not yet reached the limits of its territorial expansion. Many men in the past century and a quarter have attempted to bound the United States, but they were all proved wrong, and we may as well give up this geographical question as unanswerable. Our history shows that *Ne plus ultra* is not a safe party policy. We hope President Roosevelt's advisers will not induce him to adopt the unlignified

and untenable position of King Canute. It would be quite proper, however unnecessary, for the Administration to make a statement to the effect that it will not take advantage of the present crisis in Santo Domingo to force her into any unwelcome relations with us, but further than this it has no right to go. No one has "authority" to say that if the same favorable circumstances should present themselves the United States would repeat its mistake and decline to enter an open door. That it was a mistake subsequent history has, in our opinion, proved, and, altho it is impolite, even in a newspaper, to say "we told you so," still we may be permitted to intimate that the word "our" in the title of this article is used out of courtesy, and has no editorial signification, as a reference to our files of 1871 clearly proves.

The Guidance of the Spirit

We would recur to the address of Dr. A. H. Bradford, as retiring Moderator of the Congregational National Council in Des Moines, Iowa. His central subject was the Guidance of the Holy Spirit in the Church. Seldom has one heard a truer presentation of the principle which allows growth out of old into new forms of truth, and the competence of the Church of the present day to modify its old formulas of faith and fit itself to its new conditions and duties.

There appears to be a certain happy mysticism about the expression, "the guidance of the Spirit"; and by mysticism we mean the power to see God by the eye of faith where he is not present by the eye of sense. It is, we say, a happy thing to be able to feel the pressure and influence of God in affairs and in personal experience, where some severely practical people can certainly discover only their own mental action or the course of human events; and who, believing God present in human events and personal experience, are glad to believe, but are denied the knowledge of sight. They accept the guidance of the Holy Spirit, but they are not able to distinguish it from their own common sense and judgment.

If there be any God—and there is—and if there be any care of God for his world—and we cannot doubt it—then there must be the guidance of the Spirit of God in the world, and particularly in the Church which is devoted to his service. But how can we tell when it is guided and when we are guided? Most people, who do not pretend to be prophets, must be satisfied to make the best use of their own common sense, good judgment and careful study of duty, and simply presume the guidance they cannot distinguish.

What we call the guidance of the Spirit is, then, the best use of our own judgment; and it is faith that tells us that a divine influence has settled our cause to be right. Men differ in their judgments, and so differ in the guidance they have received. The best we can say, when it comes to the final result, is that this result of the resolution of all these divine forces is a divine result—and of this we need not be too sure, for a wrong result has, in the history of the Church, continued for ages.

But the doctrine of the guidance of the Holy Spirit differs very little from very old formulations of religious freedom. It has been called the right of private judgment, the liberty of prophesying, the liberty of dissent, the free interpretation of Scripture, the essence of Protestantism, and sanctified common sense. To say that the Church and its members enjoy the guidance of the Spirit is practically the same thing as to claim the privilege to judge for themselves what is true and right, uncontrolled by tradition, creed-formula or written text. One statement of this principle we may presume is as true as the other; for when a man uses all the knowledge, science, reason and good will he can command and reaches a judgment, it is his own judgment and he does it, and can claim it for himself; but at the same time he has the right to believe that the divine Spirit of all truth, the very God who rules the intangible realm of good reason and truth, is with and behind the data, the process and the conclusion. Thus Dr. Bradford may say that it is the Spirit of God that has guided the Church in

its forward conquest of truth, while a less mystic mind may insist on the right of private judgment and the conclusions of study, reason and common sense.

For the end is the same, liberty; the breaking of the bands of fettered truth, the constant reconstruction of creeds, and the right every year for every man, in his own best and reverent way, to discover what truth God has left open to his search. No falser mark of religious truth has ever been formulated than that which describes it as what has been held "always, everywhere and by all." There is no truth about God our Father or man our brother that has been held "always" or "everywhere" or "by all." With only the historian's regard to the teaching of the past, but bringing every dearest, most treasured inheritance of belief to the severest, yet most devout, test of present knowledge of fact and duty, we must ever revise our creeds. The process will be that of human reason, and the result it is our right to believe will be under the guidance of the divine Spirit.

The End of the Fair

Fairly successful as was the Louisiana Purchase Exposition, it is to be hoped that we shall not have another international exposition for twenty-five years. The country has had enough of them; now let Italy and Japan take their turn. And yet the St. Louis Fair was the biggest the world has yet seen, and it paid its expenses, returning to the United States Government the $5,000,000 appropriated, quite to the surprise of the Congressmen who voted it. If the attendance was not as large as at Chicago, it is because St. Louis is not as central to population as is Chicago; and, further, the people who saw Chicago and Buffalo were somewhat satiated with fairs. The St. Louis Exposition was magnificent in its displays and in its buildings, but it had nothing especially new to bring us. The Philadelphia Exposition was a lesson in art to our artisans. The Chicago Exposition was a lesson in architecture and in the possibility of parks. The Buffalo Exposition showed us the magnificent progress of electricity. The St. Louis Exposition had no such great lesson to add to what had gone before. It was beautiful, it was grand, it was immense, but it had no new note of progress. But there is every occasion to congratulate President Francis and those associated with him in the great success of their great undertaking.

The Honor of Dead Ladies

The system of interpellation in foreign legislative bodies which permits any member to demand an answer from the Government on any of its acts has certain disadvantages. Just now the Chamber of Deputies is forced to stop action on three such important measures as the income tax, old age pensions and the abolition of the Concordat while it discusses the question of the right of Joan of Arc to be called the Maid of Orleans, a point obviously impossible to settle unless some spiritualistic medium can get a communication from the Duke of Bedford. The trouble arose in a theme presented by a pupil in a Paris high school, in which the Roman Catholic view of the beatified Joan was presented. The professor of history, M. Thalamis, ventured to criticise the legend of miracles, and such an uproar resulted that the Minister of Public Instruction was forced to change him from the Lycée Condorcet to the Lycée Charlemagne on account of his "lack of tact." The Ministry was defeated by 16 votes on this question, and only the personal intervention of Premier Combes prevented its downfall. M. Jaurès, the Socialist leader, is to fight a duel with M. Deroulède, the exiled Nationalist, and the usual processions and street riots have occurred. The Catholic students place wreaths on the statue of Joan of Arc in Paris, because she is a semi-saint; the infidel students do the same, because she was "abandoned by her King and the nobles and burned by the Church." Evidently it is as unsafe to say anything against Joan of Arc in France as it is to suggest in Scotland that Queen Mary was other than the best and purest of women. Who can say that the age of chivalry is dead when

men are willing to fight for the reputation of a woman who lived 500 years ago?

Mrs. Gilbert It is only a few weeks since that we called our readers' attention to the farewell tour of Mrs. Gilbert, the oldest actress in the world. "I am not a Patti," she said, and these words have received a sad confirmation in her sudden death in Chicago last week. In the length of her career and number of her friends she reminds one of Joe Jefferson, but while he has confined himself chiefly to Rip Van Winkle, Mrs. Gilbert has in her time played some 500 parts. She was born in a Methodist family on an English farm in 1821. She first appeared on the stage as a ballet dancer, and it was not until she was 36 years old that she attempted acting. This winter for the first time she appeared as a "star" in a play entitled "Granny," written for her by Clyde Fitch, in which she showed the naturalness and charm characteristic of all her work. Her kind heart and lovable disposition had endeared her to three generations of playgoers, and there were always wet eyes in the audience as she stepped forward to give in the old style way her epilog, ending with the words:

"Goodby, old friends, new friends, my children every one of you!
Listen, for it's true, I love each mother's son of you!
For wealth, for fame, my goodness, I don't care a filbert!
If only in your hearts you'll keep old Mrs. Gilbert."

It is from citizens of Alabama that petitions are coming that Representative Heflin, of the Fifth Alabam district, be expelled from Congress. In a speech at Tuskegee he said (and he now calls it a *joke*):

"There they sat, Roosevelt and Booker, and if some Czolgosz or one of his kind had thrown a bomb under the table no great harm would have been done the country."

The circular petition says that in the same speech, referring to the lynching of negroes at Staterville, Ga., he said it was "the sending off of a few more Republicans singing, 'Nearer, my God, to Thee'"; and it adds that this was a brutal allusion to the death of President McKinley. Certainly a man who could suggest the assassination of the President is not fit to be allowed in any decent body of men. It is for no worse language that we put Herr Most and Emma Goldman in prison.

It is a curious discovery, and seems to be justified, which is announced by Mr. Maunder, superintendent of the solar department of the Greenwich Observatory, that the magnetic storms which disturb the compass and the telegraph wires and produce the aurora not only are caused by sun-spots, but that they occur regularly at intervals of twenty-seven and one-third days, just the time it takes the revolution of the sun to bring the place of a sun-spot back again. The magnetic storm is repeated, even altho the spot itself has disappeared, as if there were an influence still being emitted. Mr. Maunder also finds that it takes about twenty-six hours for the electric influence, whatever it is, to travel from the sun to the earth. This observation is likely to throw considerable light on the nature of the emissions we receive from the sun.

One good way to deal with college hoodlumism is that taken by the city authorities at New Haven, where a committee of the freshman class was compelled to go to the city officials and make humble apology for damage done on Halloween night and to pay all damages and return confiscated property found by the police in the students' rooms. Another good way is threatened in California, where students are to be criminally prosecuted for very serious injury done to another student as a result of which he is partially paralyzed. Such lessons teach a more correct view of what is fun.

It is by no means as assured as it seemed that the union between the Northern Presbyterians and the Cumberland Presbyterians will take place. We see that the presbyteries of the Cumberland Church are dividing about equally upon it, and many of them have delayed action until their spring meetings. A

new anxiety among them is their fear for their uneducated ministers. Meanwhile the presbyteries of the Northern Church are waking up to the proviso that there may be separate presbyteries for negroes. This old slavery question is also blocking a hopeful union between the United Presbyterians and the Associate Reformed Synod of the South.

Here is a lesson from the heathen. In the district of Wan-hien, the province of Sz-chuen, China, there was a terrible drought. No rain fell for thirty-one days, at just the time when rice was to be transplanted. Famine stared the people in the face. They prayed, they fasted from meat, fowls, eggs; they made vows, but still no rain. At last they decided that the anger of the gods was for some sin, and concluded that it was for the sin of growing opium. Thereupon they all agreed to grow no more opium. They gathered and burnt before the idols all their poppy-seed. They signed their words each with his own blood. Then the rain came.

The record of crimes of violence in South Carolina has been published by a Charleston paper and it is impressive. It covers 32 out of 41 counties, and the ten months of this year. There are recorded 160 homicides, or five to a county, or about one homicide every other day. No white man was convicted of murder and sentenced to death, but eight were convicted of manslaughter and 16 acquitted. Two negroes were convicted of murder and sentenced to be hanged; several others convicted of murder were recommended to mercy, and 20 convicted of manslaughter. In many cases no arrests were made. Is this civilization?

The derivation of the name *Roosevelt* attracts attention. That it was originally a German Jewish name, *Rosenfeld*, as a Russian paper asserted in explanation of the President's regard for oppressed Jews, is a pure invention; but we have from Dr. D. B. St. John Roosa, of this city, not only the positive assertion that, Browning to the contrary notwithstanding, *roos* can in Dutch mean only *rose* and not *horse*, and he adds the further important evidence that "in Holland the seals, to be easily found, Rooses and Roosevelts, often have roses as part of their crest, never a horse."

The difference is striking between the war spirit in the two countries. In Japan the soldiers march in procession to enlist, accompanied by their triumphant friends; we hear of none running away. In Russia the conscripts hide away and flee the country by thousands, while mobs resist the conscription. There must be a reason for the contrast, to the credit of one country and the discredit of the other. Let Russia once give its people as much liberty as does Japan, and we shall see there as much patriotism and here as much sympathy.

It was by an unaccountable heterophemy that we last week substituted the name of the late Mr. S. P. Avery for that of Henry G. Marquand as the distinguished President of the Metropolitan Museum. Mr. Avery was one of the founders and benefactors of the Museum, but his great gift of an architectual library of 15,000 volumes was to Columbia University. Mr. Marquand's main gifts were of priceless paintings to the Museum.

Oxford sticks to compulsory Greek, by a vote of 200 to 164, and probably Cambridge will follow the example. This means that candidates for honors in mathematics and natural science cannot escape the old full classical course. In the present breadth of learning it is too late to require that chemists and electricians should study two classical languages. More German and French would be better for them.

The danger of militarism in our country is not very great. Secretary Taft's report shows an array of 60,183 officers and men, less than one to a thousand of our population. The people are in no great danger while the army is being steadily reduced from its legal limit of 100,000 men.

Insurance

Plowing Furrows to Stop Progress of a Ground Fire in the Adirondacks

Forest Fires of 1903 in New York State

THE report of William F. Fox, the Superintendent of Forests for the State of New York, has recently been published by the Forest, Fish and Game Commission of the State. From this report it appears that New York in common with other States suffered from forest fires to a larger extent during 1903 than usual because of prolonged spring droughts which prevailed and which produced conditions especially favorable to such fires. Woodland fires in the Adirondack region generally occur in April or May. The ground at this time is covered with many dead leaves, which under the influence of the first warm sun and a south wind become so dry that a single spark will ignite them. Under such conditions the spread of a forest fire is exceedingly rapid, and if in its progress it reaches the dry refuse of an old lumber job the flames quickly pass beyond control, and great damage results. The total direct loss during the period covered by the report was, in point of fact, between $3,000,000 and $4,000,000.

Forest fires are sometimes due to carelessness in regard to camp fires, but in the majority of cases such fires originate from locomotive sparks. During the early part of 1903 the conditions were such that incipient fires sprang up after the passage of nearly every railroad train. Smoke and flames bordered a long stretch of the line of the New York Central, except where, for eight miles, it passed through the private preserve of Dr. William Stewart Webb, who personally employed a large number of patrols, who were kept constantly on duty to extinguish the locomotive sparks that fell along the road. The fire wardens could not follow this example, since under the present law defining their duties the employment of men is not permissible until a fire is seen. No provision exists for patrolling or for the prevention of fires. When the absolute necessity became apparent, however, some attempts were made in the direction of patrolling, in spite of the inadequate framing of the law.

In the forests of Germany, altho traversed almost everywhere by railroads, there is practically no loss caused by sparks from locomotives. This is due to the fact that when timber cuttings have been made in German forests the tree tops, limbs and brush are entirely removed, leaving the forest floor clean and free from inflammable material. The conditions prevailing in the Adirondack regions and abroad are by no means the same, but it is certain that something might be done to lessen the danger from domestic forest fires. Some conflagrations mentioned in the report were due to incendiaries and degenerates, prompted by malice, revenge or criminal instincts. Strong and apparently well grounded suspicion exists that certain forest fires have been started by men in order to obtain employment as fire fighters. Enormous losses have resulted because of forest fires, detailed figures regarding which appear in the report. The subject seems to be most important, and is one to which public opinion may well be seriously directed.

Financial

Dividends Out of Capital

THE decision of Justice Clarke, of the New York Supreme Court, in the suit against a director of the American Malting Company ought to exert a wholesome and restraining influence. This concern was a combination, organized in 1897, with a capital stock of $30,000,000, half of it in 7 per cent. preferred shares. The directors proceeded to pay eight quarterly dividends on the preferred stock outstanding, the entire sum thus disbursed being about $1,855,000. By the third of these dividends a deficit of $142,000 was caused, and the remaining five were paid out of capital. After the payment of the eighth, in November, 1899, the serious condition of the company could no longer be concealed. It owed millions, needed working capital, and found it difficult to borrow. To raise money $4,000,000 of 6 per cent. bonds were issued, at a cost of $400,000 in discounts and an annual interest charge of $240,000.

Two stockholders sued each of the directors. This decision is in the case against Alexander M. Curtiss. Other similar cases are pending. The court holds that Mr. Curtiss is liable to the company's stockholders in the sum of $1,087,074, this being the sum of the unlawful dividends authorized at meetings at which he was present. The law is plain enough. It says that dividends, if paid at all, must be paid out of net profits or the surplus on hand. These dividends were paid out of neither, but out of capital, and were clearly illegal. Justice Clarke remarked that to ask directors to obey the law did not seem to him to be asking too much. The decision shows how stockholders can defend their interests by bringing lawless directors into court, if such directors have assets enough to satisfy a judgment against them. In this instance it is not shown that the directors declared and paid the unlawful dividends for any speculative purpose, having in mind their personal profit. But many instances may be recalled of the payment of unwarranted and unlawful dividends to sustain the market price and enable those who came in "on the ground floor" to unload their shares upon the public. Such dividends are useful in promoting the "distribution" of stock, and the discontinuance of them permits the sellers to regain their holdings at very low figures. The law used in this case of the Malting Company appears to be available for the protection of stockholders in any company whose directors have been paying dividends out of capital.

OWING to a revival of trade, the railroads having terminals at New York have within the last six weeks restored to their pay rolls 20,000 men who were dropped in the early part of the year.

....The cotton market was depressed on Saturday last by the Government's report showing a crop of 12,162,000 bales, which exceeds by 900,000 bales the largest crop heretofore produced.

....A night and day bank, to be open for business every hour in the twenty-four, is to be established in New York, with offices in the neighborhood of Fifth Avenue and Forty-second Street.

....The Reichstag, at Berlin, has adopted a resolution asking the Government to introduce a bill for the protection of the middle commercial classes against great accumulations of capital in the retail trade.

....The Lackawanna Steel Company, whose works are at Buffalo, enters the Steel Rail Pool with an allotment of 15 per cent. of the output. Possible competition having thus been averted, it is expected that the pool price of $28 per ton (for buyers in this country) will be maintained.

....Dividends announced:

Westinghouse Elect. & Mfg. Co., Preferred, 2½ per cent., payable January 15th.

Interborough Rapid Trans. Co. (Manhattan R'way Div.), 1¼ per cent and extra ¾ per cent., payable January 3d.

Chicago Great Western R'way (5 per cent. Debentures), $2.50 per share, payable January 15th.

West Side Bank, 6 per cent., payable January 3d.

The Independent

Vol. LVII NEW YORK, THURSDAY, DECEMBER 15, 1904 No. 2924

Survey of the World

Annual Message of the President

The President's message is a long one. At the beginning he speaks of the "noteworthy prosperity" which the nation "continues to enjoy." Emphatic approval of the principles underlying the governmental policies to which, in part, this prosperity is due has been expressed by the people, who have thus shown "their desire that these principles be kept substantially unchanged, altho, of course, applied in a progressive spirit to meet changing conditions." Except in the foregoing words there is no reference in the message to tariff revision, nor is there any mention of reciprocity or the race question in the South. As the message would fill 23 pages of THE INDEPENDENT, our summary must deal briefly with only the leading parts of it. Much space is given to questions of organized labor and organized capital and to the problems presented by the change in industrial conditions during the last half century. The organization of labor, Mr. Roosevelt says, should be encouraged "so long as it is conducted with a due and decent regard for the rights of others":

"But when any labor union seeks improper ends, or seeks to achieve proper ends by improper means, all good citizens, and more especially all honorable public servants, must oppose the wrongdoing as resolutely as they would oppose the wrongdoing of any great corporation. Of course, any violence, brutality or corruption should not for one moment be tolerated. Wage-workers have an entire right to organize, and by all peaceful and honorable means to endeavor to persuade their fellows to join with them in organizations. They have a legal right, which, according to circumstances, may or may not be a moral right, to refuse to work in company with men who decline to join their organizations. They have under no circumstances the right to commit violence upon those, whether capitalists or wage-workers, who refuse to support their organizations or who side with those with whom they are at odds; for mob rule is intolerable in any form."

Employees of the Government may, without objection, form unions or belong to them; but the Government can "neither discriminate for nor discriminate against non-union men who are in its employment or who seek to be employed under it." The existing law for the safety of railroad employees should be amended and strengthened, and there should be, the President says, a stringent employers' liability law in the District of Columbia and wherever the national Government has direct authority. He recommends the appointment of a Commission to study this question "with the view of extending the provisions of a great and Constitutional law to all employments within the scope of Federal power;" also, legislation requiring a block-signal system and limiting the hours of labor on railroads, and empowering the Government to investigate concerning railroad accidents. The Labor Bureau, which is about to make a report concerning the Colorado strike—"in which certain very evil forces, which are more or less at work everywhere under the conditions of modern industrialism, became startlingly prominent"—should have means to investigate and report upon labor conditions (wages, hours, the work of women and children, and the effect of immigration) throughout the country, and especially as to child labor in the several States.

Corporations and Railroad Rates

Labor has first place in the message, and the second is given to corporations. It is absurd, the President says, "to expect to eliminate the abuses in great corporations by State action, and it is difficult to be patient with an argument that such matters should be left to the States." The national Government alone can deal adequately with them. The people should continue to show moderation, an earnest desire to do no damage, and a quiet determination to eliminate or minimize whatever there is of evil. There should be a broad community of interest and good feeling between capitalists and wage-workers, and between both and the public. He quotes an address of President Mellen, of New Haven, as to what a great corporation's policy should be with respect to publicity and a due regard for public opinion. The Bureau of Corporations, he explains, is to accomplish its purposes by co-operation, not by antagonism; by inquiry, not by attack. It will give Congress all its facts, except those which should be withheld in the interest of competitors in legitimate business. As insurance is a business of national character, he urges Congress to consider whether the power of the Bureau cannot be extended under the Constitution to cover interstate transactions in it. The President then takes up the question of railroad rates, making recommendations which are causing much discussion:

"Above all else, we must strive to keep the highways of commerce open to all on equal terms; and to do this it is necessary to put a complete stop to all rebates. Whether the shipper or the railroad is to blame makes no difference; the rebate must be stopped, the abuses of the private car and private terminal-track and side-track systems must be stopped, and legislation of the Fifty-eighth Congress which declares it to be unlawful for any person or corporation to offer, grant, give, solicit, accept, or receive any rebate, concession, or discrimination in respect of the transportation of any property in interstate or foreign commerce whereby such property shall by any device whatever be transported at a less rate than that named in the tariffs published by the carrier, must be enforced."

Under a decision of the Supreme Court the Commission now has only the bare power to denounce a challenged rate as unreasonable, and cannot declare and enforce a reasonable rate in place of it. At present it would be undesirable, he says, finally to clothe the Commission with general authority to fix rates, but it ought to have power to decide, subject to judicial review, what shall be a reasonable rate in place of a challenged one, found, after full hearing, to be unreasonable; and its ruling should take effect at once, to remain in force unless reversed by the court of review:

"The Government must in increasing degree supervise and regulate the workings of the railways engaged in interstate commerce; and such increased supervision is the only alternative to an increase of the present evils on the one hand or a still more radical policy on the other. In my judgment the most important legislative act now needed as regards the regulation of corporations is this act to confer on the Interstate Commerce Commission the power to revise rates and regulations, the revised rate to at once go into effect, and to stay in effect unless and until the court of review reverses it."

Other Topics and Recommendations

The Filipinos, Mr. Roosevelt says, are at present utterly incapable of existing in independence at all or of building up a civilization of their own; but we can help them to rise, and he hopes "that in the end they will be able to stand, if not entirely alone, yet in some such relation to the United States as Cuba now stands." This end may be indefinitely postponed if our people "are foolish enough to turn the attention of the Filipinos away from the problems of achieving moral and material prosperity toward foolish and dangerous intrigues for a complete independence, for which they are as yet totally unfit." Those of our people who have especially claimed to be the champions of the Filipinos "have in reality been their worst enemies." Our tariff on Philippine products should be reduced, and the pending bill to encourage the investment of American capital in railroads and various industries on the islands should be passed. Our foreign policy is considered in connection with the navy and the army. Our aim, the President says, should be to secure throughout the world the peace of justice, but our declaration and efforts should be supported by potential force.

Unrighteous war and unrighteous peace should be shunned. We should aid movements to obtain substitutes for war, and should keep prepared to assist in exercising the international police power. Then he refers to the new arbitration treaties and the call for another Peace Conference. There should be "no halt in the work of upbuilding the navy." Our attitude toward South American countries is explained in accordance with the terms of the letter of Mr. Roosevelt that was read at the Cuban banquet. "We would interfere with them only in the last resort, and then only if it became evident that their inability or unwillingness to do justice at home and abroad had violated the rights of the United States or had invited foreign aggression to the detriment of the entire body of American nations." In connection with remarks concerning the propriety of expressing disapproval of crimes committed on a vas scale abroad, Mr. Roosevelt says it is inevitable that a nation should desire to express its horror at such an event as the Kishenef massacre or at such cruelty and oppression as the Armenians have suffered. The conduct of Russia in making it difficult for American Jews to obtain passports and to travel in that country is characterized as "unjust and irritating." He asks for a law against bribery and corruption in Federal elections, with

"provisions for the publication not only of the expenditures for nominations and elections of all candidates, but also of all contributions received and expenditures made by political committees."

Alaska is the subject of a long passage, in which many changes are recommended for the improvement of the government and the good of the natives. The territory should have a delegate in Congress. Pointing to an alarming increase of the cases of fraudulent or improper naturalization, the President asks for a thorough revision of the naturalization laws. The need of a field assistant to the Commissioner of Indian Affairs is explained. Lands should be set aside as refuges for the large wild beasts, and the Cañon of the Colorado should be a national park. Washington should be made a model city. An inquiry as to sanitary conditions and the housing of the poor there should be made by a special Commission. Severe laws relating to child labor and factory inspection should be enacted. Wife-beaters should suffer some kind of corporal punishment. Married women should not work in factories:

"The prime duty of the man is to work, to be the breadwinner; the prime duty of the woman is to be the mother, the housewife. All questions of tariff and finance sink into utter insignificance when compared with the tremendous, the vital, importance of trying to shape conditions so that these two duties of the man and of the woman can be fulfilled under reasonably favorable circumstances. If a race does not have plenty of children, or if the children do not grow up, or if when they grow up they are unhealthy in body and stunted or vicious in mind, then that race is decadent, and no heaping up of wealth, no splendor of momentary material prosperity, can avail in any degree as offsets."

Questions Before Congress

It has been decided that there will be no special session of Congress for tariff revision next spring, but there may be one in October, altho those who have been accustomed to direct the course of legislation in the Senate and the House prefer that there shall be no special session at any time next year. The advocates of revision have encountered very formidable opposition, especially in the Senate. Among them is Senator Hopkins, of Illinois, who, as a member of the Ways and Means Committee, helped to frame the Dingley law, and who now says that unless his party revises the tariff now he can't see how it can afford to discuss the question in the next Congressional campaign. He adds that it was well understood that the Dingley duties were made higher than they should have been because it was expected that reciprocity treaties would reduce them. In New York the Union League Club has passed by unanimous vote a resolution earnestly requesting Congress to investigate the tariff question "with the view of making such changes in the present rates as will remedy unjust conditions, if any such exist."—Altho the President has so earnestly recommended that the Interstate Commerce Commission be empowered to fix and enforce a reasonable

freight rate in the place of one challenged and found to be unreasonable, it is thought in Washington that neither the Quarles bill (in the Senate) nor the Cooper bill (in the House), both of which provide for this change in the law, will be passed at this session. Neither of them may even be reported from committee. They are opposed by the railroads and are disapproved, it is said, by many influential Republican Senators and Representatives. Commissioner Prouty remarks that there will be either Government regulation of railroads or Government ownership. On the evening of the 6th, following the publication of the message, fourteen railroad presidents, representing the leading companies, assembled at a dinner in New York and discussed the message's recommendations. The sharp decline of stocks on the 7th and 8th was ascribed in part to a prevailing belief that they regarded the rate recommendation as something that should be strenuously opposed. It was known, however, that one cause of the decline was the campaign of Mr. Lawson, of Boston, against certain corporations.—Senator Platt, of New York, has introduced a bill to reduce representation in the South. It provides for a reduction amounting to 19 members of the House. Action upon it at this session is not expected.—The President has again nominated Dr. Crum to be Collector at Charleston, and the nomination will probably be confirmed, as Mr. Tillman will resort to no obstructive motions. —In the House Mr. Cockran has introduced two bills, one providing for an inquiry concerning the party campaign funds of the last three Presidential campaigns by a non-partisan commission, and the other requiring a prompt publication of the contributions received and expenditures made by the campaign committees.

For a Canal at the Sea Level

It may be that the Panama Canal will be constructed at the sea level. Members of the House Committee who returned from the Isthmus last week are convinced that this ought to be done if the conditions will permit it without a prohibitive increase of cost. This is also the opinion of Senator Kittredge, acting chairman of the Senate Canal Committee, who accompanied these Representatives in their journey to the Isthmus, and who says it would be a waste of money to follow the present plan for a canal with a summit level and several locks. It is roughly estimated that the proposed change of plan would increase the cost by $100,000,000. Senator Perkins will introduce a bill directing the Commission to develop a plan for a cut at the sea level and to report as to the cost. The result of the borings now in progress at the site of the proposed Bohio dam may affect the decision of this question. Borings made by the French company proved to be misleading; our own engineers have not yet found a firm foundation at the bed of the Chagres River, altho they have gone to a depth of 165 feet. It is said that Chief Engineer Wallace regards a sea-level canal as a feasible project; a report soon to be made by him will deal with this subject. In even a sea-level canal one tidal lock would be required.—Much dissatisfaction concerning the Commission is expressed by the Representatives who went to Panama. It is said that there are too many Commissioners and that they have not been in agreement. Three, it is said, would be enough; if there must be seven there should be an Executive Committee of three and the members of it should remain on the Isthmus. Such a committee was suggested by General Davis, but he was outvoted.—There is a demand for an inquiry by Congress concerning the Panama Railroad Company, which is now owned by our Government, but which has an exclusive traffic agreement with the Pacific Mail Steamship Company, and this company is controlled by the Harriman (Union Pacific and Southern Pacific) transcontinental railroads. This agreement appears to be one in unlawful restraint of trade. Probably it will be abrogated after the required notice of six months, which may soon be given. The road has been a very profitable one.—In a public address at Panama on the 5th Secretary Taft said he confessed that he had made a great mistake in signing an order to enforce the Dingley tariff at the boundaries of the Zone. The order was made against the advice of Governor Davis, and it had been the

chief cause of friction between the two Governments. "The United States," he continued, "does not covet a single foot of your soil. It has guaranteed your independent, peaceful and prosperous career. It only desires to retain the powers necessary for the investment of $300,000,000, and its rights to build, I hope, a sea-level canal." An agreement has been signed providing that all cargoes landed at Zone ports must present a Panaman consular invoice from the port of shipment. It has been decided at Washington that the Zone is foreign territory so far as emigration to the States from it is concerned.—The holders of Colombian bonds in London have asked President Roosevelt to act as arbitrator in deciding for what part of the Colombian foreign debt Panama should be responsible.

Washington Notes

It appears to be expected in Washington that Secretary Shaw will retire from the Cabinet on March 4th, and it is reported that he has not been invited to remain in office. Some newspaper correspondents say that he is not fully in harmony with the President owing to his attitude toward civil service reform and his opposition to any movement for tariff revision. He is a candidate for the Presidential nomination in 1908, and some say that for this reason his continued presence in the Cabinet might be embarrassing.—Ex-Senator Carter, chairman of the National World's Fair Commission, says in a published letter that "most grave and serious charges of corruption in connection with the awarding of certain premiums have been filed with the Commission." As the Exposition Company did not comply with the law by submitting the appointments of jurors to the Commission for approval, he adds, it is the Commission's duty to investigate these charges before approving the awards. It is said that the charges relate to not more than 50 of the premiums.—Owing to the complaints of tobacco growers in Tennessee and Kentucky, the Department of Justice has begun an inquiry as to operations of the combination of manufacturers commonly known as the Tobacco Trust.—It is understood that, altho the imposition of discriminating duties upon all imports brought in foreign ships has been a favorite project at nearly all the hearings of the Merchant Marine Commission, it will not be recommended by the Commission, because 40 per cent. in value and 60 per cent. in bulk of our imports are now free of duty, and the public would not like to see the cost of them increased by 10 per cent. even for the subsidizing of American ships.—Official reports show that Mr. Burnett, United States District Attorney at New York, has received during the last six and one-quarter years $273,300 in fees, in addition to his annual salary of $6,000. Provision for the payment of these fees to him, on account of customs cases, is made by a law which will now probably be amended.

French Politics

There have been rather more than the usual number of sensational incidents in French politics during the past week. M. Syveton, who struck General André, the Minister of War, in the Chamber of Deputies, died from asphyxiation by gas escaping from an unlighted stove in his room on the day when his sentence of expulsion from the Chamber expired. There are three theories of his death held by various political factions. One is that it was an accident, tho it is difficult to understand how a man at work at his desk in the daytime could be overcome by gas before noticing the odor. By others it is thought to have been a suicide, due to his apprehension of being condemned to imprisonment for two years at his approaching trial for his attack upon a public official. His friends assert that he was murdered by the Masons on account of his exposure of their methods of espionage into the private life of the officers of the army. On the question of the use of spies in determining the qualifications of civil and military officials Premier Combes has had to withstand a strong attack from friends and foes, led by M. Ribot, a Conservative Republican and former premier, and M. Millerand, a former member of the Waldeck-Rousseau cabinet and Socialist. So far, however, he has succeeded in holding

his position, tho by very small majorities. The question of the virtue of Joan of Arc still serves as an occasion for the display of political and religious animosities. The duel arising from this question between M. Jaurès, the Socialist leader, and M. Déroulède took place on French soil near the Spanish frontier, by tacit permission of Premier Combes and in the presence of gendarmes, notwithstanding the fact that M. Déroulède is in banishment in Spain for conspiracy under penalty of imprisonment if he enters France. The duelists exchanged two shots without effect. The Chamber is now giving its attention to the income tax proposed by the Government, a measure which makes radical changes in the present fiscal system and is strongly opposed by those on whom the new taxes will come heaviest. At present $40,000,000 is raised by taxes based on such indirect indications of financial ability as doors and windows. The new plan contemplates raising $26,400,000 by taxing individual incomes and $12,000,000 by taxing rentals of real estate. The tax on incomes is graduated, incomes under $500 being exempted. Over $500 the rate gradually increases, the highest rate being about 2 per cent. on incomes above $4,000. The tax applies to foreigners having a furnished residence in France or receiving revenues from French investments.

The Nereg Massacre

We have received the following account of the massacre of October 10th and 11th at Nereg, Armenia, from an eyewitness: Friday night, or before daylight Saturday morning, a band of 18 Armenian revolutionists entered the village of Nereg, located about 30 miles southwest of Van. They demanded about 100 bushels of wheat, which the villagers were to carry to the top of the neighboring mountain on Sunday night. Sunday evening, just before sunset, the village was surrounded by soldiers and zabtiehs, who opened fire on the revolutionists, who had been betrayed by a Kurd spy named Abdul Kafur, a professed friend of the revolutionists. After sunset, but before dark, the revolutionists started for the mountain. Two zabtiehs, one of them a brother of Abdul Kafur, had intrenched themselves in a hole near the road and fired at the revolutionists as they approached; in the fight that ensued Abdul Hamid, brother of Abdul Kafur, and a notoriously bad man, was killed, whereupon the soldiers and zabtiehs fled. The following morning the Government forces returned, and finding none but the oldest men and a few boys and children in the village they set fire to the monastery. Then the soldiers withdrew and zabtiehs handed the village and Armenians generally over to the Kurds, headed by Abdul Kafur, with *carte blanche* to rob, murder and burn as they pleased. Two old men, aged 110 and 75, were murdered and stripped in the village. The village was completely pillaged and each house set on fire as soon as pillaged. All Armenians found on the road or in the fields and some in the neighboring villages were robbed and murdered, some of them being horribly tortured. For example, one man named Nercess Bozigian, a shoemaker of good character, was thrown down, his clothing set on fire and then dry grass thrown upon him, and either before or after this, probably before, he was slashed and cut with knives, an attempt being made to write Turkish on his body with a sharp knife. Another man had ten stab wounds, another four bullet wounds. One man's head was battered to a pulp. The bodies of twenty men and boys were found. Many cattle were burned to death. So far as known no woman was killed, but several were wounded. Abdul Kafur took a child from its mother's arms, and, finding it a male, rolled its head under his foot until the skull was fractured and blood ran from its ears. The frantic mother snatched the child away and ran with it. It is still living, but there is little hope of recovery. Village houses are so built that it is impossible to reckon by houses. One hundred and eight living rooms and stables, etc., were destroyed by fire and many other places were damaged, but not destroyed. The Kaimakam, Lutvy Bey, made no effort to save the villages and purposely kept away from the scene of ravage. The Vali promises punishment of the guilty parties and return of the stolen property. He has ordered distribution of grain to the people, who are starving. Nothing

done yet. Zabtiehs, sent to get bread for the sufferers from a Kurdish village whither plunder had been carried, went to an Armenian village and compelled them to furnish bread freely, the larger part of which they appropriated for themselves.

The Port Arthur Fleet Sunk

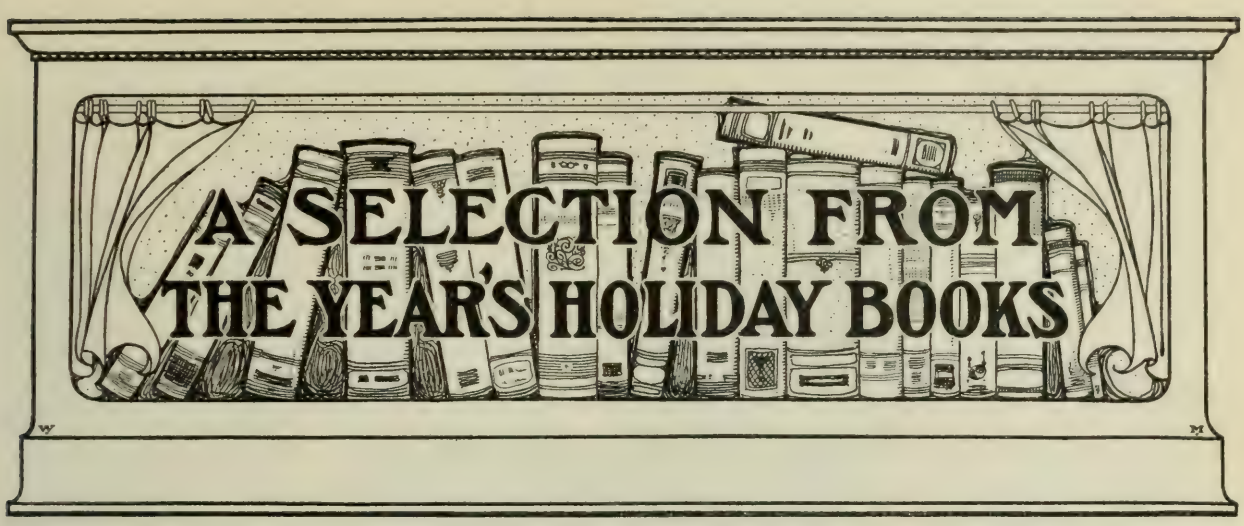
As soon as the large guns could be mounted on 203-Meter Hill the Japanese began the bombardment of the Russian battleships and cruisers in the harbor, and most of these are now reported to be sunk or disabled. No signs of life appeared on the Russian ships, and it is thought they had been abandoned and possibly scuttled. The Russian authorities at St. Petersburg are said to be disappointed that the fleet did not attempt a sortie instead of remaining inactive to be inevitably destroyed. Eight shells struck the cruiser "Pallada," which then began to list to port. The cruiser "Bayan" was hit six times and set on fire. The battleships "Peresviet," "Poltava" and "Retvizan" were struck by over 30 shells each, and are submerged to their upper decks. The mine ship, or transport, "Amur" was hit 14 times and sunk. The battleship "Sevastopol" was sheltered behind a hill, and it is uncertain how much it is damaged.

Newspaper correspondents in the field about four miles above Port Arthur, discussing with a Japanese officer the lay of the land. Japanese trenches are seen cut in the side of the mountain just ahead. In the valley beyond are the white tents of a part of the Third Army Division. This photograph was taken between the dates of September 13th and October 8th. Copyright, 1904, Underwood & Underwood, N. Y.

The torpedo boats and destroyers are now being bombarded. In the fight of November 30th General Nogi's second and only remaining son was killed. His eldest son was killed in the battle of Nan-Shan Hill. The Japanese cruiser "Saiyen," while assisting in the bombardment of Port Arthur on November 30th, struck a Russian mine and sank, with the captain and 38 men on board. The "Saiyen" was originally a Chinese cruiser and was captured by the Japanese in the battle of Wei-Hai-Wei in 1895.—The second division of the Baltic squadron, under Rear-Admiral Voelkersam, sailed after coaling from Djubutil, French Somaliland, for Madagascar on December 10th.—Operations along the Shakhe River are confined to skirmishes, night raids and the bombardment of intrenched positions.

Russian Reform Movement

The prospects of the movement in favor of a more liberal and constitutional government are still uncertain. The most contradictory reports are circulated as to the attitude and opinions of the Czar and Czarina. The Grand Duke Sergius, uncle of the Czar and Governor-General of Moscow, and Mr. Muravieff, the Minister of Justice, are both reported to have resigned because of the encouragement given by Prince Sviatopolk-Mirsky, Minister of the Interior, to the liberal movement and the refusal of the Czar to dismiss him on account of it. Permission to return was accorded to all members of the Finnish Diet who had been exiled for political misdemeanors, and the Czar's speech at the opening of the Diet, from which we quote, is regarded as mild and conciliatory under the circumstances:



"The measures enacted for the suppression of resistance to the laws which unite the empire and the Grand Duchy of Finland have only a temporary character, and will be abolished by me joyfully as soon as the Governor-General announces that cause for these measures has ceased to exist. The other laws, such as the imperial manifestos of February 15th, 1899, and June 20th, 1900, dealing with the use of the Russian language in the Finnish Senate, and that of August 12th, 1901, dealing with military service, will, as regards the main principles, remain in force, but I have had new measures framed for the purpose of limiting the application of these laws, appreciating the remonstrances regarding them by the Finnish Senate.

A conference of nineteen provincial marshals of the nobility, who are *ex officio* heads of the zemstvos, was held in Moscow at the residence of Prince Troubetskoy, in which they unanimously approved the memorial in favor of a constitutional government presented by the Executive Committee of the zemstvos at their recent meeting in St. Petersburg. They also took the significant action of unanimously recommending that the fund subscribed by the nobility in honor of the birth of the heir to the throne should be devoted to village schools instead of using it for a naval college, as proposed. The Town Council of Moscow unanimously adopted the proposal of Prince Galitzin, Mayor of Moscow, to summon a conference of all the municipal councils of Russia to act in accordance with the zemstvos. It is understood that Prince Sviatopolk-Mirsky will relieve the large cities from the state of siege under which they now suffer by allowing the measure to lapse with the end of the year. The Social Democratic Labor party is not satisfied with the moderate demands of the zemstvos for a share in the government, but demands relief from industrial as well as political tyranny, and calls for the immediate stoppage of the war. In response to their call for a demonstration against the Government a large crowd, mostly of students and workingmen, assembled in front of the Kazan Cathedral at 1 o'clock on December 11th, waving red flags and singing the "Marseillaise." In accordance with the orders of Prince Sviatopolk-Mirsky dismounted police attempted to disarm the leaders and disperse the crowd without using harsh measures, but they were beaten back. The squadrons of mounted gendarmes concealed near the building then swept out upon the Nevsky Prospect and cleared the place. Over a hundred persons were injured by being trampled upon or struck with the flat of their swords, but the police were not as harsh in their methods as were the Cossacks in the riots of 1901. Such revolutionary manifestations will probably have a very bad effect upon the more moderate reform movement.

"She made them gallop around an imaginary ring."

The History of Portrait Miniatures from the Time of Holbein, 1531, to that of Sir William Ross, 1860, with a Chapter on Modern Work. A work of reference for the collector. By George C. Williamson, Litt. D. In two crown folio volumes, containing 104 plates, illustrating over 500 selected miniatures. Macmillan. $55.00.

Masterpieces Selected from the Kôrin School. With biographical sketches of the artists of the school and some critical descriptions. By Shiichi Tajima. Superbly illustrated with hand-painted and other wood cuts executed by Japanese artists. Bound in silk, with specially designed end papers. Tokyo: Shimbi Shoin. $20.00.

William Ward, A.R.A.; James Ward, R.A.; Their Lives and Works. By Julia Frankau. With 30 photogravures, and a folio portfolio containing 40 engravings in mezzotint and stipple, printed in monochrome and colors. Macmillan. $150.00.

Pictures by George Frederick Watts. Introduction and selections by Julia Ellsworth Ford and Thomas W. Lamont. Illustrated by many superb reproductions of Watts's paintings. Fox, Duffield. $5.00.

The Life and Art of Sandro Botticelli. By Julia Cartwright (Mrs. Ady). Rubricated titlepage, frontispiece in photogravure, with many reproductions of the artist's work. Dutton. $4.00.

Porcelain. By Edward Dillon, M.A. Illustrated with reproductions of famous examples of pottery in colors and otherwise. Putnam. $6.75.

Everyday People. By Charles Dana Gibson. Reproductions of original drawings. Scribners. $4.20.

Eighteenth Century Furniture. By Luke Vincent Lockwood. Descriptive of the Pendleton Collection. The Rhode Island School of Design, Providence, R. I. $150.00.

The Oriental Rug Book. By Mary Churchill Ripley. With illustrations, including color plates. Stokes. $3.00.

The Marks of American Potters. By Edwin Atlee Barber. With numerous illustrations. Edition limited to 1,000 copies. Edwin A. Barber, Westchester, Pa. $2.25.

Lace: Its Origin and History. By Samuel L. Goldenberg. With illustrations of ancient and modern laces. Brentano. $1.50.

The Lace Book. By N. Hudson Moore. For lovers and owners of lace. The lace of each country is considered separately, and each variety is described. Stokes. $5.00.

Flower Fables and Fancies. By N. Hudson Moore. With decorations by Frederick G. Hall. Illustrations and marginalia in tint. Stokes. $1.60.

Stories of Popular Operas. By H. A. Guerber. With illustrations. Dodd, Mead. $1.20.

Shakespeare's Heroines: Characteristics of Women, Moral, Poetical and Historical. By Anna Jameson. With 6 color plates and 70 halftone illustrations by W. Paget. Dutton. $2.50.

The Story of King Richard, from the Play of Shakespeare. Retold by Alice Spencer Hoffman. Illustrated by Dora Curtis. Dutton. 60 cents.

The Story of the Tempest, from the Play of Shakespeare. Retold by Alice Spencer Hoffman. Illustrations by Walter Crane. Dutton. 60 cents.

The Canterbury Tales of Geoffrey Chaucer. A Modern Rendering Into Prose of the Prologue and Ten Tales. By Percy Mackaye. Illustrations in color by Walter Appleton Clark. Fox, Duffield. $1.50.

British Poets of the Nineteenth Century. Edited by Curtis Hydden Page. Sanborn & Co.

The Rubáyát of Omar Khayyám. Translated by Edward Fitzgerald. With 12 photogravures after drawing by Gilbert James. Dutton. $1.50.

Sonnets from the Portuguese. By Elizabeth Barrett Browning. Decorations by Adrian J. Iorio. Frontispiece in photogravure. Bound in white, tooled in gold. Caldwell. $2.50.

The Poems of William Morris. Selected and edited by Percy Robert Colwell. Crowell. $2.00.

The Holy Grail. By Alfred Tennyson. Holiday edition, with ornate decorations in brown tint. Engraved frontispiece. Bound in ooze leather, with silk doublè. Caldwell, Boston. $2.50.

Poems of Childhood. By Eugene Field. With illustrations in color by Maxfield Parrish. Scribners. $2.50.

When Little Boys Sing. Words, music and pictures by John and Rue Carpenter. McClurg, Chicago. $1.25.

Over the Hill to the Poorhouse and Over the Hill from the Poorhouse. By Will Carleton. New edition, with illustrations by W. E. Mears. Harpers. $2.00.

London News. By Catherine A. Janvier. Harpers.

The Greek Poets: An Anthology. By Nathan Haskell Dole. Crowell. $2.00.

Yosemite Legends. By Bertha H. Smith. Illustrations and borders in color by Florence Lundborg. Paul Elder, San Francisco. $2.00.

Prosit: A Book of Toasts. Compiled by Cloto. Paul Elder, San Francisco. $1.25.

Maximes. By La Rochefoucauld. Wessels. $1.00.

The Entirely New Cynic's Calendar of Revised Wisdom. 1905. By Ethel Watts Mumford. Oliver Herford and Addison Mizner. Paul Elder. 75 cents.

The Log of the Griffin: A Story of a Cruise from the Alps to the Thames. By Donald Maxwell. With illustrations, some in color. Lane. $2.00.

Sketches on the Old Road Through France to Florence. By A. H. Hallam Murray and others. Copiously illustrated in color and otherwise. Dutton. $5.00.

Bright Days in Sunny Lands. With illustrations. By A. Van Doren Honeyman. Honeyman & Co., Plainfield, N. J. $1.75.

Mammy 'Mongst the Wild Nations of Europe. By Ruthella Mory Bibbins. Illustrated. Stokes. $1.25.

Paris and Its Story. By T. Okey. Rubricated

title-page. Numerous illustrations in color, tint and black-and-white by Katherine Kimball and O. F. M. Ward. Macmillan. $6.00.

Switzerland: Picturesque and Descriptive. By Joel Cook. Illustrated. Coates.

Imperial Vienna. An account of its history, traditions and arts. By A. S. Levetus. Illustrated. Lane. $5.00.

Italian Villas and Their Gardens. By Edith Wharton. Illustrated with pictures by Maxfield Parrish and by photographs. Century Co. $6.00.

The Road in Tuscany: A Commentary. By Maurice Hewlett. In two volumes. Macmillan. $6.00.

Oxford and Its Story. By Cecil Headlam, M.A. With 24 lithographs and other illustrations by Herbert Railton. The lithographs were tinted by Fanny Railton. Dutton. $8.00.

Edinburgh. By Robert Louis Stevenson. New edition. Scribners. $1.50.

Japan: An Attempt at Interpretation. By Lafcadio Hearn. Frontispiece in color. Macmillan. $2.00.

Highways and Byways of the South. Written and illustrated by Clifton Johnson. Macmillan. $2.00.

Denizens of the Deep. By Frank T. Bullen, F.R.G.S. With illustrations by Charles Livingston Bull and Theodore Carreras. Revell. $1.75.

Love Finds the Way. Paul Leicester Ford. With illustrations by Harrison Fisher and decorations in tints by Margaret Armstrong. Dodd, Mead. $2.00.

Petals of Love for Thee. By Edith Hall Orthwein. Decorations in color from water color sketches by W. H. Cuthbertson. Dodge Publishing Co. $2.00.

The Book of Clever Beasts: Studies in Unnatural History. By Myrtle Reed. With illustrations by Peter Newell. Putnam. $1.50.

Cats by the Way. By Sarah E. Trueblood. Illustrated by the author. Lippincott. $1.25.

The Luxury of Children and Some Other Luxuries. By Edward Sanford Martin. Illustrated by Sarah S. Stilwell. Engraved and rubricated title-page. Marginalia in tint. Harpers. $1.75.

Life of Christ for Little Children. Illustrations from the masters and illuminated after parchments of the fifteenth century. By Mary Mein Carter. A. J. Holman, Philadelphia.

The Mountains. By Stewart Edward White. Illustrated by Fernand Lungren. Frontispiece in color. McClure, Phillips. $1.50.

Red Cap Tales. Stolen from the treasure chest of the Wizard of the North, which theft is humbly acknowledged by S. R. Crockett. Illustrations in brilliant color. Macmillan. $2.00.

Cape Cod Folks. By Sarah P. McL. Greene. New edition, with illustrations. De Wolfe, Fiske & Co., Boston. $1.50.

In the Closed Room. By Frances Hodgson Burnett. Illustrations in color by Jessie Wilcox Smith. McClure, Phillips. $1.50.

The Well in the Wood. By Bert Leston Taylor. With illustrations in tint by F. Y. Cory. Bobbs-Merrill. $1.25.

Upland Pastures. By Adeline Knapp. Rubricated title-page. Frontispiece in photogravure. Edition limited to 1,200 copies. Paul Elder. $3.00.

The Little Kingdom of Home. By Margaret E. Sangster. J. F. Taylor Co. $1.50.

The Food of the Gods and How It Came to Earth. By H. G. Wells. Scribners. $1.50.

Kitty of the Roses. By Ralph Henry Barbour. Illustrations by Frederick J. von Rapp in color, marginalia in tint. Lippincott. $2.00.

New England in Letters. By Rufus Rockwell Wilson. Rubricated title-page. Illustrations in color. Wessels Co. $1.50.

Babes in Toyland. By Glen MacDonough and Anna Alice Chapin. With pictures in color by Ethel Franklin Betts. Fox, Duffield. $1.50

Emerson: Poet and Thinker. By Elisabeth Luther Cary. Illustrations in photogravure. Engraved title-page. Putnam's. $3.50.

Thomas Nast: His Period and His Pictures. By Albert Bigelow Paine. Macmillan Co. $5.00.

The Art of Caricature. By Grant Wright. Baker-Taylor Co. $1.00.

A Journey in Search of Christmas. By Owen Wister. Illustrated by Frederic Remington. With marginalia decorations in tint. Harpers. $2.00.

Is There a Santa Claus? By Jacob A. Riis Christmas tree and other marginalia Macmillan 75 cents.

THE holiday offering of books this season is not quite so important in an art sense as was the case last year. To this there are, however, some notable exceptions. In many cases color plates have been utilized this year, as was the case twelve months ago, but there seems to be a slight tendency toward economy in the matter of illustration. The popularity of the photogravure process in illustration shows no falling off. In the following notices a limited selection has of necessity been made from the best of the holiday books. The color plates included in the present issue of THE INDEPENDENT are all derived from current publications. They may be taken as fairly representative of this class of work.

One of the most important holiday books of the year is the new edition of *The History of Portrait Miniatures*, by Williamson, and in its present elaborate form includes a great deal of entirely new information. In preparing this book the author has received special facilities through Queen Alexandria for examining the royal collections in Copenhagen. The same sort of permission has been graciously awarded by the Czar of Russia, the King of Sweden and Norway, the German Emperor and the Queen of Holland with respect to the royal and imperial collections at St. Petersburg, Moscow, Stockholm, Berlin and The Hague, the miniatures and archives in which have been hitherto inaccessible to the student. The growing appreciation of miniatures as collection objects will make this volume an absolute necessity to those who wish a reliable book of reference upon the subject. The book contains a notable showing of miniatures by Richard Cosway.

In *Masterpieces Selected from the Kōrin School* there is an excellent presentation of attractive and decorative art that is typical of the Far East. The selections appearing in this volume have been judiciously made, and the book is well calculated to introduce to cultured people in all parts of the world the real

artistic value of Japanese art as exemplified in the works of Kôrin and of his principal pupils. Something like two hundred masterpieces have been selected for reproduction, the mediums used being either colored wood-cuts or fine collotypes prepared by specialists. The work in its entirety has been executed in Tokyo.

Julia Frankau has done a masterly piece of work in her biography of *William and James Ward,* with its wealth of illustration. The early original and vigorous style of James Ward, showing his strong but peculiar feeling for color, is set forth again and again in the numerous examples of this artist's work that are included in the present publication. Of William Ward, altho the elder brother, not so much is said biographically. That he as well as James was a valuable and successful engraver, however, is repeatedly demonstrated. The work of the two brothers is most beautifully reproduced.

Pictures by George Frederick Watts is an especially beautiful gift book, containing a very satisfactory selection of reproductions of the works of this painter. Appropriate poems accompany many of the pictures, and the book as a whole is a very excellent example of commercial book making.

Love and Life. From "Pictures by George Frederick Watts." Fox, Duffield

The Life and Art of Sandro Botticelli is an expansion of a smaller sketch which appeared last autumn. Botticelli is described both as a painter and a man. The volume includes much fresh light that has been thrown upon the career of one of the most remarkable painters of the Florentine Renaissance.

Dillon's *Porcelain* is concerned with a certain product of the potter that is known as porcelain or china. Its history is traced from its earliest beginnings down through the ages, and the various celebrated potteries are described, together with the products of such factories as that of Sèvres, Chelsea, Bow, Derby, Worcester, as well as that of old Japan and China. The book concludes with the reproduction of sundry marks on porcelain that mean so much to the collector.

Following his annual custom, Mr. Charles Dana Gibson has prepared a book this year which is the ninth in his series of published drawings. The pictures included are for the most part those which originally appeared in *Life* and *Collier's Weekly.* The present volume is entitled *Everyday People,* and includes some very characteristic as well as delightful drawings. Mr. Gibson is perhaps at his best in the vein of satirical humor, which enters into many of his drawings.

A monumental work by Luke Vincent Lockwood is entitled *Eighteenth Century Furniture.* The volume is concerned with the consideration and description of the celebrated Pendleton collection at Providence, R. I., which was accumulated during thirty years of active work on the part of the late Mr. Pendleton. The collection contains many unique pieces, which have been illustrated and described by the author. This is really a magnificent book.

During recent years a decided interest in Oriental rugs has been developed in this country, and a number of books have appeared having to do with the manufacture and identification of such rugs. *The Oriental Rug Book* gives the

characteristics of the leading Oriental rugs, and has a mass of material relating to the symbolism of color as well as the legends and myths that find a place in many of the Oriental rugs.

Mr. Edwin Atlee Barber, of the Pennsylvania Museum and School of Industrial Art, has accomplished a much needed work in his volume on *The Marks of American Potters*. His is the first attempt to furnish a complete list of marks used by American potters, which he has accompanied by historical sketches of the manufacturers themselves. The book will be enthusiastically welcomed by collectors of American pottery, and the chapter in which the marks of American potters so far as known are reproduced will be of great value in identifying specimens.

A Chippendale Wall Cabinet. From Lockwood's "Eighteenth Century Furniture." Copyright, 1904, Luke Vincent Lockwood

Lace: Its Origin and History, is a rather sketchy account of this product of the needle. The author has touched lightly upon the history of hand-made lace and has succeeded in gathering together some very satisfactory illustrations of this article of adornment.

The versatility of N. Hudson Moore has recently been strikingly exemplified. He has written as an authority on old china and old furniture. His most recent contributions to current literature are *The Lace Book* and *Flower Fables and Fancies*. In his lace book he has dealt with hand-made lace and has traced its history. Through his illustrations he has been able to show something of the delicacy and charm of the finer laces. In his *Flower Fables* he has collected charming fancies and conceits that linger around the rose, the lily, the violet and other popular flowers. Some of these conceits originated in Japan, others are native to America, where the Indians gave a spirit to every living thing. Some other legends had their birth among the Persians, where, tho the maiden might not read or write, she could spell out the love letter in flowers and leaves, and send an answer by the same sweet messengers.

Devotees of the opera frequently find themselves at a loss to understand the librettos of their favorite operas. In *The Stories of Popular Operas* the various themes are set forth in such a manner as to enable the reader to gain a fair idea of what the opera is intended to suggest and encompass. The plots are told in detail and much information appears as to the stories whence the ideas embodied in the operas were obtained.

A careful study of *Shakespeare's Heroines* has been made in a book carrying the same title. In these days of Shakespearean clubs, recitals and revivals of Shakespeare classics the information contained in this volume will be heartily welcomed.

The Story of King Richard and *The Story of the Tempest* are among the very attractive holiday publications. In their limp leather bindings they make very pleasing little gift books.

A Young Shinto Priestess in Ceremonial Costume.

Frontispiece from the late Lafcadio Hearn's last book, "Japan: An Attempt at Interpretation." Reproduced by permission of The Macmillan Company for the Holiday Book Number of The Independent.

The difficulty of reading Chaucer in the original has been entirely overcome by Percy Mackaye in the volume entitled *The Canterbury Tales of Geoffrey Chaucer* as rendered into modern prose. In the collection are included the Prolog and ten tales. Many persons will appreciate the infinite art of Chaucer in the text now made available who would never get beyond the first half page of this father of English literature if they were to read the work as issued by Chaucer's original publishers. The illustrations of the volume are by Walter Appleton Clark, who has well caught the spirit of the text.

The poetic selection that Mr. Page has made and embodied in his volume entitled *British Poets of the Nineteenth Century* is characterized by an appreciative as well as judicial mind.

There have been so many editions of *The Rubáiyát of Omar Khayyám* that certain collectors have been enabled to assemble libraries confined exclusively to various editions of this work and books having to do with it. In the edition now made available by Dutton the illustrations are in photogravure after drawings by Gilbert James. Lovers of this Persian poem will welcome the present edition.

Another old favorite that has been redressed for the holidays bears the title of *Sonnets from the Portuguese,* by Elizabeth Barrett Browning. The frontispiece and paginal decorations form its features.

William Morris was one of the few men of many talents who left a strong impression upon everything he took up. His work as a decorative designer, maker of art volumes and social reformer would have sufficed to make him famous in either of these departments had it not been for his incursions into literature. He will perhaps be best remembered as a poet. The volume *The Poems of William Morris* will have a welcome, therefore, from those who may not have suspected Morris of having poetic qualities, as well as those who did thus suspect him.

Tennyson's *The Holy Grail* is reprinted as a holiday book, with marginalia in tint and the binding in suède leather and silk doublè.

Eugene Field's *Poems of Childhood,* with illustrations by Maxfield Parrish, appears as a notable contribution to this year's holiday books. The frontispiece in particular seems to have caught the spirit of Field's delightful poetic inspiration in a particularly charming way. The illustration accompanying "The Dinkey Bird," for example, is quite as poetic in its art inspiration as is the poem which inspired it.

When Little Boys Sing and its wealth of illustration, done in an exceedingly artistic manner, suggest the work of the late Kate Greenaway. John and Rue Carpenter are responsible, however, for the words, music and pictures. The following verses will give an idea of the text:

Maples and *Podocarpus Chinensis.* By Kôrin. From "Masterpieces Selected from the Kôrin School"

PRACTICING.

What's the use of practicing,
For little boys like me?
It never does me any good
So far as I can see.

I play my scales both up and down,
I make my fingers sore,
And when I'm through I play my scales
No better than before.

A new edition of *Over the Hill to the Poorhouse* and *Over the Hill from the Poorhouse,* by Will Carleton, is of the holiday publications. Whatever may be said of Mr. Carleton as a poet, and whatever place he may ultimately hold in literature, certain it is that the poem which lends its name to the present book touches the hearts of those who have any appreciation of the pathetic side of life.

London News is a collection of verses based upon London *motifs.* The illustrations introducing cat subjects are perhaps its principal feature.

One of the fullest anthologies that has yet been prepared upon the poetic side of Greek literature is embodied in *The Greek Poets,* by Nathan Haskell Dole. The work is characterized by high scholarship and beautiful verses.

Yosemite Legends contains a collection of Indian traditions dealing with the famous Yosemite Valley. The marvelous imagination of the Indians is set forth in half a dozen stories which are derived from Indian sources.

There seems to have been a revival of interest in the sentiments that are appropriate to after-dinner speeches, judging from the number of books that have recently appeared on the subject of toasts. One of the most recent of such books is *Prosit.* In this book California writers have combined in preparation of the sentiments.

La Rochefoucauld's celebrated *Maximes* appears among the holiday offerings this year in a pleasing edition.

The Entirely New Cynic's Calendar of Revised Wisdom again strikes an important note in its text and illustrations, set forth as they are in black and red.

The author of *The Log of the Grifin* certainly has an eye for the picturesque, and in the color plates as well as the black-and-white illustrations that appear in the volume the spirit of the diverse places visited has been delightfully caught and reproduced.

Sketches on the Old Road Through France to Florence has been made the vehicle for carrying some very pleasing color plates made in harmony with the book's title. A journey made under the conditions signified by this book must certainly have been idealistic.

There certainly is a great charm in foreign travel properly indulged in. The quaint customs, picturesque dress, as well as the romance of foreign cities, appeal to almost every one. In *Bright Days in Sunny Lands* the charm of the old world is pleasingly set forth.

There have been many accounts of old world journeys, but Mrs. Bibbins's idea of making a heroine out of an old colored mammy and taking her through European countries along much traveled ways, and giving her a background of famous cities and places, was a very happy one. A thread of romance has been skillfully worked into the volume entitled *Mammy 'Mongst the Wild Nations of Europe.*

Not only those who have been in Paris, but also those who have not, will be interested in *Paris and Its Story,* illustrated as it is with its numerous color plates. The legendary history of Paris appears, as well as its present day aspect, with its pronounced art inspiration, that is felt by even the casual visitor to this gay city. The author has something to say of the political side of Paris. He touches also upon its civics, the life of the boulevards, the opera, and he has not forgotten to mention some of its famous *cafés.*

The romance of Switzerland and its picturesque qualities seem quite inexhaustible. They figure once more in Joel Cook's volume entitled *Switzerland Picturesque and Descriptive.* The glaciers of Switzerland, its mountains, valleys, lakes, passes, chateaus and cathedrals are happily described and beautifully illustrated in this book.

Imperial Vienna is a notable contribution to the holiday literature. The author includes in the book something of the pageantry of religious and court ceremonies, the musical life of Vienna, and all the various activities in art and enterprise that bring to this capital its high

THE MOUNTAINS

Specimen illustration from "The Mountains," by Stewart Edward White, reproduced by permission of the publishers, McClure, Phillips and Company, for the Holiday Book Number of *The Independent*.

renown. Special facilities were given by the Emperor of Austria for the accumulation of material in the making of sketches, which are effectively used in the edition.

It is a curious thing to read in *Italian Villas and Their Gardens* that the Italian garden does not exist for its flowers, but that they are a late and infrequent addition to its beauties, a parenthetical grace, counting as only one more touch in the general effect of enjoyment. Possibly this novelty is one thing that goes to make the magic of the Italian garden. The illustrations which adorn this volume explain in a large measure the reason of the attractiveness of the Italian villas and their gardens, even if the introduction of flowers is in the nature of a by-product. It is hard to conceive of a more beautiful villa than the Villa Medici at Rome, that Mr. Parrish has illustrated for the readers of this volume on page 100, and this is but one instance taken at random from the book.

The First Monday. From "The Entirely New Cynic's Calendar." Copyright, Paul Elder and Company, San Francisco

In *The Road in Tuscany* Maurice Hewlett, who is a great traveler and has spent a considerable portion of his life in Italy, has embodied the result of a good many years' work. The book follows Mr. Hewlett's work entitled *The Queen's Quair.*

There is probably no city in the world about which clusters more that is romantic than is the case with the city that forms the theme of the book *Oxford and Its Story.* The story of Oxford not only touches the history of England in a social and political, mental and architectural way in very many points, as the author sets forth in his preface, but because of the recent establishment of the Carnegie Oxford scholarships interest in Oxford has been very widely extended, and in the elaborate volume devoted to this city there is much that is traditional as well as historical. The strength of the volume naturally is devoted to the scholastic life of the city as well as the influence exerted by Oxford upon the Reformation and other world movements.

An attractive reprint of Stevenson's *Edinburgh* is imported by the Scribners.

The recent death of Lafcadio Hearn lends to his book entitled *Japan: An Attempt at Interpretation,* something more than ordinary interest. Few Occidentals have succeeded in reaching the Oriental point of view more certainly than has Mr. Hearn. His methods of attaining his expert knowledge regarding Japan, which called for his renunciation of his native land and his acceptance of Japanese citizenship, are well known. In this, his posthumous, book appears the results of his critical study of the Japanese character and characteristics.

Clifton Johnson has continued his series of *Highways and Byways,* and his last publication is concerned with the South. Mr. Johnson has happily succeeded in making his text and illustrations go hand in hand. Nothing that is picturesque in the South has escaped his observation.

In *Denizens of the Deep* we have another contribution from the author of "The Cruise of the Cachalot," which established the reputation of Mr. Bullen as a writer of sea stories. Mr. Bullen's knowledge of the sea is manifestly very great.

The scene of the story *Love Finds the Way,* by Paul Leicester Ford, is laid in New York at the time of the Revolution. Mr. Ford's ability to write a good Revolutionary story and to picture a fascinating Revolutionary maid has been exemplified in his *Janice Meredith.* The present story is much less pretentious than the former one, but it includes the same dainty wit and inimitable cleverness.

The publisher of *Petals of Love for Thee* has attempted a decoration that was intended to be lavish, but the colorings used are far from satisfactory.

Myrtle Reed's *Book of Clever Beasts* bears as a sub-title Studies in Unnatural History, and, as its title suggests, it is a humorous book, in which many of those who have seriously written upon nature and the animal world have been skillfully caricatured. The book is illustrated by Peter Newell in his characteristic fashion.

The author of *Cats by the Way* has succeeded in massing considerable information in her book regarding cats. She has concerned herself, however, with the pussy of the fireside, the kitchen and sitting room cushion rather than with the aristocratic animal of the bench show. In this book the Angora and the Persian cats are forgotten in favor of the more homely and everyday cat. The author was unable to resist the temptation to introduce one dog as a foil for a multitude of cats.

The study of children under the title of *The Luxury of Children and Some Other Luxuries* is concerned with one of the problems of to-day. One of the interesting chapters of this volume is entitled Other People's Children. A suggestion in this chapter is that other people's children that interest us parents most violently are those that our children are or are to be thrown in with. This is but a single note, it is true, but is well worth most careful consideration. The author has found space for the discussion of the proper place for grandparents in connection with children.

In the *Life of Christ for Little Children,* really an illuminated alphabet, the illustrations are derived from such artists as Raphael, Correggio, Murillo, Leonardo di Vinci, Rubens, Bouguereau and Doré. The pages of the volume are embellished with designs derived from the work of monks in the Prayer Books of the fifteenth century. The designs themselves have been very satisfactorily reproduced. The colorings have, however, lost much from the originals, whence they were derived.

The enthusiastic record of a trip made by Mr. White through the Sierras appears this year with the title of *The Mountains.* The fictitious and the real are intertwined and interwoven into the narrative, which is also in the nature of an instruction book, telling the would-be traveler something of the how, what, where and why in regard to the multitudinous details of mountain and forest travel, which must be known if such a journey is to be made. The book includes a comprehensive chapter on cowboys.

Some years ago a number of volumes appeared anonymously bearing the title of the Waverley Novels. The authorship of these was afterward acknowledge by Sir Walter Scott. When they originally appeared they had a great vogue, but they are now too frequently neglected because of the change in the popular taste as to literary form. The stories are there, but they are overlooked in these rapids days. S. R. Crockett in *Red Cap Tales,* which he boldly proclaims are stolen from the Wizard of the North has redressed Scott's best stories, and has made them more readable than they are in the original.

Those who are familiar with the picturesque beauties of Cape Cod will welcome a new edition of *Cape Cod Folks.* The illustrations in the volume admirably show many of the distinctive features of that peninsula, both as to sea and shore, and give to Mrs. Greene's story a handsome subject and worthy setting.

Mrs. Frances Hodgson Burnett, in the pages of *In the Closed Room,* has written her first tale of child life in ten years. It is a tender and gentle story. Judith, a little girl living in a dingy tenement, suddenly finds herself in a great house near the park, in which there is a forbidden closed room. How she enters it and how a delightful round of mystery is opened to her Mrs. Burnett tells with infinite art.

A children's book which tells a real story is that entitled *The Well in the Wood.* It is concerned with the adventures of "Buddie," who is a little girl who fastens a spray of night-shade in her hair and thus learns to know the birds and beasts of fields and forests in a most surprising manner; thus she meets the laziest beaver, bunny cottontayle, the guinea pig, with eyes that fall out; the fat, sleepy bear and many others. At the well, at the bottom of which lies the truth, all meet to find out why a rabbit wobbles his nose.

Upland Pastures is made up of a series

THE BIRTHPLACE OF JOHN GREENLEAF WHITTIER
AT EAST HAVERHILL.

Villa Pia—In the Gardens of the Vatican. From a drawing by Maxfield Parrish in Mrs. Wharton's "Italian Villas and Their Gardens." The Century Company

of out-of-door essays written by Adeline Knapp. In certain cases these essays have to do with the beautiful things of spring and summer in California. They are, however, by no means altogether localized, but are charged with the philosophy which is universal. Green fields, blue skies, the birds and bees, fresh winds and springtime showers are themes with which the author delightfully deals.

The Christmas holiday season without a book by Mrs. Sangster would not seem like Christmas. Mrs. Sangster's volume this year is entitled *The Little Kingdom of Home*, and is upon a subject about which Mrs. Sangster is especially qualified to write. Her survey of home as a kingdom is bright and comprehensive. According to Mrs. Sangster there is a place there even for the spinster.

Mr. H. G. Wells's extraordinary power of vividly realizing the most daringly imagined conditions is once more exemplified in *The Food of the Gods*, which is an absorbing story as well as a most suggestive invention.

A charming little love story, in which a young lawyer and the mistress of a Rose Garden are moving figures, is entitled *Kitty of the Roses*. The narrative is colored with summer sunshine and interspersed with the fragrance of flowers and the alluring uncertainties of love-making. The conclusion of this story is particularly happy.

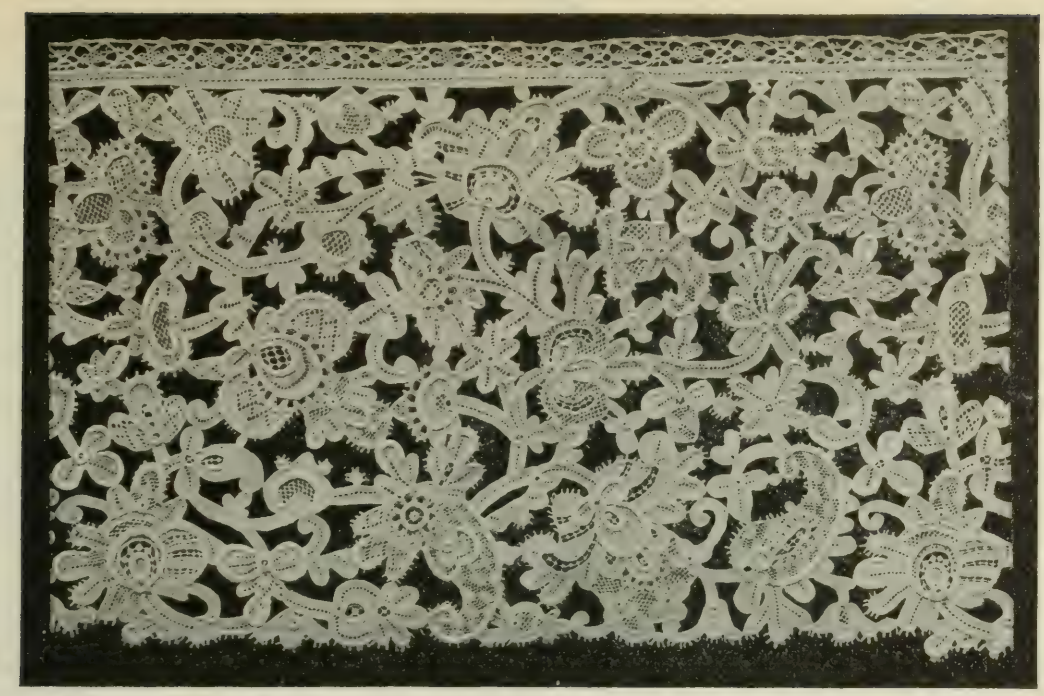
The old claim that "Boston is the hub of the universe" is strengthened, if not confirmed, in the volume *New England in Letters*. In the pages of this book we catch glimpses of Longfellow, Whittier, Hawthorne, Emerson, Oliver Wendell Holmes, Mark Twain, Charles Dudley Warner, Harriet Beecher Stowe, and many others who have given to New England its name and fame in literature.

Babes in Toyland is a free version in book form of Mr. MacDonough's popular play, which has been enjoyed by thousands of children and parents since its production on the stage. An appeal is made in this amusing narrative directly to a child's sense of the romantic. The real and the fantastic have been very skillfully mingled in the author's story.

To her former volumes on the "Rossettis," "William Morris," "Tennyson," "Browning" and "Dante Gabriel Rossetti" Miss Elisabeth Luther Cary has now added her volume on *Ralph Waldo Emerson*. Miss Cary has traced Emerson from his earliest years, through his various experiences, until the end, and has presented a very comprehensive survey of Emerson. Her estimate of his influence upon American thought has been carefully weighed, and the book, as a whole, is an important contribution to the holiday publications.

School of Flying Fish. From "Denizens of the Deep" Revell

In his studies of *Thomas Nast, His Period and His Pictures*, who has sometimes been called the father of the American cartoon, Mr. Paine has been exhaustive. Many of the symbols now unconsciously used by the cartoonists who have come after Mr. Nast were originated by him. The tiger as the symbol of Tammany Hall, the elephant for the Republican party, and the donkey for the Democratic party were conceptions of Mr. Nast. Many of Nast's cartoons serve as illustrations to the volume.



The idea of *The Art of Caricature* is

COPYRIGHT 1904, BY FOX, DUFFIELD & CO.

FUZZY WAS A LITTLE BROWN BEAR

Real Point de Venise. From Goldenberg's "Lace: Its Origin and History." Brentano

to furnish its readers with a foundation upon which to build an art education. The author, in speaking of his theme, has well said that caricature is not incorrect or bad drawing: it is good drawing refined and controlled to produce a humorous effect. A chapter in the book gives the leading present day caricaturists.

China Painters at Work. From Dillon's "Porcelain." Putnam.

Owen Wister has taken up the Christmas theme in *A Journey in Search of Christmas.* In the course of this journey the reader is taken into the Far West and brought into contact with cow punchers and ranchers. The journey is circuitous and the paths devious, but the end of the story sets forth that the journey was by no means in vain.

The volume by Jacob A. Riis, entitled *Is There a Santa Claus?* certainly has the merit of being timely. The conclusion reached by Mr. Riis is that Santa Claus is by no means altogether a myth. He has worked the story out in his usual artistic style. The press work by Gilliss Bros. is very satisfactory.

A very attractive line of holiday calendars, printed for the most part in Bavaria, in colors, is being shown by E. P. Dutton & Co.

Among the notable European Christmas magazines that have colored illustrations inserted are the *London Graphic The Sketch, Holly Leaves, Pear's Annual, The Illustrated London News* and *Paris Figaro Illustré.*

Christmas Books for Children

BY MONTROSE J. MOSES

EDITOR OF "EVERYMAN," ETC.

A BRIGHT array of juvenile books awaits the Christmas buyer; out of the varied assortment all tastes may be satisfied and all interests stimulated. The successful shopper is one who secures the book to fit the taste, and lest he become bewildered in this festive overflow, it were well to gain some idea of the field. The paramount thing is to know the desires of the boy or girl: then to ply the fiction group, the fairy-tale group, the nature group, or the historical group until the proper purchase is made. So do you brush aside the books you do not wish, and which would otherwise lure you to open their attractive covers.

Let us note a few generalities. Santa Claus, it is evident, has well-nigh disappeared from story and picture; when he is mentioned, he has changed from the round, red, jovial fellow of yore to the Christmas spirit only. Again, in these days of common pleasures and outdoor sports, there is a scarcity of distinctive girl literature; golf is partly responsible for this, and also the college life, for a kind of coeducative taste has reduced the demand for the old-fashioned feminine stories. Where, however, a pronounced heroine is introduced, there is a tendency to make the book older in tone, and markedly romantic. Another point is the demand that the use of history has made upon the accuracy of fact. There are many more explanatory prefaces than usual, and footnotes and appendices are often to be found. And as far as history is concerned, a national awakening is to be traced in child literature: hardly an epoch in American development passes without a representative volume, and there is much improvement in the manner of mingling fact with fiction. Everywhere, in this Christmas array, the influence of education is manifest. Even the fairy tales have a folklore value. This stimulates interest, but it is doubtful whether it fully awakens the free play of imagination—a healthy liberty it would be a shame to deprive childhood of.

LARGE BOOKS.

One Day. By Edith Farmiloe. Dutton. $2.00.
A B C in Dixie. By Louise Q. Bonte and George W. Bonte. Dutton. $1.25.
Mammy's Li'l Chilluns. Written and illustrated by Clara A. Williams. Stokes. $1.00.
The Happy Heart Family. By Virginia Gerson. Fox, Duffield. $1.00.
Buster Brown. Pictures by R. F. Outcault. Stokes. $1.00.
Foxy Grandpa Up-to-date. By Bunny. Stokes 60 cents.
The Story of the Five Rebellious Dolls. By E. Nesbit. Il. E. S. Hardy. Dutton. $1.25.
The Golliwogg in Holland. By Florence K. Upton. Verses by Bertha Upton. Longmans, Green. $1.50.
Chatterbox. Dana, Estes. $1.25.
McClure's Children's Annual. Ed. T. W. H. Crosland. McClure, Phillips. $1.50.
Little Precious. By Gertrude Smith. Harper $1.30.
Riverland. By Robert W. Chambers. Harper. $1.50.
The Brownies in the Philippines. By Palmer Cox. Century. $1.50.
Goop Tales Alphabetically Told. By Gelett Burgess. Stokes. $1.50.

The details of a small boy's birthday are described in text and pictures by Edith Farmiloe, and the volume is named *One Day*. The stories are simple, and a note signed Mummy says, "My darling wrote *all* the book himself, and spelt every word up to three syllables." Quainter in idea and design is the *A B C in Dixie*, where the colored pictures of colored people, and the verses, smack of Southern atmosphere. Clara A. Williams's *Mammy's Li'l Chilluns* contains the same quaint tone, and the author's preface declares that darky folk are capable of child-thoughts and playfulness as well as whites. Odd and pleasing will prove *The Happy Heart Family*, by Virginia Gerson. While the colored pictures are poor in reproduction, the adventures of the girl and boy hearts will amuse little readers. Familiar faces will be found in the two large books introducing

Buster Brown and *Foxy Grandpa Up-to-date* between covers. The radiating rays around Buster prove the only moral to be drawn from his pranks, and youngsters will readily forgive the lack of dignity in Grandpa. The adventures in *The Story of the Five Rebellious Dolls,* pictured in colors, center around a runaway crowd, who meet with a wild sort of people called the Jamborees.

On the same order is the yearly expected *Golliwogg,* who now travels *in Holland.* Thirty-one color plates show vari-tinted costumes and queer doings. Much more welcomed and fuller in contents is *Chatterbox,* without which Christmas would seem strange indeed. Time cannot alter the old flavor, nor the settled appearance of this volume. In addition, the simple rimes and jingles forming, with a collection of stories, the *McClure's Children's Annual,* will commend itself to young readers. It shows clear print, and particularly instructive are the plates picturing the Kings and Queens of England. Gertrude Smith's *Little Precious,* with its excellent type and varied illustrations, again introduces Josey and Janie and Joe; Mamma's girlhood home is the scenic background, and Papa discovers a gold mine—enough in itself to hold wee listeners. After the same pattern as his *Orchardland* comes Robert W. Chambers's *Riverland,* which has a motive of the sugar-coated pill kind. His animals and insects talk natural history, yet, tho the mosquito, butterfly and others are not all human, still a facile pen lends flashes of true feeling to the descriptions. Miss Green's drawings are bold in color, and the dedicatory photograph is charming. Frolicsome as ever are *The Brownies in the Philippines.* Their round little bodies and thin little legs are kept active by snakes, ants and natives. The dude, the fisherman, the Indian and their companions are as they were years ago, when Mr. Cox first introduced them in *St. Nicholas. The Goops,* as usual, point a moral and adorn a tale. The fifty-two boys, from Abednego, who would not go to bed, even to Zeemsneaze, who refused to use a handkerchief while sneezing, the fifty-two girls, from Askalotte with her needless questions, to Zelphina, with her selfish ways, show no abatement of originality or wit. In drawing, the loop style is the Goop style.

Fairy Tales.

Alice's Adventures in Wonderland. By Lewis Carroll. Stokes. $1.50.
Fantasma Land. By Charles Raymond Macauley. Bobbs-Merrill. $1.25.
Lucy and Their Majesties. By B. L. Farjeon. Century. $1.50.
In the Miz. By Grace E. Ward. Il. Clare E. Atwood. Little, Brown. $1.50.
Two in a Zoo. By Curtis Dunham and Oliver Herford. Bobbs-Merrill. $1.25.
The Little Giant and Other Stories. By Thomas Dunn English. McClurg. $1.00.
The Brown Fairy Book. Ed. by Andrew Lang. Longmans, Green. $1.60.
The Japanese Fairy Book. Compiled by Yei Theodora Ozaki. Dutton. $2.00.
Mr. Wind and Madam Rain. By Paul de Musset. Tr. Emily Makepeace. Putnam. $2.00.
Fairy Tales. By Dumas père. Stokes. $1.25.
Granny's Wonderful Chair. By Frances Browne. Intro. Frances Hodgson Burnett. McClure, Phillips. $1.50.
The Nursery Fire. By Rosalind Richards. Il. Clara E. Atwood. Little, Brown. $1.50.

No better book could introduce a fairy tale section than a reprint of Carroll's *Alice in Wonderland,* from which so many weak imitations have come. Tenniel's famous drawings are used, and M. L. Kirk has done some creditable full page pictures, tho they are not as telling as the originals, nor as unique as the wide-eyed figures by Peter Newell. In make-up, the *Fantasma Land,* by C. R. Macauley, is tempting, but the story of the small hero who meets many of Dickens's characters, besides Don Quixote and the ghost of Hamlet's father, is forced in humor and with feeling. As

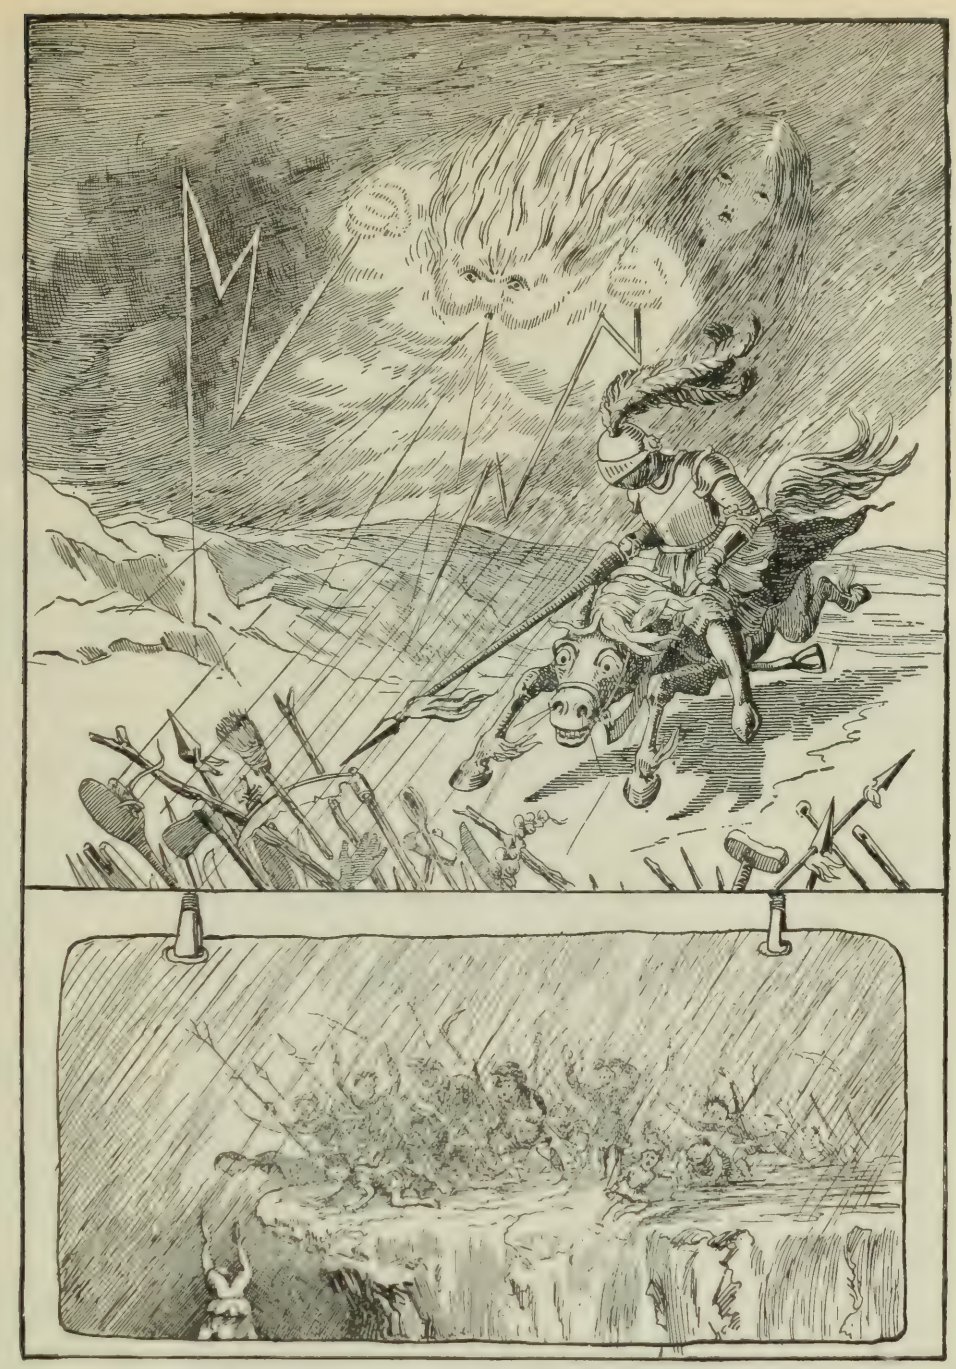
Illustration from Lang's "The Brown Fairy Book. Longmans

an illustrator, however, this author is to be congratulated; the line work, in conception and tracery is altogether worthy. Farjeon's *Lucy and Their Majesties* is a comedy in which Madame Tussaud and her wax figures disport themselves and aid a little girl in making her sister's course of true love to run smooth. The heroine wakes up in the end.

First cousin to Oz and Yew and Mo is *In the Miz,* by Grace E. Ward. The stories will please, as will the illustrations, but the Miz tale will need some explaining. Not so Dunham and Herford's *Two in a Zoo,* which in imagination is no unsuccessful imitation of Kipling, and whose crippled boy hero among the cages is sympathetically sketched.

Four tales gathered into *The Little Giant* reveal a charming vein in the author of the song *Ben Bolt.* The big dwarf, the princesses, the gifts, and the modest yet telling moral points stamp the true art of gaining interest in writing for children. The drawings by Lucy Fitch Perkins do much to make the book tempting. From Africa, Australia, Persia, India and other lands, Andrew Lang has gathered his stories for his usual *Fairy Book,* colored *Brown* this year, and just as attractive in its manufacture as heretofore, with elaborate pictures by H. J. Ford. Then there is a *Japanese Fairy Book,* with brush work by a Japanese artist and Yei Theodora Ozaki as compiler. In tone it is thoroughly Eastern and minutely imaginative, like all Japanese art. A tale of Brittany is found in *Mr. Wind and Madam Rain,* from the French of Paul de Musset. Poor peasants come to fortune with their son, through the efforts of these elements. The book is tastefully printed. In addition, two *Fairy Tales,* by Dumas *père* may be recorded. But by far the most striking volume of stories is *Granny's Wonderful Chair,* that is made to talk. This was a lost fairy book, and Mrs. Frances Hodgson Burnett found it after much searching, and has written an introduction, which will be enjoyed. Each tale ends with a little girl becoming more a princess. Rosalind Richards's *The Nursery Fire* will meet a demand from the tiny realm for reading aloud.

Greek Tales and Romance Legends.



The Heroes; or, Greek Fairy Tales for My Children. By Charles Kingsley. Dutton. $2.50.
Jason's Quest. By D. O. S. Lowell. Lee & Shepard. $1.00.
Famous Legends. Adapted for Children. By Emeline G. Crommelin. Century. 60 cents.
Stories of Robin Hood. By J. Walker MacSpadden. Crowell. 60 cents.
Stories of King Arthur. By U. Waldo Cutler. Crowell. 60 cents.

Turning to what is of as great a literary value, as it is of imaginative impetus, a sumptuous reprint of Charles Kingsley's *The Heroes* greets us, telling the never stale doings of Perseus, Theseus, and the Argonauts. Then, too, *Jason's Quest,* by D. O. S. Lowell, is to be had, well illustrated, and careful as regards scholarship, but not so spontaneous in the narrating. Embracing a much larger field is *Famous Legends,* adapted for the school-room by Emeline G. Crommelin, who, bearing in mind her educational object, is too direct where grace would have added much. Two volumes to be warmly commended are *Stories of Robin Hood,* by J. Walker MacSpadden, and *Stories of King Arthur,* by U. Waldo Cutler. Each contains an introduction of marked value for young readers, and the adventures are retold in running narrative, with headings from ballads in the one, and faithfulness to Malory in the other.

Biographical.

In the Days of Chaucer. By Tudor Jenks. Barnes. $1.00.
In the Days of Shakespeare. By Tudor Jenks. Barnes. $1.00.
Captain John Smith. By Tudor Jenks. Century. $1.20.
The Son of Light Horse Harry. By James Barnes. Harper. $1.25.
The Adventures of Buffalo Bill. By Col. W. F. Cody. Harper. 60 cents.
The Maid of Orleans. William Tell. Mozart. Beethoven. Tr. from the German by George P. Upton. McClurg. 60 cents each.
Little Royalties. By Isabel McDougall. Revell. $1.25.

A suitable introduction to the last mentioned book is Tudor Jenks's *In the Days of Chaucer.* It is a forceful account of what the man was, what he means to literature, and how he came to be. Another volume of this *Great Writers Series,* which Mr. Jenks is preparing, will be helpful: *In the Days of Shakespeare.* These titles bring us into the realm of biography, and again Mr. Jenks's name figures in a notable life of *Captain John Smith,* which is told in a direct style. There is much based upon source, and gaps are filled in with con-

The Rout of the Cornish Rebels. Illustrations from Musset's "Mr. Wind and Madam Rain." Putnam

sistent conclusions. There is a discriminating index, but why are there no maps?

Doubtless a tie as to the attractiveness of titles will exist between *The Son of Light Horse Harry,* by James Barnes, and *The Adventures of Buffalo Bill,* by Cody himself. But the historical value of the former, dealing with the entire Lee family, especially the career of Robert E., will prove of more permanent interest than the rambling, crude, tho highly "scalpy" accounts of the true Wild West, with its pistols, yagers and scouts. Four volumes that are stories as well as lives are *The Maid of Orleans, William Tell, Mozart and Beethoven.* In price, size and style their supplementary reading possibilities will be realized. *Little Royalties* are delightfully described by Isabel McDougall. Embedded in the narratives there are those salient features of each age, which will stamp themselves distinctly. No volume of its kind within recent years has shown quite the freshness or the sympathy.

Books About Indians.

The New World Fairy Book. By Howard A. Kennedy. Dutton. $2.00.

The Basket Woman. By Mary Austin. Houghton, Mifflin. $1.50.

Red Hunters and the Animal People. By Charles A. Eastman. Harper. $1.25.
Ten Little Indians. By May Hazelton Wade. W. A. Wilde. $1.00.
The War Chiefs. By Frederick Ober. Dutton. $1.50.
Little Metacomet. By Hezekiah Butterworth. Crowell. 60 cents.
The Hermit of the Culebra Mountains. By Everett McNeil. Dutton. $1.50.
The Boy Captive of Old Deerfield. By Mary P. Wells Smith. Little, Brown. $1.25.

Reaching the domain of Indians, we may begin with *The New World Fairy Book,* telling of Canadian tribes. Whether authentic folklore, it is not said. But the tales are picturesque and absorbing. In *The Basket Woman,* Mary Austin describes the Californian Indian customs and legends, and an element of tribal truth is vouched for. There is *Red Hunters and the Animal People,* by Charles A. Eastman, himself a Sioux, and called "Ohiyesa"; the accounts show much color and keen discernment of nature, together with a human quality in animal life. A glossary of Indian names is appended. May H. Wade's *Ten Little Indians* deals with the young folk of ten tribes famed mostly in American history. A foreword is given for each section, and tho the language is simple, the object is for older grading. A 1493 experience is introduced into Frederick A. Ober's Santo Domingo tale, *The War Chiefs;* its hero has been left on the island by Columbus, and his varied adventures carry useful information. In *Little Metacomet,* Dr. Butterworth has given a pleasant mixture of history and nature; one of the heroes is the son of King Phillip, of Colonial fame. As for *The Hermit of the Culebra Mountains,* Everett McNeil makes two boys win a Western trip as a school prize, and during their travels they strike gold, fight robbers, and come back laden with glory. Another tale along conventional lines is *The Boy Captive of Old Deerfield,* with incidents dated 1704. Footnotes, plans and appendices relative to history and the Indians, mark the book as among those whose fiction is coupled with accuracy.

Historical Fiction

The Story of Rolfe and the Viking's Bow. By Allen French. Little, Brown. $1.50.
The Crusaders. By J. A. Church. Macmillan. $1.75.
With Richard the Fearless. By Paul Creswick. Dutton. $1.50.
Sea Wolves of Seven Shores. By Jessie Peabody Frothingham. Scribner. $1.20.
The Fort in the Forest (Colonial Series). By Everett T. Tomlinson. W. A. Wilde. $1.50.
The Search. By E. P. Weaver. Barnes. $1.25.
The Rider of the Black Horse. By Everett T. Tomlinson. Houghton, Mifflin. $1.50.
Dorothy's Spy. By James Otis. Crowell. 60 cents.
Defending the Island. By James Otis. Dana, Estes. 75 cents.
A Lass of Dorchester. By Annie M. Barnes. Lee & Shepard. $1.25.
The Ark of 1803. By C. A. Stephens. Barnes. $1.25.
Bonny Lesley of the Border. By Amy E. Blanchard. Wilde. $1.50.
A Midshipman in the Pacific. By Cyrus Townsend Brady. Scribner. $1.20.
By Conduct and Courage. By G. A. Henty. Scribner. $1.20.
The Three Prisoners. By W. H. Shelton. Barnes $1.25.
Prince Henry's Sailor Boy. By Bruneck Safford. Henry Holt. $1.50.
The Soldiers of the Duke. By Eva Madden. Wilde. $1.25.

In the space allotted, it is well-nigh impossible to indicate plot and character of the numberless historical books. They all reveal heroes lost to history, but brave beyond measure; they all describe hair-breadth escapes, but primarily they depict a period or the spirit of an age. In *The Story of Rolfe and the Viking's Bow,* Allen French has equaled his *Sir Marrok* in the mingling of saga feud and law and bravery. Through the character of the Wandering Jew, Dr. Church tells, in *The Crusaders,* a chronicled story of the first, third and eighth Crusade—a book pleasing and direct, but lacking maps. Paul Creswick follows this by a stirring tale, *With Richard the Fearless,* in which the hero proves to be a King's son, and the heroine is attractive and healthily romantic. It is a successful imitation, much simplified, of the Scott method.

History and adventure mingle nicely in the buccaneer volume by Jessie Peabody Frothingham, entitled *Sea Wolves of Seven Shores.* Real exploits these, and easily located, if only the publishers had given us maps. *The Fort in the Forest,* by Dr. Everett T. Tomlinson, dates 1757, and deals with the fall of Fort William Henry. Chronologically, this is followed by *The Search,* in which the author, E. P. Weaver, describes the American frontier around 1764. There is a preface and the hero from London finds strange life and exciting times in the new country. Dr. Tomlinson also writes *The Rider of the Black Horse,* a Revolutionary account of one of Washington's couriers in 1777. The exact method of treating fact does not retard the interest of the hero's escapades and the heroine's quick mind. The cover de-

sign will attract. An appealing story by James Otis is *Dorothy's Spy*, in which two little Revolutionary maids of New York befriend a British Lieutenant. By the same author is *Defending the Island*, a vigorous tale of Bar Harbor in 1758. Mr. Otis has the knack of story telling. Dorchester, S. C., in 1796 is the scene of *A Lass of Dorchester* by Annie M. Barnes, and Betty Blew, before introduced to readers, befriends Indians, and saves her father from business enemies.

A Louisiana Purchase story is that by C. A. Stephens, called *The Ark of 1803*. The hero is the means of showing the arduous trip down the Ohio and Mississippi rivers to New Orleans, when the country was everywhere filled with doubtful highways. Amy E. Blanchard, in *Bonny Lesley of the Border*, presents a novelized juvenile; there are rivals in love and also plenty of stilted style; but tho colorless in locality, it is interesting. Prolific Dr. Brady has the hero of *A Midshipman in the Pacific* impressed by the English so that he can describe times on a whaler, trader and frigate; besides mixing up Nelson, Trafalgar, and the War of 1812. Dr. Brady is comprehensive. So, too, the last of Henty's, *By Conduct and Courage*, follows the events of Nelson's days in the usual style that has gratified so many. As for the Civil War, it is partially traced in *The Three Prisoners*, by W. H. Shelton, by means of an artificial series of thrilling incongruities. Extraneously, but by no means slightingly, may be mentioned *Prince Henry's Sailor Boy*, in which the life of a German seaman is graphically described in detail (with notes), and a romance is forthcoming. Then, as delicate in physique as *L'Aiglon* stands the little Duke of Gloucester, son of Queen Anne, who figures in Eva Madden's *The Soldiers of the Duke*.

FICTION.

Eight Cousins. By Louisa M. Alcott. Little, Brown. $2.00.

Rose in Bloom. By Louisa M. Alcott. Little, Brown, $2.00.

From Alcott's "Eight Cousins." Little, Brown

Baby Elton, Quarter-Back. **By Leslie W. Quirk.** Century.
Boys of St. Timothy's. **By Arthur S. Pier.** Scribner. $1.25 net.
The Little Grey House. **By Marion Ames Taggart.** McClure, Phillips. $1.25.
The Merryweathers. **By Laura E. Richards.** Dana, Estes. $1.25.
Ruth Campbell's Experiment. **By Nina Rhoades.** Wilde. $1.25.
Nathalie's Sister. **By Anna Chapin Ray.** Little, Brown. $1.50.
Kristy's Queer Christmas. **By Olive Thorne Miller.** Houghton, Mifflin. $1.25.
A Book of Little Boys. **By Helen Dawes Brown.** Houghton, Mifflin. $1.00.
Mr. Kris Kringle. **By S. Weir Mitchell.** Jacobs & Co. $1.00.

No two books can better head a juvenile fiction list than the reprints of Miss Alcott's *Eight Cousins* and *Rose in Bloom,* the same sweet, healthy narratives, satisfactorily pictured by Harriet Roosevelt Richards. We would have had the cover designs more in taste with the delicacy of the book. Two of a kind are *Baby Elton, Quarter-Back* and the *Boys of St. Timothy's*—simple, direct manly—not brilliant, but upright. Each is interesting, yet Tom Brown still holds the field. In the *Boys of St. Timothy's* Arthur S. Pier has scope for individuality of character in his descriptions of football, rowing, track work and tennis. *The Little Grey House,* with the three plucky girls and their three boy friends, cannot be praised too warmly. It is in every way full of charm, and the daughter, Rob, who is the trump heroine, is a Miss Alcott type. The book is by Marion Ames Taggart. In cheerful out-door camp-spirit comes *The Merryweathers,* by Laura E. Richards, where romance and old friends go through invigorating days, and pair off agreeably at the end. So, too, is there in Nina Rhoades's *Ruth Campbell's Experiment* romance for the final pages. To aid her brother's family, the heroine plays helpful housemaid unbeknownst, and a fortune finally reveals the secret. Anna Chapin Ray makes *Nathalie's Sister* fight against a brooding temperament, and help win a law case.

A series of Christmas experiences is told to a little girl by her family, and Olive Thorne Miller puts them into *Kristy's Queer Christmas.* Different in style, and by far more childlike and human and true in its observation, is *A Book of Little Boys,* by Helen Dawes Brown, which will please young and old. Dr. Mitchell's *Mr. Kris Kringle* is to be mentioned, because the way in which the little ones bring the father and mother together, and this is added to in sweetness of spirit by the fact that the proceeds of the sale of the book are to go to a home for crippled children.

Animals and Nature.

Monarch, The Big Bear. **By Ernest Thompson Seton.** Scribner. $1.25.
The Haunter of the Pine Gloom. **By Charles G. D. Roberts.** Page. 50 cents.
A Quintette of Graycoats. **By Effie Bignell.** Baker & Taylor. $1.00.
Tales of a Poultry Farm. **By Clara D. Pierson.** Dutton. $1.00.

One striking animal story is Ernest Thompson Seton's *Monarch, The Big Bear,* which is as good as *Wahb,* and is dramatic, human and graphic in its account of struggle. In the same warm terms of praise for the eye that sees into the heart of wild things and wildernesses, Mr. Roberts's *The Haunter of the Pine Gloom* may be recommended. *A Quintette of Graycoats* is pleasingly observed by Effie Bignell, and the habits of the squirrels attractively described. *Tales of a Poultry Farm,* as told by Clara D. Pierson, is interesting because of the idealized naturalness of such a practical environment as is the setting in the book.

Miscellaneous.

Snowland Folk. **By Robert E. Peary.** Stokes. $1.20.
Handicraft and Recreation for Girls. **By Lena and Adelia Beard.** Scribner. $1.60.

Two miscellaneous titles may be recorded: Mr. Peary's *Snowland Folk,* tempting in cover and holding in descriptions of the Far North; then *Handicraft and Recreation for Girls,* by the Beards, as suggestive and useful as it is entertaining.

One word of retrospect: the foregoing points to an improved level of juvenile literature, characterized by a tip of the balance toward heaviness. True, individual boys and girls will thrill through only one or two of the books, while I have been deluged by many more than here noticed. But if, by this survey, shopping lists are somewhat aided, it is all that can be expected from an article of the kind.

Song

BY JOHN GREENLEAF WHITTIER

[This poem was written in 1830, and was printed in the *New England Review*, which Whittier was then editing. He did not sign it at the time, but indicated his authorship in pencil in a bound file of the paper. It was never collected, and I have never seen it copied.—S. T. PICKARD.

That vow of thine was full and deep
As man has ever spoken—
A vow within the heart to keep,
Unchangeable, unbroken.

'Twas by the glory of the Sun,
And by the light of Even,
And by the Stars that, one by one,
Are lighted up in Heaven!

That Even might forget its gold—
And Sunlight fade forever—
The constant Stars grow dim and cold,—
But thy affection—never!

And Earth might wear a changeful sign,
And fickleness the Sky—
Yet, even then, that love of thine
Might never change nor die.

The golden Sun is shining yet—
And at the fall of Even
There's beauty in the warm Sunset,
And Stars are bright in Heaven.

No change is on the blessed Sky—
The quiet Earth has none—
Nature has still her constancy,
And *Thou* art changed alone!

Attractiveness in Books.

BY THEODORE L. DE VINNE

[Mr. De Vinne has undoubtedly done more for the improvement of printing than any other man in America. He is now the head of the firm of Theodore L. De Vinne & Company, and is the author of half a dozen books on various phases of the art of printing.—EDITOR.]

NOVELTIES have to be considered by the publisher who wants to make a new book attractive. There are new fashions in paper and binding, new methods of engraving, new processes for printing in black and colors, new arrangements of pages and new styles of printing types. The types that fill the pages and receive closest scrutiny seem to be of most importance. If the new book can be printed in an entirely new face of letter not used by any rival, its pages should be invested with a charm that will command respectful attention.

This survey of possibilities with types invites to dangerous ground full of pitfalls. Pleasing types are not always proper types. A book on an ecclesiastical or medieval subject may be wisely set in an acceptable form of black-letter, an early Italian book in italic, the plays and poems of the Puritan century in an imitation of the types and the style of its time, but at or about a certain point not easily defined tolerance stops. The black-letter must be of a face sanctioned by long usage; modern variations admirably designed are disliked by book-lovers. Readers and reviewers are critical. Types of old time, attractive enough in books of that time, are not so attractive in modern books on modern subjects. The ordinary reader who is a book-buyer has the belief that the dress of the book, as of the man, should be the dress of to-day, and not of the fifteenth or seventeenth century. He may concede that the garments of old time are more picturesque, but who now dares appear on the street in a red velvet coat, embroidered satin waistcoat and short breeches, adorned with lace and ruffles?

Nor does tolerance stop at the revival of old fashions. Ornamental or fantastic forms of letters that convey the peculiar notions of the writer are barred out of book texts. Even the autographic lettering of an artist like William Blake, admired by his disciples, is unacceptable to the book-buyer. Pleasing it may be on one page of a magazine, but it will make unsalable the book filled with it. To be salable the text of a modern book must be easily readable. Like coins of money, book letter must be identified at first glance. Any serious variation is resented by the reader as an attempt on the part of the designer to obtrude his own conceits more than to make plain the subject matter. The want of individuality in lettering may be regretted by the artist, but the features of precision and uniformity that he dislikes are the ones that make the printed page attractive.

Altho roman text-types for books conform to a fixed standard of form, type-founders give us enough of variety. They provide us with roman letters that are bold and black, tall and thin, broad and squat, weak and sturdy. Here are a collection of faces or styles mainly from one printing house, but the number could be largely increased by more research. All of them have been used for the printing of books and pamphlets. For the purpose of comparison, selection has been confined to the sizes (12 and 14 point) oftenest used for the octavo page. The effect of the full page of print is imperfectly presented in two lines of each style, but it may be enough to show the changes that are produced by thinning or thickening, lengthening or shortening structural lines.

REAL old-style. Based on the model of William Caslon of London, 1721.

MODERNIZED old-style, as reformed by a Scotch designer about 1860.

FRENCH OLD-STYLE. The form approved by a type-founder of Paris.

CADMUS, or Elzevir. An imitation of types used at Leyden, 1634.

BRADFORD. A German reproduction of a type used in 1510.

FIFTEENTH CENTURY. An uncouth letter based on forms made by early inexperts.

JENSON. American reproduction of the Golden type of William Morris.

RENNER. Based on the type of Franz Renner, Venice, 1472.

RENNER of bold face. Useful for old texts or side-heads.

BOLD-FACE OF DIDOT. A French revival of his bold type of 1810.

LIGHT-FACE of modern-cut made for open composition.

ORDINARY face of modern-cut, of greater general serviceability.

COMPRESSED-FACE, French. Much approved by publishers of Paris, 1820.

MOTTEROZ-FACE. Prescribed for school-books in Paris, France.

OLD ROMAN. A combination of satisfactory features old and new.

SCOTCH-ROMAN. A face out of favor in 1820, but revived in 1898.

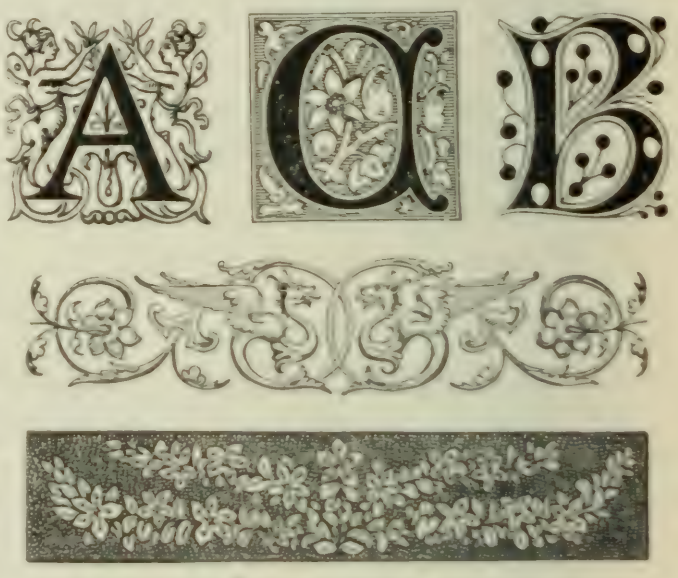
BOLD-FACE. The revival of the style in most request a century ago.

CHELTENHAM. New. An American style, compressed but very readable.

CUSHING. An American style. All its lines are of uniform width.

A large size of type is needed to fairly present the peculiarities of its style which are unmistakable in a body of 24-point, but recognized with difficulty in the small body of 6-point. To make print attractive by the cut or fashion of its letter, one must use large type.

Attractiveness does not depend entirely on size. "The hood does not make the monk," nor is a pleasing style of type enough to make the book pleasing. It must be presented on suitable paper and properly printed. Some of the styles here shown are at their best on dry and smooth, and others on damp and rough, paper. There are papers that accept, and papers that resist absorption of ink, and there are presses and pressmen that overcolor or undercolor paper. An entirely acceptable face of type can have its characteristic features grossly perverted by excess of ink and impression or by scamped ink and feeble impression. To be attractive types must be properly arranged in pages. I have by my side the folio edition of Quintilian, printed by Aldus at Venice, 1472, in which are chapters of thirteen solid pages, each 5⅜ x 8¾ inches, without paragraph breaks or even the sign ¶ to indicate change of subject matter. Not far off is Robert Stephen's octavo edition of the Bible (Paris, 1545), which is almost as compact, and equally repelling to the student. Valuable as these books are as monuments of early skill, no modern reader can consult them with pleasure, and no publisher dare accept them as models to be imitated.



Roman letter needs a proper relief of white space. Types jammed close together, with thin spaces between words, without added space between lines, without broken white lines for paragraphs, with each chapter closely following its predecessor after the fifteenth century fashion, may be inviting to the amateur bibliophile, but the ordinary book-buyer will not tolerate this compactness in any modern book.

Compact type-setting, unavoidable in dictionaries and directories, in the Bible and in all books that require much matter to be crowded in small space, is now carefully avoided by the publisher in his make-up of a new book that he intends to be attractive. He knows that the

reader prefers printed pages that show more white than black on the leaf, with white enough in the margins, at chapter headings and endings, and between words and lines. There is authority for the preference. "The eye is not saddened," writes John Ruskin, "by quantity of white, but it should be saddened and greatly offended by quantity of black." When paper and vellum were scarce there was excuse for economy in its use, but there is no excuse now for a needless huddling together of types. The book-buyer of to-day does not accept this treatment in a modern book as artistic. He may call it penuriousness—the saving of paper and presswork to the damage of eyesight. Yet the attempt to make a book inviting with plenty of white space can be pushed to unwise excess. Needlessly broad gaps of white space between single letters of lines of display, between the lines of a paragraph, and, worse than all, "the rivulet of type in a meadow of margin," is a swing of the pendulum too far on the other side. The buyer of a book wants its print more than its paper, but he wants print readably apportioned on the paper.

To make print attractive the eye of the reader must be diverted and relieved from the dreary monotony of solid composition with types always and everywhere the same. White space at the ends of lines of poetry, between verses of the Bible, between paragraphs and chapters, and full-blanks or half-blanks between different parts of the book are great helps to easy reading, ready reference, and a better understanding of the subject matter. Early printers undervalued these aids. How the modern schoolboy would rebel over a text-book at the welding together in solid, unbroken lines of the declensions and conjugations of words!

For books made for entertainment more than for instruction, decoration is of good service. A large initial letter at the beginning of a fresh topic, engraved headbands and tail pieces that mate with each other and with the initial, and sometimes borders that inclose the entire page, are devices of old book-makers that continue to find imitators. When made to order to illustrate subject matter, they are expensive; the publisher of to-day has to pay in dollars for what once could be paid for in dimes or pence. Nor is it easy to find an artist who can produce decoration that will be in accord with the typography. When this result is attained the general effect is admirable. When it is not—when the printer fills up supposed gaps on the leaf with the odds and ends of printing-house or type-founder's stock that have no relation to one another, the result is not at all pleasing. Composition so treated does not hang together. There are false notes in the music.

"Decorations That Swear at One Another"

Decorations may be profuse and yet unattractive. When made at different times by different artists, not working together toward a defined plan, the general effect of assembling is that of patch-work.

Illustrations in books were never more abundant and never so monotonous as to method and treatment as they are now. Etching, line, and mezzotint engraving, and even photogravure, are rarely to be had even in books of limited editions and large price. Lithography is often unwisely rated as impracticable. Engraving on wood is one of the dying arts. Photo-engraving, in the style known as half tone, is the process in most request. The plates from which photo prints are made are usually reductions in size of about one-eighth of an original sketch largely of brush-work. This reduction unavoidably muddles distinctions in gray

shading, making flat, foggy and indistinct forms that afterward have to be cleared up by hand engraving. Another remedy for this fault is to enforce light and shade by additional plates of color in pale tints, but this means more printing and more expense. When the colors have been properly arranged and printed, the result is most pleasing. Some recent color work on photo plates may be harsh and crude, but it should be considered that the art is still in its infancy and that it has before it a grand future of usefulness. Able experimenters here and abroad are developing its possibilities. No other method of engraving has been so successful as photo-engraving in reproducing *fac-similes* of difficult subjects at moderate cost.

The great objection to photo-engraved plates is the shiny and heavy paper that has to be used for the best work. It is not possible to print them properly on paper of dull and rough surface that is often preferred for the pages of type-work only. The contrast between the two kinds of paper is offensive, but as yet unavoidable.

A new form of paper, light, fluffy, bulky and of rough surface, known as "featherweight," has been recently introduced. Its lightness and bulk are largely produced by the "agalite" or asbestos with which the pulp is stuffed. Pleasing for weak hands, it is most destructive to types or plates in the operation of presswork, and for that reason is strongly disliked by printers and publishers.

Bindings attract or repel at first glance. The cloth cover, gaudy with gold and bright color, tempts the inexperienced buyer; the Seidlitz-powder cover in boards of dull blue paper and backs of white parchment invites the disciplined collector; the neat tooling of a graceful design on crushed levant leather pleases the bibliophile more than any other kind of decoration. It should not be necessary to add that a pleasing exterior is not a safe guide to merit of an interior. Yet, outside show is not to be undervalued. To the publisher and the dealer it may mean the good or bad luck of the book. It is the mantle that, for a time at least, hides negligence and the imperfections of the hurried work that spoils too many of our books. There is, however, reason to regret that some of the money spent on outside decoration had not been spent on a better quality of interior workmanship.

Every book represents the combined workmanship of many distinct crafts, that do not always work together under one direction or with unity of purpose. For making the simplest book we must have paper-maker, ink-maker, type-founder, printer and binder. For the sumptuous book this list must be largely increased. All these different crafts but the last have it in their power, through haste or ignorance of real needs, to make more difficult the work of those who follow them. It is largely to this want of concert as well as to the want of far-seeing plans of supervision that imperfect and unattractive workmanship is produced.

New York City

Maxím Górky

BY PRINCE PETER KROPOTKIN

Author of "Fields, Factories and Workshops," "Mutual Aid," Etc.

FEW writers have established their reputation so rapidly as Maxím Górky. His first sketches (1892-95), were published in an obscure provincial paper of the Caucasus, and were totally unknown to the literary world, but when a short tale of his appeared in a widely-read review, edited by Korolénko, it at once attracted general attention. The beauty of its form, its artistic finish, and the new note of strength and courage which rang through it, brought the young writer immediately into prominence. It became known that Maxím Górky was the pen-name of quite a young man, A. Pyeshkoff, who was born in 1868 in Nizhni Novgorod, a large town on the Volga; that his father was a merchant, or an artisan, his mother a remarkable peasant woman, who died soon after the birth of her son, and that the boy, orphaned when only nine, was brought up in a family of his father's relatives. The childhood of Górky must have been anything but happy, for one day he ran away and entered into service on a Volga River steamer. Later he lived and wandered on foot with the tramps in South Russia, and during these wanderings he wrote a number of short stories which were published in a newspaper of Northern Caucasia. The stories proved to be remarkably fine, and when a collection of all that he had hitherto written was published in 1900, in four small volumes, the whole of a large edition was sold in a very short time, and the name of Górky took its place—to speak of living novelists only—by the side of those of Korolénko and Tchéhoff, immediately after the name of Leo Tolstóy. In Western Europe and America his reputation was made with the same rapidity, as soon as a couple of his sketches were translated into French and German, and retranslated into English.

MAXIM GORKY
Courtesy of Charles Scribner's Sons

It is sufficient to read a few of Górky's short stories, for instance, "Málva," or "Tehelkásh," or "The Ex-Men," or "Twenty-six Men and One Girl," to realize at once the causes of his rapidly won popularity. The men and women he describes are not heroes; they are the most ordinary tramps or slum-dwellers; and what he writes are not novels in the proper sense of the word, merely sketches of life. And yet, in the literature of all nations, including the short stories of Guy de Maupassant and Bret Harte, there are few things in which such a fine analysis of complicated and struggling human feelings is given, such interesting, original, and new characters are so well depicted, and human psychology is so admirably interwoven with a background of nature—a calm sea, menacing waves, or endless, sun-burnt prairies. In the first-named story, you really *see* the promontory that juts out into "the laughing waters," that promontory upon

which the fisherman has pitched his hut; and you understand why Málva, the woman who loves him and comes to see him every Sunday, loves that spot as much as she does the fisherman himself. And then, at every page, you are struck by the quite unexpected variety of fine touches with which the love of that strange and complicated nature, Málva, is depicted, or by the unforeseen aspects under which both the ex-peasant fisherman and his peasant son appear in the short space of a few days. The variety of strokes, refined and brutal, tender and terribly harsh, with which Górky pictures human feelings, is such that in comparison with his heroes the heroes and heroines of our best novelists seem so simple—so simplified, like a flower in European decorative art in comparison with a real flower.

Górky is a great artist; he is a poet; but he is also a child of all that long series of folk-novelists whom Russia has had for the last half century, and he has utilized their experience: he has found at last that happy combination of realism with idealism, for which the Russian folk-novelists have been striving for so many years. Ryeshétnikoff and his school had tried to write novels of an ultra-realistic character, without any trace of idealization. They restrained themselves whenever they felt inclined to generalize, to create, to idealize. They tried to write mere diaries, in which events, great and small, important and insignificant, were related with an equal exactitude, without even changing the tone of the narrative. In this way, by dint of their talent, they were able to obtain the most poignant effects; but, like the historian who vainly tries to be "impartial," yet always remains a party man, they had not avoided the idealization which they so much dreaded.

The stratum of society from which Górky took the heroes of his first short stories—and in short stories he appears at his best—is that of the tramps of Southern Russia: men who have broken with regular society, who never accept the yoke of permanent work, laboring only as long as they want to, as "casuals" in the seaports on the Black Sea; who sleep in dosshouses or in ravines on the outskirts of the cities, and tramp in the summer from Odessa to the Crimea, and from the Crimea to the prairies of Northern Caucasia, where they are always welcome at harvest time.

Far from his whining and complaining about the hard lot of his tramps, a refreshing note of energy and courage, which is quite unique in Russian literature sounds through the stories of Górky. His tramps are miserably poor, but they "don't care." They drink, but there is nothing among them nearly approaching the dark drunkenness of despair which we see in Levítoff. Even the most "down-trodden" one of them, far from making a virtue of his helplessness, as Dostoyévsky's heroes always did,—dreams of reforming the world and making it rich. He dreams of the moment when "we, once 'the poor,' shall vanish, after having enriched the Croesuses with the richness of the spirit and the power of life." ("A Mistake," I, 170.)

Górky cannot stand whining; he cannot bear that self-castigation in which other Russian writers so much delight: which Turgueneff's *sub*-Hamlets used to express so poetically, of which Dostoyévsky has made a virtue, and of which Russia offers such an infinite variety of examples. Górky knows the type, but he has no pity for such men. "What's all this talk about circumstances?" he makes "Old Izerghil" say.

> "Every one makes his own circumstances! I see all sorts of men—but the strong ones—where are they? There are fewer and fewer noble men!"

In "Váreñka Olésova," Górky expresses all his contempt for the average "intellectual" of our own days. He introduces to us the interesting type of a girl, full of vitality; a most primitive creature, absolutely untouched by any ideals of liberty and equality, but so full of an intense life, so independent, so much herself, that one cannot but feel greatly interested in her. She meets with one of those "intellectuals" who know and admire higher ideals, but are weaklings, utterly devoid of the nerve of life. Of course, Váreñka laughs at the very idea of such a man's falling in love with her; and these are the expressions in which Górky makes her define the usual hero of Russian novels:

> "The Russian hero is always silly and stupid, he is always sick of something; al-

ways thinking about something that cannot be understood, and is himself so miserable, so mi-i-serable! He will think, think, then talk, then he will go and make a declaration of love, and after that he thinks, and thinks again, till he marries. . . . And when he is married, he talks all sorts of nonsense to his wife, and then abandons her." ("Váreñka Olésova," II, 281.)

Górky's favorite type is the "rebel"—the man in full revolt against society, but at the same time a strong man, a power; and as he has found among the tramps with whom he has lived, at least the type in embryo, it is from this stratum of society that he takes his most interesting heroes.

Some of Górky's tramps are, of course, philosophers. They think about human life, and have had opportunities to know what it is. He remarks somewhere:

"Every one who has had a struggle to sustain in his life, and has been defeated by life, and now feels cruelly imprisoned amidst its squalor, is more of a philosopher than Schopenhauer himself; for abstract thought can never be cast into such a correct and vivid plastic form as that in which is expressed the thought born directly out of suffering." (31.)

Love of nature is, of course, another characteristic feature of the tramp,—

"Konováloff loved Nature with a deep, inarticulate love, which was betrayed only by a glitter in his eyes. Every time he was in the fields, or on the river bank, he became permeated with a sort of peace and love which made him still more like to a child. Sometimes he would say with a deep sigh, looking at the sky, 'Good!' and in this exclamation there was more sense and feeling than in the rhetoric of many poets. . . . Like all the rest, poetry loses its holy simplicity and spontaneity, when it becomes a profession." (II, 33-4.)

However, Górky's rebel-tramp, is not a Nietzscheite who ignores everything beyond his narrow egotism, or imagines himself an "over-man" the "diseased ambition" of "an intellectual" is required to create the true Nietzscheite type. In Górky's tramps, as in his women of the lowest class, there are flashes of greatness of character, and a simplicity which is incompatible with the superman's self-conceit. He does not idealize them so as to make of them real heroes; that would be too untrue to life: the tramp is still a defeated being. But he shows how, among these men, owing to an inner consciousness of strength, there are moments of greatness, even tho that inner force be not strong enough to make out of Orlóff (in "The Orlóffs") or Iliyá (in "The Three") a real power, a real hero—the man who fights against those much stronger than himself. He seems to say: Why are not you, intellectuals, as truly "individual," as frankly rebellious against the society you criticise, and as strong as some of these submerged ones are?

In his short stories, Górky is great; but like his two great contemporaries, Korolénko and Tchéhoff, whenever he has tried to write a longer novel, with a full development of characters, he has not succeeded. Taken as a whole, "Thomas Gordéeff," notwithstanding several beautiful and deeply impressive scenes, is weaker than most of Górky's short stories; and while the first portion of "The Three," the idyllic life of the three young people, and the tragical issues foreshadowed in it, make us expect to find in this novel one of the finest productions in Russian literature, its end is disappointing. The French translator of "The Three" has even preferred to terminate it abruptly, at the point where Iliyá stands on the grave of the man whom he has killed, rather than to give Górky's end of the novel.

Over and over again Górky returns to the idea of the necessity of an ideal in the work of the novel-writer. He says:

"The cause of the present opinion (in Russian society) is the neglect of idealism. Those who have exiled from life all romanticism have stripped us so as to leave us quite naked: this is why we are so uninteresting to one another, and so disgusted with one another" ("A Mistake.")

And in "The Reader" he develops his æsthetic canons in full. He tells how one of his earliest productions, on its appearance in print, is read one night before a circle of friends. He receives many compliments for it, and after leaving the house, is tramping along a deserted street, feeling for the first time in his existence the happiness of life, when a person, unknown to him, and whom he had not noticed among those present at the reading, overtakes

him and begins to talk about the duties of the author. Says the stranger:

"You will agree with me that the duty of literature is to aid man in understanding himself, to raise his faith in himself, to develop his longing for truth; to combat what is bad in men; to find what is good in them, and to wake up in their souls shame, anger, courage—to do everything, in short, to render men strong in a noble sense of the word, and capable of inspiring their lives with the holy spirit of beauty. It seems to me, we need once more to have dreams, pretty creations of our fancy and visions, because the life we have built up is poor in color, is dim and dull. . . . Well, let us try—perhaps imagination will help a man to rise above the earth and find his true place on it, which he has lost."

"Can you,"—the "Reader" goes on to ask, "create for men ever so small an illusion that has the power to raise them? No!"

"All of you teachers of the day take more than you give, because you speak only about faults—you see only those. But there must also be good qualities in men: you possess some, don't you? . . . Don't you notice that, owing to your continual efforts to define and to classify them, the virtues and the vices have been entangled like two balls of black and white thread which have become gray by taking color from each other?" . . . "I doubt whether God has sent you on earth. If he had sent messengers, he would have chosen stronger men than you are. He would have lighted in them the fire of a passionate love of life, of truth, of men."

"Nothing but everyday life, everyday life, only everyday people, everyday thoughts and events. When will you, then, speak of 'the rebel spirit,' of the necessity of a new birth of the spirit? Where is, then, the calling to the creation of a new life? the lessons of courage? the words which give wings to the soul?'"

"Confess you don't know how to represent life, so that your pictures of it shall provoke in man a redemptive spirit of shame and a burning desire of creating new forms of life. . . . Can you accelerate the pulsation of life? Can you inspire it with energy, as others have done?"

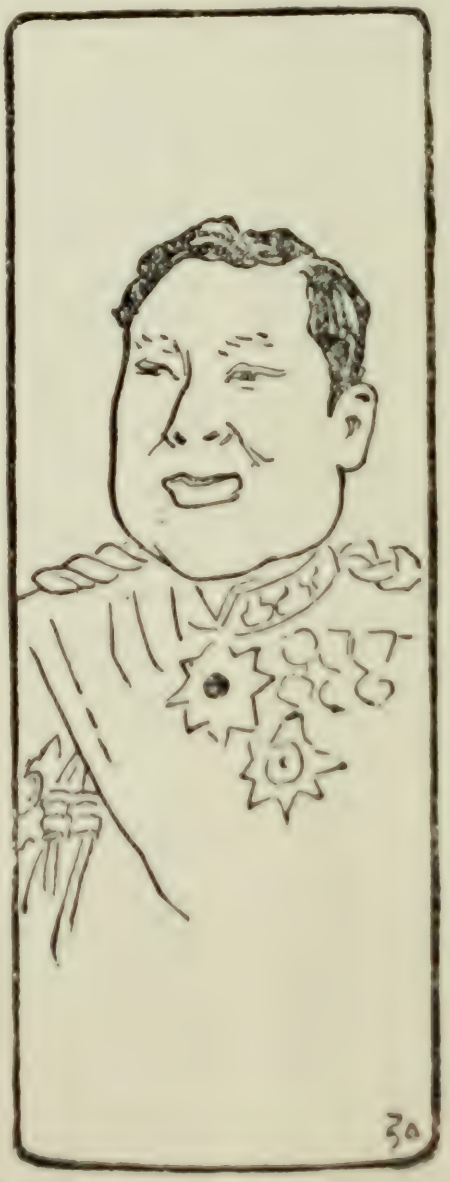
"I see many intelligent men round about me, but few noble ones among them, and these few are broken and suffering souls. I don't know why it should be so, but so it is; the better the man, the cleaner and the more honest his soul, the less energy he has; the more he suffers and the harder is his life. . . . But altho they suffer so much from feeling the want of something better they have not the force to create it."

"One thing more, Can you awake in man a laughter full of the joy of life, and at the same time elevating to the soul? Look—men have quite forgotten good wholesome laughter!"

"The sense of life is not in self-satisfaction after all, man is better than that. The sense of life is in the beauty and the force of striving toward some aim; every moment of being ought to have its higher aim. Wrath, hatred, shame, loathing, and finally a grim despair—these are the levers by means of which you may destroy everything on earth. What can you do to awake a thirst for life, when you only whine, sigh, moan or coolly point out to man that he is nothing but dust?"

"Oh, for a man, firm and loving, with a burning heart and a powerful all-embracing mind. In the stuffy atmosphere of shameful silence, his prophetic words would resound like a tocsin, and perhaps the mean souls of the living dead would shiver!" (253.)

These ideas of Górky about the necessity of something better than everyday life—something which shall elevate the soul, fully explain also his last drama, "At the Bottom," which has had such a success at Moscow, but played by the very same artists at St. Petersburg, met with but little enthusiasm. The idea is the same as that of Ibsen's "Wild Duck." The inhabitants of a dosshouse, all of them, maintain their ability to live only as long as they cherish some illusion: the drunkard actor dreams of recovery in some special retreat; a fallen girl takes refuge in her illusion of real love, and so on. And the dramatic situation of these beings with already so little to retain them in life, is only the more poignant when the illusions are destroyed. The drama is powerful. It must lose, tho, on the stage on account of some technical mistakes (a useless fourth act, the unnecessary person of a woman introduced in the first scene and then disappearing; but apart from these mistakes it is eminently dramatic. The positions are really tragical, the action is rapid, and as to the conversations of the inhabitants of the dosshouse and their philosophy of life, both are above all praise. Altogther one feels that Górky is very far yet from having said his last word. The question is only whether in the classes of society he now frequents he will be able to discover the further developments—undoubtedly existing—of the types which he understands best. Will he find among them further materials responding to the æsthetic canons whose following has hitherto been the source of his power?



Bromley, Kent, England.

Seven Months with Kuroki's Army in Manchuria

BY CHUJIRO KAWACHI, D.Sc.

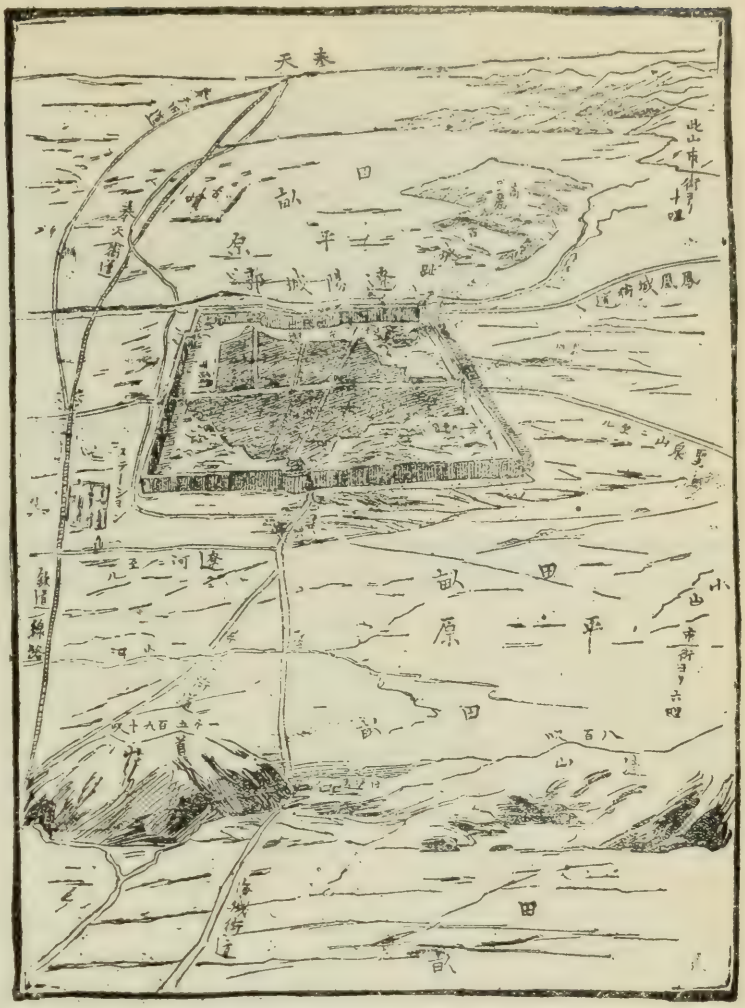
[Our readers have observed that we have sent no war correspondent, who has everything to learn, and then is not allowed to go to the front to report the war in Manchuria. We have preferred to secure reports and views from men long on the ground, who know Japan thoroughly, men like Dr. De Forest and Arthur Lloyd, and we have even been glad to publish patriotic poems from the Emperor of Japan. We give below a view of General Kuroki and his campaign from one who has served with him in the field, and shall follow it shortly with the experiences of a Buddhist chaplain serving in the Manchurian Army.—EDITOR.]

DURING the last seven months I have been marching with Kuroki's Army in Manchuria, and I have had the best opportunity of studying our military life in the field. When the war began, before we crossed the Yalu River, our men were rather excited and emotional, but now they have learned self-control, and they are terribly in earnest and cool-minded, because they know that victory will be theirs without a doubt. Often I have seen an officer rise up from a pool of his own blood and lead his wounded men back to camp in perfect order, and they never showed what they were suffering, even if it were almost unbearable. Last July, when we had a hard struggle while pushing through Mutenlay Pass, the weather was very hot and the enemy's bullets were raining round our batteries, but our artillery had received no order to answer the Russian's fire, and all the soldiers were calmly fanning themselves with the fans sent by their beloved Empress just before they left for the front.

General Oyama. From a Cartoon by a Japanese Artist.

General Kuroki is a cool-headed old man of 64. He belongs to the old clan of Satsuma, and has had a great deal of experience, fighting many times before the restoration of 1867. He is very kind-hearted and genial, and he can be tender and gentle even to a common soldier, tho he can be as fierce as a lion when he is angry. General Fujii, the chief staff officer, is, of course, the right hand of Kuroki. He is rather young, but he is one of the ablest men we have in Japan. He was many years president of the staff college in Tokyo, and now he is making all the plans of fighting for the First Army. Watchers of the battle from a distance might easily know the result by looking at Fujii. He would be leaning forward with an anxious expression on his face when the Japanese were hard pressed, but if he could see that victory was inevitable he would generally be talking calmly to Kuroki and other officers with a cheerful smile. If we compare Fujii's diligence and thoughtfulness with the calm and easy manners of Kuroki we will see there exists a great

difference between these two generals. Kuroki's favorite attitude is to stand upright, cigar in one hand, the other pointing to the different changes taking place on the battle field, but throughout talking as coolly as if he were watching maneuvers at home.

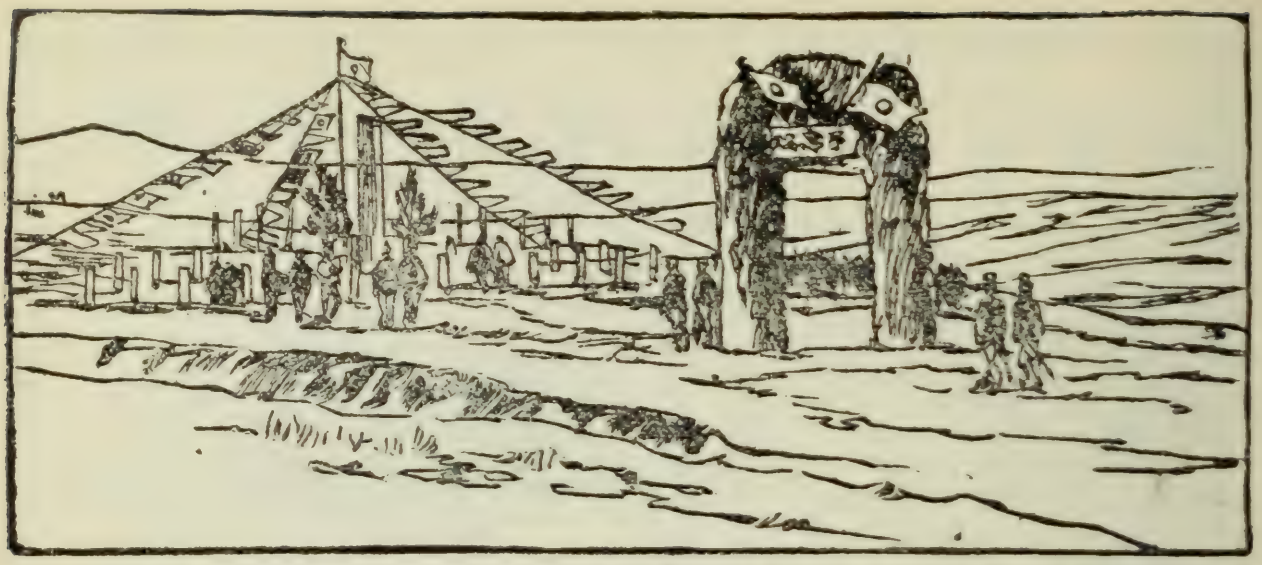


We had many foreign military attachés and war correspondents on the field, and among them General Ian Hamilton perhaps impressed us Japanese the most favorably. Britain must be proud to have such a man to represent her. He is polite and kind to everybody, and the Japanese army trusted him and respected him as if he were one of themselves. One day when we were watching the battle from a little hill near Shan-kwa-too, about fifteen or sixteen miles northeast of the city of Liao-Yang, General Hamilton said to General Kuroki:

"Well, General, Kuropatkin has met many a defeat from your army, but he never said that he was defeated and he always told his Czar that he had retired to the position he intended. This is the first time he has changed his usual defensive work to the offensive attack, and yet he was defeated so badly by you, I wonder how he will explain this to the Czar and his country."

"I do not know," responded General Kuroki, laughingly; "but Kuropatkin is always very skilful in his explanations; therefore he might say that he has withdrawn his army to a very important position after finding the strength of the enemy by patrolling with his force."

"But," remarked General Hamilton, once more in a humorous way, "he has lost so many men this time."



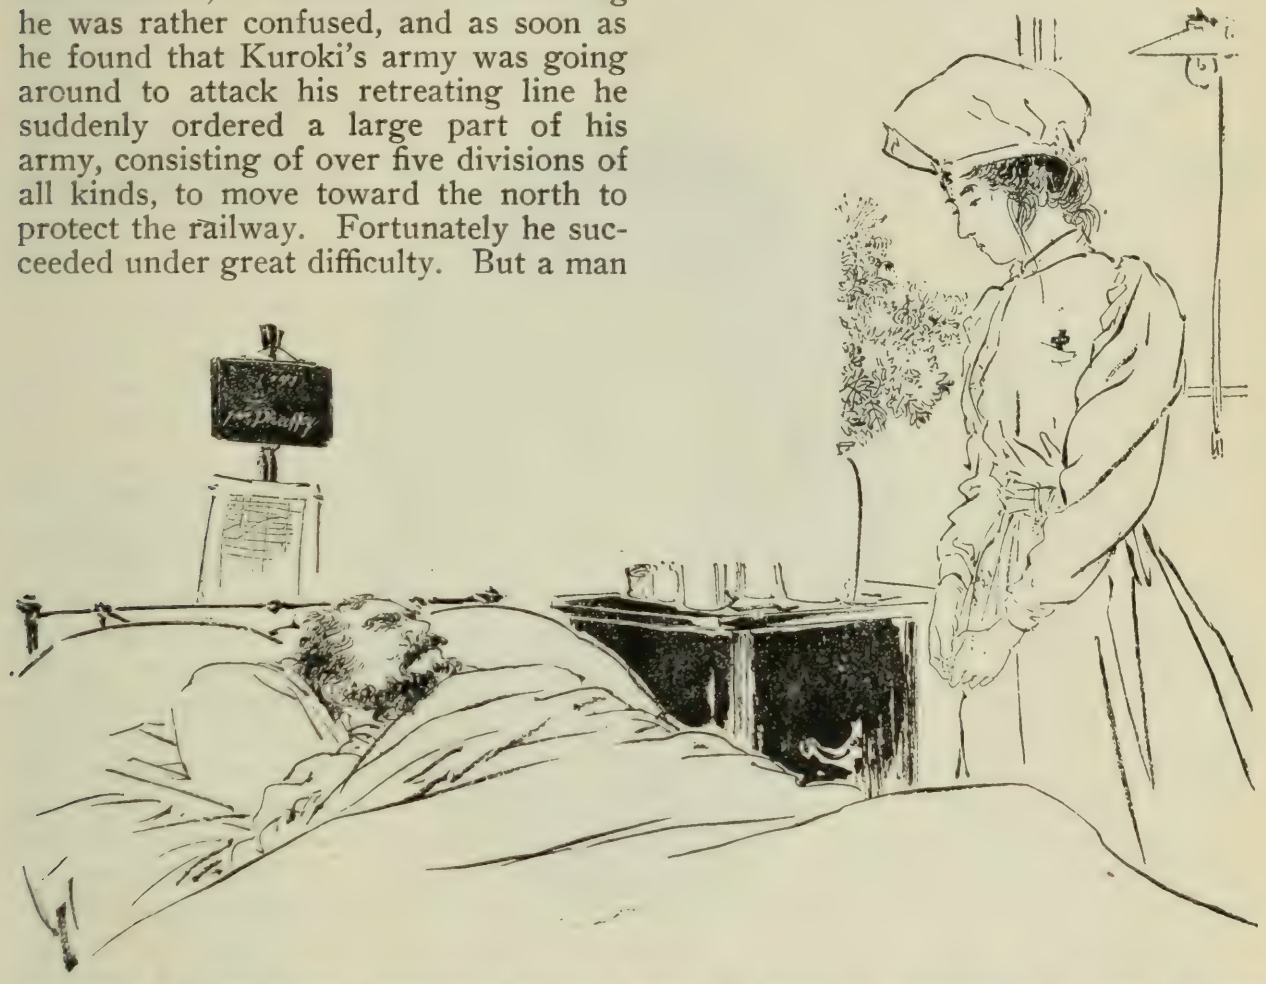
"Yes, it is true," said General Kuroki, "that we have already buried nearly 15,000 dead Russians during the last few days, picked up many wounded ones, and removed them to our hospitals; but Kuropatkin is proud of it, and tells the Czar that his men died bravely for him and his country."

Walled City of Liao-Yang. From a Japanese Print

Of course, this was only a mere joke made by two allied generals, the hero of Ladysmith and the hero of Manchuria, but the Russian generals are neither scientific nor systematic in their fighting methods, tho all their soldiers are very brave and heroic, and they are not afraid to face difficulties. The weakest points of the Russian army are the work of detecting the movements of their enemy and the poor arrangement of communications in the field, while the Japanese are not only clever in finding out the plans laid down by the Russians and the strength of their force in all directions, but the method of communications applied between the different parts of the army is almost perfect. In the Japanese army the telegraph and telephone communications from the grand headquarters to all the divisions, brigades and regiments are closely connected, and they are smoothly working with machine-like regularity.

The great defeat of the Russians which

Performing the Funeral Ceremonies for the Dead of General Nodzu's Army After the Battle of Liao-Yang. From a Sketch by a Japanese Artist



we witnessed at Shaho recently is due to their ignorance of our movements, and the number of men who were prepared for them. According to a story told by the Russian prisoners, when Kuropatkin saw that the Japanese were busily constructing many batteries and various fortifications near Liao-Yang soon after they captured that city in the beginning of last September, he thought that the Japanese would take a defensive stand there instead of advancing toward the north, and at the same time he was also misled by the peculiar mode of the Japanese attitude, as mentioned above, that Kuroki had sent some part of his men to Port Arthur to help the other army there. For this reason Kuropatkin sent a large body of nine divisions and tried to break through Kuroki's line, but his plan and desire were crushed down very easily by a small number of the enemy not exceeding one-half of his own.

General Fujii once told me soon after the battle of Liao-Yang that Kuropatkin was a brilliant man and he has managed

Carnage at Liao-Yang Railroad Station. From a Sketch by a Japanese Artist

his army skilfully, but it seemed to him that he had neither any experience in actual warfare nor had he ever conducted a very large army like the one he had now in Manchuria. It is true Kuropatkin was only one of the lowest staff officers in the Turkish war, and afterward he was always connected with the Russian war office, and thus had no opportunity of commanding any large army. For instance, in the battle at Liao-Yang he was rather confused, and as soon as he found that Kuroki's army was going around to attack his retreating line he suddenly ordered a large part of his army, consisting of over five divisions of all kinds, to move toward the north to protect the railway. Fortunately he succeeded under great difficulty. But a man with experience would never try to move such a big army at a few moments' notice, because it requires time to move so many men; therefore his little success retreating from Liao-Yang was rather luck than anything else.

Japanese Red Cross Nurse Attending Wounded Russian in Hospital at Matsuyama. From a Japanese Print

To-day no one in the world has any doubt of the success of Japan, and we also believe that the Russians will never have the slightest chance of advancing southward to control this vast land of Manchuria again in the future. But men who have traveled here and have seen many beautiful barracks, buildings, cemeteries and school houses along the railway line between Niuchwang and Mukden or the neighborhood of Dalny, will naturally feel very sorry for Russia, who has done so much for Manchuria during the last few years, and now she has lost them entirely by an obstacle raised by the little Empire of Japan.

When I was with General Kuroki he received many letters and postal cards from the Poles, Finns and Jews, sympathizing with him and congratulating him on his success, and even Russian subjects have asked him to use them in the war against their own country, while the people in Japan, both men and women, are not only ready to sacrifice their lives for their beloved Emperor, but they are always trying to help the Government to push on this war in every possible way they can think of. The domestic war loans have been issued three times since the beginning of hostilities, and each time the total subscriptions to the loan have been more than three times the amount demanded.

Besides this, according to recent cablegrams, the negotiations for the foreign loan have been concluded successfully both in London and New York; so that we are financially well fixed, far better than the Russians.

Altho we are now obliged to fight with Russia for the sake of humanity, and also for the purpose of keeping permanent peace in the Orient, the war is a terrible thing, and thousands and thousands of men are dying every day and leaving many helpless widows and children behind in starvation. May the proposed Peace Congress be opened in America next spring and bring peace to the East and soon introduce the light of civilization into the darkest lands of Russia and China.

TOKYO, JAPAN.

The Social Democratic Party in Germany

BY JOHN MITCHELL

[In view of the official attitude of the chief trade union leaders in this country toward Socialism, the following article by the President of the United Mine Workers of America is significantly frank and candid. Although at the recent convention of the American Federation of Labor in San Francisco the question of Socialism was brought forward by the Socialist members on all occasions, the Federation steadfastly outvoted the Socialists as they have done in the past.—EDITOR.]

SOME weeks ago I was seated with a number of German workingmen in one of the beautiful garden cafés which are to be found everywhere throughout the length and breadth of Germany. There were eight or ten in the party, two members of the Reichstag, and all stanch trade unionists and enthusiastic Social Democrats. The conversation turned upon the condition of the workingman in Germany and in the United States and, later, upon the progress and prospects of the Social Democratic party.

The discussion, which—as is usual in Germany—extended over many hours and became more interesting as the evening wore on, confirmed in my mind many impressions and prejudgments which I had formed concerning the Social Democratic movement. Those with whom I was conversing gave me many details in regard to the formation of the party, its internal organization and the lines of policy which it had been led to adopt.

In many respects the Social Democratic party is one of the most remarkable political organizations in the world. In the rapidity of its growth, in the effectiveness of its machinery and in the force and vividness of its appeal to various classes in the community, it stands almost unrivaled among political parties. It has increased in strength and influence and acquired recognition even in the face of pronounced opposition. In 1878 there were almost 500,000 Socialists, and in the number of its adherents the party stood fourth or fifth among the dozen or score of political bodies represented in the Reichstag. At that time the German Government, under the leadership of Bismarck, determined to crush the organization by means of laws rendering its further activity illegal. The result was, of course, exactly what might have been expected and exactly the opposite of that which was intended. For a few years the Socialists were confused, not knowing which way to turn, but they soon regained confidence, and the secret propaganda which went on added rapidly to their numbers. By 1890 the failure of the repressive law of 1878 was recognized and it was repealed. But by that time the organization had nearly one and a half million adherents, and in point of voters was first among the German parties. Since then the number of Socialist voters has steadily increased until at the present time about two and one half million men—or something less than one-third of all German electors—vote this ticket.

If the electoral districts of Germany were redistributed every ten years ac-

cording to the population, either with or without gerrymandering, the Socialists would hold at the present time something like 110 or 120 out of a total of 397 seats. As a matter of fact, there are only about one-half this number of Socialists in the Reichstag. No redistricting has taken place for over thirty years, and the cities, which are the strongholds of Socialism, are, at the present time, represented in the German parliament on the basis of the population which they had thirty years ago. Even as matters stand, however, the Socialists hold one-seventh of all the seats, and are the second largest party in the Reichstag.

The effectiveness of the party is demonstrated in many ways. Tho its receipts and expeditures are not large, considerable sums are spent in agitation and education, as well as for the subvention of a large number of daily papers representing its interests. The agitation for reforms is not confined to election times, but is carried on continuously. In the party press, on the floor of the Reichstag, in the public meetings frequently held all over the country, many of the abuses which have crept into the German civil and military administration are pointed out and attacked. Frequently the Socialist is the only party in Parliament willing to seek the redress of grievances and, in many cases, the reforms demanded by other classes of society have been obtained through the intermediation of the Socialistic party, which is primarily made up of workingmen. Thus the organization is at once democratic, popular and practical. Nevertheless, in its annual conventions questions of fundamental principle as well as of temporary policy are discussed.

JOHN MITCHELL

Not until one understands the actual political conditions in Germany does he begin to realize the secret of the great success of the Socialistic party. The political ideal of many of the men in power in Germany seems to be one of enlightened despotism, altho, perhaps, the despotism is more apparent than the enlightenment. The liberty enjoyed by the citizen in Anglo-Saxon countries is very much restricted, and the rights of free speech and free assembly are by no means fully recognized. Everywhere are police regulations, almost everything is a misdemeanor and many slight offenses are crimes. The country staggers under the weight of a militarism which crushes the people, impoverishes them and takes from them their liberty. In order to maintain huge armies on the French and Russian borders —which, in turn, leads to the excessive armament of these countries—the German youth is forbidden to emigrate, and upon coming of age he is obliged to spend two or three years in dingy barracks subject to the violence and cruelty of a brutal non-commissioned officer. The horrors of the German military system have been recently described in a book written by a young German officer, who was rewarded by a six months' imprisonment. But while the book swept through Europe and was sold by the hundreds of thousands, it contained nothing that had not already been made known to the Parliament and to the people of Germany by the constant attacks and complaints of the Socialists. The book of Lieutenant Bilse has aroused German public opinion, but has glanced off from the hard shell of German officialdom. Militarism has taken a new lease of life in the increase to the navy and in Germany's colonial misadventures, such as the brutal atrocities which led to the

despairing revolts of the Hereros, one of the negro tribes subject to German domination.

The paternal manner in which the German Government oversees the exercise of free speech is shown in many ways. The doctrine of *lèse majesté* seems capable of infinite application, and many persons are annually sent to jail for remarks which in England or in America would be visited with no punishment whatever. Not only the dignity of the sovereign, but that of the chief officials,military and civil, is protected by this widesweeping doctrine. In Germany silence is golden, as the position of prison editor (Sitz-Redacteur) demonstrates. The editors of the Socialistic papers are so often sent to jail for statements conceived to be derogatory to the constituted authorities that the editorial staff would soon be exhausted were it not for substitutes. As a consequence these papers now usually have a young man holding a very subordinate position in one of the mechanical departments who calls himself the responsible editor and who goes to jail in place of the man who actually wrote the offending article.

At the table where we sat every German had served a term of imprisonment varying from six months to four years. One of the members of the Reichstag had been sent to prison for a few years for a slight offense, and another of the men claimed to have served three and one half years for having been brushed into by a policeman in the course of a somewhat disorderly meeting.

The action of the Socialists, as of the trade unionists in Germany, is very much hampered by the law regulating public meetings. Permission to hold a public meeting must be obtained twenty-four hours in advance, and the gathering is attended by a policeman, who sits next to the chairman and has the right to dissolve the meeting if in his judgment anything occurs which does not conform to the letter of the law. Boys under seventeen, and, in certain parts of the country, boys under twenty-one,are not allowed to go to public meetings of any sort, and the presence of youths under the statutory age has been used as a pretext for abruptly dissolving meetings which were being conducted in a most law-abiding and peaceable manner.

While the Socialists in Germany number over two and a half millions, there are less than one million trade unionists. I asked my German friends why this was, and in the course of a long explanation they gave me many reasons. In the first place, the German workman seems to have been accustomed for a longer time to political than to industrial action, and the Socialistic party after 1890 had a long start upon the trade unions. Moreover, where trade unionists are concerned the opposition of the great industrial chiefs is very much greater than where Social Democrats are involved. There are men in Germany who are perfectly satisfied to have every man in their employ vote the Socialistic ticket, but who will not tolerate the weakest union in any part of their business. The wages paid in many industries are so low as to make unionism extremely difficult. The textile workers find it impossible to get together the few pennies necessary to create a labor organization. As one of the Reichstag members said, "Union dues cost money, but the ballot is free."

A still more important reason for the difference between the strength of the Socialists and that of the trade unionists —altho the vast majority of trade unionists in Germany are Socialists—is the fact that many of the Socialists are recruited from ranks outside trade union circles, and even outside the working class itself. Many of the men who vote the Socialistic ticket are subordinate officials and petty employees in the post office, the telegraph, the railroad and other Government departments, and these men dare not belong to the trade union movement; neither can they, of course, openly join the Socialistic movement without fear of some form of retribution. Nevertheless, many of them do so belong and vote the ticket regularly, and secretly send their contributions to the party. Another large class of adherents is found among the peasants. During the last half dozen years a propaganda among the agricultural workers has brought increasing numbers of peasants and farm laborers to the party. Many of the votes also come from small shop keepers and tradesmen and members of what in Germany is called the lower middle class. The appeal to the professional classes has also

been strong, and many lawyers and doctors openly—and more secretly—support the movement. In fact, every section of the middle class is contributing to the swelling vote of the Socialist party. Many of the people are not in sympathy with the ultimate socialistic ideals of the collective ownership of the means of production, but they are, upon the whole, in sympathy with the immediate demands on behalf of the workingmen; they are heartily in favor of the agitation of the party in defense of the rights of free speech and free assembly and with the assaults upon the abuses which have flown from the spirit of militarism and bureauocracy in Germany.

The Socialistic party in Germany is thus not only a movement which declares for the ultimate and complete acquisition production, but it is also a party with a by the community of all the means of distinctive and present-day working class policy. Finally, it is a party which goes beyond the working class itself and represents the struggle of the liberal minded and progressive Germans in their antagonism to the feudal government which still holds sway.

INDIANAPOLIS, IND.

The Premier of Italy and the Subversive Elements

BY SALVATORE CORTESI

[Very little has appeared in the United States in regard to the general strike in Italy—one of the most significant movements of modern times. We hope to give to our readers in a subsequent issue a view of the situation from a more radical standpoint.—EDITOR.]

THE general strike in Italy had its origin and culmination in Milan, where it lasted from the 16th to the 22d of September, and was thus called the new "five days," alluding to the other famous "five days" of March, 1848, when the heroic population of the "moral" capital of the Peninsula drove the Austrians from the town, the fortress and the walls, and planted the Italian tricolor on the highest pinnacle of the historic cathedral. It was one of the greatest and most glorious episodes of the *resorgimento* which inspired Manzoni to write the well-known ode:

"O day of Italia's glory!
Unhappy for aye is the brother
Who e'en from the lips of another,
As an alien lists to that tale;
Who telling his sons the glad story,
Shall say with a sigh, 'Not for me,
Alas! 'mongst that cohort to be,
Who saw the blest standard prevail.'"

To the patriotic Italian it sounded blasphemous to compare the two "five days," those recalling the noblest and the most strenuous sacrifices for the independence and unity of the country and those in which the worst rowdyism, from the *Teppa* of the north to the *Camorra* and *Mafia* of the south, gathered all the Hooligans of the Peninsula in a drunken, useless and senseless revolt.

The pretext was the intervention of the police and troops in two conflicts between proprietors and workmen in Sardinia and Sicily, with the result that three peasants were killed and several wounded. The general strike was announced as a protest against the abuse in the employment of arms on the part of Government agents and as a proclamation of the inviolability of life. Still, by outsiders, it was not considered an unpremeditated coincidence that it should have been proclaimed from Milan on the morning of September 16th, just as soon as the news circulated of the birth of the Crown Prince, and that it should have been extended to September 20th, the great national holiday which commemorates the taking of Rome, while the events which had provoked the protest had taken place two weeks before.

Signor Giolitti, the Italian Premier

In the large towns in the North of Italy the strike was practically complete; no press, no light, no water, no bread. Indeed, as far as bread was concerned, it was worse than this, as the co-operative bakeries made bread for the workmen and prevented the other shops from selling any to the hated *bourgeoisie*, who, in their minds, would have to capitulate from hunger. The Anarchists got the upper hand, became the leaders of the movement, and in the *Bollettino dello Sciopero*—a kind of official gazette of the strike, the only printed matter allowed to circulate—proclaimed the beginning of the dictatorship of the proletariat, saying:

"A great event has taken place in these days in Milan: the substitution of the power of the proletariat for that of the *bourgeoisie*. The Labor Exchange, in the name of the Milanese proletariat, has virtually taken possession of public power, and now practically works the administrative and political mechanism of the town, which facts assume a profoundly revolutionary significance, showing the proletariat capacity to manage the proletariat Commune. Milan resists, Milan is in the streets, Milan proclaims the cessation of work, Milan imposes the general strike in Italy. Milan is no more the town of *all*, but the town *only* of the proletariat."

The proletariat, however, was not preponderately so powerful in the Lombard capital as in the articles of the *Bollettino*

and in the proclamations of the Labor Exchange.

King Victor Emmanuel, who differed profoundly from the sovereigns to whom Italy had been accustomed for centuries, who considered that the repression of any revolutionary movement with bloodshed was an infallible and indispensable remedy, expressed only one hope—namely, that everything should be done to prevent the cradle of his baby son, the Crown Prince of his kingdom, being stained with blood, as was certainly the intention of the organizers of the strike.

No better man to carry out such a desire could be imagined than Signor Giovanni Giolitti, the Premier, who reported to the King that he was certain that the movement was not so serious, intense and deep as it appeared, and that if left to itself it would not last long, owing to the good sense and spirit of independence of the Italian masses, whose temperament, he averred, renders Italy quite different from Germany, England, Belgium and other Northern countries, in the sense that Individualism has still a much stronger hold than Socialism. Indeed, Socialism is hampered in Italy by these historic and psychological conditions, as they render difficult a struggle with the mere arms of intellect, degenerating almost always into violence and thus provoking reaction, followed by retrogression. However, not many men among those who dedicate their lives to politics in Italy would have had such an exact idea of the situation and of the best way to deal with it as had Signor Giolitti, who, belonging to that little *bourgeoisie* which in Italy has kept constantly in contact with the people, the statesman who, since the Parliamentary *régime* was granted by King Charles Albert, has better known the feelings, the prejudices and the aspirations of the lower classes than any one else. His father was Recorder in the law court of Mondovi, in Piedmont, where the Premier was born 62 years ago. A few months after his birth his father died, and he was brought up by his grandfather, a notary, in the midst of the majestic Alps, and among a mountaineer population which has rooted traditions of strength, courage and Liberalism, coupled with rectitude of character and extraordinary capacity for work. There Signor Giolitti acquired that physical and mental energy which give to his erect figure (it is over six feet in hight) the aspect of a colossus, and to his arguments an irresistible power. He distinguished himself in climbing the Alps as well as in his studies, and, as was then allowed, he included in three years' study the usual five years of the university course, taking his degree in law and initiating his career as "lawyer of the poor." Soon, however, his ability brought him to the judges' bench and at 24 he was appointed Crown Counsel, an age of unheard of youthfulness, so much so that the humoristic papers of Turin made cartoons representing blind justice presenting a baby (the new Counsel) to the country. Shortly after he was called to the Ministry of Finance, becoming in a few years one of the greatest authorities in the manipulation of the budgets of the State. At 40 years of age he was appointed a member of the Council of State, the highest bureaucratic institution of the country, the youngest members of which are generally 60 at least. Contemporaneously he was elected Member of Parliament by his native Piedmont almost unanimously, and ever since, for 22 years, no competitor of any political party has dared to stand against him in his constituency.

Signor Crispi, who was a great reader of men, called him into his Cabinet, in 1888, as Minister of the Treasury. Never, perhaps, was seen such a contrast between two conspicuous politicians. Crispi was fiery, violent, almost volcanic, in all his acts. When he spoke in public the blood mounted to his face, his eyes shone, and his superabundant gesticulation was accompanied by tremendous thumps on the table, which seemed to make the very walls rattle. Giolitti is always calm, dignified, measured, almost mathematical, both in his movements and in his arguments. He never loses control of himself, and even in the most stormy discussion seems to dominate with his great hight the others, and remain impassible, with an almost imperceptible ironic smile, which assists in rendering his opponents helpless. With two such men, understanding and harmonious, working together, strife was impossible.

Giolitti, making his first financial statement before the Chamber, said he considered himself as a witness called to give evidence before a court, and as in sworn evidence he set forth the bad condition of Italian finances, and the absolute necessity of not augmenting expenses, Crispi approved theoretically, but he, who had never understood the value of money and had considered it as a most secondary element in all enterprises, in practice increased the appropriations, and Giolitti resigned, which brought about the fall of the whole Cabinet two months later. Since then his position as one of the foremost politicians has been assured, and in May, 1892, he became Premier for the first time. His courage in dealing with the bank scandals led to his fall, but in 1901 he returned to power, stronger than ever, together with Signor Zanardelli, whom he succeeded as Premier, putting into practice the most democratic system of government which Italy has ever had.

One of his chief personal characteristics is a hatred of pretension, not of show in its right place, but of snobbism. This was shown one day during his lease of power. He was at a small village, and the stationmaster, learning that he would leave by a certain train, thought of flattering the Minister's vanity and sense of importance by ordering a fine special car, while all the railway officials were drawn up to render homage. Giolitti, getting wind of the affair, arrived quietly on foot and alone, and mixing with the country people, as it was market day, escaped notice. With them he entered a third class carriage and, speaking in dialect about the markets and the times, sped on to the next station. Meanwhile the stationmaster, seeing the time for the departure of the Ministerial train arrive and still no Minister, became nervous and irritable and somewhat ridiculous, until he broke into a violent rage on receiving a telegram from another station saying that Giolitti had arrived and departed.

Another time Giolitti was having a holiday in his own village, and, descending one of the surrounding mountains which he had climbed, came across a poor old woman laden with faggots, whose strength had given out. He immediately assumed the load, while the aged peasant woman explained that she lived in the mountains, but that she was going down to the village to see her daughter, and at the same time get a glimpse of the great man staying there, and that the faggots were a present for her daughter. When the pair arrived in the village the old dame made no effort to relieve her companion of his load, but plied him with questions about the best way of seeing Signor Giolitti. They passed up the street, through the smiles and bows of the villagers, and when they arrived at the door of a humble house the Minister stopped and with a bow said, "Giolitti thanks you for your companionship!" The old woman remained open-mouthed and then took to her bed with chagrin at what she called the *brutta figura* (bad figure) which she had cut.

It required this extraordinary man, of such exceptional coolness and perception, to have the general strike end as it did, in ridicule, but to do so, and not to have recourse to brutal force, required also an immense amount of moral courage. His previsions were fulfilled to the letter; the Anarchist and Socialist demagogs, while succeeding in agitating the surface, found a dead resistance below and an open opposition in all enlightened men, even of their own party, such as Signor Turati, leader of the Reformist-Socialists, who openly condemned the strike. In one thing reality, perhaps, surpassed Signor Giolitti's expectations: the reaction in the greatest part of the population, which united to put down the subversive elements, proposing to form a kind of citizen militia armed with 10,000 clubs and pistols. The end was that the only repression the Government was obliged to use was against these too ardent protectors of public order.

Signor Giolitti did not lose one moment, and, on the top of this, ordered the general elections, so that the whole nation could pronounce sentence on what had happened, and the verdict was disastrous for all those who had supported the crazy design of experimenting, not alone in Socialism, but in Anarchy.

Rome, Italy.

More Thoughts on Life

BY COUNT LEO TOLSTOY

[Our readers will recollect several articles we have published by Tolstoy under the title of "Thoughts on Life." These articles are made up from personal letters of Tolstoy to a friend.—EDITOR.]

I HAVE been busying myself of late elaborating a system of reading for every day, to consist of the best thoughts of the best writers. Reading all this while Marcus Aurelius, Epictetus, Xenophanes, Socrates, Brahman, Chinese and Buddhist wisdom, Seneca, Plutarch, Cicero and, of the moderns, Montesquieu, Rousseau, Voltaire, Lessing, Kant, Lichtenberg, Schopenhauer, Emerson, Channing, Parker, Ruskin and others (this is the second month since I have stopped reading newspapers and magazines), I am ever more and more astonished and even frightened not so much by the ignorance as by the "civilized" savageness in which our society is engulfed. Enlightenment and education are given to us that we should avail ourselves of, and assimilate all the spiritual heritage left us by our ancestors—while we know newspapers, Zola, Maeterlinck, Ibsen . . . and others like them. How I should like to alleviate at least a little this terrible calamity, which is worse than war, for upon this most terrible "civilized," and therefore self-satisfied, calamity grow all horrors, and among them also war. . . .

I think it is but necessary for you to look into your heart in order to learn what you have to do. If you really believe, not merely by word of mouth, in God and his law, then there can be no doubt as to how you should act. Read Matthew X, 26, 27, 28, 29, 30, 32, 33.*

There it is plainly written how one who believes in God and in his law should act. It is better for people feigning that they are believers to renounce God, for such an act shows that they are occupied with earthly matters only. . . .

There is nothing wrong in not believing, and neither I nor anybody else will reproach people because they have no faith. One cannot believe by force. But it is wrong that people lie and make believe that they have faith, and censure others, while they themselves do not believe as they ought to. These are the same hypocrites whom Christ condemned.

One of the most important motives of human activity is inspiration—hypnotic power. Such a power is very good if it is used to inspire good thoughts and feelings. Without this faculty people could not live.

But it is terribly ruinous if this power is used to call forth evil feelings, false thoughts and wicked deeds. . . .

Wicked and deluded people have blended together with a conception of God so much falsehood and evil that honest, pure and little-thinking people of our time have worked out for themselves a faculty of conscious resistance against this influence, just as I consciously stop myself from yawning, when others are yawning in front of me.

With these good, little-thinking people happens the same that would have happened with travelers who, having been called several times into an inn for the night, were robbed, and who had heard similar stories from other travelers, would not have stopped anywhere to rest, and for fear lest they should be robbed, would not have trusted even the truly hospitable people that were inviting them, and the poor people would have kept on traveling as long as their young feet would carry them. The same is with our poor young generation.

So that the evil of religious charlatans and deceivers is not only the direct harm done to the deceived, but also the harm done to people that refuse to listen and to think of what is essential to man.

YASNAYA POLIANA, RUSSIA.

* The following is a translation of the above verses as quoted from Tolstoy's version of the Gospel:

"Fear not, therefore. What is hidden in the souls of men, that shall be revealed. What you will say to two or three, that shall spread among thousands. Above all, fear not those that can kill your body. They can do nothing to your souls. Therefore, fear them not; but rather fear lest your bodies and souls be destroyed, if you will desist from doing the will of your Father—this you should fear. You can buy five sparrows for a kopeika, and even they shall not perish without your Father's will. Even a hair shall not fall from the head without the will of your Father. What, then, should you fear, if you are in the will of your Father?"

Editorials

Mr. Roosevelt and the Railroads

THOSE who control the railroads of the United States should understand that the President means what he says in his message about rebates and an adjustment of unreasonable freight charges. It can easily be seen that he is very much in earnest. They will do well to bear in mind that he enjoys the confidence of a large majority of the American people, having recently been elected by a popular plurality of more than 2,500,000. If they are wise they will meet him half way and come to an agreement on the points to which his recommendations relate.

"Above all else, we must strive to keep the highways of commerce open to all on equal terms, and to do this it is necessary to put a complete stop to all rebates. The rebate must be stopped; the abuses of the private car and private terminal-track and side-track systems must be stopped." These words show that the President will do what he can to end these evils. In the past, rebates have promoted the growth of great and greedy combinations at the expense of independent competitors and the public. To what extent the evil survives we do not know. Neither party to an unjust and unlawful rebate agreement is inclined to advertise it for the information of the public. George Rice got the facts in one of the rebate conspiracies against his business because the railroad in question was in the hands of a Receiver representing a Federal court. When the court called for an account of his stewardship the Receiver had to admit that, under a formal agreement with the Standard Oil Company, he was charging Rice 35 cents a barrel for carrying his oil, was charging the company only 10 cents for similar service and was paying the company 25 cents out of every 35 cents received from Rice. Therefore the Receiver was removed.

But that was years ago. We believe there are few conspiracies of this kind in progress now. But the injustice of the simple rebate survives in the private car, private terminal-track and side-track systems, and in other devices by which a square deal with shippers is avoided. These evils can be removed by the action of the railway companies. "Community of interest" has given to a few men the power to sweep them away without exposing the railway corporations to loss.

The proposed additional grant of power to the Interstate Commerce Commission is another question. We see no room for a difference of opinion among honest men as to the injustice of the secret or disguised rebate to favored shippers. In the case of a uniform rate, however, the considerations for or against are of a different character. With respect to a rate which, after due complaint and hearing, it believes to be unjust or unreasonable, the Commission is almost powerless. It can denounce such a rate, but cannot declare what rate should be substituted. If the railroad insists upon the denounced rate, an appeal to the courts is followed by long delay, and if the courts sustain the Commission they cannot decide what the rate ought in future to be. By slightly varying a rate as to which the judgment of the Commission has been sustained by the courts, the railway company can repeat its offense and invite further useless proceedings of the same kind.

Mr. Roosevelt asks that the Commission be empowered to decide what shall be a reasonable rate to take the place of one challenged and found to be unreasonable; also that the Commission's ruling shall take effect at once on the railroad and continue in force unless and until it is reversed by the court of review. This is the substance of two bills (those of Senator Quarles and Representative Cooper) which have been pending in committee for nearly a year. A minor objection raised by the railroads is that if the court of review should sustain a denounced and displaced rate they could not recover the money lost during the interval. And so it is said that they should be permitted to retain the objectionable rate up to the time of the court's decision, giving a bond to indemnify the

shippers if the Commission is sustained by the court. This is not unreasonable, but there are indications that the railroads intend to oppose with all their influence the entire proposition.

Railroad officers and capitalists who take this position will not be well advised. The consolidation of the railways of the United States, now almost accomplished, may easily be foreseen. Such consolidation compels supervision and a regulation of charges by the Government. Mr. Roosevelt says:

"The Government must in increasing degree supervise and regulate the workings of the railways engaged in interstate commerce; and such increased supervision is the only alternative to an increase of the present evils on the one hand or a still more radical policy on the other."

Commissioner Prouty defined that "more radical policy" last Saturday when he said: "There will be either Government regulation or Government ownership." Railway competition has practically ceased throughout a large part of the country, owing to consolidations and to "community of interest." Rates have been rising for three years past. Where there is no competition to regulate freight charges, the people will not permit them to be fixed by a small group of capitalists. Thanks to the President's message, thousands of Americans learned last week for the first time that the Commission is really powerless. Mr. Roosevelt's recommendation will be greeted by a loud chorus of approval, which the railroad companies should not ignore.

Concentration of power, due to consolidation and "community of interest," should simplify the problem and facilitate a reasonable adjustment of differences between the roads and the public. The controlling capitalists, who can at any time easily put an end to all rebate abuses, can also, if they choose to do it, reach an agreement with the people and the representatives of the people in the legislative and executive branches of the Government as to provisions for a just and reasonable regulation of rates by some competent authority representing all public interests. If they decline either to seek a compromise or to make any suggestions of their own in the line of the President's recommendations, and if they decide simply to oppose those recommendations with such influence as they can exert, their course will surely commend to the public that "more radical policy" which they regard with intense aversion.

Arbitration Treaties in the Senate

MANY treaties of arbitration have been concluded during the past two years as an outcome of a movement inaugurated seventeen years ago by the pioneers of international arbitration. They looked to the United States to lead in this movement, the three treaties first conceived being between the United States, Great Britain and France. Among the many treaties already concluded is one between Great Britain and France. But the United States has not concluded any treaty of arbitration with Great Britain, France or any other nation. The United States would stand at the head of the list if the consent of the Senate were not required for ratification of a treaty, or if a majority of the Senate were sufficient, for the first treaty of arbitration negotiated —namely, the Olney-Pauncefote treaty —was signed in 1897 by both Great Britain and the United States, and carried in the Senate by a very large majority, but lacked three votes of the necessary two-thirds majority.

This treaty was far more advanced than those now being put into operation in Europe, of which the Anglo-French treaty may be taken as the type. It provided for the arbitration of all questions. These treaties reserve for trial by war, if the parties prefer that method, all questions which affect the vital interest or the honor of either party to the treaty or the interests of a third Power. This treaty was to remain in force until denounced by one of the parties; the Anglo-French and similar treaties expire by limitation in five years. The text of the various treaties which are now or soon will be ready for submission to the Senate has not been made public.

Even if they are not as advanced as the Olney-Pauncefote treaty they should, and we believe will, be ratified by the Senate.

There is no reason why differences

of opinion on local questions should prevent concert of all parties in the ratification of these treaties. The treaties soon to be submitted to the Senate should be unanimously approved.

The vote on the Olney-Pauncefote treaty was 43 for ratification and 31 against. Of the 31 opposed to ratification 25 were advocates of free silver. So a local issue seems to have caused the defeat of that treaty. This issue is out of politics. The friction between President Cleveland and the Senate may have had something to do with this adverse vote. The relations between the present President and the Senate are more harmonious, the movement has become the great movement in world politics, and it is hardly possible that the United States Senate will fail to do what is demanded by the best sense of not only the American people, but of the good people of every nation. But pressure will be put upon the Senate to give consideration to many measures, and the friends of peace and justice should raise their voice for the treaties of arbitration, lest they be put aside for other things. The members of the Interparliamentary Union—the organization which initiated the arbitration movement—are practically unanimous in the conviction that the United States should lead, not only in the movement for treaties of arbitration, but in the larger movement for organizing the nations into one political body, with a Deliberative as well as well as a Judicial Department. Now is the time for the United States to take its proper position in the arbitration movement by the favorable action of the Senate on the treaties submitted to it, as it recently took the lead in the movement for the political organization of the whole world by the calling of a Conference of Nations.

The Senators represent every citizen in their conduct of foreign affairs, and it would be well if any citizen with knowledge of the situation should write to his Senators advocating the ratification of treaties of arbitration.

That our readers and their friends may conveniently and intelligently do this we have given this general statement of the situation, and also a list of those now in the Senate who voted against the Olney-Pauncefote treaty. They are: John T. Morgan, Edmund W. Pettus, James H. Berry, Henry M. Teller, Francis M. Cockrell, Wm. M. Stewart, H. C. Hansbrough, Boies Penrose, Wm. B. Bate and John W. Daniel.

Besides the 18 men now in the Senate who voted for the treaty there are 56 others who are either new to the Senate or did not then vote. It is especially desirable that they should feel the sentiment of their constituents.

Is There a Santa Claus?

We all remember when this doubt first darkened the little Christmas Eve corner of our radiant minds. It was not in the hallowed watches of the night, when to believe everything was easier than to doubt anything, but it came in the clear light of day, when there was no shadow crowned dimness in which to hide dear illusions. Possibly we were standing at some window that looked out upon the wintry streets. Even then we were tiptoeing with expectation, watching for him, the merry old saint who juggled with narrow chimney tops and filled our stockings with treasures once a year. We knew that his reindeer might turn the next corner at any moment and that if we saw him we should never be forgiven. Yet we gazed on in the passionate hope of one fleeting glimpse. Then—how it happened we never can know—but suddenly we realized that every prosaic detail of the scene denied his existence. The very passers by, who never looked over their shoulders to see him coming, mocked our faith. Who can describe the shock, the slow conviction, with which we faced our desolation? Most unwillingly we saw our dearest illusion fade forever. How meanly ungrateful we felt toward the patron saint of all childhood. How prayerfully we questioned our elders, hoping for reassurance. But, alas! every answer guardedly given confirmed our worst suspicions. When and how had we developed this capacity for infidelity? Was it awakened by the chance remark of an older companion? Did some higher critic in the primary class trail the question like a serpent across the innocence and glory of our

untarnished faith? "Is there a Santa Claus?" The leering, sacrilegious form of the question seemed to demand a negative reply. We fought the impudent traducer, and all the more fiercely because even then our hearts misgave us.

Before this time every thought of our happy minds had been cast in the form of a hope, every hour was a sunlit prophecy of the next, and our young faith was the incontestable evidence of all things incredible. We had never seen the pot of gold at the end of the rainbow, to be sure, but we knew it was there by the witness of our own golden spirits. We had never actually danced with the fairies beneath the harebells in the forests, but we had fairy souls ourselves and could easily conceive of the performance. And, of course, we had never seen Santa Claus, but we often felt that we were within a wink of doing so, a proof which was to us as good as a vision. All our little heaven-born faculties, indeed, stretched away from dull realities toward the miraculous, and it was not the gifts that bulged so deliciously from the fat legs of our Christmas stockings that afforded the greatest joy, but it was the evidence they furnished of the existence of Santa Claus. We hoped all things and we longed to believe all things. We were still trailing clouds of glory, and in lieu of wings we held fast every manifestation of the incredible as being more in keeping with our natural sense of immortality. Thus, the fact that the family chimney was too small to accommodate Santa's round paunch only called for a more heroic exercise of our faith, and we gallantly responded. Besides, were we not justified next morning by finding a smutted candied kiss on the hearth-rug? And never did vulgar suspicion enter our minds because similar kisses were sold for a penny at the store on the next street. If a saint twice as large as the flue could descend through it, surely one must not quibble because he made sweets like those found in every-day shops. Later, our faith was more severely tried by the performances of better authenticated characters in Scripture.

But all that was before we realized that there never was or could have been a Santa Claus; and how we contemplated our orphaned condition with rage and mortification! From that hour we gave ourselves over to the dark powers of logic and reason. We began to mark time between the credible and the incredible. Even the story of Moses in the bulrushes, that had always seemed near and kin to our own possible experience, became ridiculous, and we openly sneered behind our preacher's back at the sum of Methuselah's years. We were little catechism apostates, driven from the fold by the loss of an old saint whose benefactions exactly suited the scriptures of our own hearts.

And after all it was not the gifts we missed, but it was the unconditioned faith we lost which carried us as far as the pinfeather wings of our imagination could reach. Then we had the marks of a special providence yearly upon us, and the assurance of it sanctified us, set us apart in a recurrent Kingdom of Heaven all our own and sugared to the top with miraculous gifts. Never again shall we be able to hope with so much courage, never again will any saint seem so dearly our own.

Football as a Sedentary Exercise

THE already astonishing and still increasing popularity of athletic sports indicates that they supply a necessary element in our modern civilization. The wind of physical culture sweeping over the land is carrying away the last remnants of the monastic idea that the care and development of the body is unworthy of attention. Such a glorification of the muscular man has not been seen since the Golden Age of Nero. The advertising pages of our magazines are filled with the well displayed forms of the professors of gymnastics. Any novel piece of apparatus which can be pulled or pushed, wiggled or squeezed enough to give one a tired feeling meets with a ready sale. The earth is ransacked to its remotest regions for new exercises, and no people is too barbarous or insignificant to be called upon to contribute its national pastimes to our pleasure. No other of the arts is at present cultivated among us with so much assiduity and success as the art of contortion. Muscles that our ancestors knew nothing of are sought out and carefully cultivated.

In this movement the universities have, as was to be expected, taken the lead. One has only to compare the position which the athletic trainer holds in a modern college relative to the power and popularity of its president with the relative rank of these officers twenty-five years ago to see how great has been the advance. The gymnasium has outgrown the chapel, but the former is still too small, while the latter has become too large, for their users. A new game is seized upon by our American students with the same enthusiasm as a new metaphysics by German students. If we take the desire for recreation as a measure of the amount of hard work necessitating such relaxation we will be convinced that college students nowadays are expending an enormously greater degree of mental exertion on their studies than their forefathers.

Among the numerous and varied forms of exercise developed in the scholastic atmosphere none has attained so general a popularity as football. It is, indeed, a wonderful thing to have aroused among the people such a realization of the importance of their physical development that they will leave their business or studies to assemble for betterment of their bodies by assisting, in the French sense of the word, in a game of football. To indulge in his favorite sport each man in the crowd of twenty or thirty thousand has expended at the least from $2.50 to $5.00 and no less than half a day of his valuable time, and often put himself to much personal inconvenience. This is, of course, not to be objected to, unless it can be shown that the same amount of physical exercise could be secured in some other way. Most of those who go to football games are in positions where the laws of caste and custom, which we may deplore but cannot disregard, prohibit them from indulging in beneficial exercises, such as wood chopping or road mending, so they are obliged to resort to non-productive forms, such as provided by games. These, therefore, should be so chosen as to give the greatest possible benefit to the whole system.

Let us consider, then, the amount and character of the physical exercise derivable from football. There is, first, the struggle with the crowd at the entrance to get tickets or seats. This is similar to wrestling, but is directed, not against a single, constant antagonist, but against numerous opponents of varying hight, weight and modes of resistance. Naturally all one's faculties must be on the alert to seize every advantage, and every muscle of the body comes into play, and at the same time every part of the frame is subjected at intervals to compression, similar in its effect to massage, but more massive and effective. In this part of the game the Japanese art of jiujitsu, now introduced into our military academy by order of the President, may be used to advantage.

After this exercise, excellent tho too brief to be of much value, succeeds some three hours in which almost the whole strain falls upon the large muscles underneath the femur, which are strongly and continuously compressed in a direction perpendicular to their length. In the cheaper seats the intercostal and spinal muscles come also into play in keeping the body erect. The waving of small flags, besides, develops the arms in much the same way as the use of wands and dumb-bells in calisthenics, but care should always be taken to have a flag for each hand, so the arms may be symmetrically strengthened. Of much greater benefit than any of these is the practice of inhaling deep breaths of the fresh air and its expulsion in forcible and rhythmical utterances under the direction of a collegiate choragus. This drives the residual air from the lungs and exercises the diaphragm.

These seem to be practically all the physical benefits derived from football. We need not take into consideration the two and twenty youths who are martyred, like St. Lawrence, on the gridiron. The exercise they get is undoubtedly strenuous, even excessive, but since they number less than a tenth of one per cent. of the whole assemblage, their exertions, however violent, cannot compensate for the comparative inactivity of the rest. As a form of sedentary exercise football, then, ranks in between chess and carriage riding, more active than the former, but less strenuous than the latter.

Hoggishness

HOGGISHNESS is not a pretty word, but it has to be in the dictionary. It is more than common selfishness; it is a mean sort of selfishness which grabs everything in sight, and leaves nothing for other people. It is the spirit that puts its feet in the swill and squeals if any other snout tries to squeeze into the trough.

There are illustrations of hoggishness in politics. The despotism of a monarchy or aristocracy which claims the rights and privileges of public and social life for its own members and refuses to allow those of common birth to reach any chance of government or social favor is essentially hoggish, because it is meanly selfish. The French Revolution was a protest against hoggishness.

Many years ago, in Massachusetts and Connecticut, people who believed in a certain way, who were members of a certain Church, kept to themselves all the offices and all the ballots; no one else was allowed to vote. Those who insisted on thinking differently, and saying it, were shipped out of the colony. Every one was compelled, Jew and unbeliever, to pay taxes to support their Church. The earth—or that part of it which they could control—was theirs, and others had no rights. That was hoggishness.

In the fifties there sprang up a political party that called itself "American," but whose platform was pure hoggishness. It declared that our land belonged to the native Protestant Americans, and that no Irishman and no Catholic need apply. The multitude of foreigners whom we had invited to our shores might work for us, might build our railroads or do any other humble manual toil, but they should have no part in or right to do the governing. That was hoggishness. It was a brief madness, and then they passed away to that Paradise of Fools at "the back side of the world," the limbo of "embryos and idiots," whither, "blown ten thousand leagues away," they awaited the sure coming of their A. P. A. descendants of the next generation.

Similar was the hoggishness of Oom Paul and his Bibled burghers of the Transvaal, who held the Rand as their land, solely for their advantage. All others were Outlanders, disfranchised. The result was not to their satisfaction. Hoggishness does not succeed in the end.

Congressman John Sharp Williams said the other day that the Southern problem is not political, but ethnological. By it this Mississippi leader of the Democrats in the House of Representatives meant that negroes belong to another ethnologic race, and therefore have no right to the suffrage with white American citizens, but must remain ruled as serfs for their benefit by the superior race, which alone has the right to vote and govern. That is, he and his sort will take the whole right of privilege and none others shall get a nose in. Allow, says he, the Fifteenth Amendment to be rescinded, and then let us shut out whom we please from the ballot, and we will consent to be represented in Congress solely by our white population. That is the very essence of a spirit which bears the unsavory name.

These are a few illustrations of the spirit in the realm of past and present political history. We have not mentioned them all; we are still suffering from the spirit of the San Francisco Sand Lots and from the noisy jealousy of foreign immigration. There are extreme Chinese walls of tariff that belong to the same class. And when we come to sociological conditions, rules which would limit the admission of apprentices into trades are an illustration of a spirit which has many phases. Wherever it is, in private or public life, in social intercourse, in business or in politics, it is the extreme and most contemptible reversal of the Golden Rule.

Unanswered Questions

A CORRESPONDENT writes us:

A clergyman in the Baptist Church does not believe in the miraculous conception of Jesus; he believes that there was nothing unnatural in his conception and birth. Again, he cannot accept the Athanasian creed, that Jesus was "the very God." The bloody atonement theory he considers to be incompatible with what he conceives to be the true character of God, the Father. He believes in atonement, but in one that satisfies, and not in one that is so distasteful to so many Christians.

Should such a Baptist minister, in your opinion, still remain in the ministry of said Church? Please give your opinion.

We are no arbiter for the Baptist churches. They have equal liberty of belief, and what one church forbids another properly allows in its large freedom. We presume there are churches which such a minister should leave, for peace' sake, and there are others which might properly hold him, provided he were not contentious in his beliefs.

But these questions raise yet deeper questions as to nature of the Church and the Kingdom of Heaven.

We take it that the office of the Church is not to teach the philosophy of God, but the duty of man. The secret things belong to God, the things that are revealed to us. There was a time when the maintenance of a right philosophy of God was thought to be the principal duty of the Church. In those days men wrote creeds and cursed or burnt those who would not subscribe to them. We know better now. Churches find creeds a burden and get on better without them. We leave creeds to leisurely philosophers, and we keep the Church busy making men more Christlike.

Matters of divine philosophy are scientifically interesting. They may well occupy a speculative mind. They may be made mischievous, or they may enlarge the thought of God and encourage sympathy with him. But it must not be forgotten that God's part is not our part, his knowledge is not our knowledge, his duty is not our duty. The inner constitution of the Divine nature the Divine Being knows, and we cannot know, old creeds to the contrary notwithstanding. They formulate words that seem to mean something, but we cannot understand what they mean. Jonathan Edwards's Trinitarianism we should now call Unitarianism, and the Trinitarianism of the Athanasian Creed we should not be far off from calling Tritheism. We may talk about it, and differ, but we should be content to differ, not caring much, and leaving the knowledge to him who knows. Our business is to love God, not to understand him.

It is much the same with the doctrine of the miraculous birth of our Lord. It may play a part in our philosophy, in what we believe or disbelieve on evidence, but it plays no part in our religion, because it is not concerned with the great duties of love of God and man. That is the reason why our Lord said nothing about it, and the great preacher of Christianity, Paul, as little. The story is beautiful and old and enters into what is called the Apostles' Creed, and is worth clinging to, but it has no essential part in Christian duty, which is all that is essential in Christianity. God knows more about it than we do, and the time is past when it is well to fight over it when we have better business.

So with such a doctrine as regeneration by the Holy Spirit. That is God's part, not ours. Our business is to repent of sin, and whatever regenerating is necessary, or whatever divine influence and help, we may be sure he will attend to. We can ask his guidance, try to follow our best sense of duty, forsake our evil ways, and trust in the love of the Heavenly Father, who will perform his part in regenerating or forgiving in his own good way.

In our philosophy of religion we may speculate all we please, but in religion let us hold fast to the great essentials of the spirit. They are told in the same way in both the Hebrew and the Christian Scriptures. The former tell us that the Lord requires nothing of us but to do justly, to love mercy, and to walk humbly before our God. That is very comprehensive; it includes everything, equal justice and love to man, and obedience to God. Our Lord, in his most formal statement of all duty, says the same in other words, "Love the Lord thy God with all thy heart," "and thy neighbor as thyself." He tells us that on this hangs everything. It is the sum of all duty and religion; it is the basis of the Kingdom of Heaven, and so of the Church. The New Testament adds no new conditions of salvation to the Old. "Believe in the Lord Jesus Christ" means nothing further; all is included. But in it is not included a system of theology, because theology is not a part of religion, but is a section of philosophy, and perhaps of history.

Publicity for Campaign Funds

Some weeks before the recent election we expressed in THE INDEPENDENT a conviction that there ought to be "complete publicity with

respect to all contributions" received by the national campaign committees. We were pleased to see thereafter that our views on this subject were accepted and commended by prominent journals in each of the two great parties. The President now, in his message, recommends that a law for the punishment of bribery and corruption in Federal elections be passed, and that it shall include "provisions for the publication not only of the expenditures for nominations and elections of all candidates, but also of all contributions received and expenditures made by political committees." Bills containing such provisions have been introduced, and they should lead to the enactment of a well-considered statute before the end of the session.

Vardaman and Galloway

It is a pain to report acts of mob violence; we generally avoid them. It is a pleasure to report events that imply both courage and kindness. Governor Vardaman and Bishop Galloway both reside in Jackson, Miss. Governor Vardaman has earned disesteem for his boorishness and for his insults to half the people of his State. Bishop Galloway is a Christian gentleman and he believes in giving his best help and countenance to that class of citizens whom the Governor tries to exclude from manhood and suffrage and education. It took some courage for Bishop Galloway to do what he did the other day. The Central Mississippi Conference of the African M. E. Church was in session at Jackson under its negro Bishop Salter. Bishop Galloway visited the Conference, accompanied by his friend Major Milsaps, a prominent citizen of Jackson. After they had both made most sympathetic addresses, wishing the highest welfare and advancement of the colored people, Bishop Galloway, by invitation, occupied the chair for the rest of the session. Such a thing was never known before as a Southern white bishop presiding over a conference of colored Methodists, and in the face of past conditions and feeling it is both significant and hopeful. On Sunday Bishop Galloway returned and preached the ordination sermon and assisted in the ordination of deacons and elders and the celebration of the Lord's Supper. We believe that the race of Vardamans is diminishing and that of the Galloways increasing.

Saint Pius IX.

The Roman correspondent of a syndicate of Catholic weeklies announced recently that M. Magnien will endeavor to have Pius IX canonized. For this end he is now in Rome with a petition having 80,000 signatures attached. Who, then, is M. Magnien? He is the author of the work "Is Father Hecker a Saint?" This is an offensive libel on the Paulist Elliott's Life of Hecker. Magnien's attacks, coupled with those of the French clerical press, led in great measure to the suppression of Elliott's Life and to Leo XIII's Encyclical on Americanism. In receiving this arch-enemy of America and everything American Pius X should not forget that Leo XIII was only too glad to allege that this Papal document was not intended for American prelates. He was hitting over their shoulders some irrepressible French priests. His blow knocked out over nine hundred of them, who unfrocked quietly and now live as laymen, according to the *Fortnightly*, November, 1904, p. 850. So the aureole awaits the father of the Syllabus and the creator of Papal Infallibility—that political stroke so unfortunate for the Ultramontanes. Shall our invocation be:

"Sancte Pie, ora pro nobis"?

or

"Sancte Syllabe, ora pro nobis"?

or

"Ab insidiis Papalis Infallibilitatis Libera nos, Domine"?

Child Labor in New York

The Pennsylvania mines, the Southern cotton factories and the New Jersey glass factories are by no means the only places in the United States where child labor flourishes. Last week Mr. Robert Hunter laid some astounding testimony before Governor-elect Higgins, compiled by the New York Child Labor Committee. For instance, it seems that in Syracuse children of six, five and even four years of age were found working beside their mothers in factories from 9 A.M. to 9 P.M. In an-

other factory the foreman "in charge of a shed estimated the children under fourteen to number three hundred, all working in flagrant violation of the law." There are many more examples like this. It seems impossible that such a state of things can exist in the great Empire State of the Union, yet we have no reason to doubt the trustworthiness of the testimony. Now the disgrace of it all is that we have laws to prevent this wrong, but they are not enforced. If the present Commissioner of Labor, Mr. McMackin, pleads that he had not enough subordinates to carry on the work of his bureau he should, as a matter of good faith, have strictly enforced the law in some one locality, and in the meantime have asked the citizens of the State to compel the Legislature to grant him a larger appropriation. We understand that he has done neither of these things, tho we believe he did ask Governor Odell for more inspectors. Governor-elect Higgins should select as his successor a man who will enforce the laws to protect the workers in the factories as fearlessly and honestly as Commissioner De Forrest, of this city, enforced the tenement house laws to protect the workers in their homes. Fortunately, there is no argument for employing children under fourteen years of age in factories except miserly greed and crass selfishness. The situation has only to be explained for all rightminded people to unite for its overthrow.

Kongo Atrocities

Notwithstanding all the efforts made to blind the public as to the atrocities committed by the Belgian authorities in the Kongo State they seem to be proved beyond all question, and they have been of a horrible character. It is not sufficient to say that atrocities are likely to occur sporadically in a settlement of any new country. That is true, and yet there seems to be a system about this which indicates heartless management. The Kongo Free State is not a free State at all. There is absolutely no freedom in it. It is the most extreme example of government by a single man and that man the King of the Belgians. He rules everything, makes all laws, executes them at his own will, owns personally all the land, unless it be such as has been previously cultivated by natives, and is in possession of all its products and has the profit of all its exports. Nothing like it is known in human government within regions familiar to civilized men. It is required that there should be a profit from this vast estate, and that profit comes from the sale of rubber. Horrible cruelties have been committed in compelling men to bring in rubber, even to the extent of mutilation, destruction of villages and the existence of practical slavery. It is not true that our Government is a party to the establishment of the Kongo Free State, as it accepted no responsibilities in connection with European Governments, altho our representative was present in a consultative faculty. We have not the responsibility which the European Powers took upon themselves to see to it that the natives were properly protected. That duty belongs to Great Britain, Germany, France and others, but we had sufficient influence and gave sufficient advice in that matter that we can at least bring influence to bear, and we heartily indorse the petition which will come from various organizations to the United States Senate asking it to bring these evils to the attention of the signatory Powers, and that they appoint an international committee of investigation; and we see no reason why the United States should decline to take part in such investigation if the signatory Powers should so desire. Something ought to be done.

Ethics and Protection

It is not too often that ethics comes into financial or commercial questions, and therefore we do not regret that a number of distinguished English clergymen have published a protest against the Chamberlain idea on the ground of its essential immorality. They say:

"We, the undersigned, desire to protest against the re-establishment in Great Britain of a system of Protection, because, however sincere and patriotic may be the intention of its advocates, in itself it inevitably tends to evoke the motives and foster the tendencies

against which we are all accustomed to protest as immoral.

" (1) It cannot succeed without increasing the severance of nations; it intensifies rivalries and strengthens barriers; it is a foe to peace, and to the hopes of a wider unity of workers.

" (2) No nation can adopt it without danger to the uprightness of its public life; it makes bribery pay; it creates monopolies; it opens the door of Parliamentary lobbies to all those influences which it is our main object to exclude.

" (3) It is bound by its very conditions to tell hardest upon those who are least able to protect themselves. It will be secured by those who can best apply the pressure necessary to make their case heard. The tariff will be molded by and for the best organized. The weak and unorganized will be least able to make their interests felt; and will have to bear the burden of the gain of the strong."

We pass this over to the political moralists for them to consider its bearing on the American policy.

We are indebted to *The Savannah Press* for calling our attention to two long articles by Mr. P. A. Stovall giving an account of the visit of the trustees of the University of Georgia to the University of Wisconsin. It is evident that the visitors were as much delighted as they were surprised at what they saw, and it is to be hoped that the visit will have its effect in the future of the University of Georgia, which is fifty years older than that of Wisconsin. Georgia splits its university, for whites, into three departments, at three different cities, all rivals for the poor support they get from the Legislature.

In his hostility to the union of the Presbyterians and the Cumberland Presbyterians President Patton thus expressed his fear of fellowship with the Arminianism of the Cumberland Church:

"This train makes no stops, and when you once get on it will take you to naturalistic atheism on schedule time."

We suppose he means logically, not actually; at least we hope so. But he does not seem to have been concerned about the worst thing about that train—it has a Jim Crow car.

It is a sad pity that we white men are so afraid that the Chinese will swamp us all if we allow them to come in. At least we may be glad that the new treaty negotiated with China will allow students and travelers to be admitted. Mandarins who wish to see our country and who come with plenty of traveling money will be allowed, if they will not stay too long. There are those who are trying to exclude the Japanese, as if we were in danger from the few thousand who have crossed the Pacific.

We confess to a weakness for carved Buddhas, Egyptian scarabs, illuminated manuscripts, black-letter books, even first editions of modern authors, and a host of other curious and odd things; but it does seem as if the extreme limit had been reached along the line of collecting when a lock of Thackeray's hair sold at auction after sharp competition for $16.50 in this city a few days ago. But the veneration of relics is an ancient weakness, and we may canonize the famous novelist.

That Californian Burbank is the king of plants and greater than any monarch of men, for he creates what will support millions of men, and he is responsible for no military slaughters. His last reported achievement is a spineless cactus, which will grow in a desert and will supply cattle with food half as nutritious as alfalfa and wonderfully productive. We are not sure but he is the greatest benefactor of the world living. He ought to have the Nobel prize.

There are enough able men who might well be Mr. Depew's successor in the United States Senate if another man were to take his place, Mr. Root, for example. But we see no reason why Mr. Depew should not be his own successor. He has been a useful and wise legislator and deserves a second term. It would be a misfortune to the State of New York if it had to break in a new man.

Financial

Annual Reports and Suggestions

Mr. Roosevelt, in his message, urges the finance committees of Congress to consider the question of retiring the greenbacks and "the problem of securing in our currency such elasticity as is consistent with safety." These are subjects of much importance, and they should be taken up in committee during the present session, for preparation can thus be made for legislation in the new Congress, in which there will be little change in the lists of the two committees' members. "Every silver dollar should be made by law redeemable in gold at the option of the holder." This could be done and ought to be done before March 4th.

Except his recommendation concerning trust companies there is little in Secretary Shaw's report to excite comment. Last year's deficit was nearly $42,000,000 (owing to the payment of $50,000,000 on account of the Panama Canal); it is estimated that the current year's will be $18,000,000, and the Secretary foresees in the coming fiscal year a surplus of $22,000,000. We must raise more revenue, he says, if we enlarge our policy of public improvements. He sees no opportunity for greater economy without injury to the public service. Our currency system is "safe," but it "has one recognized weakness; it is non-elastic." The Secretary proposes no remedy. He points out the increase of the number and the capitalization of trust companies during the last decade. Since 1894 trust company deposits in New York have grown from $260,000,000 to $875,000,000, while those of the national banks have risen from $550,000,000 to $1,100,000,000. In Chicago the figures are more remarkable—trust deposits from $15,000,000 to $230,000,000, and bank deposits from $130,000,000 to only $280,000,000. Trust companies, he says, "may become an element of danger to our financial system." He suggests a law giving to the large ones in large cities "the privilege of incorporating under Federal law, with corresponding supervision," and requiring them to keep an appropriate reserve in their own vaults. The prediction can safely be made that few, probably none, of these State institutions would accept Federal incorporation if offered or would regard it (with the accompanying supervision and requirements) as a privilege of any value. Their views as to reserve restrictions were shown in New York by the withdrawal of several of them from the Clearing House on account of new requirements on this point. For any needed amendment of the laws relating to trust companies we must look to the State Legislatures.

Comptroller Ridgely, in his report, says that we are not taking our proper rank in foreign and international banking, altho we have become the richest people in the world and our banking power has grown marvelously. He recommends that national banks having a capital of $1,000,000 and located in reserve or central reserve cities be specifically authorized to buy and sell foreign exchange, to accept bills drawn on themselves, to issue letters of credit, and to open and maintain branches or agencies for such business in foreign countries, Porto Rico, the Philippines, Hawaii and the Canal Zone. He again asks for the repeal of the law which prevents a reduction of national bank circulation by more than $3,000,000 during any month. This, as he says, would promote elasticity. Our stock of gold, $1,320,400,000, exceeds that of any other country, and is nearly one-fourth of the world's stock. Our banking power, $13,826,000,000, is 41 per cent. of the whole world's banking power, and in 14 years has increased by 168 per cent., while the growth in the remainder of the world has been only 82 per cent.

Dividends announced:

Amer. Chicle Co., Common, 1 per cent., payable December 20th.

International Silver Co., Debenture Coupon No. 4, payable January 1st.

N. Y., Ont. & Western R'way, Common, $3.00 per share, payable January 16th.

Interborough Rap. Trans. Co., 3 per cent., payable January 3d.

Atch., Top. & S. F. R'way, Preferred, $2.50 per share, payable February 1st.

Missouri Pacific R'way, $2.50 per share, payable January 20th.

Jefferson Bank, 1½ per cent.

Plaza Bank, 10 per cent.

N. Y. Co. Nat'l Bank, 50 per cent.

The Independent

Vol. LVII NEW YORK, THURSDAY, DECEMBER 22, 1904 No. 2925

Survey of the World

The Railway Rate Question

It is said at Washington that probably no action in relation to the President's recommendation concerning railroad rates and the powers of the Interstate Commerce Commission will be taken at the present session. Mr. Roosevelt has discussed this question with several prominent railway presidents, including Mr. Cassatt, Mr. Mellen, Mr. Fish and Mr. Stickney. It is said that Mr. Cassatt is of the opinion that legislation is needed. In the past he has been in favor of granting more power to the Commission, provided that at the same time the railroads were permitted to make pooling agreements. In a published interview President Stickney says the law should be strengthened and the Commission made more efficient. The practice of giving rebates, he asserts, is nearly ended. His reply to a question as to the continued consolidation of railways is as follows:

"There is no doubt of its continuance. The process of absorption of weaker by stronger companies will continue. Right here lies the difficulty. If the thing keeps up until three or four men virtually own all the lines they will become more powerful than the Government itself. Why not? Are not the revenues of all the roads greater than the revenues of the Government? With the consciousness of this enormous financial strength there is apt to come the idea that all the multitude of employees should vote as their employers dictate. It is one of our happy traditions that the American people will take hold of a public evil if the emergency arises, but there might come a time when by deferring action they would be too late. Still, it wouldn't matter seriously whether four men or four hundred owned all the roads if the Government made the rate and, after making it, saw to its enforcement."

Secretary Morton, a railroad man all his life, says the President has asked him to take up the problem and that he has promised to remain in the Cabinet for that purpose. His plan he sets forth as follows: (1) Government supervision of rates through the Commission on complaint of unreasonable charges; (2) the Commission's rate not to go into effect at once, but enforcement of it to await the decision of a new court, the railroad in the meantime giving a bond to indemnify shippers; (3) the establishment of a central Interstate Commerce court of three or five judges, with final jurisdiction except in questions of constitutional interpretation; (4) the legalization of pooling agreements; (5) prohibition by law of all private car systems, private sidetracks and private terminals, with the requirement that companies shall give such facilities to all on the same terms. He would have the court composed of the ablest experts in railway law and practice. It is absurd, he says, for railway men to regard an attempt to enforce supervision of rates as meddlesome impertinence. The railway owners and managers, he adds, should join hands with the President and the leaders in Congress and reach a compromise:

"There is no reason why the great financiers of New York who stand behind the big railway corporations should become alarmed. They ought to thank their lucky stars that we have in the White House a President who insists that they shall have fair play; that there shall be a square deal all round. The President does not wish to work any injustice to the railroad industry. He is not engaged in a hue and cry against corporations. But he is right, eternally right, in his declaration that reforms of method are needed, and they are needed as

much by the railroads themselves as by the people. My experience has shown me that the most harm done to the railroads in this country is done by themselves. Government supervision of rate-making in the interest of fair play to both railroad and shipper is bound to come, and the far-sighted and progressive railway manager is he who recognizes the inevitable and joins hands with those who are working for reform and tries to secure an arrangement that shall be mutually satisfactory."

After provision for supervision of rates has been made by law he sees no reason why pooling should not be permitted; but without such supervision, pooling can never be legalized. It is understood that the railway interests as a rule prefer the plan suggested twelve years ago by Attorney-General Olney and now revived by Senator Elkins. This calls for Interstate Commerce courts—one judge in each Federal judicial circuit—and a court of appeals composed of the same judges. It was noticed last week that Senator Knox, whose appointment to the Senate was suggested, or, at least, approved, by President Cassatt, voted against the majority of his party in favor of making railway rates in the Philippines subject to Government supervision and regulation.

Impeachment of Judge Swayne

The House, by a vote of 198 to 61, passed a resolution last week impeaching Judge Charles Swayne, of the Northern District of Florida, for "high crimes and misdemeanors." This action was preceded by a debate of five hours. It was reported to the Senate on the 14th, and a committee of seven Representatives was appointed to prepare the charges and present the case. The trial may not take place during the present session. A bare majority of the Judiciary Committee (nine members) held that Judge Swayne deserved to be impeached upon all the charges (including abuse of power, non residence, and the acceptance of favors from a corporation for which he had appointed a Receiver); the remaining eight members found the evidence in support of these charges insufficient, but agreed with the majority that an impeachable offense was shown in Judge Swayne's false certificates as to his expenses, certificates by which he uniformly obtained $10 per day from the Government, altho his actual expenses were less than half of that sum. This will be the first impeachment trial since that of Secretary Belknap, in 1876.

Politics and Washington Topics

It is reported that the President intends to recommend that all corporations engaged in interstate business be required by law to become incorporated under Federal charters. This would subject them to Federal supervision.—Postmaster-General Wynne, with the approval of the President, has dismissed Frank H. Cunningham, of South Omaha, President of the National Association of Rural Free Delivery Carriers; Warren F. Tumber, of Lockport, N. Y., Secretary of the same association; H. W. Aldrich, of Concord, N. H., a member of its executive board, and J. C. Keller, President of the National Association of (city) Letter Carriers. All were found guilty of disobeying the President's order of January 31st, 1902, forbidding Government employees to solicit an increase of pay or to attempt to influence legislation in their own interest, save through the heads of their Departments. Cunningham and Keller were absent without leave and were guilty of insubordination. The associations sought pledges from candidates for Congress that they would support bills for increase of pay. It is alleged that they prevented the re-election of Representative Loud two years ago and that in the recent campaign they sought to defeat members who declined to give the pledges that were demanded.—Immigration Commissioner Sargent has conferred with the passenger agents of Southern railroads concerning plans for inducing immigrants to go South.—A canvass made by the *New York Times* and containing the official figures, 5 counties excepted, shows the following totals: Roosevelt, 7,640,561; Parker, 5,094,091; Debs, 392,857; Swallow, 248,411; Watson, 124,381; Corregan, 33,519.—By a decision of the Colorado Supreme Court, throwing out the votes of four Denver precincts on the ground that gross frauds were committed in violation

of the court's injunction, the Republicans obtain control of both branches of the Legislature, which will canvass the vote for Governor.—At last week's municipal elections in Massachusetts eleven cities voted on the new direct primary law, and nine that had used it once rejected it for elections in the future. In Boston one of the aldermen re-elected by a large majority was J. M. Curley, now serving a sentence in jail for impersonating a constituent at a civil service examination. Admitting and defending this violation of law, he had conducted his campaign from his prison cell.

The Ways of the Mormons

Hearings in the case of Senator Smoot having been resumed at Washington, much testimony was taken last week concerning Mormon marriages and the ceremonies of the endowment house. Two or three persons who had withdrawn from the Mormon Church repeated the oaths taken during these ceremonies. They assert that in one oath a promise is made that the person who is the subject of the rites will never cease to pray to God for vengeance on this nation for the blood of the prophet Joseph Smith. Mr. Smoot will be asked if he has taken such an oath. It was shown that marriages with dead persons were performed in the endowment house and that divorces from dead persons had been granted there. One Mormon witness said he had heard of only one polygamous marriage since 1890, and that was the marriage of his daughter in Mexico. One of Apostle Abram Cannon's early wives testified that he had confessed on his death bed that he had married Lilian Hamlin in 1896. This is the unlawful marriage said to have been performed on a boat some miles from the California coast. Two members of the faculty of Brigham Young University admitted that they had lived since 1890 in the polygamous relation. A similar admission was made by Apostles Penrose and J. H. Smith, who testified that they had broken the law, altho both had applied for amnesty and received it upon condition that they would obey the statute. Penrose was elected an Apostle in July last, and Senator Smoot voted for him.

For Railroads in the Philippines

A bill of considerable importance relating to the development of the Philippine Islands was passed in the Senate last week. It was passed in the House at the last session, but the Senate's amendments now require further action. As the bill now stands it authorizes the Philippine Government to promote the construction of railroads by guaranteeing 4 per cent. interest on a company's bonds for 30 years, but the Government's expenditures for this purpose are not to exceed $1,500,000 in any year. It also exempts all Philippine bonds from taxation, authorizes Philippine municipalities to incur a bonded indebtedness not exceeding 5 per cent. of the assessed valuation of their property, empowers the insular Government to borrow $5,000,000 for public improvements, establishes the metric system, and provides for locating and patenting mineral claims. During the debate Mr. Spooner pointed out that the bill (as passed in the House) gave the Government inadequate security for money expended under the guarantee. Therefore an amendment was adopted making the Government's claim a first lien. Among the amendments offered and rejected was one (from Mr. Bailey) providing that any railroad company so assisted should agree that the Philippine Government should always have and should exercise the right to regulate rates for freight and passengers. There was some surprise when ten Republicans—Senators Knox, Heyburn, Clapp, Nelson, Bard, Gamble, Kittridge, Clark (of Wyoming), Perkins and McCumber—voted for it with the Democrats. Mr. Newlands suggested that an experiment in Government ownership should be made. The insular Government, he thought, could borrow at 2½ per cent. the $30,000,000 required for the railways that were needed. He argued for a more effective regulation of railways in the States, saying that the present unparalleled concentration of wealth was due in great measure to special privileges and rebates which the railroads had granted. Government ownership was opposed by Mr. Spooner, who argued in favor of construction by private capital. Mr. Carmack objected to the guarantee of bonds, because it would "make it more

difficult for the United States to get out of the islands." Mr. Roosevelt, in that part of his message which spoke of the Philippines, had, he said, virtually renounced the Republican policy. He welcomed him to the ranks of the anti-imperialists. Mr. Gorman remarked that doubtless we should remain in the islands; that had been determined by the decree of the American people. The final vote on the bill was 44 to 23, Mr. McCumber voting with the Democrats. At the War Department much information has been gathered concerning eight proposed railway lines—four in Luzon and one in each of the islands of Panay, Negros, Leyte and Cebu. The routes of three of the Luzon lines are as follows: From Manila to Aparri, on the north coast, 336 miles; from Dagupan northward on the west coast to Laoag, 168 miles; from Manila southward to Batangas, 60 miles. These roads could be built for about $11,000,000.

The Syveton Affair

The sudden and mysterious death of M. Syveton, which formed the storm center of French politics, is shown to be due more to private than public causes. Since his death occurred on the eve of his trial for striking General André, Minister of War, in the Chamber of Deputies, it was directly charged by the Nationalists, even by such men of repute as François Coppée, Jules Lemaitre, and others, that he had been murdered by order of the Government through the instrumentality of the Free Masons, on account of his impending disclosure of their spying system. It is now shown that he committed suicide by putting his mouth over the gas jet to avoid the disclosure of a domestic scandal, as he was guilty of an assault upon Mme. Ménard, his wife's daughter by her first husband. The investigation discloses also the political corruption of M. Syveton.

Russian Riots and Reforms

The Moscow City Council adopted resolutions in favor of freedom of speech of the press and the abolition of restrictive and arbitrary laws. The discussion was to be continued on the following day, but when the Council again assembled the President announced that, owing to unforeseen circumstances, which he could not disclose, the debate could not proceed. Moscow papers received warnings from the Censor not to insert anything in their paper in regard to the doings of the zemstvos and town Councils. The action of the authorities in thus apparently attempting to check the reform movement was one of the causes of the riotous and revolutionary demonstration in the city of Moscow on Sunday, in which 5,000 people took part, many of them armed with clubs and carrying flags. The police were prepared for trouble, and squadrons of mounted gendarmes were concealed in the courtyards of the houses ready for an emergency. The crowds collected at noon and the streets were filled until night, but the police succeeded in keeping them moving and breaking up the mob by firing blank cartridges and by charges of the mounted men using the flats of their swords. Many of the rioters and police were wounded, but none were killed.—Sasoneff, who killed Minister of Interior De Plehve on July 28th by throwing a bomb, was sentenced to imprisonment for life and hard labor. The Russian law does not permit of the death penalty. His accomplice, Sikorifsky, was sentenced to twenty years' imprisonment. In order to avoid revolutionary demonstrations the trial was made as speedy as possible, and no one admitted to the law courts, except those who were necessarily present. Sasoneff, in his defence, stated that the object of the Socialist Revolutionary Party, to which he belonged, was a peaceable propaganda to show the evils of autocracy, and to inculcate the principles of Socialism among all classes of the nation, but that when they were oppressed and impeded by such men as Bogoliepoff, Minister of Public Instruction, assassinated January 27, 1901; Sibiaguine, Minister of the Interior, assassinated April 15, 1902, and De Plehve, it was necessary to remove them by force. When the organization decided on De Plehve's death a hundred men volunteered to execute the sentence. Sasoneff had been condemned to a five years'

exile in Siberia, but escaped from the convict gang across the frontier and reached Geneva, whence he returned to assassinate De Plehve.—In St. Petersburg a meeting of 404 undergraduate girls of the Medical Institute passed resolutions of sympathy with Sasoneff and demanding liberal reforms.—The special committee appointed in 1902 to investigate the condition of the rural classes and recommend measures for their betterment has completed its report. The work has been carried out under the direction of President of the Ministerial Council Witte, and includes the collection and discussion of the opinions of 11,000 of the best qualified peasants, landlords, merchants and manufacturers. The recommendations for the improvements of the law are understood to have the approval of the Emperor, and the Minister of the Interior, Sviatovolk-Mirsky. These recommendations aim chiefly at abolishing the distinction prevailing in Russian law between the peasant class and the rest of the people, and favor placing the peasants on an equality with other classes, so far as this is possible without leaving them open to the exploitation of money lenders.

The War

The most important achievement of the Japanese during the week is the sinking of the Russian battleship "Sevastopol" by a torpedo attack. The "Sevastopol" lay in the neck of the harbor of Port Arthur, where it was sheltered from fire from the hills in the possession of the Japanese, and was protected by the torpedo nets taken from the other battleships and also by a heavy boom made of iron-bound logs, cables and heavy chains. The attack was made in the night, during a heavy snowstorm, by six torpedo boats and specially fitted torpedo craft. After four hours' work, in which one torpedo boat was lost and others injured, the "Sevastopol," torpedoed ten times, began to sink at the stern. All the Russian shipping at Port Arthur is now said to be destroyed, and the whole harbor and both the old and new town are visible and under fire from the Japanese positions. Commander Mizzenoff, of the battleship "Poltava," who with seven Russians crossed over to Che-Foo in an open boat during a storm, in which they were almost frozen, reports that the garrison at Port Arthur now numbers 16,000, and there are 8,000 men in the hospitals. He says that General Stoessel has put the population on regular rations, of which there are sufficient to last three months, and ammunition for a longer time. He gives a terrible account of the fierce hand to hand fighting and carnage at 203 Meter Hill, in which he estimates the Japanese lost 12,000 men and the Russians about 2,000.—General Stoessel having sent a complaint to General Nogi that the Japanese artillery had bombarded the hospitals marked by Red Cross flags, killing both Russian and Japanese wounded, or driving them out into the snow, General Nogi answered:

"I have the honor to assure you that the Japanese army, respecting humanity and treaties since the beginning of the siege, has never purposely directed shells against building or vessels flying the Red Cross, but the greater part of the garrison is invisible from our gun positions, and as you know shells do not always reach the place to which they are directed, and especially owing to your long and brave resistance the deviation of our guns is becoming greater and greater. So with the greatest regret we are unable to guarantee them to reach the places at which they are directed."

General Stoessel has furnished his besiegers with maps showing the location of the hospitals.—The Japanese House of Representatives passed almost unanimously the large appropriations asked by the Government for the prosecution of the war.—It is expected that the Baltic fleet will assemble at some secret rendezvous in the Indian Ocean, perhaps the atoll of Minicoy or the Chagos archipelago. This is 2,100 miles from Djibutil, at the southern entrance to the Red Sea, the point where the squadron under Rear-Admiral Voelkersam, of twenty ships, leaves Africa, and he should make it in about eleven days. The squadron under Vice-Admiral Rojestvensky, which has gone around by the Cape of Good Hope, will probably coal last at the French island of Bourbon, from which the disance to the Chagos is about 1,350 miles. The combined fleet can, therefore, rendezvous at this point between Christmas and New Year's, and will then have a

run of 2,090 miles to Batavia. It is reported that a Japanese fleet has passed Formosa on its way south to meet the Baltic fleet on its way north from the Straits of Sunda.

Conditions in Armenia

Many reports of events which happened in Eastern Turkey during the last spring and summer have found their way into the papers. Some of these are true, but very few are exact. About the middle of July, under instructions from the Department of State, the American Consul at Harpût, T. H. Norton, Ph.D., left that city for the disturbed district, and during a tour of 71 days he made a very careful investigation, and the result of the knowledge obtained has been embodied in a long and able report which has been sent to the Department. Some of the American papers published the ridiculous story that Dr. Norton, disregarding the protests of the Turkish authorities, madly rushed into dangers involving his personal safety, etc., while the truth is that Turkish officials were very courteous, and furnished him with a guard all the way. Consul Norton is a very prudent, level-headed man and he took nothing upon mere hearsay, but, as far as possible, he made personal examination among the towns and villages visited, and he also gathered a mass of written testimony from reliable persons. The troubles began in Sasûn and Mûsh. Sasûn is a mountainous district lying back of Mûsh, in the Taurus Mountains. The immediate cause of the trouble was the presence in the mountains of a band of insurgents from Russia, about one hundred in number, and these were reinforced by some two hundred Sasûnites, natives of the district. The Government was determined to wipe them out, so preparations were made during the winter, and several thousand soldiers and Kurds surrounded the district ready to attack when the season and the melting snow would permit. Almost everyone of the rude houses of the people was burned. The people subsist chiefly upon their flocks and herds, but Dr. Norton says that during a leisurely ride through the district on his return journey he did not see a single cow or sheep or goat. The number of deaths reported ranged from 7,000 to 8,000, but Dr. Norton corrected the lists by learning the original number of inhabitants in thirteen villages and the present number, and taking these figures as a basis and comparing them with the reported lists, he calculated that the actual number of deaths in the Sasûn district alone was about 5,000. Some died from exposure and hunger, some committed suicide by throwing themselves into streams, some were killed in battle and others were murdered. Some of the insurgents were killed, but the most of them escaped to the villages of the Mûsh plain. When it became known that a band of insurgents was in the village soldiers and Kurds attacked the village, with the result that a larger number of the assailants than of the assailed were killed, but after the assailants would leave the village would be practically destroyed. There were four Consuls visiting Mûsh besides the American—two English, one French and one Russian. From Mûsh Dr. Norton went to Bitlis, where he remained eight days. At the same time the revolutionists went to the village of Shamiram, not far from Bitlis, and there a battle of several hours was kept up, in which a number of persons were killed, and after the revolutionists left the place the village was looted and the flocks and herds were driven away. The situation in the Bitlis region is still regarded as very critical. From Bitlis the Consul went to Van, and here the situation is still more critical. It is nearer the Russian and Persian frontier, and the revolutionists from those countries can come and go easily. Their object seems to be to aggravate the Turks and Kurds to such an extent that they will commit such outrages that the European Powers will be compelled in the interests of humanity to interfere. These revolutionists are almost as much dreaded by peaceable Armenians as by the Turks. The situation differs little from that in Macedonia. Many of the insurgents are wholly unscrupulous in their demands upon their Christian compatriots, and they do not hesitate to resort to violence to secure what they want. If an insurgent shoots a soldier from a village house it leads to the sack of that village.

Peace on Earth

By the Presidents of the United States

COMPILED BY SAMUEL J. BARROWS

MEMBER OF THE INTERPARLIAMENTARY UNION

GEORGE WASHINGTON.

"Peace ought to be pursued with unremitted zeal before the last resource, which has so often been the scourge of nations, and cannot fail to check the advanced prosperity of the United States."—*To the Senate, 1794.*

"Observe good faith and justice to all nations. Cultivate peace and harmony with all. Religion and morality enjoin this conduct, and can it be that good policy does not also enjoin it? It will be worthy of a free, enlightened and, at no distant period, a great nation, to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence."—*Farewell Address, 1796.*

JOHN ADAMS.

"I pray you, gentlemen, to believe, and to communicate such assurance to our constituents, that no event which I can foresee to be attainable by any exertions in the discharge of my duties can afford me so much cordial satisfaction as to conduct a negotiation with the French Republic to a removal of prejudices, a correction of errors, a dissipation of umbrages, an accommodation of all differences, and a restoration of harmony and affection to the mutual satisfaction of both nations."—*To the House of Representatives, 1797.*

THOMAS JEFFERSON.

"I love peace, and am anxious that we should give the world still another useful lesson, by showing them other modes of punishing injuries than by war, which is as much a punishment to the punisher as to the sufferer."—*To Tench Coxe, May, 1794.*

"I abhor war and view it as the greatest scourge of mankind."—*To Elbridge Gerry, 1797.*

JAMES MADISON.

"To cherish peace and friendly intercourse with all nations having correspondent dispositions; to maintain strict neutrality toward belligerent nations; to prefer in all cases amicable discussion and reasonable accommodation of differences to a decision of them by an appeal to arms."—*First Inaugural Address, 1809.*

JAMES MONROE.

"It is particularly gratifying to me to enter on the discharge of these duties at a time when the United States are blessed with peace. It is a state most consistent with their prosperity and happiness. It will be my sincere desire to preserve it, so far as depends on the Executive, on just principles with all nations, claiming nothing that is unreasonable of any and rendering to each what is its due."—*Inaugural Address, 1817.*

JOHN QUINCY ADAMS.

"I cannot exaggerate to myself the unfading glory with which these United States will go forth in the memory of future ages if by their friendly counsel, by their moral influence, by the power of argument and persuasion alone, they can prevail upon the American nations at Panama to stipulate by general agreement among themselves, and so far as any of them may be concerned, the perpetual abolition of private war upon the ocean."—*To House of Representatives, 1826.*

ANDREW JACKSON.

"It is unquestionably our true interest to cultivate the most friendly understanding with every nation and to avoid by every honorable means the calamities of war, and we shall best attain this object by frankness and sincerity in our foreign intercourse, by the prompt and

faithful execution of treaties, and by justice and impartiality in our conduct to all."—*Farewell Address, 1837.*

MARTIN VAN BUREN.

"Bound by no entangling alliances, yet linked by a common nature and interest with the other nations of mankind, our aspirations are for the preservation of peace, in whose solid and civilizing triumphs all may participate with a generous emulation."—*Fourth Annual Message, 1840.*

WILLIAM H. HARRISON.

"Long the defender of my country's rights in the field, I trust that my fellow citizens will not see in my earnest desire to preserve peace with foreign Powers any indication that their rights will ever be sacrificed."—*Inaugural Address, 1841.*

JOHN TYLER.

"Peace with all the world is the true foundation of our policy, which can only be rendered permanent by the practice of equal and impartial justice to all."—*Second Annual Message, 1842.*

JAMES K. POLK.

"Such has been our scrupulous adherence to the dictates of justice in all our foreign intercourse that, tho steadily and rapidly advancing in prosperity and power, we have given no just cause of complaint to any nation and have enjoyed the blessings of peace for more than thirty years. From a policy so sacred to humanity and so salutary in its effects upon our political system we should never be induced voluntarily to depart."—*Second Annual Message, 1846.*

ZACHARY TAYLOR.

"In all disputes between conflicting governments it is our interest not less than our duty to remain strictly neutral, while our geographical position, the genius of our institutions and our people, the advancing spirit of civilization, and, above all, the dictates of religion, direct us to the cultivation of peaceful and friendly relations with all other Powers. . . . It eminently becomes a government like our own, founded on the morality and intelligence of its citizens and upheld by their affections, to exhaust every resort of honorable diplomacy before appealing to arms."—*Inaugural Address, 1849.*

MILLARD FILLMORE.

"The great law of morality ought to have a national as well as a personal and individual application. We should act toward other nations as we wish them to act toward us, and justice and conscience should form the rule of conduct between governments, instead of mere power, self-interest, or the desire of aggrandizement. To maintain a strict neutrality in foreign wars, to cultivate friendly relations, and to perform punctually and scrupulously every treaty obligation—these are the duties which we owe to other states, and by the performance of which we best entitle ourselves to like treatment from them."—*First Annual Message, 1850.*

FRANKLIN PIERCE.

"The great objects of our pursuits as a people are best to be attained by peace, and are entirely consistent with the tranquillity and interests of the rest of mankind."—*Inaugural Address, 1853.*

JAMES BUCHANAN.

"We ought to cultivate peace, commerce and friendship with all nations, and this not merely as the best means of promoting our own national interests, but in a spirit of Christian benevolence toward our fellow-men, wherever their lot may be cast. Our diplomacy should be direct and frank, neither seeking to obtain more nor accepting less than is due."—*Inaugural Address, 1857.*

ABRAHAM LINCOLN.

"With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to bind up the nation's wounds—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."—*Second Inaugural Address, 1865.*

ANDREW JOHNSON.

"The sincere desire for peace by which I am animated led me to approve the proposal, already made, to submit the question which had thus arisen between the countries to arbitration. These questions (of neutrality) are of such moment that they must have commanded the attention of the great Powers, and are so interwoven with the peace and interests

of every one of them as to have insured an impartial decision."—*First Annual Message, 1865.*

ULYSSES S. GRANT.

"Let us have peace."—*Acceptance of Nomination for Presidency, 1868.*

"The year has been an eventful one in witnessing two great nations, speaking one language and having one lineage, settling by peaceful arbitration disputes of long standing and liable at any time to bring these nations into bloody and costly conflict. An example has thus been set which, if successful in its final issue, may be followed by other civilized nations, and finally be the means of returning to productive industry millions of men now maintained to settle the disputes of nations by the bayonet and the broadside."—*Third Annual Message, 1871.*

RUTHERFORD B. HAYES.

"The policy inaugurated by my honored predecessor, President Grant, of submitting to arbitration grave questions in dispute between ourselves and foreign Powers points to a new, and incomparably the best, instrumentality for the preservation of peace, and will, as I believe, become a beneficent example of the course to be pursued in similar emergencies by other nations."—*Inaugural Address, 1877.*

JAMES A. GARFIELD.

"Let all our people, leaving behind them the battlefields of dead issues, move forward and in their strength of liberty and restored Union win the grander victories of peace."—*Inaugural Address, 1881.*

CHESTER A. ARTHUR.

"I trust that the time is nigh when, with the universal assent of civilized peoples, all international differences shall be determined without resort to arms by the benignant processes of arbitration."—*Second Annual Message, 1882.*

GROVER CLEVELAND.

"The genius of our institutions, the needs of our people in their home life, and the attention which is demanded for the settlement and development of the resources of our vast territory dictate the scrupulous avoidance of any departure from that foreign policy commended by the history, the traditions and the prosperity of our Republic. It is the policy of independence, favored by our position and defended by our known love of justice and by our power. It is the policy of peace suitable to our interests. It is the policy of neutrality, rejecting any share in foreign broils and ambitions upon other continents and repelling their invasion here. It is the policy of Monroe, and of Washington and Jefferson—'Peace, commerce and honest friendship with all nations; entangling alliances with none.'"—*Inaugural Address, 1885.*

BENJAMIN HARRISON.

"The offices of an intelligent diplomacy or of friendly arbitration in proper cases should be adequate to the peaceful adjustment of all international difficulties. By such methods we will make our contribution to the world's peace, which no nation values more highly, and avoid the opprobrium which must fall upon the nation that ruthlessly breaks it."—*Inaugural Address, 1889.*

WILLIAM M'KINLEY.

"Sure of the right, keeping free from all offense ourselves, actuated only by upright and patriotic considerations, moved neither by passion nor selfishness, the Government will continue its watchful care over the rights and property of American citizens and will abate none of its efforts to bring about by peaceful agencies a peace which shall be honorable and enduring."—*Second Annual Message, 1898.*

THEODORE ROOSEVELT.

"Whenever possible, arbitration or some similar method should be employed in lieu of war to settle difficulties between civilized nations. . . . The formation of the international tribunal which sits at The Hague is an event of good omen from which great consequences for the welfare of all mankind may flow. It is far better, where possible, to invoke such a permanent tribunal than to create special arbitrators for a given purpose."—*Second Annual Message, 1902.*

THE CHRISTMAS TREE IN THE STUDIO

From an Original Drawing by C. Warde Traver

The Christmas Tree in the Nursery

A JINGLE FOR FRANCESCA AND ROSAMOND

BY RICHARD WATSON GILDER

With wild surprise
Four great eyes
In two small heads
From neighboring beds
Looked out—and winked—
And glittered and blinked
At a very queer sight
In the dim star-light.
As plain as can be

A fairy tree
Flashes and glimmers
And shakes and shimmers.
Red, green and blue
Meet their view;
Silver and gold
Their sharp eyes behold;
Small moons, big stars;
And jams in jars,
And cakes and honey
And thimbles and money:
Pink dogs, blue cats,
Little squeaking rats,
And candles and dolls
And crackers and polls,
A real bird that sings,
And tokens and favors
And all sorts of things
For the little shavers.

Four black eyes
Grow big with surprise;
And then grow bigger
When a tiny little figure,
Jaunty and airy
(Is it a fairy?)
From the tree-top cries,
"Open wide! Black Eyes!
Come, children, wake now!
Your joys you may take now."

Quick as you can think
Twenty small toes
In four pretty rows,
Like little piggies pink,
All kick in the air—
And before you can wink
The tree stands bare!

New York City.

Tariff and Reciprocity

BY W. L DOUGLAS*

GOVERNOR-ELECT OF MASSACHUSETTS

IN my opinion the tariff wall that surrounds this country is entirely too high, not only for the welfare of consumers and of the people as a whole, but for the manufacturers as a class. It protects the larger manufacturers, combined into trusts, at the expense of the smaller and independent manufacturers. It does not protect the farmer, for the prices of our staple farm products are usually fixed by the prices in foreign markets. It does not protect the workingman, for there is no tariff duty on labor. The only protection that American labor has against that of foreign lands is that afforded by the cost of passage from Europe to America, which just now is very small.

The extremely high tariff rates of the Dingley Act, higher than any before enacted or than those of any other country with the possible exception of Russia, are largely responsible for the era of trusts in which we now find ourselves. The protected manufacturers have combined in order to restrict production, raise prices and to get the full benefit of these unnecessarily high duties. For the same reason, and to make their monopoly more perfect, the smaller trusts have been merged into larger ones.

The protected "infant industries" of to-day are the billion-dollar steel and other giant trusts that get the lion's share of the tariff bonus and then show their appreciation for these great favors by intimidating and oppressing ordinary manufacturers and by selling their tariff protected wares in unprotected foreign markets at prices only two-thirds or three-fourths as high as those charged at home.

In my opinion the American consumers, who pay the tariff taxes that go to swell the profits of these trusts, should be the most favored customers of these giant paupers. Our own people are entitled to any bargain-counter prices that our protected trusts may have to offer.

The removal of these tariff duties would result in greater production of goods and in increased earnings for our workers. It would also result in giving them cheaper clothing, food and fuel.

The heavy burden placed upon the boot and shoe manufacturers of Massachusetts by the duty of 15 per cent. on hides and of 20 per cent. on leather is well illustrated by an order of sole leather which my company placed. This order amounted to $550,000. Could we have secured this leather at the prices at which it is being sold to our foreign competitors we would have saved about $55,000 on this order. This, however, represents but a small part of the tax which we pay in a year on all the leather and other materials used in our factory in Brockton.

Is there any sound reason why these fines should be assessed in the name of "protection" on American industry and enterprise?

But few people realize that every time they make purchases at stores they pay exorbitant tariff taxes. If they buy rice, or linen, or silk, or oilcloth, or cutlery, about one-third of all they pay goes for the tariff tax. If they buy sugar, or woolen goods, or lead, or window glass, about one-half of all they pay goes for the tariff tax. Nearly every article used in their homes is dearer because of the excessive tariff taxes. The houses in which our people live cost more to build because of the extreme duties on lumber, nails, paint and glass. Those who do not build and have no homes to repair have to pay higher rent because of the increased tariff cost of building. Since the passage of the Dingley bill of 1897 the cost of constructing buildings has gone up nearly 30 per cent.

You cannot escape from these tariff taxes while you remain inside the wall. Outside you can buy American-made goods at knock-down prices. Even the cost of articles not tariff taxed is increased somewhat by tariff duties, which increase the cost of transporting goods and of doing business. If the taxes on these articles of food and clothing were

* In THE INDEPENDENT of December 8th appeared a comprehensive character sketch of Governor-elect Douglas.—EDITOR.]

collected separately by our merchants policemen would be needed in every store to prevent trouble.

Speaking for myself, I would gladly give up the duty of 25 per cent. on shoes to obtain free raw materials. Yes, even to obtain free hides and free sole leather. If the handicap of taxed leather were removed I could produce shoes at as low cost as could any manufacturer in any foreign country and meet the competition of the world. Cheap labor is not cheap. It is dear when effectiveness is considered. Our Massachusetts methods of manufacturing and the economical division of labor enable us to produce shoes at as low labor cost, quality considered, as anywhere in the world. It is the high cost of materials that bars us from the fullest possible participation in foreign markets.

Our forefathers builded wisely when they tore down the tariff walls that surrounded each State previous to 1787 and made it unconstitutional to build new walls around the States. And yet, is there any stronger reason for an insurmountable tariff wall between New York and Canada than between New York and Pennsylvania? What would happen in this country if the tariff wall between us and Canada were extended around each State? Prosperity would vanish, and we would sink to the low industrial level of the small European countries, each surrounded by a tariff wall not nearly so high as our Dingley inclosure. What would happen to this grand old Commonwealth of Massachusetts if cut off from the rest of the United States by a Dingley wall? Would not the New England States soon be depopulated if thus deprived of the foodstuffs and raw materials of the Middle and Western States? Only a truly great country can prosper under the blighting Dingley tariff.

Recently, and especially since 60,000 Republican voters in Massachusetts have signed the reciprocity petition circulated by the Chamber of Commerce, a few Republican leaders have become timid advocates of a meaningless reciprocity in non-competing products. This is not the language of the Republican State platform, but it is the meaning of the words "consistently with the principles of protection and without injury to American agriculture, American labor or American industries."

In the national platform the word "any" is inserted before the words "American industries." The meaning of the national platform is clear. No product manufactured to the smallest extent anywhere in this country can be considered in reciprocity negotiations. Yes, more than this: No product or article can be considered if its admission at a lower rate of duty would interfere, even indirectly, with some other competing tho different product or article manufactured in this country. It is, of course, impossible to find an article of any commercial consequence that does not, at least indirectly and remotely, compete with some other article manufactured here.

No matter how much benefit many large and important industries might derive from a certain reciprocity treaty, it must not be put through, say the Republicans, if it will in the slightest injure "any American industry." Reciprocity pared down to fit the Republican national platform would be absolutely worthless for liberalizing our foreign trade.

I am not a pessimist, not a calamity howler. I believe in my country and yield to no one in singing its praises. As Governor of the Commonwealth I shall consider it my duty to recommend the appointment of a commission to consider the industrial needs of Massachusetts as affected by tariff duties and reciprocity treaties. I believe that such a recommendation will find favor even with a Republican Legislature. A commission composed of representative manufacturers, merchants, workingmen and farmers should consider these questions. Its conclusions will have great weight. Acting upon them and upon an act of our Legislature a referendum vote might be taken requesting our Senators and Representatives in Congress to favor certain tariff and reciprocity legislation.

Should Massachusetts lead off in this movement it is probable that other New England States, and possibly some Middle and Western States, would follow. It would no doubt be possible in this way to obtain tariff and reciprocity legislation.

BROCKTON, MASS.

Dr. Richard Simpson Woodward

PRESIDENT-ELECT OF THE CARNEGIE INSTITUTION

The trustees appointed to administer the fund of $10,000,000 donated by Andrew Carnegie for the advancement of science chose as the first head of the Institution Dr. Daniel Coit Gilman, formerly President of Johns Hopkins University, who during his three years of office has performed the difficult work of organizing the methods of the distribution of these scientific subsidies. His successor is Professor Woodward, dean of the faculty of pure science of Columbia University, who will resign his collegiate position to devote his entire time to the institution. Dr. Woodward was born July 21st, 1849, at Rochester, Mich., and graduated from the University of Michigan as a civil engineer in 1872. He was assistant engineer of the United States Lake Survey, 1872-1882; assistant astronomer of the United States Transit of Venus Commission, 1882-84; chief geographer of United States Geological Survey, 1884-90; assistant to United States Coast and Geodetic Survey, 1890-93, when he became professor of mechanics and mathematical physics at Columbia. In 1900-01 he was president of the American Association for the Advancement of Science, of which he is now treasurer. The Carnegie Institution last year dispensed $255,071 to 114 individuals for scientific research. Two biological experiment stations for experimental evolution are now supported by the Institution, at Cold Spring Harbor, Long Island, and the Dry Tortugas, Florida. An appropriation of special popular interest is that to Luther Burbank, the horticultural wizard of California, who is creating new fruits and flowers, such as a spineless cactus, a seedless grape and a stoneless plum.

The Year in Finance and Trade

BY FRANK D. ROOT

[Mr. Root is a member of the staff of THE INDEPENDENT, and has for many years devoted close attention to the general course of financial and industrial affairs, as described in the following article.—EDITOR.]

LAST year was one of depressing and almost uninterrupted decline in the securities market; in 1904 we have seen six months of dullness and uncertainty, followed by recovery—general at first, then rapid, and marked in the year's last month by sensational vicissitudes of speculation. Some of the causes of last year's prolonged decline were manifest; others were obscure. Abundant crops, exports larger than ever before, peaceful relations with foreign Powers, a full national treasury, strong banks, heavy railroad traffic and a large volume of domestic trade—these did not prevent a continuous and disquieting fall of share and bond prices. But this decline was accompanied by no depression in the agricultural districts, altho the restriction of some manufacturing industries was associated with it, as cause or effect. A natural reaction, following great speculative activity and much Trust inflation, was promoted by strikes affecting the iron and steel industry, by the first Northern Securities decision, by the unsavory Shipyard Trust disclosures and by various other events and influences.

At the beginning of 1904 the situation tended to intensify a feeling of uneasiness and apprehension that had been caused by the prolonged liquidation of 1903. Iron output had been cut down by one-half, falling from 1,673,228 tons in June to only 846,605 in December. The great Steel Corporation had reduced (and was soon to discontinue) the dividend on its common stock. Wages in the steel mills and cotton factories were declining. With increasing expenses of operation the railways found it difficult to market new bond issues, and were resorting to notes. An unusually severe winter was retarding the movement of goods. The situation was not improved in February by the outbreak of war between Japan and Russia, the great fire in Baltimore, the collapse of the Sully speculation in cotton (to be followed in March by Sully's failure), and the Pennsylvania Railroad's note loan of $50,000,000.

Trading in securities revived for a time after the final decision in the Government's suit against the Northern Securities railway combination, in March. Dullness almost without precedent had been shown by the sale of only 74,400 shares on the 10th, but on the 22d and again on the 23d the total exceeded 1,000,000. Owing to the narrow majority in the court, and especially to the attitude and the opinion of Justice Brewer (together with Attorney-General Knox's memorable remark that the Government would not "run amuck" among the corporations), railway capitalists appeared to believe that additional suits of the kind would not be brought, or that, if begun, they would fail, and that combination or association by "community of interest" could not be attacked successfully. It was in this first quarter that the Cuban loan of $35,000,000 was easily placed by Speyer & Co. in the New York market and elsewhere.

In a lifeless market quoted values declined in the second quarter, and in May many shares reached their lowest figures for the year. It became known that the Steel Corporation's net earnings in the first quarter had been only $13,208,000. The company's common shares were sold at $8⅜ and the preferred at $51¾. Litigation over the distribution of the holding company's assets was obscuring the ultimate practical effect of the Northern Securities decision, so far as the conflicting interests of transcontinental systems were concerned. Severe weather had killed 5,000,000 acres of winter wheat. Wild fluctuations in the price of cotton had embarrassed the mills, many of which began to curtail production. In May $43,000,000 of gold was exported, mainly to pay for the Panama Canal, but

this large transaction was so skillfully carried through that it caused no appreciable disturbance. Money was loaned on call at very low rates, as it had been from the beginning of the year.

Investors and the public were waiting for news about the crops. Good weather in June gave firmness to a narrow market of less than 5,000,000 shares. A menacing strike on the boats of the great lakes collapsed, and new railway bond issues were well received. But a promising increase of iron output (from 921,231 tons in January to 1,533,350 in May) was checked by a loss of 240,000 tons in June, owing to declining demand.

Not until July were seen the modest beginnings of the advance in share values that culminated in December. The following table of quotations shows how little change took place in the first five months; the high prices of Monday morning, December 5th, immediately preceding the President's message and Lawson's attack; the lower prices of December 13th, which mark almost the entire extent of the reaction, and the partial recovery, as indicated by closing prices on December 16th, the latest available date:

	Jan.2.	June1.	Dec.5.	Dec.13.	Dec.16

West. Union	86⅛	86	97⅜	91⅜	94

Beginning with July, the basis of investment for an advance was the bright promise of large crops. Growing corn was in fine condition; the yield of cotton, it could be foreseen, might easily break the record. Strikes of the beef workmen and the Fall River cotton mill hands could not restrain the upward tendency. Steel Corporation net earnings for the second quarter were $19,500,000 (against $13,208,000 in the first), and steel prices were reaffirmed by the combinations, altho a better demand was not yet in sight, and the iron output was still falling. July interest and dividend payments irrigated the dry channels of the stock market, and sales rose in this month to nearly 12,500,000 shares, from only 4,972,000 in June. The enormous exports of the fiscal year ($1,460,829,000) had been surpassed only in 1901. Capitalists foresaw the election of Mr. Roosevelt, and from this time forward a favorable influence upon business was exerted by a widespread conviction that there was to be no disturbing change in the policy of the Government. In August the advance continued.

A flurry in the steel trade, owing to an indirect reduction of the pool price of billets (from $23 to $19½) by the Republic company's conversion contract, led to some cutting of prices, but the iron output had turned the corner and was rising once more. The indictment of Weinseimer, leader of the strikers in the building trades at New York (followed, some weeks later, by his conviction), pointed to an ultimate victory for the associated employers. Early in September, the beef packers' workmen on strike surrendered.

In this month there was evidence of expert and powerful manipulation in the securities market. Capitalists had set out to take advantage of the favorable conditions not yet present, but soon to be observed by all. If the growing crops should reach maturity in safety, these would be a sufficient warrant for much higher prices on the Exchange. With a revival of confidence (due partly to the attitude and the trading of the capitalists themselves, and not wholly to the bounty of nature), demand for the products of manufacture must increase. Money on call could be had at less than 2 per cent.; in all the year the rate had not exceeded 2½ per cent. Manipulation appeared at first in an extraordinary movement affecting the steel shares, the preferred rising in a few weeks from

$58 to $74, and the common from $11½ to $18. Stocks had been selling below such value as they soon would have. Because of distrust, lack of confidence, or exhaustion, the public had not cared to buy them; rising prices would draw in both the public and the secondary speculator.

When everybody knew that the enormous corn crop of 2,453,000,000 bushels was safe, that there had been a large yield of every other agricultural product except wheat, there was no lack of investors and speculators in the Exchange market. A little later was to come the proof that there was a cotton crop of 12,162,000 bales, the greatest ever grown. In October 32,500,000 shares were sold. Below is the record by months:

	Stocks, shares.	Bonds, par value.
January	15,262,624	$80,784,000
February	8,787,259	36,061,200
March	11,440,956	46,248,500
April	8,205,529	58,771,100
May	5,290,110	37,817,600
June	4,972,804	48,985,200
July	12,462,394	64,247,380
August	12,474,789	68,217,700
September	18,767,264	114,398,740
October	32,574,449	150,001,335
November	31,981,066	214,207,300

A growing freight demand had found the railroads short of cars; companies were calling for thousands of new ones. Beginning with August, railway gross earnings had been larger than those of 1903. Steel prices were rising. The rail combination declined to sell (to American buyers) for less than its old price of $28, and companies prepared to give their orders. There was new life at the furnaces. Decline and revival of the iron output are shown below:

	1903. Tons.	1904. Tons.
January	1,472,788	921,231
February	1,390,615	1,205,449
March	1,590,470	1,447,065
April	1,608,431	1,557,267
May	1,713,614	1,533,350
June	1,673,228	1,292,030
July	1,546,184	1,106,297
August	1,571,126	1,167,672
September	1,553,717	1,352,677
October	1,425,658	1,450,401
November	1,039,622	1,480,602
December	846,605	.....

Following the election, a flood of buying orders on November 9th gave the Exchange market a total of 2,328,000 shares. In November, a considerable part of the new Japanese loan of $60,000,000 was offered in New York and oversubscribed. A few weeks earlier, the Mexican loan of $40,000,000 had been taken by a New York syndicate, and $25,000,000 of it was easily placed before the bonds were offered to the public.

At the beginning of December, rapid advances and a speculative movement of large dimensions had made the entire securities market topheavy. Capitalists whose influence had been dominant since the early days of August had taken profits and withdrawn for a season, leaving a highly vulnerable speculative structure resting upon the margin deposits of a great flock of "lambs" to whom the shares had been sold. In the past, various plans have been devised, and various accidents have happened, to shake out confiding and hopeful speculators of this class. If the upward movement is to be continued, those who stimulated it and have parted with their shares at a very comfortable profit desire to recover them at much lower prices. On this occasion their purpose was served by the remarkable advertisements of Thomas W. Lawson and by the earnest recommendations of the President's message concerning railroad rates.

On Monday morning, the 5th, prices were at the top. On the afternoon of the 6th the message was published. That evening, the presidents of fourteen prominent railway systems assembled at a dinner and discussed Mr. Roosevelt's urgent recommendation that new powers over rates be given to the Commission. It became widely known that they regarded this proposition with much disfavor. On the morning of the 6th the glaring and forcible advertisements of Lawson, a Boston speculator whose magazine articles on "frenzied finance" had given him a considerable following, advised everybody to sell at once the shares of Amalgamated Copper, the incorporated permanent blind pool of Wall Street. Prices had yielded a little on the 5th; they yielded more on the 6th, and violent liquidation followed on the 7th and 8th. Great blocks of shares were cast upon the market; enormous "short" sales assisted the decline. On the 7th,

2,310,000 shares were sold; on the 8th, 2,898,000.

Values melted. Margins were swept away. Nothing like it had been seen since the Northern Pacific corner in May, 1901. With the "lambs" of small resources were shorn certain rich Western speculators who had followed after the great masters of their trade and "overstayed their market." Some observed that on those two days of slaughter there was no support for prices where support had commonly been found.

Covering of "short" sales caused a slight recovery, but the suffering market had scarcely had a chance to breathe when, on the 12th, the attack was renewed, with the now familiar accompaniment of "frenzied" advertisements and telegrams. And again there was no support. By this time substantially all of the small-fry speculators must have been constrained to let go, and a great many shares must have lodged once more in what are commonly called "strong hands." At the end of the week (as the table shows), about half the loss had been regained. The disturbance—which may not yet have run its course—had been wholly speculative. The crops had not disappeared, and reports concerning trade and manufactures continued to be of a very favorable character.

Every year, in the record of financial undertakings and movements closely associated with the Stock Exchange there is something that suggests an improvement of methods. In 1903, the curious history of the broken Shipyard Trust pointed to certain needed reforms in corporation procedure and the methods of promotion. It also emphasized the expediency of enforcing the laws. There is no evidence that Receiver Smith has apologized for calling that Trust "an artistic swindle," or that Superintendent Kilburn has expressed his regret for asserting that some one had "flagrantly transgressed the laws" in operations connected with the promotion of it. There has been no legislative inquiry, no special grand jury, no prosecution; but such publicity as was given officially and otherwise to the case has exerted a restraining and salutary influence.

Lawson and the Amalgamated Copper Company have been fertile sources of suggestion in 1904. It is easy to ascribe to this agile and sensational speculator more power than he has ever exercised or possessed. His quality may be measured by the admissions in his own advertisements. Cynics will differ in opinion as to whether the part he has played has been that of a principal, a partner, or an agent. The Amalgamated—a solvent and powerful, but somewhat mysterious, corporation—was a club ready to his hand. Shunning publicity, making no reports that threw light upon its affairs, meeting sharp attack with silence that to the ignorant may have seemed to be confession, it virtually invited assault in the market. Its quotations had run the gamut from 130 to 33, to the discomfiture of the unwary. Believing that, by reason of the secrecy of its management and its refusal to defend itself, it has been a menace to share values resting upon frequent and frank reports, prominent and conservative journals are even saying that from its products the privileges of interstate committee should be withheld until such reports are made by its officers. Such being the attitude of enlightened journals, it is not surprising that the ignorant and misguided should look upon this powerful corporation as a piratical craft in the seas of finance.

With such publicity as the Steel Corporation freely gives, the Amalgamated Copper Company would acquire stability for itself and promote stability in the general market. If the question whether all corporations prominent in the transactions of the Exchange ought not to be required to make adequate reports should be referred to a committee representing great corporations and financial and fiduciary institutions, the officers and directors of this company would clearly be eligible for membership. No group of American capitalists is associated with the direction of a larger number of our most powerful and conservative financial institutions. For this reason it is difficult to understand why they permit the Amalgamated to retain the unsavory reputation it has acquired and to be made a cause of financial disturbance.

New York, Dec. 17.

Staff Headquarters at Yentai, Near Liao-Yang. From a Sketch by a Japanese Artist

With the Manchurian Army of Nippon

BY A BUDDHIST CHAPLAIN

[The following article is from the diary of one of the three Buddhist priests who left Japan at the beginning of the war to serve in General Oyama's army at the front. The article describes the author's experiences only up to the great battle of Liao-Yang. Mr. Adachi Kinnosuké, of New York, has translated and edited the manuscript for us. —EDITOR.]

WITHOUT wife and without children, more especially without money loaned out, and, moreover, without any debts, for the simple reason that I have always been without credit among my friends, I have found myself a rather convenient party to "follow clouds and streams," as an ancient Chinese poet put it, in the track of the all conquering army in a foreign land. Perhaps that was the reason why I have been honored with the distinction of serving our army as a chaplain.

The saintly head of my temple is 78 years of age; 78 winters have not chilled his blood. He carries with him the fragrance of a saintly life. It was about two hours past midnight when we stood on the off-edge of a simple village. The head priest had accompanied me to this point, in spite of his age, to bid me good-by.

"Without a mishap I pray that you may come back to us," he said. After that there was silence, because something prevented me from framing a suitable phrase or two in response. In the silence, in the uncertain light of the paper-lantern I happened to carry, I saw the quiverings of my old teacher's lips, and knew that he was repeating certain passages from the Sutta. In the kindliness of his nature he wished, doubtless, that his young disciple should carry along with him the divine protection of the sacred texts, full of virtue and full of wisdom. After all, there is an unearthy touch somewhere in the make-up of men-of-law.

"If you would, you can laugh at me, saying that I am a mere frog within a well. Do not flowers fall into my world in the spring? Does not, also, the moon fall upon it of an autumn night?" So sang Sanyo Gaishi years ago. I am of the country, a dweller in a small and simple village of the mountains. The boast of the frog in the well is also mine, and I have always taken a pride in the simplicity and unvarnished polish of the country folk. As soon as our good villagers got wind of my departure for the front to serve as a chaplain with the Manchurian army they managed to find out somehow the date of my departure, and these good folk gathered together. More than one hundred of the faithful found themselves together in the main

room of the temple to ask our Lord Buddha to cover me with infinite grace. They wished also to express their appreciation of what little I have managed to do for my villagers in my simple and short life. They were not sure that I would come back to them. A battlefield is a battlefield, after all, and a mortal, even if he happen to be a man-of-law, must be prepared to step on it with a thorough understanding of leaving his earthly life behind; and so they came together, these good villagers, and I knew when I met them in that large room of the temple that I was not bowing to so many ceremonious bows, but that I was facing a solid expression of gratitude and good will. Indeed, it was the gathering of kindness and grace.

At the railway depot there were again the villagers; the train whistled, and I heard them shout the "Banzai;" nevertheless, their patriotic enthusiasm was greatly dampened with their tears. A poor fellow, whom most of them knew from boyhood, was now going away.

As I was stepping into the railway coach some one rushed up to me. I saw he was a young man who had served as a letter-carrier for a few years. He was very poor. He forced a little package into my hand, and said: "If you have time, before you start for the front, be kind enough to me to buy whatever thing you need with this little sum I have managed to save. When the war broke out I meant to offer this to a soldier who might represent our village at the fighting line. Now that you are going to represent us in the more kindly office of a chaplain, I am very much happier to be allowed to present it to you." In the little package were a few pieces of silver. For one moment do you suppose that I would exchange these pieces of silver for a million pieces of gold of the rich?

I am old-fashioned. I am a monk, and do not take very kindly to the new order of things. In all my days I have never put on a shirt of the foreign make; but what would you have? It is impossible for even an "out-of-the-world" to start for the front with the rest of the Nippon army of to-day in a kimono of a pure native cut. You ought to have seen me in my brave suit of khaki! Had I suddenly come in this my civilized costume upon the scarecrow which I had placed in the garden of our temple I do not know what apologies I could have offered it! As if I had purposely meant to highten the stagy effect of my equipment, circumstances forced me to carry an umbrella of the pure native type and manufacture. It was a blending with a vengeance of the Far East and the extreme West. The wise and the witty might have seen in me, nevertheless, the Nippon of to-day in miniature. My get-up was amusing even to myself. For years past, in fact, for all the years that I have lived on earth, it has been my custom to hunt for my handkerchief in my long sleeves, and now I could never make my fingers understand that my arms are incased in a couple of broken stovepipes. So from time to time, I put

The Great Buddha In Nirvana. Sacred Lotus Flowers of the Buddhist as Details. This Picture Shows the Traditional Snails on the Head and also the Brow Jewsied

Great Bell at the Temple in Kyoto. Image of Buddha Inside

my hands for my handkerchief, and only found the vacant space. And this foreign collar around my neck is the mischief of a thing! I don't know why our good friends of the extreme West should like this horrible reminder around their necks? Even to a man-of-law, an "out-of-the-world," the starched collar is a constant reminder of a criminal about to be executed.

The confusion that you find in the harbor of Ujina is beyond all talk. The Commissariat Department that is looking after 30,000 mouths, more or less—the fodder that they are getting ready for shipment is to be counted by so many tons. Here at this point are gathered all sorts of men, reservists, interpreters, all kinds of soldiers belonging to all sorts of regiments, divisions, battalions, with so many confusing numerical designations. Especially the day I happened to arrive there was also the day when a certain battalion which was to be shipped to the front was also to arrive, and the landscape was choked with all kinds of soldiers. They talked very philosophically, these soldiers of our country, and the fact that they are to go forth and meet one of the greatest military Powers in the world does not seem to trouble them in the least. Most of them were asleep. I wondered what they were dreaming of. When they leave their homes they do so with a thorough understanding that they would return only by a happy accident. Knowing this, their happy sleep gives you the impression of something great, something that is noble, something that fosters your faith in this frivolous humanity, after all. I saw at one section of the city the distribution of bread to these men. They were given each a small loaf of bread, wholesome, no doubt, but as economically manufactured as possible. Now, among these men there were many who had left a parental table groaning with the weight of tempting delicacies. Every one of these men that I have seen accepted the loaf of bread with a hearty expression of gratitude in their words and in the expression of their faces. The sight was quite touching enough to bring tears to the eyes of the casual observer.

I went to get my passport at the head-

Reliquary, Courtyard, Gateway and Bronze Memorial Lanterns Before the Tombs in the Temple of Zozoji, Shiba, Tokyo, Japan

quarters of the Fifth Division. The officer in charge, Major Sugiyama, said to me:

"In this summer weather it is especially gracious of you, etc., etc. Permit me to mention an incident, because it might be good material for a sermon or two in the camps. The other day the Commissariat Department of a certain division found a few cases of provisions missing. They traced them to a certain point without any trouble, and further investigation showed that they were stolen at this point. Now, it seems that there were a few accursed merchants there who bought these cases of provisions from the thieves and sold the contents of those boxes to the men of the army at about three or four times the price they paid. Now those boxes of provisions were transported at public expense to that point. These merchants themselves had received no little assistance through the transportation facilities carried on at public expense that they might accompany the army and sell a few minor articles for the convenience of the soldier. I mention this thing to you because the punishment that we could deal out to those merchants is ridiculously trifling considering the crime. May I be permitted to hope that you men-of-law would take the trouble of visiting upon these rascals the punishment from Heaven that might be somewhat in proportion to the dastardly crimes they have perpetrated?" Then the Major went on to tell me some of his experiences with these low-souled Nippon merchants, who are far below brutes, and who have for centuries past been classed at the foot of our social caste system—just above the outcasts. In the days of the Nippon-China war, he said, he had occasion to enter into one of those saké shops on the field and purchase a glass of saké. On drinking it he found that it was over 50 per cent water, but the price was exorbitant even for the real article. How these merchants can fall to this depth in such days as these, when the entire country is fighting for her very existence, etc., etc.

At noon on the 13th of June our transport left a white bouquet of steam as a parting gift to the blue skies of Nippon.

and with shockingly hoarse shrieks it began to tread out brocades upon the peaceful ripples. In front of us gleamed a melting horizon. Peace was falling upon the blue and the green of the sea. The men and officers aboard, without a word, watched the shores, that began to move away from us and melt into a dream in a sort of touching farewell.

The next day rain came in fine silk against the lead of the sky and the fog of the sea. At about eight o'clock in the evening we gathered together in the dining hall. There we opened a gathering for the discussion of the Law. Officers and men, there were altogether sixty of them. Among them I noticed the commander of the division. After a number of remarks upon the Law, at the suggestion of the division commander the meeting was given up to the debates on sacred themes. Hundreds of difficult questions came out from the officers. It is true, then, that these officers, upon whose hours and attention military duties make such an exacting demand, seem to pay their respects to our Lord Buddha and give heed to the deeper things of life! We were on the eve of starting for a battlefield. This battle of stormy discussions out on that calm and unexpected spot in the Yellow Sea came upon me as somewhat of a surprise. Graver things than even the issue of this war we have dared to discuss, and the night sped as a winged thing. It was twelve o'clock when the first thought of time came to us.

On the 16th a viewless hand had wiped away every stain from the blue of the skies, and at nine o'clock in the morning there was the sound of a descending anchor. At two o'clock in the afternoon we landed. Before us was a thousand-*ri* stretch. For the first time in my life my eyes fell upon the complexion of a continent. Through a village called Seikiatun we picked our way in the direction of Wokiatun, and covered the distance of about three *ri*. Past six o'clock in the evening, as the gloom was softening the awe-inspiring countenance of the continent, we reached the village of Wokiatun. Our home for the night was a beautiful sight to see. We only regretted that it did not please the

Burying Ground and Pagoda, Nagasaki

gracious heaven to fashion us at the hour of birth in the admirable shape of a pig. If we were so fashioned we could have added to the harmony of things beautifully in this our new home. The size of the hovel in question was about three mats, and in this roomy palace it was the pleasure of the order of things for three of us, besides five interpreters, to pass a night as comfortably as possible. As for me, I took it into my head to follow the admirable example of many a saintly monk before me: I went out into the yard, I found a tree, and in the kindly shelter of its green mantle I saw the stars brighten and then fade into the break of day.

Priests in Full Canonicals

The next day rain! The magnitude of the downpour was quite becoming to a great continent. At seven o'clock in the morning we started for Pulandien. After covering about four *ri* we opened our lunch. On this vast stretch of land, deluged with mud, there was not a drop of water fit to drink. Nevertheless, our appetities were thoroughly prepared to turn the coarsest food into a delicacy. The rain, which had up to this time been somewhat modest and observed all the proprieties in staying outside of my raincoat, seemed all of a sudden to have lost its sense of etiquet. It suddenly became very bold and came through my raincoat as if it were the most welcome guest to my skin. Moreover, the sea of mud was making all sorts of sport with our weary feet. We stopped for rest at every quarter of a mile, then began to stop at half its distance. It was away beyond eight o'clock at night when we reached our objective point. This day I covered eight *ri*—the longest, most wearisome and most heroic eight *ri* that I have covered in my life.

The 18th was fair. At eight o'clock in the morning we started at the heels of a large transport wagon. It would seem that we put too much faith in the ability of the transport wagon as a guide. It became apparent that we had lost our way, and we had to double back on our tracks more than once. As the day wore on we lost sight of the transport wagon, and to us was given a humiliating moment in which we freely confessed that we were even worse guides unto our feet than the transport wagon in the first part of the day. We were lost completely.

Night fell upon the strange road—to put it more exactly, upon the trackless stretch of land—and at a little after twelve o'clock midnight, as if a happy chance had picked us up all of a sudden, we found ourselves face to face before the station house at Wafangau. At once we threw ourselves upon the mercy of the commissariat department of the division which had its headquarters there.

On the 19th the sky still smiled. At five o'clock in the morning, after the repose of about three hours, we rose and started for a place called Kokako, rear of the headquarters. Once again we were treated to that choice luxury of a vagabond's life—we lost our way.

The next day we crossed Fuchau River, passed Malingtun to our right, and at four o'clock we at last reached our objective point. That night all the weary journeyings from the coast to this inland point became entangled in our dreams.

On the 21st bright dawn! This day is made forever historic as the day on which we enjoyed the first good bath since landing upon this great continent. It would take a poet and a philosopher of the first order to commemorate the significance of the day, the virtue of the bath, with becoming lines.

The 23d was fair. At nine o'clock in the morning we headed north. At noon we passed Tonyantai. I came upon a private. He was stooping down with his hands stretched out before him over a mud pool; he was thirsty. I laid my hand on his shoulder and said: "You had better be careful." The private looked up at me with the expression that you sometimes catch in the eyes of a frightened doe. He said: "Last night I lost the chance of securing my rations and my water. I have missed two of my meals. My canteen is empty. I know this muddy water will hurt me, perhaps; but what would you have? When I am so thirsty it is hard for me to discharge my duties. It is to hurt myself, my health, and discharge my duty, or to neglect the duty and preserve my health. I only preferred the first of the dilemma." Happily my canteen that day was not touched. Without a word I offered it to him. "You will need it," he said. "Not quite as badly as you are needing it now," I said. "So, then, you have not learned to appreciate the virtue of clean

Priest and Acolyte

water?" he said, and with swimming eyes he accepted the gift. The instance made an impression upon me. Even a private on duty in a remote corner, far from the field of battle, is mindful only of doing his duty. Duty! It is the only god whom our soldiers serve on a battle-field. It is not without reason that the Russians are declaring that nobody can fight against such a singular set of men as our soldiers. At six o'clock we reached Kokiatun. We met an orderly, and he told us that for the night the headquarters had moved. Between it and ourselves there was a wavy stretch of millet field, not a thread of road breaking it. If there is no road before us, the only thing that we could do was very plain—we had to make one, and so we did. Through the valleys we passed, came out upon a river bank, and we followed its stream up to our objective point. The hour was eight o'clock in the evening.

Bomb Proof Caves Near Liao-Yang. Mukden in the Distance at the Left From a Japanese Print in the Daily "Jiji"

July 4th, the sky without clouds. On my return to camp I found a surprise waiting. The daintiness of it was almost touching: it was an invitation from the commander of the division to "tea and cakes." We had the pleasure, three men of sable cloaks, to attend the function—it was more of a ceremony than a feast. Perhaps it was meant to remind us of the luxuries our lips were wont to enjoy in the time of peace. Certainly the sight of pink tea, of grapes, of sponge-cake and cigarets contrasted with the rigor and simplicity of life which the army in camp imposes upon officers and men. These articles, which look, in this setting like the sudden blossoming of spring flowers out of the frozen soil of December, were brought to the division commander as a present from a far away friend at home. The division commander never enjoys a luxury or a pleasure alone. Nothing refreshes his palace but that the same thing would at the same time refresh his men as well. It is not without reason that the men under him would share with him the blackest fortunes of war.

August 9th. With the whitening of the east came the reports of guns. At six o'clock we started, and about nine o'clock in the morning I found myself in a rather proud position on the back of a coolie, being carried like a spoiled child across the river. Having covered over three *ri* and a half, we gained the south gate of Kaiping. The gate was imposing; it was crowned with the sun-flag. At the entrance of it our soldiers stood guard. I found our headquarters housed in a magnificent yamen. It was called the Hall of the Meeting of Three Streams. In the alcove of honor of the main hall of the yamen I saw the statue of our Lord Sakya. Out of the north

gate of the city a few steps ahead was a hill. On the morning of this very day our army took it from the Russians, and even now, facing the enemy on the hill ranges ahead of us, the artillery duel is ripening. Far away in front of us cutting the blue above the horizon I can see the rings of smoke. They were the burstings of our shrapnels. Upon the sharp shoulder of a rock not far away from where I stand I see something that looks very much like the fall of lightning; it is a Russian shell searching our artillery position. Suddenly I come upon the regimental chief, Hara. He says to me:

"In the battle of the morning the enemy fled, leaving behind them two

His words were few, as you see, but the tone in which they were spoken told how much this chief must have thought of these eight men he had lost. His voice could hardly sorrow more for the loss of his own brothers. They must have been very brave men, these eight, and as three of us priests intoned the sacred texts over their graves I heard the suppressed sobbing of these men, their comrades.

August 23d. Three o'clock in the morning. Following the staff, we broke camp. The road which stretched away before us was choice and very inviting. The mud literally reached our knees, and the darkness of night before our eyes was as thick as the mud. It would seem

Bivouac of Japanese Army Near Liao-Yang. From a Japanese Print

corpses. I pray you, according to the great mercy of the Buddha, which falls upon all in equal measure, to afford them the grace of a prayer that would serve them as a guide and guard through the shadowy paths."

I followed him to the hasty grave in which they were interred. After the ceremony I climbed a hill and stood face to face with the battlefield. I opened my lunch. Suddenly there came to me an orderly and said:

"The dead are on the crest of that hill yonder. I pray you to come and afford them the funeral rites."

So I was led into the presence of the commander of the Third Company of the Sixth Battalion, Engineers. The commander said to me:

"There are eight dead here; all of them have come from my command. I beg you for the courtesy of the reciting of suttas."

that this Manchurian country had made up its mind to afford everybody a fair chance of being a brave soldier. If, being priests, we are deprived of handling the sword and commanding the fire, we have quite as persistent and brave a foe as the Russians dare claim themselves to be, in the mud and in the blackness of night. At half-past four a.m. we actually managed to walk over a hill. At three in the afternoon we stopped to spend the night. From the headquarters came the news: "To-morrow we shall see the beginning of a decisive battle."

August 24. Over thirty thousand of the enemy were behind the fortification which nature had stretched over the distance of four *ri* along the crest of the hill. Russian engineers taxed their skill at a few points where nature happened to be careless in this superb fortress of defense. It seemed as if they had covered the hill ranges with an almost unbroken

park of artillery. Rising at three o'clock in the morning we made for a modest hill town to the south and there stationed ourselves for a goodly view. Finding that it fell short in satisfying the desires of our hearts we climbed down the hill, covered half a *ri* in front of us, and gained a hight to the north. It was five thirty in the morning. All of a sudden there was the report of a gun. Perhaps it was one of those tentative invitations for the Russian guns to answer and thereby make known where they are. Sure enough the enemy opened fire. Their shells fell some four hundred meters from our artillery position. It became more and more savage and began to search our positions closer. But our guns were without a word.

"Pity! The position of the hostile guns are not located with exactness," came from one of the artillerymen. This sentence coming to us through the thick falling of hostile shells excited my blood. And I wonder why. I am a man-of-law, an out-of-the-world, and suddenly I find myself in the thick of the children of fire, seeking for the blood of men. Why should I take thought to the affairs of our gunners? How has it come to pass that I feel impatient over the inability of our men to discover the hostile gun positions? Why is it that my heart is without comfort because my mind thinks that the opportunity which is precious is fast passing from the grasp of these gunners?

Just then there came a shell which fell square into the midst of our park. Horses were struck down; a number of men were wounded. The sight made me cover my eyes. Our gunners opened the fire at what they were rather sure of being the Russian gun position. It was at three p.m. that we knew the position of the Russian guns with a certainty. It was rather singular that all this time our shells were telling upon the Russian guns almost without the waste of a single shell. The shelling became more and more savage, and we were ordered to withdraw to the back of a hill from which the men of the general staff were watching the action. We descended the hill, passed through the congested lines of ammunition wagons, and came upon a soldier who was leaning heavily upon his sword. He was limping his way to a bandage station. It seemed as if a shell had carried away one of his legs. An officer turned to him and said: "How is your wound?" He answered simply: "A broken fragment of a shell carried away a portion of my leg." "Why don't you ask for a stretcher?" the officer asked him. The soldier turned his pleasant smile upon the officer and said, pointing to his leg: "This, this, sir? Why, we do not call this a wound. If I were to take a stretcher my friends would think that I am really ill, and there are so many men who really need stretchers." Without another word the private limped on.

September 1st. After a visit to the field hospital I came home in the night. Nervous flashes of searchlights in the direction of Liao-Yang saved me the trouble of carrying a lantern. The sounds of a storm filled the air, the thunder and lightning of which were a thousand guns in action—the toys which the latter day civilization of ours has placed in the hands of two nations that we might play a modern game manfully.

September 2d. In my ears were the sounds of battle. I said to myself, looking in the direction of Liao-Yang:

"It seems as if they are doing something yonder. Why, then, this leisure here, and why, then, this peace?" I now came upon a company of our soldiers who were holding the rear. One of them stepped up to me and said: "A dot or a phrase, I beg you, man-of-law, to dye your brush for the souvenir of this life." I wrote upon a piece of paper:

"Death. One who would look through it is a man."

With the fall of day came the news of the fall of Liao-Yang.

New York's Great Financial Institutions and Their Presidents

BY SERENO S. PRATT

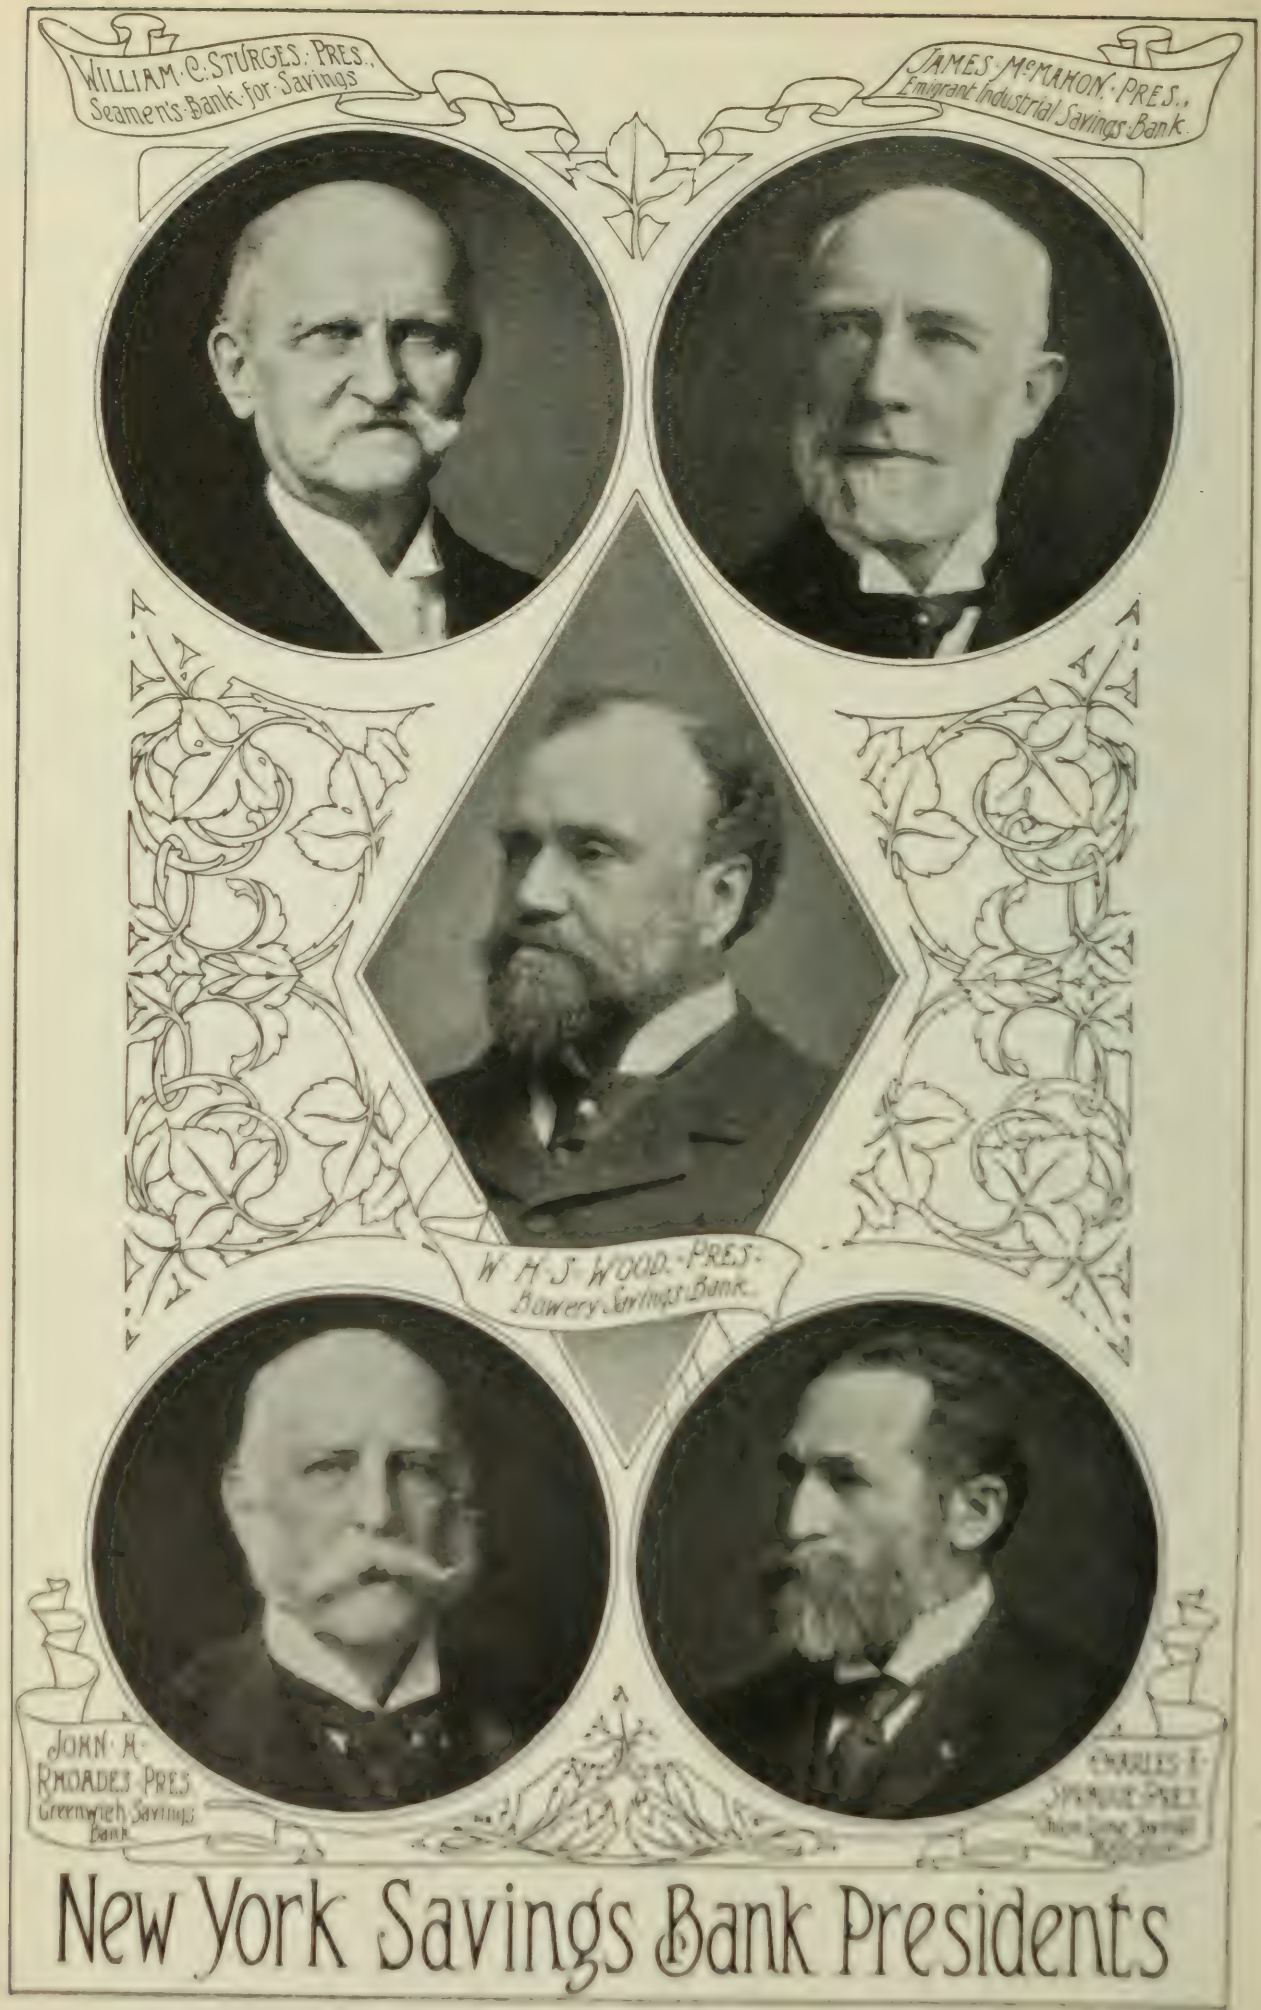
Associate Editor of the "Wall Street Journal"

NOT long before his death the late Frederick D. Tappen, President of the Gallatin National Bank, was entering the Rector Street station of the Elevated Railroad when a hand was placed gently on his shoulder. It was the hand of James Stillman, President of the National City Bank.

"Tappen," said Stillman, as Mr. Tappen turned to greet him, "it is a great thing to have the respect and regard of everybody."

Thus did the banker of To-day pay tribute to the banker of Yesterday.

Content with a moderate fortune, tho possessing unlimited opportunities to achieve great wealth, Mr. Tappen was perhaps the best example of the banker of a generation that has passed. President of an important bank, he did not seek unduly to expand its deposits by unsound methods or to increase its profits by underwritings and speculation. He represented the principle of co-operation in banking as distinguished from that of concentration, which is the spirit of the present day. It was he who in every time of panic was called upon to lead in uniting the banks of New York to stay the progress of insolvency.



But centralization is taking the place of federation. The power of the Clearing House, which is federation, and to which Mr. Tappen devoted the best service of his life, is less, while the power of a few banks of immense deposits is far more than ten years ago. These banks are still connected with the Clearing House, but are not, nevertheless, dependent upon it, and they can, whenever they choose, control it. President Hepburn, of the Chase National Bank, has said that in another panic like that of 1893 there would be no need of loan certificates and a loan committee. A few strong banks could get together and by use of their reserves or by importing gold could erect an effective breakwater against the tide of disaster.

This in a large measure marks the difference between the banking of Tappen and the banking of Stillman. Ten years ago several of the large banks were reducing their capitalization. To-day the tendency is to increase capitalization. This is undoubtedly largely due to the action of the law of supply and demand. A bigger country, with bigger transactions, carried on in a wholesale way, requires bigger banks. But what is more important than the increase in the size of banking institutions is the difference which has taken place in the methods, spirit and trend of the new banking.

The banking power of the world since 1890 has increased 110.25 per cent. The banking power of the United States in the same time has increased 168.47 per cent. The banking power of New York has increased by a larger percentage than even that of the United States. The resources of the national banks in this city have increased in that time 197 per cent., and trust company deposits in the past ten years have grown 240 per cent. The Comptroller of the Currency reports that while in 1903 of all the loans of the national banks in the United States 18 per cent. were in New York, the proportion in 1904 is 22 per cent. Nearly 40 per cent. of all the cash resources of the Clearing House banks is held by three banks, and of the increase in resources of all the national banks of the United States in the past year 22 per cent. is represented by the increase of five New York institutions.

Such facts as these give some idea of the growth of the banking power in the United States and of its rapid concentration in New York and in a few banks in New York.

The great reservoirs of credit are the national and State banks, the trust com-

New York Savings Bank Presidents

panies, the savings banks and the insurance companies, and a close examination shows an extraordinary alliance between the most important of these institutions, linking them into two or three financial chains, possessing a power that cannot be computed. Webster declared that credit was the " vital air " of commerce. So that these great groups of banking credit exercise an immense influence over the very element which commerce must breathe in order to exist.

The three leading life insurance companies, the Mutual, the Equitable and the New York, with assets of more than $1,100,000,000, or over 54 per cent. of the total life insurance resources of the country, themselves loaners of $40,000,000 on stock and bond securities, and having on deposit in banks more than $70,000,000, are in intimate alliance with the three most powerful banks, the National City, the National Bank of Commerce and the First National, having aggregate net deposits of $415,000,000. Mr. McCurdy, of the Mutual, and a number of his fellow trustees are directors in the Bank of Commerce. Mr. Alexander and Mr. Hyde, of the Equitable, and others of that company are directors of the same institution, which has thus become known as the " insurance company " bank. Mr. McCall, of the New York Life, is a director of both the National City and the First National banks, and his Vice-President, Mr. Perkins, is not only a director of the National City Bank, but also a partner of J. P. Morgan. Mr. Stillman, of the National City, is a director of the New York Life, and the bank is also represented in the direction of the Equitable, the Mutual and the Metropolitan Life Insurance companies. Mr. Baker, of the First National, is a trustee of the Mutual Life, and Mr. Snyder, of the Bank of Commerce, is a director of the Equitable.

JAMES STILLMAN,
President of the National City Bank

Now these insurance companies and banks have intimate relations, in some cases extending to the point of control with other banks, trust companies and savings banks, not only in New York, but in other cities. Thus the National City Bank is at the head of one group consisting of five national banks, three State banks and four trust companies in New York alone, having aggregate deposits of $400,000,000, while the Bank of Commerce, in connection with the Equitable Life and Mutual Life Insurance companies, is linked with five of the largest trust companies in the city. The First National and the Chase National are bound together so closely as to make practically one financial combination. There are thus three great groups of banks and insurance companies. To one Wall Street attaches the name of Rockefeller. To another it gives the name of Morgan. The third is known as the Mutual-Equitable group. Some would further reduce these three groups to two, and in some things there can be no doubt they move as one. It is not meant by this that the different links of these chains are not in most matters independent of the others, or that there is not competition between the groups, but that on occasions they are subject to the supreme interests which constitute the common bonds between them.

Along with this concentration of credit power there have developed many other striking changes which separate the

GEORGE F. BAKER,
President of the First National Bank

banking of to-day from that of twenty and even ten years ago. The most conspicuous of these is the evolution of what is called "department store" banking—that is to say, banks or trust companies composed of many departments uniting in one institution almost every branch of banking, including even bond departments, in which investments are directed and the purchase and sale of securities are conducted. The tendency is to make one institution do the work that a dozen in former days might do.

It was, perhaps, inevitable, altho to be deplored, that the concentration which has been described should be attended, certainly in New York, which is the financial center of the Western Hemisphere, with a distinct trend toward financial banking as distinguished from commercial banking—that is to say, banking that concerns itself with the sale of securities and the promotion of great enterprises through loans to corporations more than in meeting the credit needs of merchants. When it is said that the three greatest insurance companies own $638,000,000 of securities, that the national banks in New York carry over $200,000,000 of securities, and that the trust companies in this city carry $200,000,000 in stock investments, some idea is obtained of the immense stake these institutions have in the investment market independently of their loans on collaterals, which may be estimated at more than $1,000,000,000.

I was speaking not long ago of this concentration in banking to one of the most eminent statesmen in the United

RICHARD DELAFIELD,
President of the National Park Bank

States. He made this interesting comment:

"The strength of the nation should be in the wealth and prosperity of its country towns and villages. But the cities are rapidly sapping their vitality. Population and wealth are concentrated more and more in the great cities. The independent producers and merchants of the smaller cities and towns are being absorbed into the business of the great corporations, whose headquarters are in the big cities. The independent merchant or manufacturer who had his store or shop in a country town, owned his own house there, used the profits of his business in the place where those profits were made, and contributed to its prosperity and in-

fluence, is gradually being forced to sell out to the big concern in the city. Thereafter the place of the small independent merchant is taken by a hired man, a superintendent, in the pay of the corporation, and the profits of the business, instead of remaining in the town, go to the city. The same process is beginning in the field of banking, and not only is the money of the country being more and more concentrated in the big cities, but I believe that the great city banks will inevitably secure control of local banks in every part of the United States, and thus the process of concentration be carried to the farthest limits."

"What is the remedy for this?" I asked.

"I know of none," he replied.

Yet by many this development is regarded not merely as inevitable, but as altogether desirable, a natural response to economic law. A leading financial writer of London, who recently made a tour of the United States studying conditions here, expressed his opinion, in conversation with me, that this concentration was in line with increased stability and improved monetary conditions in the United States, and that it should be facilitated by the establishment of a system of branch-making like that which exists in England. In this view I cannot entirely agree. It seems to me that the point of highest safety and economic efficiency must lie midway between the concentration toward which we are steadily progressing and that wide diffusion and independence that formerly existed.

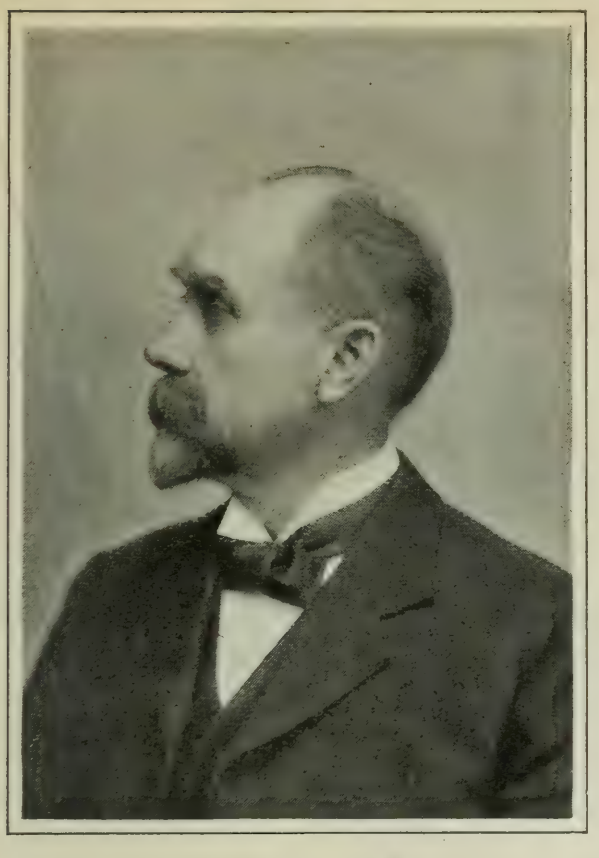
DUMONT CLARK,
President of the American Exchange National Bank

But if this power is inevitable it is in the highest degree important that it should be wisely administered. The men who have created this concentration and who control it in large measure have in their hands the destinies of American business, and if there is any question as to the outcome of the concentration which they represent it is not so much on account of what they may do as for fear of their successors. For what may be safe in the hands of strong men would be dangerous indeed in the hands of weak men.

Concerning Mr. Stillman, who is President of the National City Bank and

VALENTINE P. SNYDER,
President of the National Bank of Commerce

J. EDWARD SIMMONS,
President of the Fourth National Bank

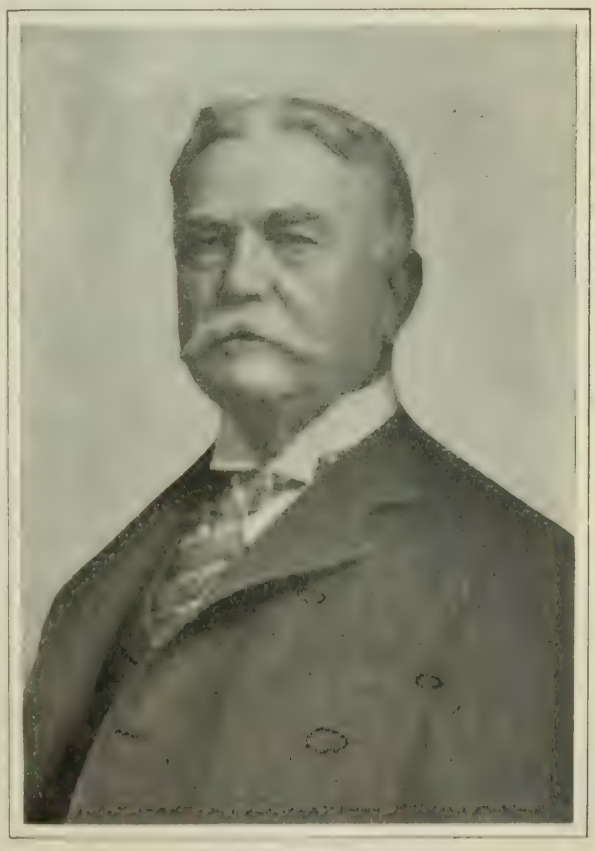


now heads the most notable of the three great financial groups, it has been said that he is the fastest thinker and the smallest talker among all the bankers. But tho Stillman commonly says little, he can speak when occasion requires and speak fluently and well. He has even a keen sense of dramatic effect and he has the art of making his silences as eloquent as Mrs. Fiske's most theatrical pauses. When Mr. Stillman presides at a fully attended meeting of the Board of Directors at the National City Bank it is estimated that more than $11,000,000,000 in corporate securities and more than one-third of the industrial trust capitalization of the country are represented. But no one doubts that where he sits is the head of the table, even tho a Rockefeller is present. Mr. Stillman is credited with three ambitions—first, to transmit to his descendants a family fortune greater than he received from his father; second, to be President of the greatest bank in America; third, to show how such a bank should be organized and directed so as to produce the fullest economic results.

George F. Baker, of the First National Bank, has given to his institution an individuality such as is possessed by no other bank in America. He has spent his life in banking and he rose to the presidency regularly through promotion from the lower positions. But it is not as a banker, but as a financier, that he has won his success and fortune. He is less interested in banking on its commercial than on its financial side. Thrown early into intimate relations with financiers who were trained in partnership with Jay Cooke, and more recently with men in control of the most powerful corporations, Mr. Baker has for years been identified with railroad financiering.

Mr. Snyder, of the Bank of Commerce, became connected with that institution about a year ago as a result of the Western National Bank consolidating with it. His promotion has been rapid. Like Mr. Cannon and Mr. Hepburn, of the Chase National Bank, who were formerly Comptrollers of the Currency; Mr. James, of the Lincoln National, who was formerly Postmaster-General; Mr. Gage, of the United States Trust Company, who was formerly Secretary of the Treasury, and Mr. Vanderlip, of the Na-

THOMAS L. JAMES,
President of the Lincoln National Bank



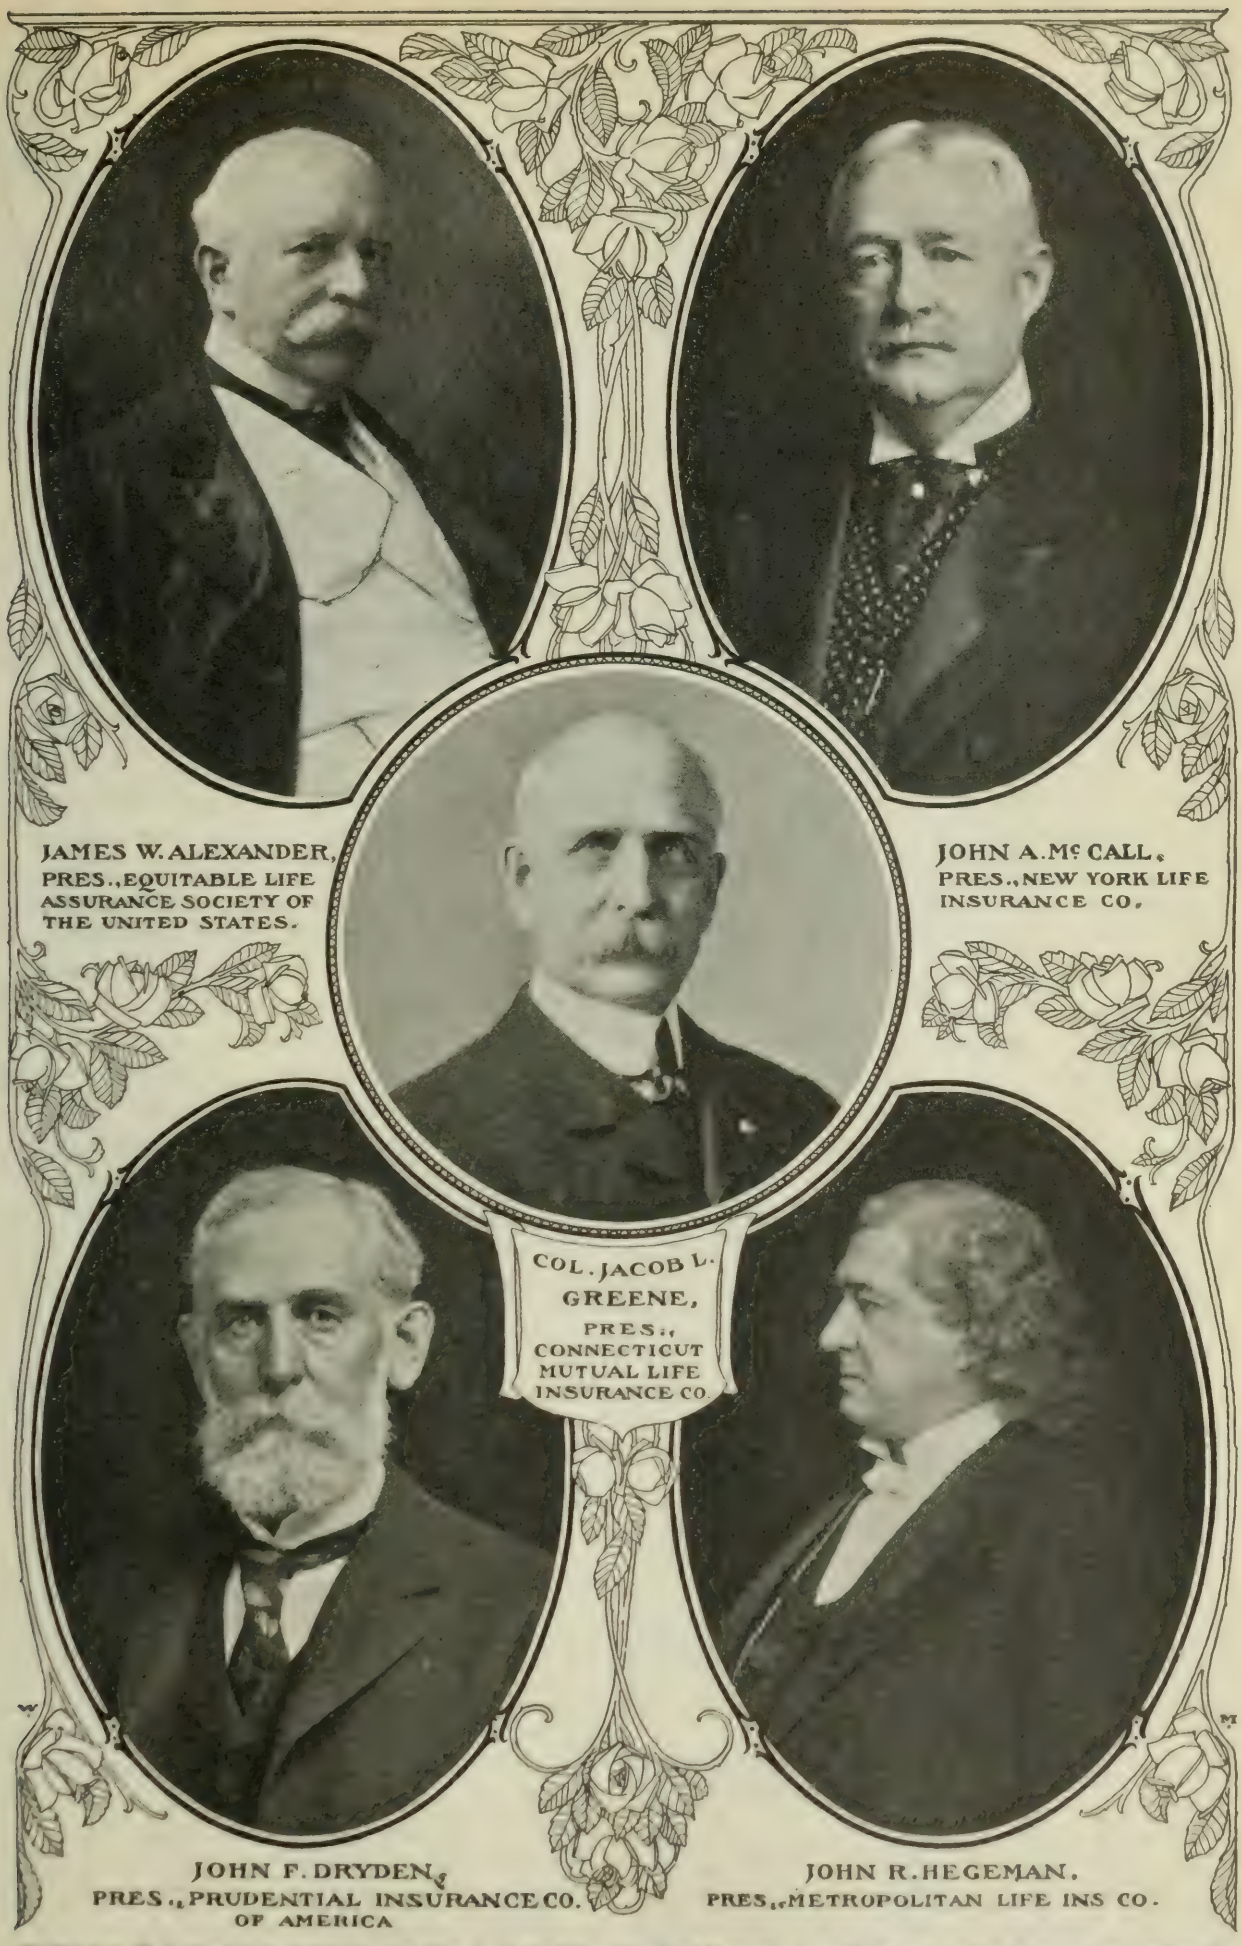
A. B. HEPBURN,
President of the Chase National Bank

tional City Bank, who was formerly Assistant Secretary, Mr. Snyder's entrance into New York banking was through the door of the Government service, in which he first served as private secretary to Daniel Manning when he was Secretary of the Treasury. Mr. Snyder may best described in the words of Mr. Hyde, of the Equitable, who said of him:

"Snyder always has the banking situation well in hand. He does not make mistakes; he does not quibble, and he wastes no time."

Concerning President McCurdy, of the Mutual Life; President Alexander, of the Equitable Life, and President McCall, of the New York Life, it is scarcely needful to speak, as the very fact that they are at the head of these immense institutions is in itself sufficient proof of their great executive ability. These men are truly international financiers. The business of their companies extends into many foreign nations and they are owners of the securities of many different Governments, so that there are hardly any other three men in the United States whose business requires them to take such a wide view of things. Mr. Alexander, who served under Henry B. Hyde and succeeded him as President of the Equitable on his death, is not only a thoroughly equipped expert in insurance, but he is also a conspicuous type of the college man in business. His recent address before the Yale University upon insurance is one of the best presentations of that subject that has ever been made. Mr. Alexander has a decided literary talent and a few years ago published a book of his own college recollections, entitled "Princeton, Old and New." It would be difficult to estimate the scope and power of Mr. McCurdy's influence, as that extends not merely over the old and conservative company of which he is the President, but in every direction in the financial world, in the market for investments, in the control of corporations and in the promotion of business activity. Mr. McCall, of the New York Life, like some of the bank presidents who have been named, entered the insurance business through the door of the public service. He was one of the best superintendents of insurance that the State of New York ever had and on his retirement from that office it is not surprising that he was invited to attach himself to the Equitable Life, with which he served

JAMES T. WOODWARD,
President of the Hanover National Bank



as comptroller for several years. When the New York Life was injured by a period of mismanagement it took a clear-headed, vigorous man to reorganize it. Mr. McCall was called upon to perform that work, and the notable results of his policy are revealed in the extraordinary growth which that institution has enjoyed since he became its President.

But there are other insurance men and bankers independent of this remarkable group of financial institutions to whom some reference must be made, even in this brief review of the money power of New York. No estimate of the insurance power would be complete that did not take some account of John R. Hegeman, President of the Metropolitan Life; John F. Dryden, President of the Prudential Life, and Colonel Jacob L. Greene, of the Connecticut Mutual, for all three of these institutions stand among the strongest in the country. Altho the headquarters of the Prudential and Connecticut Mutual are outside of this State, yet from a financial standpoint they are closely identified with this city. All three of these men have made a distinct mark both in insurance and in financial management. Mr. Hegeman and Senator Dryden have built up two great institutions, devoted largely to industrial insurance, thus carrying far and wide, among even the lowest of wage-earners, the benefits of this beneficent system. Mr. Hegeman has an original personality, and, like all successful men, has an enormous capacity for work, while his knowledge of insurance in all its branches on both its theoretical and practical sides has made him a veritable encyclopedia on the subject. The President of the Prudential is not only a power in insurance, but has become a leader in the manifold business activities of New Jersey, and his election to the United States Senate two years ago testifies both to the regard with which he is held and his great influence in that State.

On the whole there are no finer types of business men as developed in the stress and competition of modern business than those who preside over the leading financial institutions of New York. Naturally they take the color of the times in which they live. They are different from their predecessors in much the same respect as the conditions of banking are different. The business man of to-day is built on larger lines than his ancestor. He is bolder, but his courage is based upon a stronger grasp of world conditions.

Among the notable bank presidents of the city is Dumont Clarke, of the American Exchange Bank, who long served under George S. Coe, and who has caught and retained much of the spirit of that great banker of a former generation. The place of Mr. Clarke in the banking business of New York is not measured entirely by the strength of his large bank, for his influence goes outside of that institution, and he is now and will be for two years to come President of the Clearing House Association. Another notable banker, and one who is closely identified with one of the three great financial groups which have been described, is James T. Woodford, of the Hanover National Bank, which has many close bonds with the National City Bank. Mr. Woodward has been President of the Clearing House Association, but tho naturally retiring in disposition, appearing little in public, is a man of great force of character and executive ability.

Mr. Delafield, President of the National Park Bank, which ranks fourth in resources in the city and is the largest bank outside of the three main groups or chains of financial institutions, is physically the largest banker in New York, and his bigness is not by any means confined to his physique. The National Park Bank was a great institution before Mr. Delafield was placed at the head of it, but he has kept it steadily in the foreground, which is no slight achievement in these last ten years of severe competition, leading to increasing concentration of deposits in a few institutions. Mr. Delafield's proclaimed principle in banking is that his duty as bank President is not chiefly to his stockholders, but to his depositors, not mainly to earning large dividends, but to safeguarding the deposits of the bank's customers. In his opinion a bank is like a railroad in this respect. A railroad is a business enterprise, carried on to earn profits for its owners, but its chief duty is to secure the safety of its patrons.

PRESIDENTS OF LIFE INSURANCE COMPANIES

Portrait of James W. Alexander was copyrighted in 1902 by Alman & Co., New York

The Lincoln National Bank, of which Mr. James is President, is an institution which is identified with the National City group. Mr. James has probably the largest acquaintance and the most accurate memory for names and faces of any business man in the city of New York, a fact which in connection with his many admirable executive qualities explains his notable success. Few bankers have had so varied an experience in so many different walks of life as Mr. Hepburn, of the Chase National, has enjoyed. As member of the State Assembly he became known all over the United States as chairman of "the Hepburn Committee," which investigated the railroads some twenty years ago. Later he was the State Superintendent of Banks and afterward Comptroller of the Currency. He is a lawyer as well as a banker and an author as well as a statesman. Mr. Porter, President of the famous Chemical Bank, which is noted as never having suspended specie payments during its long career, which is one of the three national banks in New York that pays no interest on deposits of other banks and trust companies, and whose stock is quoted higher than that of any other bank in the United States, is one of the youngest of the bank presidents. Like James G. Cannon, the able Vice-President of the Fourth National Bank, and President Woolverton, of the Gallatin National Bank, Mr. Porter is a graduate of the Fifth Avenue Bank, which has gained the reputation of being New York's banking "kindergarten," inasmuch as a large number of officers of other banks have graduated from it. Mr. Porter has a thorough, practical knowledge of banking in all its branches, and with all the aggressiveness and courage of the new generation he possesses also that conservatism which distinguished his predecessor, G. G. Williams. Mr. Porter was recently elected a member of the Clearing House Committee.

Mr. Simmons, President of the Fourth National, has long been one of the most prominent men of New York and has filled more places of distinction in the business world than any other of our bankers. Twenty years ago he was President of the Stock Exchange, during the panic of 1884. He has also been President of the Clearing House Association and is now in the line of promotion to be President of the Chamber of Commerce. He served with notable skill as President of the Board of Education, and many years ago was Grand Master of the Masonic Order of New York. Soon after he became President one of the leading merchants of New York visited him and asked that certain irregular privileges be extended to his firm. Mr. Simmons demurred. The merchant was surprised.

"Sir," he said, "you are a new man here and do not know me. I can help or harm any bank."

Mr. Simmons drew himself up erect and sternly replied: "Sir, it is evident that you do not know me. As long as I am President of this bank not one act shall be permitted that is not in accordance with honorable methods and sound business principles."

No record of the banking power of New York should fail to take some account of the great savings banks of the city. There are twenty-eight of these institutions in New York, with deposits of over $625,000,000, and sixteen in Brooklyn, with deposits of $182,000,000. Among the presidents of these institutions who have taken a prominent part in the business of the city, not alone in the operations of their own institutions, but also in the discussions of the State Savings Banks Association, in the Chamber of Commerce and in other public bodies may be mentioned Mr. Wood, of the Bowery; Mr. Rhoades, of the Greenwich; Mr. Sturgis, of the Seamen's; Mr. McMahon, of the Immigrant Industrial, and Mr. Sprague, of the Union Dime. These men are active but conservative forces in finance, standing for sound investment and for the safeguarding of the savings of the thousands of wage-earners in the City of New York. It is to the everlasting credit of the savings bank presidents, and notably to the men whom I have mentioned, that steady resistance has been made by these institutions to every measure taken to widen the scope of their investments in securities so as to permit the use of the funds of which they are trustees in ways that lead to the borderland of speculation.

New York City.

The Spring-Time of the Soul

A SONG FOR THE CHRISTMAS TIME

BY ETHELBERT D. WARFIELD

I KNOW not if my Lord was born
When Winter winds blew fierce and cold,
And hungry wolves with snarling sped
Across the wild Judean wold,
And anxious shepherds vigil kept
The while their timid charges slept.

Perchance 'twas Spring-time when he came,
When all the fields were bright with bloom,
When lambs ran bleating everywhere,
And all the world forgot its gloom;
Forgot its gloom for simple glee
In Spring-time's ageless mystery.

I know not when my Lord was born;
Nor if the flocks were folded fast,
Or nipped the herbage ranging free,
When first their watchers stood aghast,
Then with delight and reverence heard
The herald-angel's blessed word.

But this I know—when he was born
His coming brought new life to roll
In widening billows deep and far—
The very Spring-time of the soul—
Till here to-night I seem to hear
The angel voices chanting clear.

The angel voices!—how they swell
In that high peal of peace on earth;
Hark! how they tell afresh to-night
The story of the Saviour's birth,
Proclaiming to the furthest pole
New birth and Spring-time for each soul

I know not when my Lord was born,
Nor in my gladness care to ask;
But well I know he came to save
And richly wrought his heavenly task;
For nightly now across my way
The Star of Bethlehem sheds its ray.

EASTON, PA.

The Meaning of Christmas for the Twentieth Century

BY THE REV. H. HENSLEY HENSON

CANON OF WESTMINSTER

[It is not a year since Canon Henson, the distinguished preacher of St. Margaret's, startled not only the English Churchmen, but all English-speaking Christians, by an article in *The Contemporary* in which he declared that not only in the Old Testament, but also in the New, we must recognize a large element of myth, which includes the so-called Gospel of the Childhood of our Lord. His theological position gives special interest to his teaching as to the value of Christmas in these days of scientific criticism. —EDITOR.]

IT is vain to deny that men's minds are troubled about our old Christmas festival. There are questionings in the air so insistent and so audible that they are beginning to pierce the walls of Christian homes and to reach the worshipers in the churches. As the pathetic story of the infancy of Jesus is rehearsed among us it carries along with it associations of repugnant yet multiplying controversies, as well as those gentle and elevating suggestions which have made Christmas a yearly Apocalypse of the kinder sentiments of men. Has Christmas any meaning for the Twentieth Century? is a question which, variously phrased, asked in scorn, or in anguish, or in calm determination as of men who will see the facts that they may face them, is everywhere being proposed. To that question, perhaps, we may go some way toward suggesting the answer.

Four points seem to stand out as claiming inclusion in an answer which

is at once just, complete and satisfying. In the first place, and taking the lowest ground, it will hardly be doubted by any thoughtful student of our civilization that the religious prominence given to the Mother and the Child by all sections of the Christian Church is of the utmost social value. It is not only avowed believers in the Christian religion who are affected, and affected for good, by this concentration of thought on those tender and venerable figures. We are warned by our wisest guides that as modern civilization becomes more urban and strenuous, so are the conditions of life changed for the worse in the case of the young. This is the moral, for instance, of the notable book on the "Psychology of Adolescence" which has just issued from the press. Dr. Stanley Hall cries a warning which we cannot afford to despise. "At its best," he tells us, "metropolitan life is hard on childhood," and he gives abundant evidence to show that it is specially unfavorable to healthy, wise and happy nurture of children in their earliest years. Motherhood is becoming among large sections of our people a misunderstood and mismanaged factor, and tendencies, which perhaps derive support from the vehemence and ever increasing degradation of economic strife, are lowering the regard with which that vitally important function is regarded. Apart, therefore, from all specifically theological considerations the Christmas festival serves among us this invaluable purpose of restoring to public prominence and clothing with the most august significance these primary and imperilled facts of Motherhood and Childhood, which stand at the base of society as its indispensable foundations. The patriot, the social student, the philanthropist, the philosopher, the man of humane disposition will—whatever may be his view of the Christian dogma built on the tradition—feel nothing but kindness and appreciation for this great service which Christianity is rendering to the modern world in thus sustaining in its midst an ideal which it is singularly difficult to keep within the view of those who are imprisoned in its vast cities and fired with its squalid and ruthless zeal for material success.

CANON HENSLEY HENSON

In the next place, advancing one step farther into the meaning of Christmas, will it not be agreed by all the worthiest thinkers of our time that there is great and widely ramifying advantage in this yearly diversion of men's minds from the cult of brute force to that pathetic and beautiful weakness of Mother and Child from which have grown the mightiest and most exalted potencies of civilized life? There is carved on the great northern porch of Westminster Abbey a parable in stone which many pilgrims from the farthest limits of the English-speaking dispersion will have gazed upon, and some have read. Below, parting the doorways which lead into the sanctuary, are the Mother and the Crowned Child, and above are ranged in rows of symbolic statues the representatives of all the elements of human civilization—justice, mercy, art, science and so forth. Above all is the figure of the Christ, not as a crowned child, but as the Supreme Judge, bringing before His "bar severe" all the whole various output of human effort and skill. It is the parable of the supremacy of Moral Force; it silently preaches the gospel of conquering Weakness; it cries, year in, year out, to our strenuous and earthly minded folk a protest, rooted in experi-

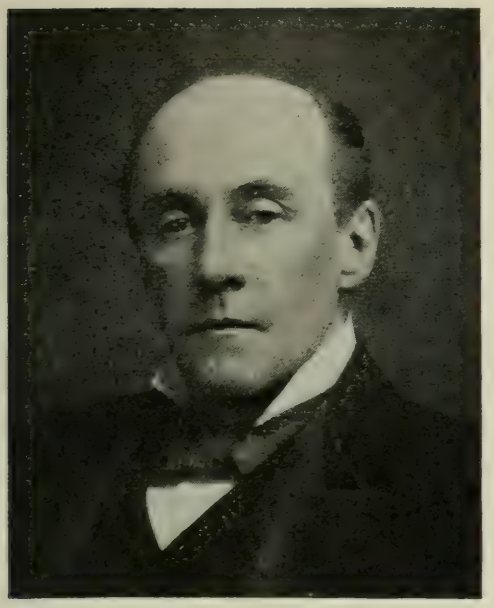
ence, echoed in conscience, against that cult of Brute Force to which it would seem by many melancholy tokens that we are now inclining, both in England and America, to revert. Apart from all questions of technical theology Christmas means for the informed and reflective student of our time this creed of the inherent superiority of the Moral over the Material, this Faith in the unseen as truly the higher and most prevailing power in the world, which has been the faith of all the Saints of Humanity, however designated and wherever serving.

In the third place—and moving onward still across the threshold of the Temple into the shrine itself—Christmas —religiously regarded by all who, with whatever varieties of theological expression, yet revere in the life of Jesus Christ the highest and the truest utterance of the Spirit of God, the high-water mark of man's spiritual attainment, the emergence on the plane of experience of the only satisfying version of Humanity —means the solemn and sufficient authentication of Human Duty. Our age is prolific of philosophies of life, and there is a tendency, too apparent to escape the most reluctant notice, for those philosophies to take a pessimistic tone. "Life is not worth living" is the thought of many, and to those who are confronted, as is more and more the case with English-speaking people, by the immense and complicated problems of society there is inevitably a disposition to despair of individual effort, to disallow as plainly futile those altruistic emotions which are the best things in our nature, and to acquiesce in the monstrous anomalies and wrongs which in our hearts we revolt against. We are tempted to fall back on the gloomy yet sympathetic despair of the Preacher:

> "Then I returned and saw all the oppressions that are done under the sun—and behold the tears of such as were oppressed, and they had no comforter—and on the side of their oppressors there was power, but they had no comforter. Wherefore I praised the dead which are already dead more than the living which are yet alive—yea, better than them both did I esteem him which hath not yet been, who hath not seen the evil work that is done under the sun."

This mood of profound depression is the condition of worse things. Cynicism in the intellectual, self-indulgence in the coarser-natured, and fierce materialism as the atmosphere of society—these are the progeny of that fatal doubt, whether, indeed, in view of such a world as this there be any worthy meaning in life or any validity in those noblest instincts in human nature which insistently call upon us to rise above our lower selves and to serve our fellows. Every competent observer of modern civilization calls attention to the increasing materialization of men's ideals and the increasing callousness of their economic and political methods. Christmas means the rebuke of these degrading tendencies of modern thought. The Ideal of Humanity is tied fast on this festival to our common human stock. Again and again, as if desirous to escape from the moral obligations implied in the fact, Christian thinkers have tried to avoid confessing the truth of Christ's genuine manhood; but the unerring instinct of the Christian society has never failed to discern the latent treason to morality implied in Docetism, and perhaps the extraordinary popularity of the Christmas Festival is no mean indication of the vital importance which attaches to the birth, in the full significance of the fact, of Him in whom the Human Race must revere its own ideal of character and life. In the present day it is well known that difficulties have been raised from within the Christian camp on grounds of historical criticism with respect to that article in the Christian Creed which declares the "Virginity" of Christ's Mother. Without entering here on any discussion of those difficulties, the present writer may express his agreement with Professor McGiffert in the view expressed in a recent monograph on "The Apostles' Creed," where he says:

> "The article as it stand in the original text with the emphasis on the reality of Christ's birth cannot satisfactorily be explained, except as a protest against Docetism, and more particularly the Docetism of Marcion. And so any one who believed that Christ was really born, and that his life was not a mere phantom, even tho he did not believe that Christ was born of a virgin, was in accord with the spirit of the article, tho not with its form."



Be this as it may, my present argu-

ment remains unaffected. Christmas means for the twentieth century what it has meant to the previous nineteen centuries, that the life and character of Jesus Christ are genuinely human, and, therefore, in true and binding sense, exemplary. The view of our personal duty which is insistently suggested by our higher selves, which finds in history approximations in the lives of those whom we perforce revere as the saints and saviors of the race, is completely embodied in the career which started on its course when Christ was born at Bethlehem. Christmas Day, therefore, brings that ideal from heaven and binds it into our common life, as a key to interpret ourselves and a call to serve our fellows.

Finally, we advance through the outer court of the Sanctuary into the Holy of Holies and there read the message of Christmas. It is not merely that we are sent to the Manhood which took its rise in Bethlehem so many centuries ago in order that we may understand and revere our own manhood, and know how we also shall be able to live worthily of ourselves, but it is also that we are allowed to know not less surely that the Creator-Spirit from whom ultimately all things proceed is there alone completely interpreted to his creatures. To the dim suggestions of the ordered and beautiful universe and the lofty suspicions of the human conscience is added the supreme and satisfying manifestation of God in Christ. To that sublime oracle of prophecy which sums up in a single sentence the long struggles and labors of all the prophets, Jewish and Ethnic, who have from age to age kindled and carried on the torch of human self-respect, Christmas adds a confirmatory message, which removes the inevitable doubt and sadness born of human frailty and sin and brings the great truth near in comfortable words of a Master whom we can love and know and worship. "He hath showed thee, O man, what is good; and what doth the Lord require of thee but to do justly, and to love mercy, and to walk humbly with thy God." Micah's oracle is the sum and substance of prophetic teaching, and yet for all its nobility and truth it strikes something of chill and fear into men who have the melancholy witness within themselves that the message has been heard in vain and carries within it no consolatory pledges of obedience. "The quest is not for me" is the thought that darkens the mind when the austere Vocation of Morality is thus heard. "Depart from me, for I am a sinful man, O Lord." Christmas carries us into another Presence and sets us within audience of another Voice, the same, and yet more tender, solicitous and prevailing. "Come unto Me all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you and learn of Me; for I am meek and lowly in heart, and ye shall find rest unto your souls. For my yoke is easy and my burden is light." In spite of the wonderful changes of time, which have left in the world little unaltered save the profound yearning and the immense sorrows of Mankind, the song of the Herald Angel, which echoes on Christmas Day in the churches of Christendom, carries a message which is as fresh and relevant and consolatory as when first the blessed words were spoken. "I bring you tidings of great joy which shall be to all the people; for there is born to you this day in the city of David a Saviour which is Christ the Lord." Human life will continue to be burdened with a weight of cares, shadowed by manifold sorrows, tormented by unappeasable desires, but henceforth increasingly it will be lightened and relieved by the sweet ministries of Christian compassion. The frailty of infancy, the weakness of womanhood, the helplessness of maternity, the outcast destitution of poverty, the desolateness of oppression—all these, passing into the Light of the Birth at Bethlehem, shall become transformed into the choicest treasures of humanity. So the "Prince of Peace" grasps the scepter of a redeemed universe in His infant hands and sends forth throughout the world his voiceless but prevailing mandates. All tyrannies of homes and society and political power are stricken fatally, and, tho the way may be long, and the process tedious and intermittent, it is always forward from darkness into light, from the faint streaks of day-dawn to the glories of noon-day. So we men of the twentieth century may hail him King and cry anew the carol of the First Christmas: "Glory to God in the highest and on earth peace."

LOUIS ENGLISH.

Literature

ANTHONY HOPE,
Author of "Double Harness"

Double Harness

By "Double Harness"* Mr. Hope means the marriage contract; and his story dramatizes the different methods husbands and wives in good English society have of being unfaithful to it. One after another the five couples which make up important *rôles* pass across the stage, to the reader's horror and amazement. First, there is Tom Courtland, whose "Lady Harriet" throws things at him, abuses the children, and finally kills herself in a rage, because of his unfaithfulness and because she has the scorpion nature, ready to sting even herself to death. Next are the Selfords, a gushing pair, "whose amiability was the result of frequent quarrels." Then come the Fanshorns, he an honest, stupid man whom the author forces into a false position with diabolic dramatic skill; she a pretty society woman, who had been so long cured of a *liaison* that she had almost outgrown it morally before her husband discovered it. This woman, by the way, the author represents as the most attractive, the most virtuous and the most generous character in the story. The Roymores scarcely count, since they are so entirely respectable; nor does "Momples," whose husband is in prison, altho there is some shrewd speculation on the part of less fortunate husbands in the story to the effect that these poor creatures have remained faithful to one another through the exigencies of the situation.

Meanwhile Mr. Hope gets the hero and heroine married and starts a brand new matrimonial experiment with everything in favor of virtue, fidelity and happiness. And the pretext upon which the young people are alienated is very flimsy. All the men in the story are right and proper persons, who have been teased into evil courses by "wearing" wives. The trouble with this last couple is that the wife has illusions, which is what every woman should have, provided she can change them fast enough after marriage to keep up with the developments of the matrimonial situation. But this wife's do not change. She longs to keep on "siding straight into the gold" of a honeymoon sunset, after the day of sentiment has past and the dawn of an intelligent practical affection should be at hand. In such cases the outside affinity usually appears and offers his romantic consolation and services to the disappointed wife. And in this instance the husband only prevents an elopement by threatening to kill himself and the child of their marriage.

This is a thrilling and impudent solution of the difficulty and convinces the reader that the author is not concerned with any ethical scruples. If such problems really exist in English married life as commonly as this story indicates, it gives no serious suggestions of how to solve them. The one character, in fact, who considers them practically is a professional libertine. To a young man about to marry "perfection" he furnishes the following shrewd advice:

* Double Harness. *By Anthony Hope.* New York: McClure, Phillips & Co. $1.50.

"Perfection? . . . Not enough, my boy! I may have two horses and you may have two horses, and each of my horses may be better than either of your horses; but when we come to drive them you may have the better pair. Two good 'uns don't always make a good pair. . . . They've got to match—both their paces and their ways. They've got to go kindly together, to like the feel of one another, don't you know? Each of 'em may be as good as you like single, but they may make—by Jove, yes!—the devil of a pair! It's double harness we're talking about, Blake, my boy."

Osgood's American Colonies

PROFESSOR OSGOOD'S history * devotes itself especially to a revelation of the origin of English American political institutions. He says:

"It is intended to exhibit in outline the early development of English colonization on its political and administrative side."

In view of this great purpose the author was wise to limit himself to consideration of the Continental Colonies only, and the two large volumes which his researches have produced are none too ample to give his subject proper scope. Their production, he informs us, was the work of many years. They are to be followed by another volume which will deal with the beginnings of Imperial administration and control, and in that volume the British side of the problem will be discussed, as the American side has been in the volumes now in hand.

In the first part of his first volume the author examines at length The Proprietary Province in Its Earliest Form, while the second part deals with The Corporate Colonies of New England; the second volume shows The Proprietary Province in Its Later Form.

The government of each colony or province is traced from its beginning, and a general idea of Professor Osgood's method may be conveyed to the reader by his treatment of the province of New York, which, in the first place, was the Dutch province of New Netherland. This, in the beginning, was almost a pure autocracy. With the charter the company obtained the powers of government, which it delegated to a Director and Council.

"The Council itself was a small body, filled mainly by the director's appointees and subject to his control."

Secretary Van Tienhoven expressed the truth when, in defending Stuyvesant and his policy against attack, he declared:

"No one comes or is admitted into New Netherland except on this condition, not that he shall have anything to say, but that he shall acknowledge the sovereignty of their High Mightinesses, . . . and obey the Director and Council for the time being, as a good subject is bound to do."

But the people did not acquiesce in this autocracy. Dutchmen of the seventeenth century knew quite as much about liberal institutions as did their English cousins, and so we find them opening their mouths without waiting for the autocrat's invitation. We find a continuous agitation, resulting at last in the appointment of Twelve Men to represent the commonalty.

The Director looked upon these Twelve Men as a temporary body having no power except to give him such advice as he might ask them for concerning the best way of dealing with the Indians.

But the Twelve Men took no such view of their function. They sought to bring about all sorts of reforms, and Kieft in disgust dismissed them, forbade them to meet again and threatened them with *corporal punishment* in case they disobeyed.

When Governor Nicolls, representing the English conquerors, stepped on the scene in 1664 his first conciliatory utterances to the conquered province gave rise to the belief that a representative tax granting assembly would be conceded, but this proved a false hope.

By means of the English conquest New Netherland became New York, the private property of the Duke of York, and the Governor, representing him, was still an autocrat. In vain the colonists petitioned for rights and liberties. At last they withheld revenues.

Here was an argument the force of which James could thoroughly understand and he gave way immediately to the extent of allowing the establishment

* THE AMERICAN COLONIES IN THE SEVENTEENTH CENTURY. *By Herbert L. Osgood, Ph.D., Professor of History in Columbia University.* Two volumes. New York: The Macmillan Company. $5.00.

of a legislature carefully directed by himself.

This legislature immediately realized all his fears by assuming full power over taxation and passing statutes intended to secure to the inhabitants of the province jury trial and civil rights as guaranteed by Magna Charta and the Petition of Right. It also set about remodeling the judicial system and giving it a statutory basis.

Surprising as it may seem, the Duke actually approved the so-called "Charter of Liberties" and probably the other acts. But before the Duke's approval reached New York the period of proprietary government in the province came to a close. Charles II died and the Duke became King.

Immediately thereafter the Committee of Trade and Plantations considered the New York "Charter of Liberties" and the new legislature's assumed powers. These were thought to be too great, and when, in 1686, Dougan was commissioned as royal Governor he was expressly empowered to exercise the full legislative as well as executive power in conjunction with the Council. Thus again was the government of the province restored to autocracy.

Babylonian Business Documents

THIS tenth volume of cuneiform texts* from the archives of the wealthy Murashû family of Nippur forms the direct continuation of Series A., Vol. IX (Babylonian Expedition of the University of Pennsylvania), by Hilprecht and Clay. This is the first part of the series to appear as the sole work of Professor Clay, altho much of the credit for Volume IX undoubtedly also belongs to him. This is evident both from even a cursory examination of Volume IX itself as well as from the long list of additions and corrections to Volume IX which Professor Clay has inserted as an appendix to Volume X.

In the introduction to Vol. IX, pp. 14 f., it was stated that nearly all the business recorded in the tablets was dated in the reign of Artaxerxes I and was done in the interest of two sons of Murashû—viz., Bêl-hâtin and Bêl-nâdin-shumu. The texts given in Volume X, dated in the reign of Darius II, are quite evidently a continuation of the records of this same family. Most of these documents were written for members of the Murashû family, but some of them were inscribed in the interest of their servants, who in all probability acted as their employers' agents, altho this is not specifically stated. There can be no doubt that the sons of Murashû acted as agents for the crown, as shown in Vol. IX, p. 14. It is also clear that close business relations existed between the different members of the Murashû family and their servants, as many of these contracts have to do with such transactions. The following specimen of a partnership agreement between the two individuals to farm certain lands and divide the profits equally is quite interesting:

"Ninib-muballit, the son of Mushezib, and Adgishiri-zabdu, the son of Bêl-êrib, who had spoken to one another as follows: 'Let us sow five *gur* of seed in the field of *rab-mun-gu* along the bank of Nar-Baltia in the town of Bit-Hadiia,' agreed thereupon together and the seed—*i. e.*, five *gur*, for a crop they planted. The seed—*i. e.*, five *gur*, Adgishiri-zabaddu shall measure and show (deliver) to Ninib-muballit. They have sworn by the king that whatsoever grows on it shall be equally divided with regard to their tithe and profit."

These tablets are nearly all of them of unbaked clay and frequently in very bad condition. Professor Clay publishes 132 of these texts, with 42 photographic reproductions, all admirably executed.

A highly interesting feature of these cuneiform documents is the existence on nearly one-third of them of filing indorsements in Aramaic characters. For example, in the case of the contract just cited, we find the contract proper signed by five witnesses and the scribe. The seal of one of the principals Adgishiri-zabdu, then follows and his name appears written in Aramaic characters. This custom was evidently the result of a system of filing such documents for easy reference. These indorsements in another language than that of the contract itself show that Aramaic was probably the

* BUSINESS DOCUMENTS OF MURASHU SONS OF NIPPUR, DATED IN THE REIGN OF DARIUS II (424-404 B. C.). *By Rev. Albert T. Clay.* Philadelphia: University of Pennsylvania.

business tongue of Babylonia at this period. We know in this connection that the Assyrian officials spoke Aramaic as early as the time of Sennacherib, as shown by the interview with the representatives of the Judean king Hezekiah. Furthermore, it is extremely probable that Aramaic was the language in use among the returning Jewish exiles who went back to Palestine from Babylonia. Whether or not Aramaic had become the everyday vernacular of the Jews at this period is an open question, but all indications seem to point in this direction. There can be no doubt that Aramaic was used in Assyria for filing indorsements as early as the time of Sennacherib and that it was in very general use indeed at the time when these Murashû contracts were written.

Professor Clay's work is to be commended most highly. He has displayed here to the best advantage his very marked ability for the interpretation both of the cuneiform records and of their difficult Aramaic dockets. His discussion of Yâma-Yâwa (p. 20) is peculiarly interesting. Clay regards Yâma-Yâwa as the Babylonian equivalent of the contracted form of the Hebrew Tetragrammaton. This name he considers was pronounced Ya-hô, basing his view, first, on the traditional Hebrew pointing Yehô, and, secondly, on the fact the Septuagint invariably transliterates the name as Iô.

It is unfortunate that Professor Hilprecht has seen fit to insert in Professor Clay's work a variety of notes setting forth his own views, which are generally contrary to certain readings and views advanced by Professor Clay. Such a procedure is not usual in scientific works and it is in questionable taste. If Professor Hilprecht differed with Professor Clay on any important points it would have seemed more in accord with courteous precedent if he had embodied his objections and explanations in a separate treatise under his own name.

Professor Clay has reproduced in an attractive and illuminating fashion records which set before us the exact business details of a civilization which flourished more than 2300 years ago. This book cannot fail to be of value to the general student of history, while all Assyriologists will welcome it as a most important and enlightening addition to their ever-growing field of research.

In this connection we add the following note received from Prof. J. Dyneley Prince, of Columbia University:

"It may be of interest to students of comparative religion to learn that Professor Clay, of the University of Pennsylvania, has discovered on an Aramaic docket to a cuneiform business document, dated in the reign of Darius II. (424-404 B. C.), the Semitic pronunciation of the much disputed Babylonian god-name *Ninib*. For years this name has been variously read *Adar, Nin-ib, Nin-dar, Nin-rag, Nin-urash*, etc. It is now quite clear, however, that the Semitic Babylonians of the later period did not read the name in any of these ways, but that they rendered it by two Semitic words which Professor Clay does not attempt to transliterate, owing to the difficulty of deciphering the Aramaic letters. These words I believe to be *Enu Reshtu*, 'Exalted Lord,' which was evidently the usual pronunciation in late Semitic for this god, as the name occurs four times in all in Clay's excellent work 'The Business Documents of Murashû Sons of Nippur.' Of course, this rendering does not affect any theory advanced as to the original Sumerian or non-Semitic Babylonian pronunciation of the two characters NIN.IB with which the name is always written in the cuneiform texts."

Stephen Phillips's "Sin of David"

In one respect the modern drama shows a recrudescence of the medieval; the dramatists are falling back on the Bible. Just as the Mystery plays were mere translations of the Scriptural narrative, so the contemporary playwrights, Sudermann and Paul Heyse, for example, are versifying and paraphrasing the stories that we used to hear read only from the pulpit and in family worship. The steady secularization of the Bible and its enormous wealth of dramatic material have opened an inexhaustible storehouse, analogous in some respects to the literary armory which the Renaissance made accessible in the sixteenth century. Joined to this is the importunate need of the dramatist for something to say; plots have gone up to fancy prices. The cyclone of dramatized novels which overwhelmed us in 1900 evidenced the vast number of playwrights who could win fame and fortune if they only had anything to say; many persons possessed the power of knocking dra-

matic material into passable shape, but the rub was to find the material, and countless experts wrung their brains dry to no purpose. It is now increasingly clear that the Bible and the stage are to join forces, and we may confidently expect to witness in the next few years a new and not altogether divine incarnation of the Word.

It is interesting to compare George Peele's Elizabethan play, "David and Bethsabe," with Stephen Phillips's latest variation on the same old theme.* Both Peele and Phillips, each trained as an actor, rank higher as poet than dramatist, but the latter lives in an age of stage mechanism, when he is forced into some semblance of conciseness, logical order and coherence. Peele was utterly untrammeled, and he let his poetic fancy lead him as it listed. He followed the Scriptural narrative with scrupulous fidelity, making absolutely no pretense at such *selection* as was later to enable Shakespeare to transform coarse and rambling romances into noble works of art. The scenes in Peele's play have little order and less connection; he took a number of chapters from the second book of Samuel and translated them into a blank verse so sweet and musical that Mr. Bullen, in a fit of irritation, calls the whole play "a mess of cloying sugarplums." Still, there are exquisite passages, such as this one, for example, that so charmed Mr. Lowell:

"Now comes my lover tripping like the roe,
And brings my longings tangled in her hair.
To joy her love I'll build a kingly bower,
Seated in hearing of a hundred streams."

Now, Mr. Phillips uses unoriginal material in a strikingly original manner. When the title of the play was announced every one expected to see once more before the footlights the Psalmist King and the veritable wife of Uriah. No such thing; it is the temper of the seventeenth century (that Mr. Wendell loves to talk about) to which this verse-drama is attuned. We are in the great civil war of 1643. A harsh Puritan officer, "with his Bible and his sword," holds in the bonds of subjection rather than in love his French wife, fair in face, warm in heart, and almost bursting with the joy of life. A superior but equally pious officer arrives upon the scene; he falls in love with the neglected wife; in a short time his duty is to send a brave leader at the head of a forlorn hope, where death to the man in front is a certainty. After a fearful mental struggle he sends the husband, who straightway shares, and with a similar absence of suspicion, the fate of the loyal Uriah. Mourning for a decent interval, the lovers are married; later, a child is born. The child becomes ill, and, despite all loving care and the skill of science, dies. The heartbroken mother, in an exceedingly powerful speech, demands of God to know the reason for this cruel chastisement.

"I say it were relief
To feel that here I paid for some far sin.
Sooner heaven's ire than heaven's indifference!"

The husband confesses; at first she loathes him, for she feels the dead man between them. He finally persuades her, however, that God has already punished them sufficiently, and "they kiss again with tears" over the grave of the little child. Should any one quarrel with the poetic justice of such a conclusion, Mr. Phillips can point silently to the Bible.

We have said that the author of *The Sin of David* is more poet than dramatist. Despite his training on the boards and his familiarity with the technic of the playwright's art, he is essentially a poet, and his diction is much nobler than his stage settings. It is far the best dramatic poem he has written since his first, the beautiful "Paolo and Francesca." In "Herod" and in "Ulysses" there was certainly a distinct falling off; in parts of both these plays he was positively bad, and in some other scenes grotesque, almost absurd. But in this seventeenth century drama his touch on the accompanying chords is sure, and he never sings off the pitch. While some of us have never shared the mad enthusiasm of the English reviewers, who compared Mr. Phillips with Milton, no unbiased critic can read *The Sin of David* without feeling that its author is a genuine poet and without uttering an earnest wish that his works to be may show even more abundantly the fruits of the poetic spirit.

* THE SIN OF DAVID. *By Stephen Phillips.* New York: The Macmillan Co. $1.25.

Marjorie Fleming

MARJORIE FLEMING lived a little short of nine years. Her "Works"* consisted of some letters and a few little "diaries," written between her fifth and ninth years, preserved for a generation in the family, read and copied by delightful old Dr. John Brown, of Edinburgh, and then, as far as the originals were concerned, gone forever. This "copy" by Dr. Brown, however, was carefully made, and now forms the basis of Mr. MacBean's centenary book on the little maid. A water-color drawing, silhouette, pencil sketches, neighborhood gossip and neighborly reminiscences give the surroundings of her crowded life, adding much, not to the charm of Dr. Brown's perfect "Story," now published as part of the book, but to that satisfaction which we all have in placing our small heroine in her natural habitat.

From the hills of Kirkaldy, where she was born, one may almost see, across the waters of the Firth of Forth, the more famous hills of Edinbro Town. On the shore, by the Perthshire town, Marjorie played, coming down from Kirkaldy, until she was five. On the sounding beach, three miles from the other royal town, Walter Scott, on his cavalry horse, rode up and down spouting "Marmion." How the two lovers came together, when the maid was six or seven, has been told by the Edinbro doctor in the most vivid character sketch ever written—a sketch which endears to all men both the two lovers and the story-teller. No reader will ever forget the three splendid Scotchmen, Erskine, Scott and the indolent "Darsie Latimer," scorching down "arm in arm from the Parliament House by Bank Street and the Mound," pausing at the corners to have out the last story, then home, up the opposite hights, and then Scott's hours of fun with his "little wifie" of six summers.

The best part of the diaries, tho not all, is given in the doctor's own hand, as it were: Marjorie's troubles with the "simmecolings" and the "multiplication table," and the "divil," who has so mercifully refrained from giving her "boils and many other misfortunes," the "bad, bad sina tea" that made her "pronounce a word that should never come out of a lady's lips, it was that I called John a Impudent Bitch"; her many mental misgivings over that "papithatic thing" called "love," to which the little maid reverts so often, in spite of the fact that "Isabella will not allow me to speak about heroes and heroins, and tiss too refined for my taste," and that memorable Saturday at Braehead, when she "expected no less than three well-made bucks, the names of which is here advertised"; her "ofers of marage" from a faithless "espused" man; her commiseration for the unhappy sailor "leaving his native country, when he might get a wife, perhaps me, for I love him very much."

These are all in Dr. Brown, but many simple touches of child nature besides these are to be found in the diaries—touches that serve to fill in the picture, giving it background and the shadows as well as the light of her short life. The little maid is very human. Her journal is a perfect mirror, in which is reflected every mood of life as she lives it or reads it in books and passes it over her innocent lips. She carries our hearts with her wherever she goes, whatever she does and says. With her we "like loud Mirement and laughter," and, after reading our own daily journals, we turn our backs on the city with a long sigh, and say with her:

"I love to walk in lonely solitude & leave the bustel of the noisy town behind me & while I look on nothing but what strikes the eye with sights of bliss & then I think myself transported far beyond the reach of the wicked sons of men where there is nothing but strife & envying pilfering & murder, where neither contentment dwells but there dwells drunkenness."

* MARJORIE FLEMING. *The Story of Pet Marjorie, Together with Her Journals and Her Letters. By L. MacBean.* To which is added MARJORIE FLEMING. *A Story of Child Life Fifty Years Ago. By John Brown, M.D.* Illustrated. G. P. Putnam's Sons, New York.

Essays on Modern Music

Of the making of books of journalistic musical criticism there is no end. Each new year sees the publication of two such volumes, where the old year counted one. The literature about music bids fair to become almost as extensive as that about literature. The musical critics

of *The Sun* and of *Harper's Weekly*, respectively, now come forward to swell the harvest, each with a sheaf of papers dealing with the music of to-day. Writing of similar, sometimes the same, themes, their treatment of them is yet vastly dissimilar.

The reader rises from a perusal of Mr. Henderson's book* with the impression that in his opinion the "drift" of modern music is to the "demnition bow wows." This is really too bad. We cannot believe that the noble art is "drifting" that way, at all. For him "Parsifal" is "the child of Wagner's artistic decrepitude," "a decrescendo in inspiration, a ritardando in invention," "a most imposing pageant set to unimposing music" mere futile, uninspired copying of greater things the composer had done before. For him even the Wagner of the "Nibelungen Ring" did not know the true significance of his own work. For him in the Italian opera of recent years

> Nothing's new, and nothing's true,
> And nothing signifies;

and the oratorio of to-day, as exemplified by Elgar, is an absurdity.

Concerning Richard Strauss, the most commanding figure among contemporary musicians, to whom he devotes seventy pages, Mr. Henderson cannot quite make up his mind. He would call Strauss a madman, "a symphonic poetaster," "a noisome, nasty, rollicking Till Eulenspiegel, Gargantua of Germany, with the whirligig scale of a yellow clarinet in his brain and the beer-house rhythm of a pint pot in his heart," and so have done, were it not that he feared the future would laugh him and his criticism to scorn—as it undoubtedly will, if his ghost remains.

It may be seen that Mr. Henderson wields a trenchant pen, and dashes off vivid, picturesque, venturesome phrases and figures. He is witty. Sometimes he is flippant. In the exuberance of his gayety he bursts into song in dedicating his book to his colleague, James Huneker, upon whose pungent and coruscating style it often appears he has modeled his own—not always to the best advantage it seems to us.

The book is more significant as a plea for the likes and dislikes of Mr. Henderson than as a serious and permanent contribution to the history of the development of music. But it will be found intensely interesting—by the people who are interested in that sort of thing and the impressionistic school of criticism seems to be in high favor just now.

On the whole, we are much better pleased with Mr. Gilman,* who gives us a dozen short papers on Richard Strauss, Edward MacDowell, Edward Elgar, Charles Martin Loeffler, Pietro Mascogni, Peter Cornelius, Edvard Grieg; on "Women and Modern Music," on "The Question of Realism," on Verdi and Wagner, and on "'Parsifal' and its Significance," and in them makes a sincere and notable attempt at a constructive criticism of certain of the more interesting phases of latter-day music. He has wider sympathies than his fellow critic and deeper insight. If he does not deliver the sledge-hammer blows delighted in by Mr. Henderson (note you, constructive analysis is not to be accomplished by the pounding required for the destructive variety: you do not smash your marbles when you are preparing to build a palace with them), he yet writes vividly and well. He shows a tendency to rather too frequent quotation from other critics (yet they are usually excellent things that he borrows: his taste is good), and surely there was no real need for the infliction upon his readers of such a verbal monstrosity as "Romanticistic." But these are venial sins.

It is not so much that we agree with the judgments uttered by Mr. Gilman, fair and sound and good as most of those judgments are, as it is that the tone of his work is reassuring. While he appraises the achievement of his music-makers with keen discrimination, he has approached his task with that respect for it and for its subject which engenders respect in the reader. Your flippant critic by the very irreverence and irrelevancy of his pertness vitiates his own competence and authority.

Mr. Gilman is not so witty as Mr. Henderson. He is not so rhapsodical as Mr. Huneker, tho his praise is often lavish enough, in all conscience. But he is

* Modern Musical Drift. *By W. J. Henderson.* New York: Longmans, Green & Co. $1.20.

* Phases of Modern Music. *By Lawrence Gilman.* New York: Harper & Bros. $1.25 net.

never dull. His book is more than interesting. At times it is illuminating. And it leads to the expectation of greater things from him in the future.

Pathfinders of the West. Being the Thrilling Story of the Adventures of the Men Who Discovered the Great Northwest. By A. C. Laut. Illustrated. New York: The Macmillan Co. $2.00.

In the ever-popular "story" manner Miss Laut relates the adventures of Pierre Radisson, the De la Vérendryes, father and sons; Samuel Hearne, Alexander Mackenzie and Captains Lewis and Clark. She vigorously champions the cause of Radisson and asserts his right to the honor of having discovered the upper Mississippi River in 1659, or fourteen years before Marquette and Joliet reached it. The Radisson journals, discovered in London in 1885, the *Jesuit Relations* and other contemporary accounts are freely cited to support her contention. It is a strong and well-nigh conclusive argument. But the claim is still disputed in many quarters, even by those familiar with the Radisson journals. Some have gone so far as to declare these journals pure fabrications, while others, tho convinced of their genuineness, regard them as grossly inaccurate. Accepted according to Miss Laut's interpretation they would mean that Radisson not only discovered the upper Mississippi, but during the same year journeyed through Iowa, perhaps Eastern Nebraska, South Dakota, North Dakota, Montana and Minnesota. The jealousy of the Jesuits prevented a due acknowledgment of his deeds, while his later difficulties with both the French and English Governments served to obscure his memory. Of the other travelers Miss Laut has presented little that is new and less that is controversial. But she has given a spirited and entertaining account of their various journeys through the wilderness.

A Soldier of the Valley. By Nelson Lloyd. New York: Charles Scribner's Sons. $1.50.

The soldier here referred to is a young mountaineer who goes to the Spanish-American War and returns in six months, laurel crowned, but minus his legs. The country and village folk crowd into the story upon his arrival to do him honor. They are not really needed in the tale, but the obliging author makes room for them because they are familiar types of knuckle-hardened humanity and likely to prove entertaining to the sophisicated reader. The story is cast along the lines of Peter Rosegger's "A Forest Schoolmaster," but the idea of patience, love and loneliness are worked out upon a lower plain spiritually. The maimed man's reflections never reach the Austrian schoolmaster's epic hights. They are, in fact, on a pathetic level, like the tameness of a winged bird which no longer hopes to fly. But after the storm and stress we pass through in reading the average novel there is a peculiar satisfaction in following an author who is obliged to accommodate his leaping unicorn imagination to the halting progress of a cripple. We are far from wishing any harm to the heroes of fiction, but if this salutary effect could be obtained through, say, a few rheumatic twinges in the authors themselves it might result in less activity in the development of terrible plots, which are always wearing upon the nerves of the reader.

From "The Soldier of the Valley," by Nelson Lloyd. (Scribners)

The Twenty-third Psalm is here annotated and illustrated in a unique manner, with a story commentary by William Allen Knight and decorative designs by Charles Copeland. The Oriental setting of the poem is thus explained in an unobtrusive way and in language which, tho not childish, a child can understand. An admirable little gift book. (Pilgrim Press, Boston, 50 cents.)

Farmington. By Clarence S. Darrow. Chicago: A. C. McClurg & Co. $1.50.

Undoubtedly one of the most valuable qualifications for parent or teacher is that he should keep in touch with his own childhood. One wonders, however, in reading Mr. Darrow's sketches of his boyhood whether he alone of grown-up folks remembers, while others forget, or whether folks remember nowadays, while a generation ago childhood was more quickly and completely forgotten. The keynote of *Farmington* is the misunderstanding of childhood by grown-ups and the constant antagonism of children to their elders. "It is just like Huck Finn," was the comment on the book by a twelve-year-old boy, and, in fact, the same antagonism that characterizes Mark Twain's immortal little ne'er-do-weel is visible in this well-cared-for son of most worthy parents. It is worth while inquiring whether nowadays children generally regard older people as stupid and perverse, and whether it is usual for parents to meet the children with the "one great word, No." Many things have altered since the days of which Mr. Darrow writes; the world has grown a little wiser and a little better; and surely there is nothing for which the present generation should be more thankful than that the days have passed away when parents ruled their children from a distance, and when no word of affection, no kiss nor caress was given by the mother to her little ones, and when the love that was unstintedly bestowed upon them was wholly hidden from the childish eyes. The pathos of unloved childhood runs through Mr. Darrow's book, altho the childhood was not unloved, as Mr. Darrow shows in the light of later experience. Even more to be pitied than the child were the parents who loved so well yet who denied their children the sunshine of love and themselves the joy of its reciprocation. Mr. Darrow describes them with the most delicate and tender touch, yet not without scathing sarcasm for the stupidity which could blot out so much of the color and sunshine in the world.

Lyman Beecher. By Edward F. Hayward. 12mo, pp. 114. **Henry Ward Beecher.** As His Friends Saw Him. 12mo, pp. 135. Boston: The Pilgrim Press. 75 cents each.

These volumes from a denominational publication society in Boston give brief record and appreciation of two great men, father and son. We simply ask whether an ethical question is not involved in holding up to loving memory even the greatest man whose life went down in shadow.

Christmas Eve on Lonesome. By John Fox, Jr. New York: Charles Scribner's Sons. $1.50.

This is a volume of short stories. Some of them are very slight, mere etchings of mountains herded grimly against wintry night skies, touched here and there with light streaming from cabin windows, altar places, set aside by the love tragedy and poverty of human life. But if they are lacking in substance they are at least written in Mr. Fox's inimitable style.

Editorials

A Christmas Suggestion

Of all festivals of the year, Christmas most intimately touches the personal life. Memorial Day and the Fourth of July appeal to sentiments of patriotism and of nationality. Labor Day appeals openly to class interest and class feeling, but it is becoming an autumn holiday, pure and simple. Thanksgiving Day has almost lost its patriotic significance and has become a household festival, the closest parallel that we have of the old pagan religion of the domestic hearth. New Year's Day, so far as it is observed, is a social occasion. The Christmas holiday, unlike any other, or perhaps we should say, more than any other, awakens the feelings of personal interest, of individual affection. In our gift giving and receiving we are conscious of the individual want, of the personal preference. It is an occasion that calls forth the best powers of discrimination that we have.

Not only in our remembrances of relatives and intimate friends do we thus put ourselves in close touch with individual personality, but likewise also in our remembrances of those who are less favored than ourselves, with those who are in destitution or in suffering. We realize more keenly than at any other time the vital importance of personal knowledge and immediate sympathy with each individual human being to whom our impulses of kindness and good will go forth.

It is a fortunate and a beautiful thing that there is one such occasion in the year to emphasize the personal relation. But in a complex civilization there is danger that the expression of personal interest may become too narrow, too much a fact of tradition or of routine; above all, that we may unconsciously assume that generous gifts and expressions of good will are a full discharge of obligations that cannot thus be paid in full.

In the ages of slavery and of serfdom kindness and generosity acquired an exaggerated importance. Equality of manhood was unrecognized, and the social superior did not think of his relation to his chattels or to his dependents in terms of human rights to be respected. He felt only an obligation to ameliorate conditions that he never thought of reforming. The age of serfdom has been followed by the age of democracy, but the sentiments, the habits, the customs of feudalism survive in the attitude of the rich and the powerful toward the wage earner and the socially inferior.

It would go far toward the ennobling and the refining of democracy if within the domain of personal relations we could substitute the feelings and the usages that are proper to the democratic spirit for time-worn sentiments that we have inherited from a feudal *régime*. Not generosity, but the spirit of fairness, of essential justice, is the true spiritual essence of democratic relations. It is not democratic to feel toward a fellow-man that we ought generously to do something for him to make his lot more bearable. That is the feeling of the feudal lord toward his dependents and inferiors. Democracy demands that we should sincerely desire to render to our fellow-man that which is his due; to withhold from him nothing to which he is justly entitled; to deprive him of no opportunity that he ought securely to enjoy; to meet him frankly and openly as a human equal; and, above all, in the exercise of any superior power that we may enjoy, to take no advantage that will inflict injury upon him.

If this democratic spirit animated the world to-day there might be less giving of Christmas dinners to the poor, but there would be more giving of fair treatment in the dealings of powerful employers with their wage-earning employees. There would perhaps be fewer Christmas boxes sent by millionaires to poor relatives, but also there would be fewer manipulations of listed stocks in Wall Street, designed to multiply the number of those women and children whose modest trust properties are year by year added to the swollen accumulations of successful financiers.

If at this Christmas season those men and women upon whom fortune has smiled during years of great prosperity

feel moved to make the occasion as joyous as it can be made for their less fortunate fellow beings, let them consider the wisdom of converting the old spirit of feudal patronage into the living, modern spirit of democracy. Let them resolve to be fair and just first, and generous, if they may be, afterward. Let them determine to take no grasping advantage of opportunity, but rather to extend opportunity to those whose need is not of gifts but of a chance and encouragement to help themselves. For this is the way, and the only way, and, we add, the Christian way, in which, under modern conditions, the reign of peace on earth and of good will among men can be realized.

The Mistletoe or the Rose

This year, as for so many hundreds of years past, the mistletoe will hang in our rooms as an indispensable Christmas decoration. Now, the holly holds its own in holiday greenery, apart from custom, because of the beauty and decorative value of its sharply-cut leaves and scarlet berries; but the mistletoe, insignificant in appearance and shy in demeanor, is retained only on account of the tradition of the magic powers which it once possessed, but which it has by this time almost or entirely lost. The generous favors it bestowed in Druidical times upon those who stood beneath it have shrunk in the course of centuries to a kiss, and it may be questioned whether to-day it possesses even a trace of its pristine potency. We do not speak positively on this matter, because in this scientific age it is not safe to make general statements not backed by statistics and we can find no accurate data on the subject. In fact, folklore seems to have been too little studied from the experimental side, and our universities so far have neglected to establish folklore laboratories. But to the young men who are so hard up for thesis subjects and are so willing to sacrifice themselves for science we suggest the task of determining whether the mistletoe nowadays renders one immune to the penalties visited upon the presuming admirers under ordinary circumstances. Such an investigation, involving experiments upon a large number of subjects of a variety of temperaments, would be a promising and not unpleasant line of research, and the results would be quite as valuable as in some other Ph.D. dissertations. There is only one case on record, that of Balder the Beautiful, where the mistletoe was immediately fatal to a young man.

Assuming, however, in the absence of definite information, that the ancient and honorable custom of kissing under the mistletoe has fallen into innocuous desuetude, there remains the further question, likewise impossible of answer, whether kissing itself is dying out or has merely changed its floral sanction and is now done under the rose instead of the mistletoe. In sociology disappearance does not always imply extinction. Has the condemnation of non-aspetic osculation by physicians effected a diminution of the practice? It is less than three hundred years since Frenchmen and Italians visiting England were shocked at the freedom in the use of the kiss as a common greeting between friends and acquaintances of opposite sex. Other times, other manners; nowadays when boys and girls are old enough to stand alone they have already reached an age when they are too self-conscious to play "King William was King James's son."

Pagan openness and medieval plain speaking have both disappeared. From our literary and social vocabularies the "grosser names" of "liberal shepherds" have vanished. But morals do not always change with manners. Cupid now is fully clothed, but he is as tricksy as he ever was in his primitive nakedness.

The cry, "Great Pan is dead," has been many times heard across the woods and streams, now as a lament from would-be pagans who felt cribbed by puritanic customs, now as a jubilation by ascetics who would trample down all natural instincts; but whether a shout of despair or triumph it is not true. The gods, immortal, for they personify immortal passions, possess the power of mysterious metamorphosis. They take strange guises to have their will with easily deluded men and women, who know not in what curious ways they turn and wind and come again. Sometimes a heathen god poses as a Christian saint in order to retain his devotees. Sometimes he finds an avatar in a newly discovered

social or religious philosophy and a church is founded to enshrine him. Eleusis is a stronghold of the gods. They are most to be feared when they wear the magic helmet of invisibility. Rites *sub rosa* are not necessarily as harmless as those under the mistletoe.

The Nobel Prizemen

EACH year it has been found necessary to divide one of the Nobel prizes of $40,000, and in this case it is the literature prize, which is divided between Frédéric Mistral, the Provençal poet, and José Echegaray, the Spanish dramatist. Of these the American public is probably better acquainted with Mistral from Janvier's chatty narrative of his visits to Provence, first published in the *Century* in 1893, and the translations of Harriet W. Preston, published in the *Atlantic* in 1872. In addition to these Professor Downer has given u an interesting study of Mistral and the Félibres.

He is now in his seventy-fifth year and it is nearly half a century since Lamartine heralded him to the literary world in these words:

"A great epic poet is born; a true Homer of our own time; a poet who has created a language out of a dialect as Petrarch created Italian."

Create a language he did, but notwithstanding his genius and his untiring efforts by means of books, magazines, newspapers, societies, lectures, festivals and songs he has not succeeded in his attempt to make the *langue d'oc* a rival of the *langue d'oil*, which beat it in the struggle for existence five hundred years ago. The efforts of the seven young Félibres to revive Provençal as a literary language resemble the Gaelic movement of young Ireland at the present day, of which the outcome is likely to be similar. Mistral has, however, never lost courage and he announces that he will devote the prize to the support of his Provençal museum in the old palace of Arles. To this enterprise President Roosevelt was one of the first contributors and to him the poet showed his gratitude in an ode.

The award to Echegaray is a recognition of the power of the drama of ideas. The critics may say that his construction is faulty, that his people are puppets, his effects exaggerated, the incidents confused and the endings depressing, but, in spite of these defects, his moral earnestness and intensity of purpose have aroused and impressed the people as other dramatists with fewer faults have failed to do. It was said in Spain, as it is said here now, that it was impossible to get an audience for anything but light lewdness and comic horseplay, that a native drama was impossible because adaptations from the French were so popular, that the people would not stand preaching from the stage. But that was before Echegaray turned his purifying rivers into the Augean stables of the theater. He demonstrated that conscience is as useful as a dramatic force as passion, and that the fatalism of the consequences of sin is as efficient a dramatic motive as the fatalism of the will of the gods in the Greek plays.

Echegaray was forty years old when he wrote his first play, which was put upon the stage while he was Minister of Finance. He was educated as a civil engineer and was a professor in the School of Engineers for many years. His original work in pure and applied mathematics ranks him among the foremost scientists of Spain.

The award of the prize in physics to Lord Rayleigh and in chemistry to Sir William Ramsay calls attention to a very curious chapter in scientific discovery and emphasizes the importance of pure research. It has been called "the triumph of the third decimal." Apparently nothing could be more dry, tedious and barren of interesting and important results than the task undertaken by Lord Rayleigh to determine the exact specific gravity of nitrogen and to ascertain why that gas when obtained from one of its compounds weighed one two-hundredth part less than when obtained, in what was thought to be a state of purity, from the air; yet that led to the discovery of a new gas, argon, forming one per cent. of the atmosphere, and in following this up Professor Ramsay discovered a complete series of new elements, helium, neon, xenon and krypton, entirely unlike any previously known substances. Then helium was found to be mysteriously connected with the Becquerel rays, and finally identified by Ramsay and his pupils as

one of the products of decomposition of radio-active matter, thus giving rise to the new ideas that an atom is not a simple body, but more complex than the solar system, that one element may be transmuted into another, and that matter is merely a form of electricity; discoveries and theories as revolutionary as Newton's law of gravitation or Laplace's nebular hypothesis.

The prize for efforts in behalf of peace is given this year for the first time, not to an individual, but to an institution, the Institute of International Law (*Institut de Droit International*), an association of prominent scholars of all nations whose work in the study and systematization of the mass of customs and agreements between nations may be regarded as a first step toward making it really what its name implies, international law.

Professor Pavlof, who receives the medical prize, is the Professor of Experimental Medicine at the Imperial Institute of St. Petersburg. Here his investigations into the digestive functions have attracted the attention of the medical world for many a year. His most important work has been a revolution of the knowledge of stomach digestion. He has succeeded in showing by means of experiments, which stand every test of physiological criticism, that the central nervous system in what might be called its agency as a psychic factor is an important element in gastric digestion. The mucous membrane of the stomach he has proved to have the faculty of recognizing the character of substances presented to it and reacting accordingly. If pebbles or sand are swallowed, the mere acts of mastication and deglutition will not give rise to gastric secretion. The presence of such materials in the stomach leaves that organ absolutely inert. On the other hand, a different kind of gastric juice is poured forth for each kind of food. It is most abundant for those which the animal likes and least for those for which it does not care. Dogs accustomed to cooked meat furnish a better gastric secretion for its digestion than for raw meat. Things for which the animal cares little do not invite gastric secretion and take long to be digested. Materials for which there is a dislike are left unchanged, and the consequence is disturbance of the digestive tract. The gastric mucous membrane then seems to have some such faculty of discrimination as has the human skin. Pavlof's work has been accomplished by the most painstaking experimentation and by a genius for adapting means to ends in asking questions of nature that stamp him as one of the great investigators of our time.

Dr. Lyman Abbott as a Theologian

In his sermon before the Harvard students last Sunday Dr. Lyman Abbott said—and we doubt not he is correctly reported:

"I wonder if you Harvard students will believe me when I say that I no longer believe in a great First Cause? To-morrow the papers will publish this and brand me as a heretic.

"I believe in a great and ever-present force which manifests itself in all the activities of man and the working of nature. God is energy, intelligent energy, working for good. The Bible no longer can be accepted as the ultimate truth. Science tells us man was not created, but is a creature of evolution.

"Literature and history tell us that many of the beliefs of the Bible are copied from anterior religions. Even the Ten Commandments were the result of a gradual growth, not the inspired word of Moses. God is great, yet personal, everywhere, yet near—nearer than hands and feet."

Dr. Abbott is not a distinguished philosopher or theologian; he is a noble philanthropist, a fresh and suggestive helper in all good causes, a most acceptable teacher of ethics and religion; hardly a close thinker. He walks close to the perilous borders, but keeps his own footing on safe ground. He is very much of what the French call a *provocateur,* and loves to stir up the animals. He knew he would do it when he made the above utterance. He loves to be quick to see and bold to accept and propagate the newest thought of science or criticism; and he does it not of reckless purpose at all, but because he wants religious faith to keep in touch with current knowledge.

But when he announces that he no longer believes in "a great First Cause," he is not at all clear in his explanation of what he means. He tells

us that "God is energy, intelligent energy, working for good." But in the name of all reason and understanding, what is that but "a great First Cause?" The word "energy" is abstract; but when you call it "intelligent" you have stepped out of the realm of the abstract into that of concrete personality. If the energy is "intelligent," it is conscious. If it is intelligently "working for good," it has personality of a moral character. If this "intelligent energy" is "a great and ever-present *force,* which manifests itself in *all the activities* of man and the working of nature," it is what we call an omnipotent personality. This is his definition of "God;" and that is the ordinary definition of God, universal intelligence, unlimited power, and absolute goodness. We do not imagine that when Dr. Abbott defines God as "an *ever-present force,*" and an "*intelligent* energy, working for *good,*" he means that it is working unintelligently, mechanically, toward results which it does not comprehend, but which our intelligence recognizes as orderly and good; but he must mean that the intelligence is subjective in the energy, and not objective in us. We do not understand that in using the words "God" and "intelligent" and "good" and "energy" he is uttering either atheism or pantheism; he is putting simply in other words which perhaps confuse himself as they may confuse others the ordinary commonplace thought of God which we have all held before we heard of evolution.

What, then, does he mean when he says he does "not believe in a great First Cause." We do not know; we doubt if he knows. Perhaps he means merely that this "intelligent energy" did not create lions and elephants and trees and mountains by a series of successive fiats, but bade them grow in the process of nature. That is the only meaning we can make out of his words, but fortunately we are not obliged to make them consistent. A Great Cause can work just as well through nature, by laws, as by a multitude of successive or simultaneous creative volitions. We care not how the energy works, so long as it is personal, intelligent, strong and good. It is convenient to call it God; it is equally proper to call it a great First Cause.

What Dr. Abbott tells us about the Bible as slowly produced, or the derivative nature of man, or the historical source of the Ten Commandments, is told in somewhat startling language that will interest the unintelligent sensational press, but it is not new, nor is it important—and it need disturb nobody.

Mr. Post of Battle Creek

THERE was one employer in the recent open shop convention of the Citizens' Industrial Association who seemed to understand something of the economic reasons for union opposition to the open shop. This was Mr. C. W. Post, of Battle Creek, Mich. According to his statements in the convention, elaborated in an interview for the Brooklyn *Eagle,* the citizens and workmen of his home town, on his initiative, have entered into an agreement with the employers in which the latter agree to pay the standard rate of wages, to abide by all the State laws regulating the employment of labor, and never to institute a general lockout. The citizens "agree to furnish him with first-class workmen, who will work for the standard rate of wages, and who will never strike, picket, institute boycotts or do any of the illegal acts common to organized labor." The standard rate of wages is to be determined and announced by a bureau, preferably the Department of Commerce and Labor, based on the market value of labor in the particular market. In this way the Employers' Association, in whose triumphs Mr. Post sees as much danger as in the successes of the unions, will also drop their unfair and coercive methods and will not oppress. "After all," he says, "the ultimate difference between us is not so great."

It is certainly an encouraging sign when an aggressive employer like Mr. Post, who has won his fight for the open shop, recognizes that there may be such a thing as a "standard rate of wages," and is willing to bind himself to pay it. Presumably this rate will not be based on the market value of inefficient labor, nor on that of cheap and unmigrant

labor. Neither will it be based on the exceptional earnings of specially skilled and versatile workmen. Machinists, for example, in some towns like Battle Creek, are paid all the way from $1.50 to $3.75 for 10 hours' work, according to their individual abilities. The standard rate would, of course, not be set at either of the extremes, but would be announced at, say, $2.50. The employer then would raise the wages of those who are receiving less than $2.50. He would, of course, discharge those who were not worth that much, since he binds himself only to pay the standard and is not bound to hire any man whom he does not want. Those workmen who are worth more than $2.50, likewise, do not bind themselves to work if they do not want to, and there would probably be some employers who would prefer a good man at $3.75 to a poor man at $2.50. Since the employers do not bind themselves to pay no more than the standard rate, they would naturally make individual bargains at higher rates with those superior workmen who are worth more than the standard. The standard rate would then become a minimum rate.

Those workmen who have been discharged because they are not worth the minimum would ask to be taken back at their former rates of wages. This the employer, under his agreement with the citizens, could not do, unless an exception should be made in their favor. He would have good reasons for making the exception, because they are not worth the minimum rate and he has pity on them and could use more men to get out a larger product if he did not lose money on them. Competition is rather severe and some of his competitors are paying less than the standard. Since his other workmen have agreed not to strike, and since the Department of Commerce and Labor has no authority to enforce its standard rate, and since the exception is so manifestly proper, he will make it, and thus furnish work for idle citizens.

It would seem that Mr. Post comes out just where the union does, and that the ultimate difference between them "is not so great." He probably would soon find another union on his hands, striking to enforce the minimum rate by compelling him to discharge non-unionists. Or, perhaps, in order to avoid that evil, he would ask Congress to give the Department of Commerce and Labor the legal authority to enforce its standard rate on himself and his competitors, and then he would come out where New Zealand does with its compulsory arbitration. No doubt Mr. Post has thought the matter out in all its details and has provided means for maintaining the standard rate of wages without recourse to its attendant evils, the closed shop or compulsory arbitration. The American people will watch with hope and solicitude the gradual unfolding of these details at Battle Creek.

Reduced Representation

WE have not approved nor do we approve any bill such as that presented by Senator Platt in behalf of the Republican Club of New York, for the reduction of Southern representation in Congress. We repeat that where the people of any race are excluded from suffrage, whether by law, force, or fraud, it is only just that their representation should be reduced. Men that are not represented at the polls should not be, in fairness, represented in Congress.

But there is another side to the matter and it appears in two ways, one that of constitutional law and the other that of wise policy.

Let us take it first on the matter of constitutional law. The Fourteenth Amendment thus reads:

> "When the right to vote at any election for the choice of electors for President and Vice-President of the United States, representatives in Congress, the executive or judicial officers of a State, or the members of the legislature thereof, is denied to any of the male inhabitants of such State being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State."

"Is denied," "or in any way abridged"—these are the limiting words. What is "denied" or "abridged"? "The right to vote." Denied or abridged by whom? It does not say definitely in this section,

but the previous section of this Amendment says:

"No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States."

That makes it clear if anything were needed that it is by the laws of the State that "the right to vote" is denied or abridged. It is not local violence, it is not fraud, it is not maladministration of the laws by registrars or others that is meant; but simply the enactment of laws which prevent citizens from voting. Such a law would be one which forbids illiterates to vote or negroes to vote.

Now there is no law in the South which forbids negroes to vote. There are laws which forbid illiterates to vote. There are laws which, however, admit illiterates who can understand and explain a section of the State Constitution that is read to them. These laws are applied by registrars, who are in the habit of illegally and unfairly deciding that all white illiterates can understand the section read, while no negroes can understand it. The wrong is not in the law, but in its administration. Of course, those excluded by law are covered by the Fourteenth Amendment, but what census can tell who they are? A census can tell how many are illiterate, but not how many can explain the section read, and who shall tell which section, a hard one or an easy one? It is perfectly impossible.

Other laws further provide exceptional favor to illiterates if their ancestors have fought in either army during the Civil War. That requires a new census provision, and makes still more difficult, if we may say so, the impossible task of counting those who are excluded from suffrage, not by malfeasance of registrars and others, but by legal enactment.

Other provisions of law in certain States exclude those who have not paid their poll tax for two years; but that cannot be considered in any scheme for reduced representation, because any man can pay his poll tax, and if he fails it is his own fault, just as when a registered voter fails to go to the polls.

For the reasons given above we do not anticipate that it will be feasible to find any census basis for reduction.

Congressman Williams says the South would consent to reduced representation if the Fifteenth Amendment were rescinded and the exclusion of negroes were permitted. Were Congress to reduce the representation on the basis of excluded negro suffrage it would be taken as condoning such exclusion. They would say, "The negro is no longer represented; why should he vote?" and the force would be all the stronger and with a show of justice to forbid his voting. Now the negro is counted in representation, and he claims a moral right to vote, and he will in time get it. The wiser way is to have him represented, and then have him demand, and have the country demand, that he be permitted to vote; and we believe the better judgment of the South would approve the demand. We would in no way seem to accept and condone the injustice.

Of course, the bill presented by Senator Platt, and which we do not know that he approves, is absurd on its face, as it selects certain States for reduced representation. If such a law were to be seriously considered it would have to include all the States in the conditions, and single out none. We do not object to investigation, but we see no likelihood of gaining anything by it except an improved public sentiment.

Suicide

EVERY now and then a sad case is reported in the newspapers in which an individual who has been suffering for some time from what was diagnosed as neurasthenia commits suicide. Not infrequently this suicide takes place at a hotel where the patients have been staying for some time in the course of travels undertaken on the advice of their physician for the purpose of regaining their health. Usually the patients are elderly, at least past middle life. Sometimes, however, they are comparatively young, and then there is an added note of sadness in the story. Its publication in the newspapers always leads to a number of individuals who are themselves suffering from what their physicians have diagnosed as neurasthenia having a thrill of anxiety as to whether they, too, may finally not come into a condition in which

they shall be tempted to a corresponding unfortunate termination.

It is now very well recognized that genuine neurasthenia, if there is such a thing as uncomplicated nervous weakness —for that is all that the high-sounding word neurasthenia means—is not likely to bring about such a state of mind as will lead to suicide. Unfortunately, however, through a mistaken notion on the part of physicians that they will save the patients and their friends the shock of hearing the word melancholia, neurasthenia is often used as a mask for this serious mental affection, which so often leads patients to the taking of their lives. Professor Kraepelin, the distinguished professor of mental diseases at the University of Munich in Germany, has insisted that not a few of the cases of lack of ability to continue occupations, accompanied by intense discouragement, are really of melancholic and not neurasthenic character.

The late Sir Andrew Clarke, so well known as one of the greatest of English physicians in recent generations, used to tell some of his patients who were prominent in political life in England that they had not enough brains to run a severe political campaign and their liver at the same time and that if their liver suffered, when they insisted on overstrenuous exertions in the campaign, they must not be surprised. It is well recognized now that the brain as the principal portion of the central nervous system is an important organ for the co-ordination of many even of the vegetative functions throughout the body.

The central nervous system is as it were the *primum mobile,* and all vital activity depends on it. In this at least the old vitalism which attributed functions to the vital force as derived from a principle of life is still prominent in biology and medicine. In persons of lowered mental power, then, the tendency to reaction upon the brain of the strenuous life, or especially of any superfluous activity, is almost sure to result in serious deterioration.

The only safeguard for the patients themselves and for their friends is to be made to realize very distinctly the dangers, then, of such neurasthenic conditions as are accompanied by severe symptoms of depression. Such nervous and mental states readily become worse and then the tendency is to suicide or sometimes to those awful combinations of homicide and suicide with which the sensational press make us so familiar. Men supposed to be suffering merely from nervous exhaustion kill their families and then themselves because physicians who had examined them have not cared to utter the dread word melancholia and suggest the necessity to friends of exercising surveilance whenever depressive states of mind become manifest.

There is an unfortunate increase of suicide at every age. This increase is, however, most marked in the period between fifteen and twenty-five years. Many of the individuals have manifested melancholic symptoms long before there is any attempt at suicide, but their danger has been masked by the unfortunate neurasthenia. This word has found an entrance into every language, but has not been adopted by medical societies in their official nomenclature, because it is too vague. Like rheumatism, it covers entirely too much. At the present moment nearly every second person one meets complains of suffering from rheumatism. At two large recent medical society meetings it was insisted, and without contradiction, that chronic rheumatism is one of the rarest of diseases, very seldom seen by physicians, the conditions called such being very various and due to many different causes. It seems important, then, that the word neurasthenia should no longer be abused at such sad cost and that the simple truth with its danger should be told, not to the patient, but to friends, in order to secure as far as possible the necessary precautions.

The Mormon Investigation

The Senate has been investigating Mormonism the past week and has rediscovered many very familiar facts. It has been again learned that there are Mormon endowments and Mormon oaths of a blood-curdling character, doubtless the surviving imitations of ancient secret society formulas, and such as there is reason to believe had bloody force in the Danite days. And we have learned, what everybody knew, that there are leading

Mormons that still live in polygamy, and that now and then plural marriages take place, sometimes escaping the law by being celebrated in Mexico. We have also been told that by alliance with the Republican party the Mormons of Idaho control the State. All that has been very interesting, even if stale. But it has nothing to do with the right of Mr. Smoot, an acknowledged monogamist, to a seat in the Senate. Nor has there been any evidence presented inconsistent with the claim that the rule forbidding new plural marriages is on the whole obeyed, so that the number of polygamists is being reduced by death. As to Idaho, we see no reason why Church or clergy should not meddle with politics. If one religion controls a State its sentiments will be expressed in legislation, under our rule of popular sovereignty. A State may even have an established Church, and has had under our constitution, and might again if Quebec wished to join our Union. If Christian people don't like the control of Mormons in Idaho they should convert them. Mormonism is bad, if not rotten; but bad men have political rights. The cure for Idaho or Utah is religious, and educational and social, not political. We expect Mr. Smoot to be admitted. He could not be if he were guilty of the crime of polygamy.

The National Civic Federation

Last week Mr. August Belmont was elected to the presidency of the National Civic Federation, to succeed the late Senator Hanna. Mr. Belmont has yet to prove his ability in this position, but his modest speech in accepting the office would seem to show that he realizes the responsibility conferred upon him and the high order of work required. It is no small honor for a great Wall Street financier to have the confidence of the leaders of organized labor, as was evidenced by the unanimous vote cast for Mr. Belmont. Even Mr. Carnegie, who declined the presidency before it was offered to Mr. Belmont, admitted that it was the greatest honor that had ever come to him, especially in view of his supposed connection with the Homestead affair. The National Civic Federation in its four years of existence has amply justified itself. Leaving radical and Utopian solutions of the capital and labor problem to others, it confines itself to the immediate difficulties between employers and employed, and uses its good offices to settle these difficulties in the most practical manner possible. As such it has done more than any other agency to bring about peace in the industrial world. No wonder it is bitterly hated by the uncompromising socialists on the one hand and by the so-called "Parryites" on the other. At the annual dinner last year one of the representatives of the employees brought down the house by asking what the people whom he represented could expect from an organization harboring two such eminent politicians in its membership as Senator Hanna and Grover Cleveland. The labor element, however, has found that it pays to work and confer with the representatives of the other classes, and we believe that there is not a labor leader of any importance in the country who does not now acknowledge the value to organized labor of the work of the Federation. As long as Mr. Ralph M. Easley is its real executive power its future is assured.

Loss of Southern Influence

Senator Bacon, of Georgia, lately said:

"I would be incapable of attributing to the North a general hatred of the South. It is a much milder sentiment, my belief in the existence of which at the North causes me to grieve. It is the sentiment which is unwilling that the Southern people shall have an influential part in the administration of the General Government."

But which is it that is sectional and "unwilling," the North or the South? It is not in the North, but in the controlling States of the South that violence is used to secure the control of one party; that constitutions are adopted with extraordinary provisions whose avowed purpose is to exclude the voters of the party which has elected Mr. Roosevelt. In a number of those States there is no free election. On the other hand there is not a State in the North in which one party is not just as free to vote as the other. They do vote freely. The same States that vote for a Republican President elect Democratic Governors. Is it in human

nature to approve of the policy of States that thus segregate themselves and exclude from the suffrage those who support the national policy? Let the South allow freedom of suffrage; let these States have a chance to select rulers from either party, and they will no longer be without influence. We should then no more be told that the preference of the South is of no account, because they would vote for a yellow dog if nominated by the Democratic Party.

Praise for Vardaman

Governor Vardaman is no bundle of contradictions, altho one day the country rebukes and despises his rudeness or his injustice, and the next praises his defense of the defenseless negroes of Mississippi. He tells his people that negroes should be kept as servants, not allowed other education than that of serfs, and he vetoes appropriations for their higher schools; and a few days later he inaugurates the finest and most general defense they have found anywhere against the whitecappers. He has secured indictments against hundreds of members of these criminal associations, including State officers, and sent many to prison. He is determined that these whippings and murders shall cease; the negro must be protected. Yet it is evident that this is not wholly for the negroes' sake. The old masters in antebellum times were brave defenders of their own slaves. This violence drives away labor, and demoralizes all the peaceful conditions of industry. How can cotton be picked when the laborers are being hunted and their houses burned? Are not the men who do this mischief themselves mostly poor whites who have no cotton fields of their own, and no financial interests in peace? It is a matter of thankfulness that labor is protected, whether men are developed or not.

A French Duel

Mark Twain wrote up a French duel many years ago in his characteristic style, but they are getting funnier all the while, and are now beyond the need of the embellishment of a humorist. For example, M. Jean Jaurès and M. Paul Déroulède have a difference of opinion in regard to the virtue of Joan of Arc, a difference so great that it can only be wiped out by blood. M. Déroulède publishes a letter in which he calls M. Jaurès a dangerous man. M. Jaurès, notwithstanding that as a Socialist he is opposed to dueling, is impelled to send him a challenge. M. Déroulède thereupon calls attention to the fact that he has in the past called M. Jaurès much worse names, such as a *demi-traitre*, and insinuates that the sudden sensitiveness of M. Jaurèes's honor is due to the knowledge that he, Déroulède, is an exile in Spain, where the authorities prohibit dueling. M. Jaurès then telegraphs to Premier Combes strongly insisting that he grant a safe conduct to Déroulède to re-enter France for twenty-four hours. The Premier assures him that the police will not interfere. Accordingly the duel takes place on French soil in the presence of such an enormous crowd that the police have great difficulty in clearing a sufficient space for the combat. Two shots are exchanged at twenty-five paces without damage to anybody. On leaving both combatants bestow gifts upon the charities of Behobie and Hendaye, the towns between which they fought. M. Déroulède also presents a medal bearing his bust and the inscription *vox pŏpuli* to the proprietor of the villa and distributes two real pieces to all the small boys in the crowd. Evidently a French duel is not a fight, but a ceremonial. It is more spectacular than the seven-hour duel—the battle of "Bumper" Hill between Greene and Lawson, but the result is the same.

Extraordinary Discovery in Egypt

Herodotus says that Hecatæus saw in Thebes the statues of 345 high priests of Amon, who had followed one another in regular succession. The story seemed incredible, but it is probably true. If true the value of it is that it would give scholars of ancient Egypt a connected chronology, and would justify lists of dynastic kings. Those statues, and a multitude of others, M. Legrain has found. He has been engaged for some years in repairing and strengthening the famous temple of Karnak at Thebes. In his work last winter he hit on a great pit, in which were heaped pell-mell hundreds of

statues. With them were over a thousand gilded bronze statues of Osiris. Before the season was over he had recovered 450 statues, and he expects to recover as many more. Among these is a great number of priests of Amon. In one case 16 generations of a priest have been recovered. But the most remarkable statues are those of kings; and they go back as far as the second dynasty. One can easily see the value of such an inscribed Valhalla for chronology and history. There is a statue of Cheops of the great pyramid, of the fourth dynasty, and two of the fifth; also five statues of the twelfth and thirteenth dynasties, including some kings previously unknown. The *chef d'œuvre* of the whole is a statue of Thothmes III, of the eighteenth dynasty, and it is particularly interesting because the profile of the face is European rather than Egyptian, and reminds one of the statuary of ancient Greece. The statue of the "Heretic King" Amenophis IV is in fossil wood, and evidently a portrait. There is a good statue of Tirhakah, mentioned in the Bible. A valuable result is the proof that the twenty-first, twenty-second and twenty-third dynasties were contemporaneous. The probabilities are that these statues were regarded as too sacred to be destroyed, and were thrown together at the time when the Ptolemies were repairing the temples.

It is no small discovery, now given to the world by Messrs. Grenfell and Hunt, of perhaps the oldest known manuscript fragment of the New Testament, found on papyrus in Egypt. It contains some five chapters of Hebrews, and is assigned to the early part of the fourth century. It agrees quite closely with the famous Vatican Manuscript, B. Nearly all variations between manuscripts are minute; and one of these is of interest in Heb. 11:4, where our Greek manuscripts give us: "God bearing witness in respect of *his* gifts." Westcott, guided by a quotation from Clement of Alexandria, conjectured that it should read, "God bearing witness *to him* in respect of the gifts"; and so it reads in this papyrus, the only manuscript authority for it.

We are glad to announce that the Austrian excavators at the ancient city of Taanach, in South Palestine, have found several tablets with cuneiform inscriptions which go back to the time of the Egyptian rule in Palestine some 1,400 years before Christ, perhaps of the period of those found at Tel-el-Amarna in Egypt, which have thrown so much light on the condition of Palestine before the Israelites entered the land. They have not yet been published, but will be soon. Only one such tablet had ever been found before in Palestine, that found by Mr. Bliss in Lachish.

It is likely that Congress will at this short session pass bills for the creation of two new States, one of Oklahoma (with the Indian Territory) and the other of Arizona, with New Mexico. The Senate has adopted amendments that are somewhat questionable. One of them requires all State officers of Arizona to be able to read, write and speak English. We may be grateful that this is not required for voting. We are not sure that a purely Spanish-speaking man should be forbidden to hold any State office in a State where the predominant language is Spanish, desirable as it may be that English be cultivated.

There was a fire the other night started in the Hebrew Orphan Asylum in this city. The children, all young, had been trained in fire drill, and when they were wakened by the signal they all rose, dressed, put a blanket about them, and then stood at attention till directed to go in an orderly way. Meanwhile the teachers and the older boys manned the fire hose and put out the flames before the engines arrived. The drill prevented fright and confusion and possible death. Every large school should have a fire drill, and every factory as well.

It will be a surprise to many that James Jeffrey Roche should be willing to give up the editorship of the Boston *Pilot* for a position as Consul in Italy. It may give him leisure for literary work, but he would be much missed in the editorial ranks. We are amused to see that some journals have tried to take a fall out of him for rhyming *south* with *drouth* in a late poem. The critics evidently do not know any spelling but *drought*.

The Independent

Vol. LVII NEW YORK, THURSDAY, DECEMBER 29, 1904 No. 2926

Survey of the World

A Federal License for Corporations

The first general report of the Commissioner of Corporations, James R. Garfield, has excited much interest and comment because of its recommendation that all corporations engaged in interstate or foreign commerce shall be required by law to carry on such business under a Federal franchise or license. In the beginning, Mr. Garfield says that there exists a deep-rooted general feeling of dissatisfaction with existing commercial and industrial conditions, which present the foremost problems of to-day. Some causes of dissatisfaction are apparent, and the evils are very real and great. The legal conditions under which corporate business is carried on are extremely unsatisfactory. They permit and invite abuse, represent the needs and demands of special interests, and are not a permanent body of law adapted to provide properly for all the interests involved. The "State system," applied to interstate business, has developed peculiar evils and a diversity so great as to amount in operation to anarchy. Under it no satisfactory reform is to be expected. So far, the commerce clause of the Constitution has had a negative development only, both under Congress and by judicial interpretation. The Bureau of Corporations can get the essential facts, but no real remedy can be expected until Congress takes affirmative action under the great powers granted by that clause. To delegate control of interstate commerce to the States would be unconstitutional, and the objections applicable to the present "State system" would not be avoided. Of compulsory Federal incorporation of interstate commerce companies, Mr. Garfield says:

"This is probably legally practicable, but it involves radical industrial and political changes by the centralization of power in the Federal Government, and presents serious difficulties because of its effect upon the authority of the States over such corporations in matters of taxation and local regulation. Any optional law of this character would not overcome these difficulties."

There remains to be considered a Federal license or franchise. This is practicable legally, Mr. Garfield says; it avoids the legal difficulties of national incorporation as well as the practical one of centralization of power, and it gives the national Government direct regulation of the agencies of interstate and foreign commerce. Therefore, he suggests that Congress be requested to consider the advisability of enacting a law which in general should provide as follows:

"(1) The granting of a Federal franchise or license to engage in interstate commerce.

"(2) The imposition of all necessary requirements as to corporate organization and management as a condition precedent to the grant of such franchise or license.

"(3) The requirement of such reports and returns as may be desired as a condition of the retention of such franchise or license.

"(4) The prohibition of all corporations and corporate agencies from engaging in interstate and foreign commerce without such Federal franchise or license.

"(5) The full protection of the grantees of such franchise or license who obey the laws applicable thereto.

"(6) The right to refuse or withdraw such franchise or license in case of violation of law, with appropriate right of judicial appeal to prevent abuse of power by the administrative officer."

The Bureau of Corporations, he adds, has the appropriate machinery for the administration of such a law, and also exhaustive information which would be

immediately available for the use of Congress or any committee which might consider such a measure.

The Evils that Suggest It

As the Government would have the right to attach conditions to the proposed license, Mr. Garfield continues, it would thus be enabled to reform the present condition of corporate business in all its important features. It would be necessary to make the franchise compulsory, for some of the conditions would be objectionable "from the strict standpoint of those interested in the corporation." For this reason they would prefer the State law, but they should be required to take out the Federal license and submit to the conditions, which would be for the protection of the public. "If corporations do not now avail themselves of the known merits of the Massachusetts law, for instance, rather than the piratical possibilities of the laws of some other States, it is hardly likely that they would avail themselves of a properly drawn Federal law," if this were optional. "A majority, perhaps, of the great corporations formed in the last two or three years have been formed not with a view to their future or to their business stability, but with a view to the stock market and the issue of stock, and a promoter having this latter purpose in mind would care nothing about the enhanced reputation given by a sound corporate act, but would care a great deal about the enlarged possibilities of stock manipulation given by loose State law":

"Under present industrial conditions secrecy and dishonesty in promotion, overcapitalization, unfair discrimination by means of transportation and other rebates, unfair and predatory competition, secrecy of corporate administration and misleading or dishonest financial statements are generally recognized as the principal evils. The Government should secure means for fair business competition, freedom from unjust discrimination, such publicity of corporate organization and management as will disclose real financial worth and methods, should provide a jurisdiction broad enough to meet existing conditions, and then should fully protect the person or corporation obeying the law, and promptly punish the violator of the law."

Mr. Garfield suggests the requirements of the proposed license, some of which relate to reports concerning the interests of promoters, the contracts with them and with financiers, while others forbid discrimination and "those commercial methods which are clearly unfair competition." In the course of a long account of the bureau's work—the collection of facts, the compilation of statutes, statistics, etc.—he remarks that the immediate purpose of its inquiries is the suggestion of constructive legislation, not the institution of criminal prosecutions, and that legitimate business has nothing to fear from the exercise of its power. He insists that the bureau has a right to ascertain the cost of production of articles used in interstate and foreign commerce. "The ideal tariff duty is the difference between the cost of production at home and abroad; hence Congress has the right to know what the cost is."

Unjust Railway Charges

In its annual report the Interstate Commerce Commission asks—as the President did in his message—for legislation that will enable it to order and enforce a reasonable freight rate in place of one shown by full investigation to be unreasonable. It explains that since 1897 (owing to decisions of the Supreme Court) it has had no power to do this. It simply asks for such power as it exercised between 1887 and 1897, a power not involving the determination of whole tariffs, but only redress for wrongs disclosed by thorough inquiry in response to complaint:

"The situation is regarded as increasingly grave in view of the rapid disappearance of railway competition and the maintenance of rates established by combination, attended as they are by substantial advances in the charges on many articles of household necessity. Thus the law is extremely defective, aggrieved shippers have no other recourse than to appeal to the Commission, in the hope of some relief from conditions which they regard as intolerable. All concede that rates should be reasonable and just. When they are not so there is now no adequate means of making them reasonable and just unless the carrier can be convinced and persuaded to do so. The interest of one party cannot be safely relied upon to determine and protect the rights of another."

The desired power is greatly needed for the correction of very serious abuses in connection with the use of private cars and of terminal railroads controlled by shippers. With respect to private cars it is shown that concessions to certain shippers in refrigeration charges amount to the payment of a rebate, and that the use of such cars has created a practical monopoly in the movement of certain commodities, especially fruit. In other ways the shipper who owns his car has a rate advantage over one who does not. The practical monopoly in the transportation of fruit has been gained by the Armour car lines, with the accompaniment of "an enormous and unreasonable increase in refrigeration charges." Figures are given in the report. The terminal railroad is "a most dangerous means of giving preference to favored persons." The case of a railroad used by the International Harvester Company, or Trust, is cited as an example; also that of the Chicago, Lake Shore & Eastern Railway, used and entirely owned by the United States Steel Corporation. In such instances the rebate or preference is given by the great railroad companies in the guise of undue allowances in a division of freight charges or excessive payments for switching service, the allowance to the Steel Corporation for certain products being ten times the actual cost of transportation. Such practices, the Commission says, "are extending in all directions." It asks for power to bring this special service under control and to make the rates for it reasonable and just. —It is said in Washington that the question of giving the Commission more power may be referred to a joint Congressional Commission, which would sit in the interval between March 4th and the beginning of the next session.—Railroad Commissioner Thomas, of Wisconsin, reports that the railroads doing business in that State have given rebates amounting to $4,477,725 during the last seven years.

Mississippi Whitecappers Punished

Sentences of unexpected severity were imposed by Judge Wilkinson, at Brookhaven, Miss., on the 20th, upon the white farmers recently tried for "whitecap" crimes. Oscar Franklin, for the murder of a negro named Hilson, was sent to the penitentiary for life. Imprisonment for fifty years was the punishment ordered for William Franklin, D. W. Smith, Elias Smith, R. L. Smith and Elbert Gill, who had been found guilty of manslaughter in the killing of Henry List, a negro. For a similar offense—his victim having been a negro named Bayless—David Posey's term of confinement is to be 25 years. Samuel Posey gets 10 years for robbery and 10 more for "whitecapping." The arrests and convictions were results of the work of detectives employed by Governor Vardaman. During the last two years in parts of Mississippi, and in Lincoln County especially, the negro laborers have been persecuted by murderous bands of "whitecappers," whose methods and acts were like those of the Ku Klux conspirators. The organizations were known as Farmers' Leagues, and at the beginning their avowed purpose was to enforce the laws. Within a short time, however, they were driving negroes from their land holdings, forbidding them to own property, and assassinating those who did not promptly obey the orders of bands of masked men who roamed the country by night. In some districts the land was no longer cultivated, or crops rotted on the ground for lack of harvesters. The oaths of the marauding bands bound members to perjure themselves in any legal proceeding relating to their offenses and "to assist to put out of the way any and all obnoxious negroes within the jurisdiction" of each local organization. The private detectives employed by Governor Vardaman became members of the leagues and obtained possession of all their secrets. At the beginning of the investigation the conspirators were plotting the assassination of a prosecuting attorney who was attempting to bring them to justice. Among those who have been indicted is a member of the Legislature.

Labor Controversies

At the Fall River cotton mills, Christmas found the strike still in force, altho about 10,000 employees had returned to work at the lower wages fixed by the companies. About 10,000, including nearly all the union weavers,

remain idle, and 5,000 have left the city. The strikers asked last week for arbitration by the Civic Federation, but the companies firmly declined. They have offered to support by an exhibition of their books the assertion that they cannot afford to pay the old wages, owing to the competition of mills in Southern States, where wages are lower, the work day is longer and the latest improvements in machinery are used. The strike is now 22 weeks old, and there is much destitution in the families of the idle workmen. By the unions $950,000 has been distributed, including all their reserve funds and the money raised by mortgaging their real estate. The strikers now rely only upon contributions and the help of the Salvation Army. They are to vote this week on the question whether they shall give up the contest.—In New York the associated manufacturers of caps gave notice last week that on and after the 26th they should insist upon an "open shop;" whereupon 1,600 workers (the employees of 19 firms) went on strike.—By the executive board of the International Carriage and Wagon Makers' Union it has been decided that the "open shop" shall be opposed throughout the coming year in all factories where it is now found, and especially in those of David M. Parry, the aggressive president of the Manufacturers' Association. This is to be done by strikes if other measures fail. The union has 40,000 members, and an effort will be made to draw in 16,000 men who are not at present connected with any labor organization.

The Philippine Islands

Second Lieutenant Stephen K. Hoyt and thirty-seven enlisted men of the Thirty-eighth Company, Native Scouts, were ambushed and killed on the 16th inst. at Dolores, island of Samar, by the fanatical savages known as Pulajanes. The savages then threatened to attack the town, and the remaining scouts called for help, which was sent to them. These Pulajanes—led by "Pope" Bulan, who tells them that he acts by divine authority—have been accustomed to come down from the mountains and to attack the coast settlements. In November they killed nine scouts. With them are said to be islanders of more intelligence, who have been defrauded by native buyers of hemp who are employed by merchants on the coast.—The recent report of the Philippine Collector of Customs to the Government at Washington speaks as follows of the value of native labor:

"Despite the gloomy predictions of many thoroughly sincere investigators and writers on the subject, the Filipino laborer has conclusively demonstrated that he is a practicable and dependable element in the industrial development of these islands. In the past two years several immense enterprises have been successfully carried on solely with the aid of Filipino laborers. All goods arriving at or leaving the port of Manila are handled by natives. During the past year the operation of the customs 'Arrastre plant' has been entirely in the hands of native labor, including the steam tramway and four large steam cranes. The Filipinos make good clerks, copyists, typewriters, subinspectors, and, in some instances, excellent fiduciary officers. In the handling of cash in subordinate positions they have shown a high degree of accuracy and integrity. As marine officers and engineers, especially in the latter position, they have exhibited a skill, fidelity and courage which entitled them to unstinted admiration."

The battalion of Philippine Scouts, 280 men, now at St. Louis, will be taken to Washington and will have a prominent place in the parade on inauguration day.—All the associations of growers and manufacturers of tobacco in this country will strive to prevent the proposed reduction of the tariff duties on imports of Philippine tobacco and cigars to 25 per cent. of the Dingley rates.

Latin America

During the past month or two there has been a recrudence of revolutionary news from our Southern sister republics. Haiti and Santo Domingo are both on the verge of revolutions, the latter never having become pacified despite the assurances to the world of President Morales. In Brazil a treasonable plot was discovered just in time before it was hatched, and the guilty instigators imprisoned. In Paraguay and

Uruguay something approaching civil war has been in progress for half a year. A minority of the Uruguayan insurgents refuse to stay beaten, but despite this peace has just been brought about by the signing of a compact under which the office seekers of the rebel party will receive their proportional share of the "plums" and get a representation in the Cabinet. In Colombia the shield on the American Consulate at Carthegena was recently "besmeared with filth," but the gallant action of Rear-Admiral Sigsbee, who visited the Colombian port on his flagship, the "Newark," speedily brought "ample apologies." The most serious trouble, however, is in Venezuela. If Castro was bullied by England, Germany and Italy two years ago and was the party to deserve universal sympathy in his controversy with them, now the situation is just reversed, for Castro is refusing to pay the awards of the various commissions. He is unjustly taxing the foreign merchants, is monopolizing for his own personal profit and that of his sycophants the principal staple products of the land, and in violation of the spirit, if not the letter, of the treaty negotiated by Mr. Bowen is diverting and doctoring the customs receipts of La Guayra and Puerto Cabello. Quite naturally he has turned against Mr. Bowen, and unless he reverses his policy it is very probable that the United States will be asked to intervene in behalf of England and Germany. It is hardly likely that the Allied Powers will attempt to collect their debts again at the cannon's mouth, considering the sensitiveness of the American people over the Monroe Doctrine. The general situation in Venezuela is deplorable almost beyond belief. Castro has about 1,500 political prisoners in jail and is reported to be spending most of his time now in excesses. Some interesting developments are pretty sure to take place in the immediate future. The only countries that report a peaceful outlook are the Central American States, whose Presidents have just met together in conference and signed a secret treaty, one clause of which is said to be in favor of arbitration. Chile and Bolivia have also just signed a treaty of comity and friendship, which is supposed to amount to an offensive and defensive alliance.

The Cretan Crisis

This month expires the term of six years for which Prince George of Greece was appointed to serve as High Commissioner of this island and he has announced to the Powers which gave him his position that he will not serve longer unless they will consent to the union of Crete with Greece. There does not appear to be any immediate prospect of this, since Italy, Russia and France at least have refused consent. Turkey, tho primarily most interested, will have the least to say about it. The administration of Prince George has been very successful in its primary purpose, that of restoring order to this turbulent population, and there has been little open strife. But the present condition of things is not regarded with favor by the Mohammedans, who have left the island in large numbers. Six years ago the Mohammedans numbered one-third of the population, now they constitute only a ninth, and the thirty thousand now remaining will doubtless leave if the country is united with Greece. Prince George has subjected himself to great criticism on account of his despotic and partisan administration. Local government has been curtailed even more than under Turkish rule, and papers opposed to the Government have been suppressed at will. Professor Jannaris, a well-known Cretan scholar, was thrown into prison for complaining of the administration in a letter to Prince Nicholas, the brother of Prince George. Among the many difficulties in the way of union is the ecclesiastical question, for the Church in Greece is autocephalous, while that of Crete is under the authority of the Ecumenical Patriarch of Constantinople, who would want compensation for the loss of the province.

The North Sea Commission

The International Commission selected to investigate the action of the Russian Baltic squadron in firing upon the British fishing fleet on Dogger Bank met at Paris, December 20th, and

was received by President Loubet at the Elysée Palace. Admiral Davis, the American representative, did not arrive at Antwerp on the steamer "Finland" until that date, but reached Paris in time for the first formal meeting. Admiral Fournier is the French representative on the Commission, Admiral Kaznakoff is the Russian representative, Rear-Admiral Sir Lewis A. Beaumont the British representative. The Commission unanimously elected Admiral Baron von Spaun, of the Austro-Hungarian navy, as the fifth member, and then adjourned until January 9th. The original tapes of the wireless messages exchanged by the Russian fleet at the time of the firing have been sent to Paris for the use of the Commission. It is reported in the English papers that some of the fishermen of the Hull fleet have been brought before the Russian Consul at London and by the influence of bribes and whisky induced to testify to having seen Japanese torpedo boats among the fishing vessels. The Russian defense is said to be as follows:

"First—That the firing by the Russian squadron was jusified as a defense against attack. This entails proving the presence of Japanese torpedo boats. The Russian delegates say they possess this proof in the most positive and overwhelming form.

"Second—That even if the Russians were not attacked, they believed they were, and therefore the defensive measures taken were in absolute faith.

"Third—At most, it was an accident at sea, where the dangers and risks are extreme, and analogous to the British battleship 'Camperdown' ramming and sinking the British battleship 'Victoria' and the recent firing by a British warship on a coasting vessel at target practice."

The Morocco Situation

Conditions in Morocco grow almost daily more serious, and it now seems than France will have to abandon her policy of "pacific penetration" and resort to armed force. The Sultan Mulai Abd-El-Aziz has precipitated a crisis by dismissing his French advisors and all the foreign military attachés in Fez. The French Minister at Tangier has recalled the Consul and warned all French residents to leave Fez, as it was feared that the Sultan would seize them as hostages. The British and other Ministers took similar action, and probably all foreigners will leave the capital to avoid being involved in the impending outbreak. The French representative, M. Saint René Taillandier, was expected to go to Fez to advise the Sultan the last of this month, but now this is impossible, since the Sultan has adopted an active anti-foreign policy and has resented all offers of the French to police Tangier, notwithstanding his own inability to maintain order there. Raisuli, the bandit who kidnapped Harris and Perdicaris, has become still bolder in his depredations. He recently attacked a caravan only five miles from Tangier and captured eleven prisoners and a number of mules. Later he raided a caravan in the city itself, and his men appear openly in the streets of the city, fully armed, for the purpose of buying ammunition and supplies. There are 500 French native troops at Tangier, but they have avoided taking any action other than the necessary protection of French property, for fear of rousing national animosity. If the Sultan proclaims a holy war the danger to all foreign residents will be very great, and the French will find it necessary to do some hard fighting before bringing the country under their control. There are 50,000 French troops in Algeria, and this number can be speedily increased by 80,000, while the Sultan's army does not exceed 3,000 men, but in case Mohammedan fanaticism is roused in Morocco and Algeria, the colonial situation will be a difficult one, all the more since a number of the Deputies now supporting the Combes Government are opposed to the expansion policy even when peaceful. The first action of the French will probably be the seizure of the commercial ports, but this will not materially affect the interior. The tribesmen surrounded Alcazar and demanded that the French Consul and an English resident be given up to them, but they were induced to withdraw for a consideration of $300. Mohammed Schanny, a follower of Jacques Lebaudy, the self-styled "Emperor of the Sahara," was seized and imprisoned by order of the

Sultan as soon as he arrived in Morocco. He was formerly private secretary to the Sultan's late Grand Vizier, Bahmet At.

The Czar's Manifesto

The reply of Emperor Nicholas to the petitions of the zemstvos and other bodies for reforms in adminstration and a greater degree of self-government was issued on the night of December 26th. The manifesto is, like the previous ones issued by the Czar, somewhat vague and general in its wording, and while it makes too many promises and apparent concessions to please the bureaucracy, it is not specific enough to satisfy even the moderate liberals. The document begins with the following preamble:

"In accordance with the revered will of our crowned predecessor, and thinking unceasingly of the welfare of the realm intrusted to us by God, we regard it as our duty and the Government's duty, in conjunction with undeviating maintenance of the immutability of the fundamental laws of the empire, to have untiring care for the country's needs, distinguishing between all that is really in the interests of the Russian people and tendencies not seldom mistaken and influenced by transitory circumstances."

The Czar states that the proposals of the Minister of the Interior in regard to placing the peasants on an equality with all other citizens are being considered by commissioners selected from the most experienced of the highest administrative officials for the purpose of bringing them into effect. The Czar specifies eight reforms which he considers urgent in the interests of the legal strengthening of civil and public life.

First. The adoption of effective measures for safeguarding the law in its full force as the most important pillar of the throne of the autocratic empire, in order that it should be enforced thoroughly and equitably, and that legal redress can be secured by all who have suffered wrong from arbitrary acts.

Second. That the action of local and municipal institutions should have as wide a scope and be as independent as possible in the administration of local matters.

Third. That in order to secure equality of persons of all classes before the law steps should be taken to bring about the necessary unification of judicial procedure through the empire and secure independence of the courts.

Fourth. That attention should be given to the introduction of State insurance for workmen.

Fifth. That the exceptional laws decreed at the time of an unparalleled outbreak of criminal activity on the part of the enemies of public order should be revised and limited to such cases where the actual safety of the State is threatened.

Sixth. The laws dealing with the rights of communities and persons belonging to heterodox and non-Christian professions should be revised.

Seventh. That the ordinances restricting the rights of foreigners in the empire should be reduced to those required for the interests of the empire and the needs of the people.

Eighth. That all the unnecessary restrictions should be removed from the existing press laws, and that printed speech should be placed within clearly defined legal limits.

Simultaneously with the manifesto a warning is issued against those who have stirred up disorder in the present crisis, and a rebuke is administered to the zemstvos and town councils for venturing to consider anything above the local matters which are legally under their jurisdiction, in the following words:

"Such movements against the existing order of government, which have fallen adversely upon the bulk of the Russian people, who are loyal to the everlasting foundations of the existing Government, gave to the excitement above referred to an undeserved importance of a general tendency. The Russian people involved in this movement, forgetful of the grievous year which has fallen to the lot of Russia, blinded by chimerical hopes of profits which they might expect from a radical change in the ancient foundations of the Russian State and life, and not knowing what they were doing, acted to the advantage, not of their country, but of its enemies.

"Zemstvo and town statutes and every form of institution and company must not go beyond the limits provided for them, and must not concern themselves in questions in the consideration of which they have no legal authority. Presidents of public meetings who allow consideration to take place of matters not in their province on questions of general government are liable under the existing laws, and organs of the press, with the knowledge of the responsibility which rests upon them, must for their part introduce the necessary calming effect on public life, which has deviated in recent times from its proper course."

The War

The capture of the north fort of Keekwan Hill is the most important success of the Japanese at Port Arthur since the storming of 203-Meter Hill. This was accomplished by blowing up the fort with dynamite laid in tunnels which have been in construction ever since the outer Keekwan fortifications were seized in the assaults of the last of November. Two main tunnels were run under the main wall of the north fort from the moat for a distance of forty feet, and from this four shorter tunnels branched. Seven mines of dynamite placed under the wall were exploded al-

most simultaneously, throwing earth and wreckage hundreds of feet in the air, and making two large breaches in the wall, through which the Japanese charged so quickly that some fifty of them were killed or wounded by the falling material. The storming party consisted of two battalions of volunteers under General Samejima, all sworn to capture the fort or die, who were concealed in the parallels and the caponière extending into the moat. In order that the dark blue uniform of the men might not show against the brown of the soil which would be turned by the force of the explosion all the attackers wore brown woollen underdrawers over their trousers and brown sweaters over their tunics. Instead of a cap each man wore a brown woollen headpiece, which extended to the shoulders, leaving only the face visible. Every man carried a rifle in his right hand and dynamite grenades in his left, while a lighted slow match was attached to his cartridge belt, with which to ignite the fuses of the grenades. The Russians resisted desperately and held every available shelter of the interior and rear defenses until overpowered. Nine field guns and four machine guns, with a large quantity of ammunition, were captured, and over 300 Russians killed. The capture of the north fort opens a way up the gorge to the top of Keekwan. The Japanese now hold five of the seven protecting forts on this hill. The hights east of Houyangshukou, about a mile and a half south of 203-Meter Hill, have been captured by the right wing.—Admiral Togo has withdrawn the most of the fleet from Port Arthur, since the Russian ships have all been disabled, and is preparing for the Baltic fleet on their arrival in the Pacific. Formosa is being fortified to prevent its being seized as a coaling station by the Russians. A Japanese fleet said to be composed of two battleships, four cruisers and twelve torpedo boats passed Singapore December 22d, going west to meet the Russian fleet.

Mary, Mother

A CHRISTMAS FRAGMENT

BY PHILIP W. FRANCIS

THE Blessed Maid, she sits and holds
  Her little Babe upon her knee,
Her little Babe she sits and holds
  And looketh on Him tenderly;
She does not know the angels lean
  From Heaven's walls the twain to see.

The angels lean from Heaven's walls,
  They are a shining companie,
Archangels and the Cherubim
  And rankéd seraphs in their degree,
And they are clad in harness bright,
  Wrought in God's holy armorie.

The angels lean from Heaven's walls,
  And loud they sing adoringly;
The Blessed Maid, she does not hear
  The angels' wondrous minstrelsie;
The kine, they kneel down in their stalls
  To hear that heavenly harmonie.

The Blessed Maid, her eyes drop tears,
  The kneeling kine she does not see
Nor hear the angels triumphing;
  She sees, afar, Gethsemane,
The cruel stripes, the crown of thorns,
  The awful cross on Calvary.

BUTTE, MONT.

American Perils

BY JOHN BURNS, M.P.

[Mr. Burns, generally admitted to be the most prominent figure in the English labor world, gave the interview which follows to an editorial representative of THE INDEPENDENT in London. It is of peculiar interest at this time of disturbed labor conditions and of the agitation of all questions having social and industrial bearing upon the welfare of the American people.—EDITOR.]

THE future of America often depresses me. Its limitless territory and vast wealth, its innumerable opportunities for the mass of the people, are circumscribed and impeded by the undue exaltation of the Unit over the Aggregate, of the Individual as against the Community, of the Monopoly as against the State. One sometimes thinks that this increasingly difficult problem cannot be solved peacefully, constitutionally, decently and in order.

The paramountcy of the Plutocrat is a sinister sign of American life. The Trust, the Boss, the Monopolist apply themselves merely to exploiting the self-centered activity and concentration of the average American. That individual, being fully occupied in fighting for his own hand, has neither the time to see whither all this is tending, nor has he sufficient patriotism to combat the machinations of the Monopolies that are weaving, spider-like, their web around the American people. The point with me is, Will a sufficient number of the disinterested rich and cultured poor unite to avert a conflict, now threatening the American nation, which may prove as terrible a struggle in many respects as that which embroiled the American people forty years ago?

I fear the few—individuals as unscrupulous as they are wealthy—will forestall control by the best elements of the nation, and provoke a trial of strength, before cooler and wiser heads can find the straight but narrow path out of your social troubles. My apprehensions on this point are confirmed by the blackguardly manner in which an older country—with slower methods and more conventional ways—was jockeyed into a South African war by a small gang of grabbing capitalists. Those trouble breeders, like yours, are often of foreign origin, and in the attainment of their ends have wasted fifty thousand lives and 500,000,000 pounds sterling, and have besmirched

our fame, and all for the sectional interest of a dishonorable class.

The Philippine and Cuban questions, and notably the enormous expenditure in recent years on your navy and army, all point the same moral in America as here. The patriotism of the marauding monopolies, with other people's Men and their neighbors' Money, is merely a people taking one of those short and rapid cuts—well known to them—to avert the dangers that threaten them. I trust they may do this, remembering that neglect of such precautions leads to the endangering of the commonwealth.

If they do, then the American people can teach Europe how to stop the apparently never ending drain upon its re-

JOHN BURNS

flimsy garment which hides a multitude of sins—the patriotism which Dr. Johnson described as the last refuge of the scoundrel.

In a word, the disease of Europe—Imperialism—has seized upon the younger nations of the earth. I am afraid that this condition of affairs may be used by the American commercial magnates to fasten their power upon the people at home while advancing their own interests abroad. My hope is that the dark outlook may be brightened by the American sources, which war, armies, navies and their inevitable conscription mean to the people of the Old World.

The best way of dealing with Trusts is the good old British way. Let Parliament control, if already firmly established; but, better still, let their formation be prevented, by municipal absorption, in their infancy. Industries allowed to combine become a menace to the community and a danger to the State. Private ownership of public utilities in America has assumed the magnitude of

a scandal that threatens to become a national crime.

The growth of municipal enterprise in England is a monument to the prescience of those sturdy men who nurtured the movement in its beginnings. It also saves the present English generation from those problems detrimentally affecting America, where water, electricity, traction and transit are absolutely in the hands of Trusts or Corporations.

Over one thousand communities—towns and cities—in our country own their gas works, electric lighting systems, water supplies, tractions, markets and similar institutions. Exactly in the proportion to which this ownership prevails is the measure of our immunity from those dangers confronting America, where hosts of paid, unscrupulous and secret agents are always lobbying Parliament, boodling councilors and chloroforming large masses of voters, in the interest of the Trusts and to the detriment of the great American people.

Here in England we have a complete army of civil servants continuously working for their fellow citizens with a capability and honesty unequaled in the world.

Moralizing the Capitalist in America will be a long and costly process. Municipalizing him out of his power is a much cheaper and quicker procedure. Illegalizing the Trusts is no remedy, unless you expropriate them before they become dangerous and usurp the functions of the State.

Municipalize the corporation in the city; nationalize the monopoly in the State. This can be done in several ways, such as by restricting the power of the Corporation or Trust to its present position, or, in case of future growth, by conferring wider powers only on communities for future extension, reverting to the people at the end of lease or franchise. Monopolies might even be bought out automatically. Should the bosses who own them desire to be kept out of further mischief, why, harness them to the State, and give them a salary to run their late businesses for the benefit of their neighbors.

As for the tariff, I am a Free Trader. All sensible men are. I cannot for the life of me see how you can make every one wealthier by making everything dearer—and that is what a tariff does. The ideal and proper status of trade should be one where nations interchange the surplus of some commodity of their own with their neighbors for a surplus of some of their neighbors' commodities. If any tariff be necessary for revenue purposes, why, levy it. Outside of that, free imports and exports.

Perfect legislation prevails to the extent to which the Tariff does not. Protection damages both him who should receive and him who makes. The strongest reason against a tariff is, however, the moral one. The extent to which the American Government is not as good as it might be can be gauged by the tariff. The domination of America, social, industrial and governmental, by the Trusts is due to Protection, which allows the tariff-monger to regard Congress as a pliable medium for a class instead of being the legislative instrument for all.

In considering the factor of Labor it will be well to remember that you cannot suppress the Union. You will get into trouble if you attempt to destroy it. Unionism in the trade is like civic spirit in the community and patriotism in the State. Unionism is capable of great good for all. In the hands of intolerant, desperate men it may be, and is, at times a source of trouble. It is the greed of gain in the employer, it is the merciless grinding of the faces of the poor, that drive workingmen to combine, and the extent to which they do unwise things may be measured by the degree of harshness meted out to them. It is this treatment that drives men to perpetrate actions which, I am sorry to say, have recently been committed in certain parts of America.

We must go back to first causes. We must lift Labor from the arena of the demagog on the one side and from the greed of the employer on the other. You will then find how true is the saying, "Slow rises worth by poverty depressed."

Capitalist ridden communities have acted on the maxim, "Get wealth honestly if you can, but get it." This is possible only for the few. The many revolt against it in various forms and ways.

The Anarchist, with his wild doctrine of individual despair, the Union by its

collective defense, the citizen by the vote, are but different manifestations of the same fight which all men of all ages have indefatigably waged against insolence of property, abuse of wealth and class assumption of collective power. These abuses take root in the ownership of the means whereby other men live.

The American people lost one million men to put down black slavery. The tradition of liberty still survives and will be invoked this time for white and black emancipation from the tyranny of the Trust. Its expression will take the form of isolated outrages in the beginning, of ineffective control in the second stage, and of expropriations in the final stages. This is due to the fact that some Americans know that the Trusts and Mine Magnates whom Unions vainly oppose are preparing for the bulk of the American people another form of slavery, all the more insidious and dangerous because it subtly disguises itself behind the forms of property and individual ownership—superficial obedience to law, which it is steadily corrupting or diverting to its own ends.

Why, in spite of Corporation and Trust, has the average young man such opportunities for advancement? The answer is obvious. The United States of America, in the first place, has much greater extent of territory than England. It has also less convention. There is in consequence more scope for individual effort and personal endeavor.

Fortunately, America cannot at present boast of an aristocracy like that of England; it does not even possess a definite governing class. Yet, for all that, your America has in embryo an aristocracy which before very long will become fully developed. Your country will then be subservient to the most intolerable, callous and brutal domination the world has yet seen. Your governing class will not be tempered by tradition; it will not be polished by art. The past will not modify it, the present will suffer from it, and the future will revolt against it. You can no longer guarantee to the youth from your universities that he will occupy the place and own the business his father filled and owned.

In America big fish are eating little fish, and the little fish have to eat mud. The little fish will ultimately object to this form of diet, and, being greatly in the majority, will rebel against the big fellows. The result will be the upbuilding of a cultured proletariat, for whom the Trust has no place at its table, because it has absorbed their heritage, barred their future, thwarted their ambitions, stifled their ideals.

The intellect, courage and physique of these university lads, lads dispossessed of their heritage by the tyrannical Trusts, will go into municipal life and politics. The Labor advocate of the future will not be a miner, navvy, dock laborer or blacksmith, but rather the man who was too kind to crush the toiling worker, too educated to be a tyrant, too human to become the bully or the boss. With such educated and whole souled men as leaders, with the workmen as voters, and with the humane and intelligent rich as helpers, our Union troubles are going to leave the domain of the workshop, strike and outrage, because Capital has overreached itself. In consequence, the skirmish of a master against his men will be transformed into a State issue, the battlefield of which will be the State Legislatures, the City Councils and the Federal Congress. In that sign they will conquer.

To the workers of America I would send this message:

Be patient, be bold, be strong!

I do not advocate violence. On the contrary, spasmodic ebullitions of anger on the part of men, however badly treated and cruelly provoked, are often the worst means by which Labor can come by her own. I would say to all workers, hang on to what you already possess. The Union, the Strike, the Civic Vote, the State Ballot are yours. Use all these agencies as opportunity wisely decides and necessity dictates, for by these means and by these means alone you will surely conquer and win.

On paper—in theory, thought and sympathy—America's is perhaps the most admirably drawn constitution under which a free people could move, live and have their being. The American Constitution, however, was conceived and materialized when men subsisted almost entirely by agriculture; when yeoman farmers and town craftsmen worked at

their callings and their trades and were, in fact, industrially as politically, free men. The situation has entirely changed. Steam and electricity, with countless improvements in machinery, have brought about a subdivision of labor and have revolutionized the whole sphere of work. Men congregate in cities, they work in large factories and are being gradually, but none the less surely, converted into mechanical automata, mainly for the benefit of other people.

The restless discontent and violence characteristic of American Labor are the expressions of the workers' anger at the manner in which they are and have been treated under a free Constitution, in the Republic of Monopoly, where Money is King.

Destroy the pernicious influence of the Trusts, equalize things by the establishment of Free Trade, and I can see no reason why America should not be in the van of civilized peoples. Unfortunately, signs are not wanting to show that it is dropping far behind.

I still hold to my opinion that Chicago is the pocket edition of Hell, except that the climate of Chicago may be hotter at present than when I was there. Yet, in spite of Chicago's many seamy sides, the city has many good points in its favor. No city in the world can make such a short cut to the Millennium as Chicago, once it makes up its mind.

Even the good qualities of Chicago are carried to excess as well as its bad ones. Its chief defect is the toleration of misgovernment and of municipal scandals, which I am pleased to hear are not so serious as they were. The right and proper thing, however, is not to blame Chicago, but rather to sympathize with her, to extend to her a helping hand, to place her on her feet. When once her face is turned toward the light she will be able to make comparison between her past evil condition and her present bright prospects, a comparison that will redound to the credit of her future good. We can then leave it to Chicago to form a pure and efficient city government, both virile and strenuous in its operation.

If the best men of Chicago will only give one hour daily to thinking about the good government of their city, instead of concentrating the whole of their time upon self, it will be better for themselves and will incidentally straighten the crooked paths of Chicago administration.

Should there ever be a social revolution in America Chicago will be its headquarters. If the social revolution be, as I hope it will be, peaceful and orderly, Chicago will lead that movement. As a preliminary it will be compelled to have its schools, colleges and seminaries free from the dictation of wealthy endowments, endowments that "keep pure thought in leading strings and high moral development on crutches."

The Carnegie and Rockefeller gifts are mainly harmful. I do not believe in the giving of something away for nothing. It pauperizes people. Further, Carnegie has given most of his presents to the wrong people. He should have given them all to Americans, out of whom he made his money. Instead, he has endeavored to make reparation, by proxy, to Britain, after having deprived American workman and consumer of money rightfully theirs. These donations, so-called, would have been much better spent on the workman and consumer in the first instance—on better houses, higher wages and shorter hours in the Pittsburgh works, all of which are conducive to longer and happier lives.

The distribution of Carnegie's wealth points to me this moral: "Charity is the fee which the monopolist gives to-day for the privilege of robbing the people to-morrow."

My advice to the American people is to be robbed by the Trusts no longer, but to use all their strenuous qualities to create, own and use for the Commonwealth the vast resources of its great continent for the life, liberty and happiness of ALL its citizens.

BATTERSEA, LONDON, ENGLAND.

Linking the Atlantic with the Pacific

BY CY WARMAN

Author of "The Story of the Railroads"

WHEN the United States Government was casting about for a path for the iron horse whose shrill cry was to give the aborigines their first shock it gave ear to the advocates of the "Sunset Route," but never seriously considered the proposed line through the Dakotas. That was altogether too far north. Since that time the Northern Pacific and the Great Northern, practically paralleling each other, but not too close together to serve the growing communities through which they pass, have been built, adding thousands of farms and millions of people to the West, and they are earning something on the money invested.

Since that time the Atchison, Topeka & Santa Fé has been built across Raton Range into New Mexico, against the protest of the people of that Territory, at a time when a stage would not pay, and it has paid expenses from that day to the present moment. It made that country just as Mr. Hill's railways made the American Northwest. Without railways that Northwest would still be an empty land, silent as the vales of the Saskatchewan and the Peace. Since that time the Canadian Pacific, at present the most northerly line, has been built, and its success is a standing guaranty of the future greatness of the Dominion.

The zone of wheat has been steadily shifting for the past half century, swinging always to the northwest, until, today, men harvest it up near the edge of the Arctic Circle. For this reason, and many others, the railroad has been hitching north. The footstool is fairly well occupied. Save for a few remote and comparatively unknown nooks, there are not elsewhere free homes for the homeless. Away off in the Northwest, where the summer sun rises just after midnight, and where the sunlight lingers through the long eleven hours of afternoon, the inhabitants have grown wheat from seed to seed in ninety days.

Canada is on the eve of an epoch. She is passing through a period similar to that through which the United States passed in the sixties and seventies. She's making history—doing a new chapter in transcontinental railroad building that shall, if successfully carried through, amaze even America, where we are supposed to be equal to anything. The scheme of the Grand Trunk Pacific is stupendous. The very audacity of the enterprise took the breath away from the Grand Trunk shareholders when they were first called upon to back the builders.

Leaving out for the present the line east of North Bay, or, more properly speaking, east of Lake Temiskaming, we find the main line leading almost due west, passing out of a good clay belt, where two thousand homesteads were taken up this year; passing into what was, up to the advent of the Pathfinder, a comparatively unknown country; running not far north of the Great Nickel belt, winding along the banks of rivers to the geographers unknown, rivers teeming with fish, and upon whose wide waters millions of logs will be borne to the mills that will be built along this new transcontinental railway. Immediately north of the Great Lakes the land falls to the north. The rivers flow northward. As you journey north the country drops gradually, but the temperature rises and the snowfall is lighter as you slide down the northern watershed. Running east and west a few miles—or a few hundred, rather—north of the lakes there lies a long swale through which the pathfinders are pushing the survey. At a point 210 miles northwest of Port Arthur, whence a branch will lead down to the lake, the main line taps the English River, but does not cross that stream. This great waterway is famous for its fish, fur, timber and mineral possibilities. If I did not guard my pencil I should write "mineral deposits," but as the

country is as yet practically unexplored it is safer to say "possibilities."

West of the English River for some distance the country is rough but well wooded. Some thirty miles east of Winnipeg you come out into patches of open country, and presently break into the great prairie and plunge at a bound into the fertile fields that are calling the home-hungry from the four corners of the earth. And the way the homeless are answering this call would lead to the conclusion that the land would soon be all taken up, but there is plenty of room. This wilderness that is waking, this country to be conquered, is so vast that it will take a hundred years to explore it, and a thousand years may come and go before a white man has settled upon the last quarter section upon which a white man may live.

All the way from the western fringe of the Ontario forest the land lies level to Winnipeg, where the Assiniboine is lost in the great Red River of the north. From the valley of this famous stream came the first hard wheat, now known to millers all up and down the earth.

Westward from Winnipeg the pathfinders have stretched their line five hundred miles across the safest, best and most promising part of the whole Northwest. I came to this conclusion not wholly as a result of my personal observations, but give it also as the opinion of the well-informed men of the West who are not interested in the development, exploitation or settling up of any particular section of the country.

Manitoba for the man who wants to gamble, get rich or go broke on a single wheat crop; South Alberta for the irrigation farmer, North Alberta and British Columbia for the stock rancher, but for sure, safe, mixed farming give me the new unstaked empire that is to be opened

CY WARMAN

by the Grand Trunk Pacific, Assiniboia and the great Saskatchewan Valley.

"I paid for my farm with one crop of flax," said a farmer on "Farmers' Day" at the Winnipeg Fair. "I can beat you," said a man at his elbow. "I paid for mine and had one-fifty per acre to the good."

The simple stories told out here sound like fairy tales, but the tales told by the farmers are mainly true. It is only when I come in contact with the oily-tongued curbstone dealer in town lots that I remember, and urge myself to remember, that trite observation of David's, that all men are liars.

Notwithstanding many obstacles and interruptions, the engineers have already located a line from the South Saskatchewan tc Lake Superior that will surprise even the optimistic promoters of this great transcontinental road. They are now absolutely certain of a line with a three-tenths grade—practically a level line—the maximum mount per mile eastward being a little less than sixteen feet. And along this line lie thousands of homesteads, hundreds of thousands of acres of land. Fifty years hence, if the white dove continues to hover over this continent and over our kith and cousins across the sea, millions of people will come and settle here in the wide Northwest.

Our children, surely our children's children, shall walk the paved streets of cities that will rise where the linemen are driving their stakes in the wild grass to-day. To ride, to drive, to walk amid these endless reaches of ranch lands is to set your "wheels" going and to soar on the wings of fancy into the future when there shall be no more land for the homesteader, when all this wild prairie is given to the plow, when the wild goose is gone to the northern lakes, and the wild moose, backing into the forest that fringes the wheat belt, shall gaze across the Saskatchewan and wonder what next.

The Grand Trunk Pacific will hold steadily to the northwest all the way from Winnipeg to Port Simpson. Out in Assiniboia a fifty-mile branch drops south, picking up Regina, the important and rapidly growing capital of the Northwest Territories. Crossing the South Saskatchewan somewhere south of Saskatoon, the pathfinder sets his face toward Edmonton, destined to be the chief city of the far Northwest. Three years from to-day it will have three railways. Nothing short of a real estate boom can stop Edmonton. It has more live ones to the inch than any town in Canada and the best hotel in the Northwest.

Here, tho still in a good mixed farming country, the road cuts through the great lignite belt. On the Red Deer River, as on the North Saskatchewan, the veins can be seen cropping out of the banks on either side. In the city limits of Edmonton I saw as fine a market garden as I have ever seen, and immediately across the river, but fifty rods away, they mine fairly good domestic coal and deliver it in Edmonton at $3 per ton. Poor as it is, this lignite is a gift from the gods to this north country.

West of the South Saskatchewan for fifty miles or more the line lies along the south bank of the North Saskatchewan, a beautiful river that cuts a deep furrow in the face of the earth.

As the road leaves the river a branch leaves the main line leading southwest some two hundred miles to Calgary, the metropolis of Southern Alberta. Here, as at Edmonton, we find every indication of a city to be within the next decade. It is near Calgary that the Beresfords have their fine cattle ranches. A vast amount of English capital is invested here, and it is here that they are spending millions of dollars digging a great ditch through which a river shall flow ten feet deep and sixty feet wide, carrying 2,000 cubic feet of water per second to quench the thirst of the 300,000 acres of semi-arid land that lie in the region to be watered. There will be twenty miles of main canal and 100 miles of secondary canal.

West from Edmonton the pathfinders have set two rows of stakes. One line, running a little south of west, crosses the Rockies at Yellow Head Pass and finds a harbor at Bute Inlet, which is sheltered by Vancouver Island. The other, and most probable route, leads to the northwest, touches the Peace River at Dunvegan, crossing the range at Peace River Pass only 2,990 feet above the sea. At Dunvegan, which is on the

Upper Peace River, where there has been no frost in summer to hurt the fine gardens grown annually at the Hudson's Bay Post for fifteen years, we pass out of the agricultural section and enter the forest section and mineral zone.

Also, we shall have here the annual harvest of the fur-catcher, and here, too, will lie a new field, made accessible by the railway, for the lover of outdoor sports and the pursuer of big game. Already there is an excursion steamer on the Upper Peace, and on all the great rivers of the north the boats of the Hudson's Bay Company, so that as soon as the road is built it will be easy going to Lake Athabasca, and the mighty Mackenzie.

Twelve hundred miles from Winnipeg will take the tourist to the top of Peace River Pass, with Edmonton midway, and five hundred miles more, with a drop of less than three thousand feet—says, six feet to the mile—brings us to the brine at Port Simpson, five or six hundred miles north of Vancouver and five hundred and fifty miles, a full day's sail, nearer the Orient than any other Pacific port. In addition to being the best harbor on the coast, save San Francisco, Port Simpson lies at the point where the Japan current breaks strongest on the continent, and gives birth to the warm Chinook wind that makes habitable millions of acres that otherwise would be a bleak and barren waste. From Peace River Pass to the Pacific Coast the road runs through a rough country, but it is well timbered and promises much in the way of mineral wealth.

All the way west from Edmonton to the Pacific, approximately a thousand miles, this new line will pass through a wonderfully interesting country—a land comparatively unknown to-day, a land abounding in big things—great lakes, majestic mountains, dark forests, deep cañons and mighty rivers.

The Grand Trunk Pacific will have a main line from Moncton, on the Atlantic, to Port Simpson, on the Pacific, over 3,000 miles long. It will cost a hundred to a hundred and fifty milion dollars, and will make millions of homes accessible to the settler. When it is all done it will cost between two and three millions dollars to fence it, and there will need to be an elevator for every ten miles of track in the wheat belt. Railway men of America predict that it will be a monument to the man who conceived it and a credit to the Dominion Government who saw the necessity for it, and who helped to make its construction possible. It means much for Canada and for the British Empire, for, when the last spike is driven London and Liverpool will lie down to rest one full "sleep"—five hundred and fifty-eight miles—nearer to Yokohama than they slept the night before.

MONTREAL, CANADA.

Approximate Route of the New Highway, Grand Trunk Pacific Railway

Strange Russia

BY ANNETTA HALLIDAY-ANTONA

Illustrations from Stereographs Copyrighted, 1904, by H. C. White Co., N. Y.

The Great Moscow Gate, St. Petersburg

IT was not so many years ago. Snow and droskies, droskies and snow; blue, blue sky overhead and a line of palaces on either hand; shop fronts painted in glaring colors—pink, green and blue; Byzantine-like shrines of the Virgin on every corner, with tipsy mujiks kneeling before them; nobility and beggardom brushing elbows in the populous streets—a combined effluvium of dirt and perfumes, highly spiced with the omnipresent odor of Russia leather—these are the indelible pictures my memory still retains of that fantastic edition of the Arabian nights—St. Petersburg.

But it is not this cosmopolitan northern Paris which is now in my thoughts; I am thinking rather of those far-off provinces surrounding it, through which the Volga pours its sullen, yellow waves, and where upon a certain winter's night I chanced to find myself journeying toward the golden-domed, half-Asiatic city of Nizhni Novgorod, with the blaze of northern lights shining upon the great, silent, snow-covered world around me.

Our party comprised an English uncle of mine, traveling on Government business to the Eastern steppes; his companion, a Russian gentleman of highly nervous temperament, by name Fedor Rostoff, who knew to a nicety when to consult the dictionary of invective, with which his native tongue is peculiarly rich; our *ischvostchik*, or driver whom I shall call Ivan Ivanovitch, and lastly, but by no means subordinately, my good aunt Barbara and myself, who were to remain at the old town of Lower Novgorod for the January fair of timber and woolen goods, held upon the frozen Volga, while uncle went eastward with his Kalmuk riders to the plains, where for twenty generations Asiatic tribes have tented and cropped.

The moon was at the full; we had left the frozen capital eight hours' journey behind us, and were now tearing along a dreary road, birches and pines before, behind and on each side of us, through solitudes where the steam whistle of civilization had never as yet penetrated. The road itself, however, was excellent, for the snow had just fallen and, becoming macadamized by the frost, rendered the motion delightful.

Aunt Barbara, in spite of mercury registering 12° R. of freezing, nodded in her warm nest of furs, and uncle and his Russian ally conversed animatedly upon the Eastern question, or the future of Russia, or the result of emancipation—the three problems were identical to me.

Our horses, four abreast, were lashed with chains and ropes to the open sledge, open, forsooth, because we could not obtain a closed one, and we carried three bells attached underneath the highest part of the "duga," or badly formed horseshoe, which rose high above the collars of the two trotters. Since we had started at sunset, it had been one long run through a monotonous landscape, each hour being precisely like its fellows. After a time uncle and Mr. Rostoff ceased talking and were alike succumbing to the drowsy influence of the keen night air upon their faces and the comfortable warmth of the furs and rugs with which the sledge was literally piled.

"Ivan," I exclaimed to our driver, in sheer desperation at the stony silence which seemed to have fallen upon all, "Ivan, I understand it will be very bad traveling by to-morrow, as by that time the road will be cut up into furrows. The Czar must be very negligent of his people's welfare."

To which remarks, volunteered in Russian that was nothing if not execrable, our *ischvostchik* turned his blue eyes furtively in the direction of the slumbering Rostoff, uttered something that sounded like a succession of rapid

sneezes, in which I could distinguish the word disloyal, whipped up his horses smartly, and for the remainder of the journey glanced not at me, or near me, but simply over me. He must have considered my tendencies Nihilistic, to say the least. I had forgotten this was not the country of free speech.

About half after one in the morning we dashed into a small village on the border of a lake, and, after much delay, at last gained an entrance to what the Russians characterize a hotel. We succeeded in securing two rooms, after a wait of an hour and three quarters, and from the mysterious depths of our sledge Ivan produced beds, candles, cushions, forks, knives and certain dainties, and altho the samovar nearly set the establishment on fire in its efforts to boil, we finally had the satisfaction of partaking of some eggs and very hot tea with sliced lemons in it.

Traveling by post-road in the land of the Czar entails an outfit that contains everything from a bed to a tea-pot, and as black rye bread strongly impregnated with sand, and milk, tea, eggs and occasional potatoes are the ordinary articles of food in a Russ village, he whose palate is aspiring requires other edibles.

Early morning found us again on our way; the air was pure, and altho the view was tiresomely level, there was about it all a touch of life here and there, the charm of the blessed sunshine gleaming on the old, pale walls of a convent peeping out now and then from the forest, and a flush of color where the murky winter's dawn reddened the arch of sky with a scarlet glory.

A herd of half-wild horses dashed by us, a peasant with Oriental beard and coat of dressed sheepskin passed with his dog; a pilgrim journeying southward called out a Godspeed to us; we overtook and distanced a woman and child plodding wearily through the heavy snow, and, tho late in the year and out of season, we encountered a chained gang of Siberian convicts under the escort of mounted Cossacks. A dismal procession, indeed, is this criminal convoy with their leg-chains of four pounds weight, as Fedor Rostoff informed us, some of the more desperate ones yoked by fours to a pillar of wood fastened to their necks by iron collars. The exiles marched in silence and as fast as they could tramp, dreading every moment the terrible whips of the Cossack guard, and I noticed some young girls—probably Nihilist students or Polish patriots—among that band of murderers, thieves,

Typical Russian Drosky

The Nevski Prospect, the Main Thoroughfare of St. Petersburg

conspirators, soldiers and Muscovite courtesans.

Many were perhaps doomed to die on the road long before the Siberian frontier was gained, and those who, surviving the dreadful hardships and exposures of the journey, reached the quicksilver mines of the Government beyond the Urals, entered upon a life more cruel than any death could be.

As we advanced the roads grew worse, the ruts becoming very pronounced and producing a shaking and jolting hard to be imagined. Indeed, now that I think of it, the broadest poetical license would scarcely have called them roads, as the snow having become cut up with much travel, little hummocks were formed, and the sledge thumped up and down over them like a skiff in a choppy sea.

Village after village passed, log-built and mud-built, small and large, wretched cabins with their four rough walls, pierced by doors and windows, the crannies caulked with moss, and the inevitable wolf-dogs snarling and fighting in the wide, dirty lane which divides the ten or hundred cabins of a great Russ village.

A plank-roofed chapel painted green, surmounted by a gilt cross, stood usually at one end, flanked by the elder's house (or village ruler's), and a whisky shop, quite certain of being larger than any of the other structures. Beyond these pine log dwellings, for leagues on

leagues, spread the bleak, mournful fields, checkered at intervals with dark masses of larch woods and willow clumps, the home of the blue fox and wild hare.

The vastness of the view seemed infinite, there was a sense of peace in these unworn solitudes, and I had just concluded that this was the fit asylum for the stray faiths and fancies of the world, when Aunt Barbara exclaimed:

"It is the abomination of desolation spoken of by the Prophet Daniel!" which worthy observation caused Mr. Rostoff to remark:

"No wonder these hungry mujiks dream of some day enjoying the sunny kingdoms of Hindustan. They will fight for them when the time comes, altho they are ignorant of where they lie."

Uncle, to our great surprise, disdained to notice this challenge, and we dashed on through village republics, genuine Russian Arcadies, Utopias and New Jerusalems—flying from all other village hotels as Abraham fled from the cities of the plain.

On the evening of the third day after leaving St. Petersburg we entered the white-stone city of Moscow, the ancient capital of the Czars, and, being provided with letters to a certain Russian family, prepared for a stay of some sixteen days in this most genuine of Russian towns.

In One of the Vegetable Markets of Old Kief

Contrary to the impression St. Petersburg produces of being the product of an autocratic mind, the offspring of European culture and French architecture, Moscow presents an ever changing picture of the Orient and the Far North, whose legendary and actual history frames it in one of the noblest settings, not only in Russia, but of all the Slavonic nations of the world. Paris may be the Aspasia of cities, but Moscow, with its shadows of dissenting creeds and the perfection of a great sacrifice upon her, must ever be the Heloise.

Its dead thousand years rise and greet one at every step with story, memory and name, while, like a subtle thread, the charm and energy of a new-born age, the breath of freedom, commerce and the liberal arts penetrate the haunting past until even the Panslavonic dreamers and dangerous champions of '69 have accepted the prosaic routine of everyday life and look forward with confidence to the years to come.

Ceremony of Blessing the Apple, Procession from the Cathedral of the Assumption, Kremlin, Moscow

We saw many pedlers selling religious prints, pictured saints, playing-cards and candles all from the same pack. The streets were usually well thronged, for the genuine Russian enjoys a crowd, and through the multitude wandered venders of white bread, and cheese fritters, and dancing bears—great favorites in the Czar's kingdom—with their masters, while flocks of sacred white pigeons flew tranquilly overhead.

The shopkeepers, in the great bazars, wrapped in their pelisses of white wolf-skin, poked charcoal into the everlasting samovar, or tea-urn, and noisily invited our patronage for certain articles of native art industry.

The booths are divided into rows. There is Cloth Merchants' Row, Silk Merchants' Row, Haberdashers' Row, Portmanteau Row, Feather Bed Row and Watchmakers' Row, to say nothing of certain hatters, furriers, booksellers, coppersmiths and trunk makers. Under the gloomy archways image sellers and toy traders share space and attention with retailers of all kinds of miscellaneous articles, while, as the Russians are essentially fond of boots of every description, one entire side is occupied by the Boot Row, where the most bewildering display is exhibited, comprising top-boots, Oxonians, patent-leathers, Wellingtons, Tamboffs—tall boots of scarlet leather with an odor like sandalwood — Kazan-boots, steppe-boots and a few pairs of the enormous jack-boots formerly worn by the Emperor's guards in the Crimea, but which disappeared with the Czar Nicholas I.

Occasionally from some dusky nook like a dark hole in the wall glittered a goldsmith's or jeweler's stall, sparkling with treasure and color, like some of the old Moorish shops in Granada or Seville; the tea-stalls, always thronged, sent forth a most invigorating fragrance, and through the length of the arcade strayed the crowd, motley indeed—superstition skepticism, wealth and pauperdom—for in Russia life is all contrast, the rich are very rich, the poor are very poor, and for every costume of cloth of gold one sees two of rags.

Cheap prints and photographs are exposed in all of the shop windows, and I myself have often laughed heartily to see a burly Russ literally roaring before some late French reprint displayed. The nation as a people are very easy to amuse, as any one who has seen them at a popular theater may testify.

The *Pelz-Magasins,* or furriers' shops, are very numerous in Moscow, and in them are found the thick, soft pelisses of sable and other almost priceless furs, costing a thousand silver rubles, the cloaks of bear and wolf skin, and the robes of Siberian silver fox and Canada marmot, and, after these attractive shops, those of the jewelers are the most splendid and are filled with rarely beautiful gems—rings, bracelets, necklaces, a blaze of diamonds, bouquet-holders and fan-mounts in pink topaz, earrings of rose-colored beryl, brooches of brilliant amethyst and aquamarina, work-boxes of malachite, seals cut from smoke topaz, and jasper paper-weights, with a cluster of violet amethysts carved upon them.

All travelers in this half-Oriental land must have remarked those numerous little retreats with an enormous bunch of grapes in gold leaf over the entrance. They are the *vodka* dens, or drinking shops, and one evening our party set out to pay the most prominent a visit.

The chief feature was an organ of the steam-piano style, playing a good many of the melodies Chopin wove into his waltzes; at the buffet, café or bar, which extended the entire length of the refreshment room, were some large framed, full bearded, self-satisfied appearing men, taking Lafitte and cognac, schnapps, aniseed, and butter-brods thickly spread with caviare; a princely stranger regaling himself with cayenned kidneys, deviled biscuit and broiled bones; a red bearded man in a red shirt and an *ischvostchik* enjoying their cheap grade caviare between layers of pastry, and a fierce looking mujik digesting Nihilism with his *vodka,* which might have been vitriol or castor oil from its appearance, but which I found to be a mixture of both.

These, with a few Russian officers, students and German tradesmen, were the types of character I remember noticing as we entered and ordered supper.

The *menu,* to say the least, was fantastic, with its highly peppered sausages, its caviare, delicately put up in very small sized yellow hooped kegs; its dried sprats, smoked salmon and *vodka.*

Milkmaids of Kief, Russia

Memory recalls the whole fanciful picture—the Caucasian minstrel, clad in gay velvet, who appeared when the steam-piano had been tired of and who in turn yielded to the clamorous calls for the *vritska,* or dance. The tables were pushed backward, and the Russian servant girls, with their bright Tartar faces and grotesquely awkward boots, were swung by the students, officers and natives generally in a wild dance that soon took on a semblance of the French can-can. When it approached too closely the limits of the Quartier Latin we left, overhearing a remark from the red-shirted man to a gloomy browed student who sat near the entrance:

"Nationalities!" he exclaimed scornfully; "pooh! what are they? absurd conceptions. Cut down the price of meat and bread and you'll soon see what nationality comes to. We are living in the prosaics now, an age which kicks brains into the poorhouse and gives crowns to tyrants and fools!"

Civil rights in Slavonian social life depend largely upon the performance of religious duties, for the Russian, like his Arabian brother, is a man of prayer, carrying his religion with him as a talisman from the cradle to the grave.

Some one has said that "every Russian prays and plays," and as this nation is at all times fanatical upon the subject of music, there is a general stampede of bells every Sunday morning from the four hundred and thirty churches of Moscow. Campanology, indeed, is carried to such a high science that the confusion and tumult of the metal tongues constantly remind one of the Tower of Babel.

The Russian goes to the grocery for a picture-frame, to the tobacconist's for tea, to the confectioner's for handkerchiefs, and to the hairdresser's for almost everything else. A great many milk-women carrying over each shoulder a hollowed out piece of wood serving as a yoke, from which hang a number of battered tin pots, are to be met in the streets; heavy water-carts lumber by, and the cold-and-hot-tea man with his tray, tumblers and slices of lemon is a national necessity; likewise the bread man, who manages daily to dispose of a great basketful of the many formed loaves and rolls in which the Czar's subjects delight.

The city streets with their display of nationality and life particularly interested me. I love to submerge myself in the strong current of national and individual spirit which flows beneath the calm exterior of a country's democracy, and of all the jewels in old Moscow none so strongly held my heart and fancy as that rough mass of uncut diamonds—its people.

We left Moscow on New Year's—the Russian Boxing Day—a day of whose intricacies in the Orthodox ceremonial I have always been uncertain, but which I recollect especially as a day on which the popular sentiment, "It is more blessed to give than to receive," was distinctly emphasized in the numerous presents bestowed.

Our *ischvostchik*, an odd mixture of picturesqueness and brutishness, indulged in a yell of pleasure as the animals seemed to comprehend his language, and away we bumped, the horses scrambling, pawing, tearing over the road as best they might.

"Good-by!" shouted our friends; "look out for wolves!" and then with a final crack of the whip, Moscow the mighty was left behind.

All that day we rode through a fine woodland country, emerging at times upon the bank of a frozen river, with long expanses of ice shining like frosted silver in the sun; a narrow line of crimson light, lying on the extreme edge of the wide, windy plain, told us that the sun had set, and almost simultaneously night fell, starless and dismal; the temperature changed, the air became bitter and icy cold, snow fell in fine, sifting flakes, and the northern whirlwind, rushing with furious blast across the vast white fields, blew the snow powder into drifts here and there. It was in substance a Dakota blizzard transported to the wilds of Russia.

The horses were young and swift, however, and took the road unerringly; their hoofs and the sledge made no sound on the snow, and we all seemed as frozen as the ghastly solitudes around us, while the baying of some famished pack of wolves, who scented our presence on the air, sounded from the thick forests of birch and pine.

It was intensely dark, and altho four closed lanterns shed a dim, flickering light about our sledge, it was impossible to see two feet ahead. Ivan peered anxiously through the cold gloom, but, declaring that we were on the right road to Vladimir, drove his horses like mad, and the storm slackened somewhat after a time. Finally the lights of the town gleamed against the background of snow; ten minutes later our terrible ride was ended and we were safely housed.

Vladimir looked very gay in its gilt and paint, and that night we met some lapidaries traveling from the Government works at Ekaterinberg to the capital. With them they carried tables, col-

umns and pedestals, purple, cream color and green, made from jasper, porphyry or orlite, and emeralds and garnets cut into exquisite shapes for the imperial jewel case.

At ten o'clock the next morning we arrived at Nizhni Novgorod, the scene of some of the most inhuman barbarities of Ivan the Cruel, and made arrangements for an indefinite stay so far as Aunt Barbara and myself were concerned.

On the streets and wharves, redolent of cod and halibut, were swarms of people, and we noted the number of dramshops and drunken men we passed on driving through the town. It does not do to advance the temperance question in Russia, for the lower orders are proverbially given to tippling, both in country and in town. The press censors refuse to allow writings treating of temperance principles to pass, so even journalists and authors cannot successfully cope with the evil, *vodka* and *qvass* being an added attraction in all of the so-called tea-shops.

One of the most common as well as most comical sights in the cities was that of two tipsy mujiks embracing each other and touching their beards together. It always reminded me forcibly of the drunken chorus in the opera of "The Beggar Student"; but, indeed, the better side of the Russian nature is evinced when under the influence of liquor. Sober, the Russian is a morose, fiercely inclined, sick-of-his-home man; drunk, he is affectionate and full of songs and smiles.

The January fair was diappointing as to size. It was but an enormous sale of timber and woolen goods held in booths erected in a large building put up for the purpose over the ice-bound Volga, and could not compare in point of interest with the September annual exhibit.

Securely quartered at the house of a German friend, Aunt Barbara and I took daily walks and drives over the town and vicinity, to pass the time until uncle should return from the border-lands of Asiatic Russia.

Of those weeks certain scenes are still as vivid, still as passionately impressive, as when first experienced; others are fading fast away.

The wide stretch of wood and waste, the fir forests with their aisles of storm rifted trees, the stars burning in the steel blue sky, the long trains of horses filing through the city gates bringing produce from the hamlets of the east and west, crowds of Tartars and Cossacks, and desolation—Oriental and complete—these are ever with me, mingled with tales of the outbreak and escape, the night attack and the ravaged town.

All the rest seems a dream—one of those golden dreams of Kremlin walls and shining domes, of spires and battlements and cathedral chimes, of glittering wealth and barbaric luxury and power, which haunt one when he has seen Great Russia—the strange land of the Czar.

DETROIT, MICH.

The New Years

BY HARRIET PRESCOTT SPOFFORD

Out of the darkness, one by one,
The New Years steal into the light,
A moment gleam in spotless white,
Then, winged with great resolves, have won
Beyond the moon, beyond the sun.

O great resolves, O waxen wings—
While still another New Year hastes
Into the far and boundless wastes—
Again your airy promise springs
And melts again to phantom things!

For one dim morrow wherefore wait,
Till year by year the earth revolves,
Before you find, O great resolves,
Your untried strength? To-day is fate.
To-morrow's dawning may be late.

For, great resolves, the moment's sway
Alone is yours. The heavenly air
You long for knows not time. And there
All with no haste, with no delay,
A thousand years are as one day!

NEWBURYPORT, MASS.

Reflections Upon Old Bachelors in New England

BY MRS. L. H. HARRIS

THIS is a great country, of course, but its future does not depend so much upon protection, prosperity and imperialism (nor upon the doctrines of any mere political party, for that matter) as it does upon fidelity to certain family scriptures and domestic dogmas. Nations do not decay on account of improper government so often as they do from defective morals. Romantic sentiment falls into a bad sanitary condition; men begin to avoid the marital relation, a measure of moral hygiene providentially provided, and idealism takes on a sanctified free love smile. Then evils follow which the shrewdest statesman cannot prevent. He may devise a basis of harmony between labor and capital, he may effect industrial reforms, increase the country's commercial prestige abroad, build up the navy, found a perpetual "peace congress," stop lynchings in the South and establish Western civilization in the Philippines, but if the young men and women for whom these advantages are secured do not love and marry properly he may as well resign in favor of the devil and the Sunrise clubs and have done with it. The mighty thing he has created will not last. It will rot down into a Gehenna of lust and scarlet women.

Now to the point: We need better laws in this country, to be sure, as a growing youth demands a longer coat and more side pockets; but one great need, which no political measure will assure, is more husbands and a popular heroism for domestic life. Once we get enough people married we may have the leisure to consider Mrs. Gilman's recent proposition in THE INDEPENDENT to abolish the family kitchen. What we need now is more families, regardless of kitchen expenses.

And for once most of the trouble is north rather than south of the Mason and Dixon line. Leaving off the decimal fractions of statistics (which usually shine like false teeth in articles on this and kindred subjects), what would be some general results if all the single men in New England married? The belated happiness of innumerable maiden ladies there could not be measured, of course; but besides this immeasurable good gained more women would be enabled to practice their natural vocation of wifehood and motherhood. And whatever may be said to the contrary, this is a calling for which the women there as well as elsewhere are better endowed than for any other. Occasionally one remains single from choice, but most of them would have married if they had had a wider choice. And even in those cases where a woman prefers a "career" to her right vocation the evolution is not permanent. There is always a pretty reversion to type in the next generation. The niece of a distinguished old maid is more likely to marry than any other girl in a New England community if she gets a good "chance," and if the aunt is very distinguished she will take a bad one rather than risk a similar fate.

Again, if all these men married the congestion which now exists in some industrial centers would be greatly reduced, because there would be fewer female laborers ready to work for less than

men are paid. The accusing mobs of sallow-faced working girls seen in the larger cities and towns would be smaller. The wife also fades, but she has something to show for it, and the shop girl has nothing. The wife transplants her roses in the cheeks of her children, and the nation is paid in citizenship for every wrinkle she wears. But precisely what does become of the shop girl when she is old, unmarried and childless?

Now it does not follow that one who advocates marriages by the wholesale is also in favor of large families. Still, if we could get this generation of calloused single people in, say, New England only, properly mated, man and woman, till death parted them, it is safe to reckon that we should have in the next a better grade of workingmen, more hopeful women, more statesmen, poets and prophets, because more children would be born of that class of women whose pathetic enterprise in the hard-fisted world alone proves that they are extraordinarily intelligent, able, industrious and long suffering.

And there would be a higher standard of morals even in New England if all the men and women were legally assorted and happily wedlocked. In the fair beginning every good woman loves her lover, because she expects him to become her husband; even those unfortunate ones born to drabdom in the slums of great cities prefer virtue to vice as hopelessly as the damned long for heaven. And the man never lived who did not really hate his mate in sin. Marriage may seem a prosaic relationship, but by comparison it is beneficent and conducive to righteousness, peace and self-respect. Everybody knows what the unchaste indifference of some single men to women means. They suffer that moral nausea which follows the degrading of the purest and most spiritual of all human passions. The fairest seems foul to then seen through the lens of their polluted mind.

And we must not forget the old maid old bachelors said to be especially indigenous to New England. Many of them are egregiously unsexed and the most absurd caricatures in some particulars that the human race produces, because they rarely discover that they are "out of drawing." The old maid is often hysterically, impotently aware of her eccentricities, but this kind of a bachelor thinks he rings good coin when he is only wooden.

These represent the extreme types, of course; but the best men and women who remain single from choice cheat one another with every virtue and attraction they possess; for it is by these tokens that they really belong to one another in the matrimonial order of things.

Now the theory that women in New England wish to remain single arises from a misconception of their position. They pretend that they wish to be independent, self-supporting, in order to save their self-respect in a section where many men lack the gallantry and courage to offer them the homes and happiness they desire. As a matter of fact, the most gifted blue stocking in Boston would marry any bachelor of her acquaintance who commanded her confidence and respect and who would court her with the right genius of courtship. To be sure, she might require a stringent lover, after the intellectual hardening process she has passed through, but if the deadening effects of it have not progressed too far he will succeed. Generally when she says she prefers the single life she is proudly concealing her lack of lovers, or she has been humiliated by their lukewarmness, or her nature has been singularly perverted from the eternally feminine desire for love—for all normal women wish to be loved even more than they are ever capable of loving in return. They have a genius for sacrifice, but aside from the maternal instinct they are limited in the power of loving. That is why most of them would sacrifice careers which men would cling to tenaciously just to win and keep a man's love. They are perfected in that, and never in anything else, no matter how brilliant the achievement may be.

We hear much these days of women demanding time and opportunity to develop themselves free from domestic cares. Now this call does not really come from the women who have homes and children to look after. Such women are divinely contented to remain sedately behind the times, according to the standards in the "current topic clubs," be-

cause they know that in the end their sons and daughters will live to head the times. But this talk about a chance to "develop" comes from brave, lovely single women who have nothing else to develop. They study earth worms, dirt daubers and philosophy, and they write learned theses on abstruse subjects because they have no husbands to interest them and to fill their days with trials and tenderness. They follow after Plato because it is the only decent thing for maiden women of their age to do. They lecture upon ethics and infant psychology because they have such a limited personal opportunity to practice the former, and because they have not and never can have a baby to contradict their theories upon the latter subject.

There is nothing more pathetic or reproachful in American life than the increasing numbers of delicate women who have been forced to declare themselves the industrial and intellectual equals of men. Meanwhile most of the men titter behind their hands at the announcement. Every one of them since Adam knows that a woman is not like him in functions or in strength, that she was carefully fitted to another sphere; yet, since it relieves him of the obligation of taking care of her, he encourages her brave hallucination that she is able to take care of herself. This is a cheap unmanliness of the same grade shown by earlier savages, whose women kind did all the hard labor. The writer knows of a woman thirty years old in Boston, beautiful, gifted and good, who has never had a lover, nor even a "beau." At twenty-five she entered a profession, and now she thinks she would not like the responsibilities of married life. Yet she spent the flowering years of her life subconsciously waiting for them. And that she did not have at least an opportunity to decline them is a sort of outrage. Such a discourtesy to womanhood would be impossible in some sections of this country, but in New England the innumerable instances of it prove that the men there are not even as good citizens as they are supposed to be. Their obligations do not end with voting the Republican ticket, founding libraries, asylums and public school systems, nor even in educating the Southern negro. They have several hundred thousand respectable, good and many gifted women among them whom they do not offer the protection of their names or homes, and against whom they are ready to contend like enemies where competition is possible. We have shortcomings and to spare in the South, for instance, but fortunately our iniquities and selfishness have never taken this brutal form. There are a few elderly maiden ladies here, of course; but, for the most part, they are women who lost their lovers in the war or failed to marry for some other romantic reason. The writer never knew any woman, however homely or dryly intellectual, who lived to be thirty years old in this section without having received an offer of marriage. But this is beside the mark. If Southern men keep all their own women kind properly married they cannot be expected to look after the increasing number of belligerent, intellectual maiden women who are being developed by the selfish attitude of New England bachelors toward matrimony. Still if these single women had the courage they would be justified in taking Horace Greeley's famous bit of advice to young men, and "go West." The Western man is not so distinguished for his refinement as he is for his vocabulary, but he is startlingly intelligent, and is said to be still man enough to prefer a wife to a hobby, or a club. Certainly women who live there rarely become old maids, unless they go to some Eastern university and take a Ph.D., or pursue some severe line of study so discouraging to illusion and romance that they become too logical to follow the tortuous way of an ordinary woman's life into love, marriage and maternity.

NASHVILLE, TENN.

CHARLES BASKERVILLE

Transmutation of the Chemical Elements

BY CHARLES BASKERVILLE, PH.D.

[The author of the following article has just been called to a professorship of chemistry in the College of the City of New York. Our readers will remember that we printed a short time ago the first article from his pen after his discovery of the two new elements, carolinium and berzelium.— EDITOR.]

DOCTRINES were accepted yesterday, are assailed to-day and may, perhaps, be discarded to-morrow. Such is the history of science. Such is the life history of all human constructed systems of thought.

All things are resoluble into earth, air, fire and water was taught by the old Grecian philosophers, who argued as to the continuous or discrete nature of matter.

The natural outcome of the teaching of Greek theories as to elementary principles—for the doctrines of Aristotle were studied in all the great academies during the dark ages—was a belief in the transmutation of the metals. In the eighth century the Arabian alchemist, Geber (Abou-Moussah-Dschafer-al-Sofi being his full name), in seeking "perfection," considered all metals as compounds of mercury and sulphur in varying proportions. Gold and silver were the perfect metals, the others imperfect.

Roger Bacon, living three hundred years later, said it was as absurd to wish to transform lead into silver, copper into gold, as to pretend to make something out of nothing. He maintained the necessity first of removing from the rough earthy

mineral a bright metallic substance like lead, tin or copper. But this was only the first step toward perfection. The most perfect gold is that found in the native state. It is perfect because in it nature finished her work. Therefore, the alchemist should seek to imitate nature. Nature makes no note of the cycles necessary for her work, so the chemist required some substance which would accomplish in a short time that which nature did in ages. The alchemist, therefore, sought the "philosopher's stone," with a pinch of which it was hoped the vast changes could be accomplished. Baser metals were wont to be transmuted into more precious gold, in men's minds.

The theory of Phlogiston, Stahl's fixed principle of inflammability in contradistinction to free burning fire, was the next theory to be hurtled like a dust cloud by the breeze along the road of thought. "We grope in the dark, carrying each our poor little taper of selfish and painful wisdom."

The Roman Lucretius wrote:

> "Nature reserving these as seeds of things
> Permits in them no minish nor decay;
> They can't be fewer and they can't be less."

Despite the clarity of his many statements, the atomic hypothesis received scant attention until the seventeenth century of the Chrisian era, when Galilei's experimental science assailed Aristotelian metaphysics and demanded verifications of the premises of that philosophy, which had governed all the schools of Europe for two thousand years.

No doubt the "coincidence of independent thought is often the cause of two or more persons reaching the same result." While Gassendi, Boyle, Descartes, Newton, perhaps Boscovich, Lavoisier, Swedenborg, Richter, Fischer and Higgins had to do with our modern atomic theory, John Dalton one hundred years ago "created a working tool of extraordinary power and usefulness" in the laws of definite and multiple proportions. As Clarke remarked, "Between the atoms of Lucretius and the Daltonian atom the kinship is very remote." Altho the lineage is direct, the work of Berzelius, Gmelin and others; the laws of Faraday, Gay Lussac, Agavadro, Dulong and Petit, the reformations of Laurent and Gerhardt, but particularly Cannizzaro; the systematizations of de Chancourtois, Newlands, Hinrichs, Mendelejeff and Lothar Meyer; the stereo-chemistry of Van't Hoff and Le Bel, have imperialized the ideas of the Manchester philosopher, so that the conceptions of the conservative atomists of to-day are quite different from those at the beginning of the closed century.

By the atomic theory we mean that all matter is composed of infinitely small particles (atoms), which are invisible, indivisible, unchangeable, and possess certain characteristic properties, as definite mass.

There is a restlessness about our modern theories at present, for proposals have come from men eminent in the front ranks which appear to hark back to the medieval days. While we like to feel a certain self-satisfaction as to the logic of science and predict definite futures, at times our edifice receives a rude shock. These quiverings do not result necessarily from a great stroke in science, but often arise from some minor matter, perhaps accidentally noted, but growing in strength until the whole structure of a century seems to totter.

Röntgen did not plan to find the x-rays. Becquerel learned of the existence of the rays bearing his name quite by accident. Yet as an outgrowth of that fortuitous circumstance the Curies found radium, a scientific paradox, which this century inherited from the closing days of the last and for which no satisfactory descriptive adjective has yet been coined in any language.

"There are sounds that our ears have never heard; there is light that our eyes will never see," said S. P. Thompson. "Yet of these inaudible, invisible things discoveries are made from time to time by the patient labors of the pioneers in science." No scientific discovery really stands alone. Practically thirty years ago began the ideas which now attract so much attention. At the beginning of that time Crookes examined the effect of passing an electric current through an exhausted tube. He explained certain phenomena on the basis of the materiality of the rays; that an ultra-gaseous form of matter existed. German workers in antagonism to such an explanation

forced the term cathode rays upon the scientific world. The term holds to-day for those streams of energy, whether on or attached to small projected particles or not, coming from the negative electric terminal within an exhausted tube.

More recently J. J. Thomson and Oliver Lodge have from further experimentation insisted upon the existence of particles approximately a thousand times smaller than our lightest known chemical element, hydrogen, and respectively named them electrons or corpuscles.

Unbelief in the discreteness of matter is by no means a necessary corollary of our acceptance of the results of these brilliant investigations. The atomic base is merely shifted.

The former of these eminent English physicists has gone even a step further and endeavored to show that, after all, the electrons are simply embodied electricity and that matter is electricity. Quite coincident with these views the illustrious German chemist, Ostwald, has declared that matter is nothing more than energy, and that we know it only through its manifestations. Tritely, the bow is the violin. Matter is not only explained, but explained away.

Gustave Le Bon has recently published three papers in the *Revue Scientifique,* in which he suggests that matter may really be regarded as a special state of equilibrium between interatomic forces.

Speculations of this nature have been renewed with vigor as a result of the unique experimental observations reported about radium. Rutherford and Soddy and Ramsay have learned that the inert solar element, helium, appears to be continuously produced by radium. The elements are disintegrating is the opinion of those who have done most with these matters. Naturally such should attract and deservedly do carry greatest weight. Yet Madame Curie, the discoverer, is not fully committed, as she has just offered, frankly, the four hypotheses which have been put forward to explain radio-activity. They are given here to impress upon the reader who has been so patient as to follow us thus far the idea that the problem is by no means settled.

The explanations offered by such eminent pioneers are by no means taken as final by many. The late venerable German professor, Clemens Winkler, would hold back. The Rt. Hon. Arthur J. Balfour, Prime Minister of England, in his address before the British Association for the Advancement of Science, at the recent Cambridge meeting, drew a sharp distinction between scientific instinct and actual experience when he said:

> "That these new ideas diverge violently from those suggested by ordinary observation is plain enough. No scientific education is likely to make us, in our unreflective moments, regard the solid earth on which we stand, or the organized bodies with which our terrestrial fate is so intimately bound up, as consisting wholly of electric monads very sparsely scattered through the spaces which these fragments of matter are, by a violent metaphor, described as 'occupying.'"

The explanations offered are briefly: (1) atomic disintegration of radio-active substances; (2) transformation of gravitational energy; (3) absorption of some unknown form of ether energy; (4) atomic disintegration of other substances induced by the presence of a radio-active substance. This last might be interpreted as something resembling the "philospher's stone."

If the atom disintegrates, then it is reasonable to suppose that by reversing the process we might cause them to be built up, as was suggested by the writer in his retiring address at the St. Louis meeting of the American Association for the Advancement of Science, December last. According to Ramsay's latest work, such appears to be the actual case. By exposing glass vessels to the radiant influence of a water solution of radium bromide, imprisoned within glass, he noted marked changes in the outside vessel, depending upon the composition of the glass. Something material was apparently created. A radio-active body was built up. Again, according to Ramsay's "guess," to use his own term, do we return virtually to alchemistical principles.

The synthesis of the elements is a problem to which able chemists have directed their attention before this day. When Crookes discovered thallium, Victor Meyer endeavored to show it was really made up of certain iodonium compounds. Up to the day of the early and unhappy close of his brilliant career he

gave much time and thought to the problem. But a few years ago Fittica claimed the transmutation of phosphorus into its analogs, arsenic and antimony. Emmens in America reported an "argentaurum," or gold made from silver. We have been unable to secure a sample on the market.

While science is bound by the everlasting law of honor to face fearlessly every problem that can fairly be presented to it, in the humble opinion of the writer we need not yet give up the older conceptions of materiality. Every chemist at heart no doubt believes in the unity of matter, consequently in transmutation, but with the data at hand we are distinctly unready to accept the instinct, dream, as proved beyond question by experimental fact.

New York City.

Witchcraft in Alaska

BY JOHN G. BRADY

[Governor Brady has just been appointed to his third term as Governor of Alaska. As a student of human nature, as well as of the best conditions for advancing the people under his control, he is well qualified to speak on those conditions and customs of which the chance visitor may know nothing.—Editor.]

A RESIDENCE of twenty-seven years in Alaska has convinced me that along with the drinking of rum (the invariable effect of which seems to be to incite the natives to murder) witchcraft is the greatest curse of the Alaskan people. I have no doubt that the population along the northwest coast has been kept down to its pitiful proportions of only 35,000 because of the wholesale destruction of life by the consequences of the belief in witchcraft. Why should there not be a teeming population in Alaska, as there is in Japan? The Esquimaux stock is probably the purest type of the Turanian race in existence; the food supply is sufficient for a populous race. But this devilish system of witchcraft has been a large factor in keeping the population down.

The trouble begins with the Indian doctor or sorcerer. When a child is born into the world with a curly lock of hair on his head it is taken as a supernatural sign that he is set apart to be an Indian doctor or sorcerer. Herodotus tells us that the Egyptian priests knew that a bull calf born with certain signs was to be a god; they had no doubt about it whatever, and when these signs manifested themselves the calf was deified. It is in some such spirit that the Indians of Alaska look upon the child born with his curly lock of hair. After being reared with uncut hair and with no taste of beach food—crabs, mussels, clams or seaweed—by a final test following eight days' fast, in which he can drink nothing but salt water, he convinces the people that Yake, the abiding spirit, takes possession of him. After that, whenever he appears with his Shaman's paraphernalia of the hideous rattles, the aprons of painted buckskin, the masks, the necklaces and charms, as he dons and doffs these one after another in the symbolic ritual, they have no doubt that in what he does or says he is possessed by Yake. He is now competent to be consulted in all troubles.

They believe that every kind of sickness comes from without. It is the work of evil spirits. Suppose a man has a hemorrhage and is spitting blood. The sorcerer is summoned and he performs his incantations for hours, day after day. When these are of no avail in curing the disease it is evident to him and the people that a witch is counteracting his influence. The people are all gathered in a circle around the fire, in concern and dread, not knowing upon which one of them the judgment may fall. "O Yake," the Indian doctor cries, "where is the witch?" He passes from one to another around the circle, going around perhaps

for several times in vain. Again and again he looks up through the smoke-hole, imploring Yake to point out the witch. Then at last he points quickly to a man or a woman: "That is the witch."

Then they seize upon the one indicted. Of course, no punishment is too severe, since they believe him a witch. In the case of a woman I have known them to tie her hands, thrust knives through her breasts, through her thighs and through her lips.

I have had a great deal to do in trying to counteract witchcraft. We have had a hard struggle with it, but we are overcoming it.

Since I became Governor I heard of a case of a man with a sore throat. He had consulted an Indian doctor forty miles away, who had said that such and such a man was the witch. They had tied the poor unfortunate to a chair, with his hands behind him, and had kept him seven days without food or drink, when the news reached me. The settlement was Yakutat, 250 miles away to the northwest. We had no telegraph or means of communication, so it seemed that we were obliged to go. I told Captain Sebree, of the U. S. gunboat "Wheeling," and he consented to accompany me to the place. We found the story only too true, but its culmination was happier than in most instances. At the end of seven days the man with the sore throat had commenced to get better. They untied the witch, but he was shrewd enough to take advantage of the situation. "I am a witch," he said; "tie me up again. I bewitched the man. I will make him well." An agreement was struck with him that if he would thus influence for good instead of evil he should have so many blankets, so many camphor-wood trunks and other pieces of property. They tied him again in the chair, the patient continued to recover, and the self-confessed witch was set free with his spoils. They gave him these presents, remember, not because they had wrongly imprisoned him, or to recompense him for his tortures, but simply as the price of his ceasing to bewitch the sick man. At this denouement the witch had a chance to get away on a schooner, and he went at once. He was gone when I arrived there, but George, the Indian chief, told me he was thoroughly convinced the man was a witch.

William Hunter, a Christian native, was sick with consumption. He had a half-brother who was a bad boy and half-witted. This boy told William Hunter that a woman in the ranch (we call the Indian villages ranches) had made him a medium to make William die with consumption. William and his brother tied the medium, and he could untie himself, whether tied to a chair or to a bed; therefore they believed the boy's story. This was noised about in the village, and there was another boy who conceived the idea that he had been bewitched by a woman, the wife of an old blind man. He had been with them in the woods, and was cutting down a tree when he went off into a swoon. As he began to awake he found this old woman standing over him and grinning. That occurred twice, and he believed that this woman had bewitched him. Gossip repeated the story, and the more they talked about it the more it stirred up the community, until the people in the village were wrought up about it and they came to me.

Then I gathered them all in my office and undertook to teach them the nature of consumption and other diseases. I have a few good physiological charts in my office, made in Germany, and I displayed the vital organs of the body, telling them the causes of consumption, from which the white people suffered as well as they. I talked all forenoon, and in the afternoon we had another session. They had listened all day, but as I ended my talk an Indian chief cried aloud, "Well, that is what the white men say. We are Indians, and we know that there are witches."

The perusal of a few paragraphs from the history of the Salem witchcraft persecutions would show cases parallel to instances which I could relate by the scores. Witchcraft is about the same thing, whether practiced by the Aryan or the Turanian race. There is nothing that will stamp it out but Christian education, just as we ourselves are now kept from superstition by the same means.

ST. LOUIS, MO.

The New Regiment

BY WILLIAM O. STODDARD

FROM the window where I'm sitting I can watch the hills of snow,
But I seem to see as clearly a picture I saw nearly
One and forty years ago:—
It's a photographic memory of the White House portico.

A tide of glittering bayonets is flowing slowly by;
And the day, like this, is chilling, but the winter air is filling
With shouts of courage high
From another regiment of the men who volunteer to die.

Right yonder,—there!—stood Lincoln, as they passed him in review;
And on his deeply wrinkled face was something sprinkled
That was like a drop of dew—
But O, what drops were falling for our gallant boys in blue!

Beyond him, near the pillar, were Nicolay and Hay;
They were standing, then, together, and now one has gone forever,
As we all must pass away;
But they're young yet in the picture that was made for me that day.

Bareheaded was the President and bent as if to hear,—
Not to watch the bayonets glisten, but with half shut eyes to listen,
With a pang of pain or fear,
To the rattle of the battles that were then so very near.

The regiment marched onward with a strong and steady tread,
For the spirit that imbued them was like his who had reviewed them,
And they knew not that his head
Was bending low already o'er their wounded and their dead.

The armies all marched onward, perhaps a million men,
From year to year still tramping, with fewer at each camping;
And those who loved them then
Will never, save in memory, review their ranks again.

That winter day the people all bowed at Lincoln's side;
And altho the sod's above him they still, as then, may love him,
And may keep as gems of pride
The dewdrops that he knew not of or did not care to hide.

MADISON, N. J.

The Minister and His Young People

BY THE REV. CHARLES M. SHELDON

Author of "In His Steps," Etc.

DIFFERENT ages of the world call for different messages from God's prophets. The one great eternal message that never changes is the message of righteousness. But the stress laid on any particular phase of righteousness may differ in emphasis from century to century, owing to different movements in human progress. There can be little question concerning the change of base which once centered about the sermon as the great means of moving a congregation. I do not mean to say that the sermon, as a sermon, has lost its power, but I mean to say that the pulpit does not have the same power that it once had through the sermon as a lever to raise the community into ways of righteousness. There was a time once, especially all through New England, when the pulpit stood for rhetorical, oratorical and doctrinal power. The minister, conscious of this influence over the community, went into his pulpit with his sermon, and the people talked about it all through the week. To-day it is a rare sermon that holds the thought of an audience or of a parish half way through Monday. A good many ministers, however, have not found this out, and are still preparing sermons which would have had great effect thirty or forty or fifty years ago, but do not fit the needs of the present-day congregations. It is also a fact that a great many men in the ministry are still possessed with the idea that the pulpit is

CHARLES M. SHELDON

almost the only place from which to make an impression or build up a church. In other words, the thought of the pulpit as the main place from which a minister is to do his work, as an orator, as an eloquent writer or speaker, still dominates hundreds of ministers who are making practical failures of their opportunity because they do not see that the office of a great preacher does not command the attention of the world to-day as the office of teacher and leader in other phases of work. Men are not moved to-day they once were by the pulpit utterance. I do not think this necessarily means any decay of influence on the part of the ministry, and I would not wish to be misunderstood as stating what I do not believe—that the ministry has really lost any power. I not only do not believe that it has lost power; I believe it has gained, if it sees the signs of the times and acts accordingly.

The great opportunity for the minister of to-day lies not in the direction of great pulpit efforts, but in the quite different work of teaching and leading the young life in his church and parish. I believe that for hundreds of churches in America the actual power of the ministry would be increased two, three or four times by simply cutting the sermonizing in two. Reduce the actual preaching of sermons to one-half. Spend the other half of the time and strength that have been devoted to the preparation of sermons to actual hand to hand work with the young life in the parish. If results are what we are after, if what we want in America in the next ten or fifteen years is the return to a profound, social, national righteousness, it must be done through the training of those who are at the present time children. I have been in scores of churches throughout America within the last five years where the absence of children in the congregation was the most startling and sensational fact in evidence. And on inquiry I have found that practically no boys and girls are in the habit of attending the regular preaching services of most churches. I believe that no one fact is so fraught with serious menace to the church of the future as this fact of a childless church, and, frankly I believe that the ministry is almost wholly to blame for it. In the first place, our preaching is not simple enough. It need not lack profundity because it is simple. We are too lazy to prepare messages which the child can understand, for it is simply a rule in arithmetic that if a preacher can prepare a sermon for grown-up people in three days, it will take him twice as long to prepare one for young people. The most fruitful thing that the ministers of this country could do would be to preach to their Sabbath schools six months in the year. I do not mean what are called five or ten minute sermons for children before the other sermon, but I mean the entire preaching service given wholly to the entire membership of the Sabbath School. It is a very common occurrence for the minister to come up to his church Sabbath morning and find the best part of his congregation walking away from it. There are hundreds of churches in America where the membership of the Sabbath School outnumbers the membership of the church, and it is a very common thing for two hundred boys and girls to walk out of the church and scatter for home at the same time that one hundred and fifty or less grown-up people walk in to sit down to the preaching service. And I believe it is largely due to the fact that the ministers do not preach sermons the children can understand, and half the time the grown-up people do not understand them either. We have got to learn how to make our messages as simple as the Gospel, not childish, but childlike in their application. The most wonderful opportunity for the young minister to-day is the opportunity his Sunday School affords him. There he has an audience over which he can exert genuine influence. How many ministers have any real influence over the grown-up men in their congregations in the two matters of business and politics? No matter how much they may respect their pastor, no matter how much they may do for him in other ways, how many men, my brothers, do you have in your own churches who will listen to your message when you plead with them to vote for a non-partisan candidate, or quit their unchristian selfishness in money-making? As a rule they are apt to be too much grounded in their partisanship or their selfish business habits to change them. But with chil-

dren and young people there is hope that you may start in their minds the right conception of a social righteousness. They are not yet entangled politically or commercially. Their minds are free to entertain some clear and just conception of the Kingdom of God in its social workings and your field is free, unhampered by tradition or custom. If you have no children in your churches, you have them in your Sunday schools. Go after them where they are. Turn your Sunday School into a preaching congregation and have the joy of giving your message to those who do not have to be hammered into shape, but can be molded into plastic forms of strength and beauty. I do not think it is within the region of debatable questions to say that the ministry and the pulpit in America would rise with tremendous power if it shifted its ground from the average presentation of two sermons a week to a grown-up congregation—from that position to the one of teacher and leader of the members of the Sunday schools connected with the churches.

When it comes to the use of the material in the young people's societies containing young men and women from fifteen to twenty-one years of age, there is no question whatever of the live opportunity presented to the ministry of today. No man can do a full work in the ministry who is not in the most complete sympathetic touch with this young life. The minister who absents himself from the organization of the young men and women in his parish is missing the mark. He cannot expect to enjoy a fruitful or growing ministry. I wish to repeat it, because I have the most profound conviction in the matter, that I believe scores and hundreds of churches are partial or almost total failures because the minister is expending his main strength in the preparation of sermons for his grown-up people, and neglecting almost wholly the possibilities for training among the young. It is no uncommon sight to see small congregations in great church buildings where seventy-five or one hundred people, members of churches, who have already had one sermon in the morning, are listening to another, and outside of that church building great crowds of young men and women are tramping the streets, visiting together, untouched by the gospel message. It is not a message to them. I spent a recent Sunday in San Francisco and walked to my evening appointment, some miles from the hotel, through a church building district, and as I walked past these churches and glanced in upon the congregations gathering I noted here and there a very few young people. Some were walking away from the church buildings after their young people's meetings, going elsewhere, but the crowds upon the streets were simply enormous. Well dressed young men and young women were walking up and down, with no apparent aim or purpose —so far as I could see not viciously inclined, but simply passing the evening anywhere except inside a church building.

I think this condition is true of hundreds of cities and towns all over America, and it is a tremendous waste of power that the Church does not have its proportion of these young people in its services or hard at work doing something. The beauty of the situation, so far as the minister and his young people are concerned, lies in the fact that the two avenues through which he can work to the greatest possible advantage have already been opened. The organizations lie right at his hand. All he has to do is to adapt his time and enthusiasm to these organizations. The Sunday School is a fact. It is in many churches a larger fact than the church itself. It is already organized. It already has its place of power and influence in the parish. All the minister has to do is to accept the organization and adapt himself to it by every possible means. The young people's organization is a fact. It is the most enthusiastic form of religious expression known to this century. All the minister has to do is to accept the fact and work with the organization. The most fruitful results of any young man's ministry today will come from his enthusiastic, joyful connection with the organization of young people that is best fitted to do the work of his own parish. Three hours every Sunday night spent with his young people's society will be more fruitful of results in the next ten years than three days spent in the preparation of a second

sermon for a Sabbath evening preaching service. I say this deliberately, after some eight years' practical application of my theory to practice. I consider the young people in my own parish the most hopeful, and in many ways the most useful, part of the entire work of my ministry, when I look toward the future. Last year I gave two months to preaching services for my Sunday School. Next year I think I will double the time. I have not the least doubt whatever concerning the usefulness of these services, if results are what the ministry is after; and I do not know what we are preaching for or why we are in the ministry at all if it is not to build up a future Church that shall represent an everyday righteousness such as the nation does not to-day possess. I believe it is true, as Dr. Hillis said in his powerful sermon on "The Decline of Great Convictions," that the strength and enthusiasm of present-day manhood has gone into commercial enterprises, and has not gone into moral leadership. What the ministry of this time needs to do is to shape and train future prophetic leaders, Christian leaders in business life, in political life, in social life, in literary life. There is a tremendous lack of moral leadership in America. The Juggernaut of commercial greed has rolled over and is crushing out of existence to-day, in the lives of thousands of our best and brightest young men and young women, the higher religious aspirations. The safety of America, the redemption of its devastated municipal life, the restoration of a healthy, enthusiastic hunger and thirst after righteousness rests with the Christian churches of America, and that task devolves largely upon the ministry of America, and the ministry is walking away from its widest and largest opportunity if it neglects its young people. I say let the ministry of this great country emphasize its great message to the children, live with its young people, adapt its message to the new shaping of affairs social and commercial, preach a gospel that demands the principles of the Sermon on the Mount and the Golden Rule as absolutely for politics and business as it does for any other phase of human energy. And the hope of all this is not with those who have become fixed in their commercial and political dishonesty and selfishness, but with the children and youth, who can be trained to apply the Jesus life to the everyday life. The regeneration of American politics and American commercialism, the birth of a new and needed righteousness for this nation lies with the young generation. There are no solutions for great public questions worth considering unless at the foundation of them there is found a child, and in that child the living germ of life which grows only in a religious training, found possible only in a Christian home and a Christian church. The ministry never had such an opportunity as it has to-day. The destiny of this country can without exaggeration be said to rest with the young men in the pulpits of America. I have no faith whatever in the remedy proposed by mere education of the masses, in the building and equipment of large libraries, in the emphasis laid upon great colleges and universities if these things are in any way whatever divorced from the most profoundly elemental religious conceptions of righteousness. It will be simply a reproduction of the culture of paganism with the twentieth centnry gilding. What this country needs is a religious conviction of righteousness which is fundamental in the life, has its beginning with the child and grows up in him the very fiber and warp and woof of his entire being. The ministry can shape this life as no other power in the world can do it. It rests with the ministry, then, to see the vision of this opportunity and act upon it with enthusiasm and faith.

Topeka, Kansas.

Literature

Sainte-Beuve

Miss Wormeley's version* of Sainte-Beuve's essays on the seventeenth century is little likely to sustain the reputation she won by her translation of Balzac. If the latter was not always exactly like, it was often fully as good and occasionally even better than the original. She had somehow or other caught his general spirit, if not his precise tone, and had, so some thought, improved upon it. But in the case of Sainte-Beuve she is far less happy, either in answering his mind or following the sinuosities of his expression, while the liberties she has allowed herself in adapting, retrenching and combining his articles are often more like patchwork than editing. And yet her efforts may serve—and very opportunely now at the time of his centenary, December 23d—toward introducing him to that circle of readers who are obliged or prefer to depend upon translation for their knowledge of French literature.

Reduced Illustration from Sainte-Beuve's "Portraits of the Seventeenth Century." Putnam

The main aim of Saint-Beuve's criticism is neither judgment nor explanation in the present sense. It is simply comprehension. He is indisposed either to praise or blame. He is merely curious; he wants to know. And when he has analyzed his subject and exhibited its leading traits by quotation and commentary, he considers that his task has been accomplished. To all intents and purposes an author and his book are for him identical. Writing is only one among the many activities of life, only one of a thousand means of expression. The real matter of interest after all is the man behind it. The book is, indeed, a creation, and as such a revelation of its maker. In short, as far as it goes, the work is the man. It makes very little difference whether that work is a "by-product," a mere opuscule, a memoir, a set of letters, a monograph, a political pamphlet, a what not or a masterpiece of literary genius; it is uniformly interesting, if only the personality behind it be interesting, as an index of character. So literature becomes a branch of morals and criticism a characterization. And Sainte-Beuve's work is at bottom biographical; it deals with historical fully as much as with literary personages.

And yet his criticism involves both an explanation and a judgment, at least an estimate, tho it seldom or never pronounces one. Sainte-Beuve was very shy of caging up the fluid outlines of facts within the inflexible limits of a general statement. There is about him a sort of mental coyness, something similar to that of Renan, without the latter's intellectual coquetry. For Sainte-Beuve was neither skeptical nor indifferent; he had no love for the equivocal or the indeterminate, for twilight or eclipse. It was only that he despaired with a few formulæ to bound the Protean variety of truth. He preferred to confine himself with undulatory descriptive phrases to the particular aspect immediately under his eyes. But inasmuch as he undertook to attribute the book to its author, he did in so far account for it; while by the very circumstance of setting out its intimate character it was impossible to avoid such a grouping and accentuation

* Portraits of the Seventeenth Century. *By C. A. Sainte-Beuve. Translated by Katherine P. Wormeley.* New York: G. P. Putnam's Sons. Two volumes.

of particulars as would carry a suggestion of approval or the contrary. In this way he is not merely the great showman of celebrities, as he has sometimes been called, but also a censor, tho not always an infallible or even an impartial one, of morals.

It is evident that the success of such a criticism as this must depend almost entirely upon the subtility of the critic's analysis and the pliancy of his expression. As a method it is itself the denial of all method, of formulæ and equations and definitions. It is solely an affair of shading, and consists in the ability to appreciate and reproduce the most delicate gradations, the most elusive interplay of light and shadow; while as it creeps on from subject to subject and from period to period it implies nothing less for its perfection than absolute universality of mind and sympathy on the part of its wielder. And this is its weakness exactly. Sainte-Beuve's genius was by no means universal; it is much more sensitive on some sides than on others. His subjects are not always of first-rate interest or importance; he is not without his prejudices and limitations, as his criticism of his contemporaries shows; his phrase is not always free and unhindered. But, on the whole, his spirit is so versatile, his tongue so nimble—his language, thought and subject are so thoroughly interfused—that his transference into another medium does present very unusual and peculiar difficulties.

Books on China

*A Yankee on the Yangtze** might be called On the Missionary Trail Through Central China. The author is a clever American, with a good sense of humor, excellent descriptive power and a keen appreciation of the picturesque elements of daily life. With commendable wisdom he begins his narrative proper with the gorges at Ichang, the journey between Shanghai and this city, tho of great interest, having been described by at least a hundred preceding travelers. His book covers the route from Ichang to Bhamo in upper Burma. This route may be called the great road through which evangelical forces have moved in the past twenty-five years. Prior to that period the districts were practically inaccessible, but the development of steam navigation on the upper Yangtze and the Irrawaddy, the building of roads and railways in Burma and the establishment of foreign consulates in Yunnan and Szechuen have made this part of the world easy of access to those who enjoy

* A YANKEE ON THE YANGTZE. *A Narrative of a Journey from Shanghai Through the Central Kingdom to Burma. By William Edgar Geil.* New York: A. C. Armstrong & Son.

Plowing the Rice Fields with the Water Buffalo. From "A Yankee on the Yangtze." Armstrong, New York.

travel under primitive conditions. The country is of especial interest, as it has been less affected by the Occident than any other part of the Middle Kingdom. It contains a mixture of many races and the remnants of old civilizations and religions. Mr. Geil has taken good advantage of this wealth of material and presented it in delightful form. His interesting narrative is enriched with over a hundred praiseworthy photographs.

It is a long leap from Mr. Geil to Dr. Brown.† The former deals with individuals, places and concrete facts. The latter treats of generalizations and tendencies. His book, *New Forces in Old China,* may be put in the same class with Dean Smith's "Chinese Characteristics," a work which is already regarded as a classic by all sinologists. His analysis of the social activities of the empire is notably excellent. He is one of the first of living writers on the subject to give full credit to the force of economic and commercial factors. Few of the many authors have even touched upon this theme, or, where they have mentioned it, have done so in a careless manner, as if it were scarce worthy of their consideration. A single example will show their carelessness as well as the broad vision of Dr. Brown. Prior to the opening of the treaty ports there was an immense coostwise and river commerce carried on by the Chinese. It supported a fleet of several hundred thousand boats, ranging from sanpans to seagoing junks, and employed a million men, representing at least five million human beings. To-day more than one half of that commerce is conducted by coasting and river steamers, not to speak of steam launches and small steamboats. Nearly all of this steam tonnage is owned by foreign capital and pays a handsome dividend upon the investment. This change has thrown a vast multitude out of employment and destroyed an investment representing millions of dollars. The so-called anti-missionary feeling in many districts might with far greater truth be called an anti-foreign-steam-traffic feeling. Dr. Brown calls attention to another fact known to every European who has ever lived in the Flowery Kingdom—namely, that the cutting of a railway line creates more opposition and stirs up more prejudice and passion than the presence of a hundred missionaries. The author notes the vast change which will result from the construction of the railways, and gives a complete statement of construction up to date. As these steel roads will destroy the livelihood of an army of porters, inn-keepers and warehousemen, disturbances may be expected in every district which the railways penetrate. Dr. Brown's volume is filled with interesting points similar to those cited and should be read by all who have political, commercial or financial relations with the Far East.

Lady Townley's contribution, *My Chinese Note Book,*‡ is very well named. It is a note book of a lady visiting China who has jotted down everything that she has heard or read which interested her and which she has put into book form for the benefit of her friends. The first part of the volume, more than half, is devoted to the history of China, its religions, classics and government. This condensation deserves praise for the courage of the undertaking. The subjects, treated as they deserve, would fill fifty quarto volumes. To condense them, therefore, into one hundred and sixty odd pages is almost as prodigious a feat as that of the American globe trotter who saw all Paris in eighteen hours! The latter half of the book describes the personal experiences of the author, more especially those relating to Chinese social and court life, and is bright and entertaining. The book has some admirable illustrations and about the worst map that has appeared in several years.

In *Chinese Made Easy*§ Messrs. Brouner and Fung have produced the best handbook for learning Cantonese that has yet appeared. It is a marked improvement upon "Cantonese Made Easy," published in the eighties by Kelley and Walsh, of Canton and Shanghai. The system employed is as simple as the Robertsonian method, and the arrangement leads a scholar to a familiarity with the colloquial rather than the formal

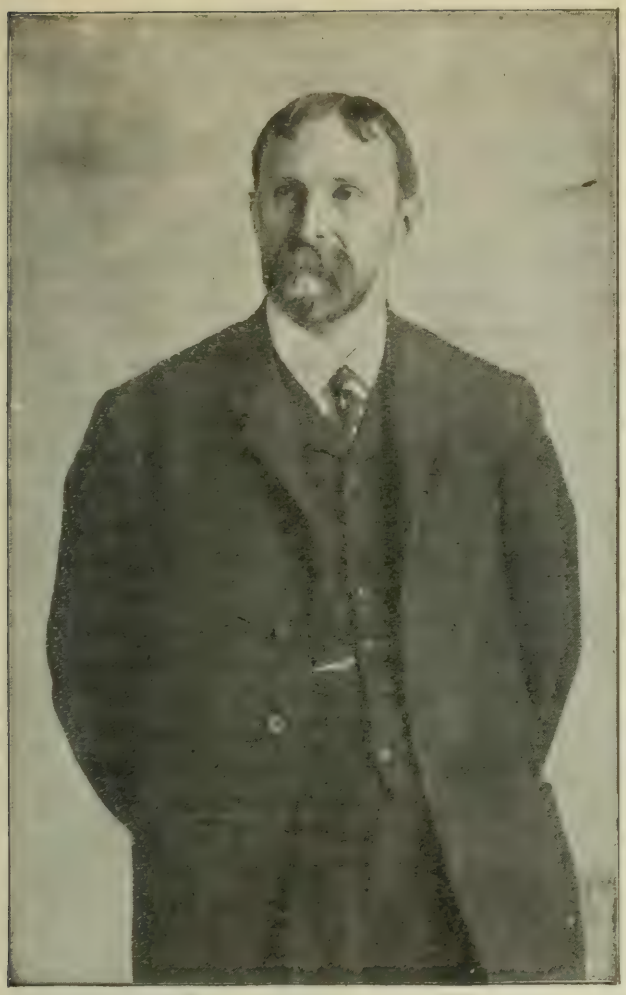
speech of Canton. Most works on the subject take the opposite course, so that the student, at the end of a year, can appreciate literary work and yet have no knowledge of the spoken speech. The reproduction of the Sam Chee Kun, or classic Chinese primer, is to be commended. It bears the same relation to China that the spelling book and first reader do to America. The Chinese characters are beautifully written, being so clear and distinct as to give no difficulty to the student. This applies with particular force to the one thousand words which have been selected for practical exercises. Each character is printed in large and small type, enabling the reader to see the curious differences that exist between the two, differences as great as those which obtain between the capitals and small letters of our own alphabet.



The American Nation*

THERE has long been a need for a complete history of the United States by associated historical scholars whose work is harmonized by an editor who has a recognized standing as a historian. Moreover, in such a history the work must be done by the scholars, and they must not merely sell their names to be placed in an honorable position in the early pages of a work really done by hack-writers, graduate students, forced by poverty to write for a penny a line. Further, the work must be done by the recognized authorities in the particular period to be treated. The fields of special study have necessarily been gradually narrowed, until it is no longer possible for one man to be the master of the whole field of American history. Truth is not learned by a bird's-eye view, but through the closest research, followed by long consideration, until the many details fall into their proper relation to the organic whole. To get this accurate view in the parts it seems to be necessary to sacrifice the unified view, which a single writer might attain, tho at a sacrifice of truth in detail. This difficulty has been partially met in *The American Nation* series, first by the unifying plan of the editor, and, secondly, by the fact that most of the writers are not only specialists on a given field, but are teachers of the whole subject of American history, and thus are compelled, often yearly, to take a survey of the whole field. Thus they reach a better appreciation of the importance and meaning of their specialty in its relation to the whole subject.

But all this effort to get the truth, both in large and in detail, might have resulted in a very dry and unreadable work, having no value except for the student. Altho the volumes are irregular in that regard, we must agree that the editor has in the main secured work that stands the double test of accuracy and of readableness. As he hopes, the history "loses nothing in dramatic interest because it is true or because it is truly told." We are interested not only by the style, but by the range of subjects treated —the social life, schools, religion, literature; the economic life, the work of the people and their labor and capital organizations, and, finally, war and diplomacy—all running well on the thread of political and constitutional history. Nor are the great personalities neglected, and some of America's greatest heroes are more fairly delineated here than in any other place that we know—notably, Henry the Navigator, Columbus, Governor Andros and Nathaniel Bacon.

It would be quite impossible within the limits of this review to mark the notable features of each of the five volumes, but the real contributions at least may be noted. Professor Cheyney's volume is in many respects a wholly new chapter in American history. Since America has, in fact, been merely a new land whither Europeans have come, with all their social and economic and political traditions, to work out their destiny in a new environment, it is very essential that we know at the start what European civilization was at the time that Spaniards and Frenchmen and Englishmen began coming to America. This we are told in a series of truly fascinating chapters

ALBERT BUSHNELL HART, LL.D.

upon (1) medieval commerce with the "Golden East," (2) the effect of the Turkish conquests upon the trade routes, (3) the pre-eminence of the Italians in geographical science and navigation, and (4) the dramatic story of Portuguese ventures on the African coast. Then the Governments of Spain and France and Holland are described, and there is a most attractive chapter upon the growth of the great commercial companies, which were to do so much of the early work of colonization. Then the spirit and importance of the Reformation are shown in its effect upon colonization. Because the English institutions became dominant in America, several chapters are devoted to describing the conditions in England when the future American left it. Finally, that we may better understand the sort of government, both local and provincial, which was set up in the colonies, Professor Cheyney has given us a scholarly account of the English Government, both central and local.

As Professor Cheyney's volume prepares us to understand the man who came to America, so Professor Farrand's book pictures the environment, both physical and human, into which the European interloper came. Not merely the physiography of North America is discussed, but those peculiar conditions are pointed out which most determined the paths which men would take—the waterways, portages, trails and passes. There is a survey of the natural agricultural products and animal life which have turned and driven men this way and that because of their economic necessities. Finally, Professor Farrand turns to that subject which has been his life's study. An immense amount of scientific study of the American Indian is condensed in some 200 pages, dealing with the distribution, character and religion. The subject which everybody knows we find nobody knows rightly, for many supposed traits of the Indian vanish before scientific investigation.

The third volume, by Professor Bourne, is one to the publication of which students of American history have long looked forward. In this field the author is without a rival in this country. Expectation is fully realized, for not only is the scholarship of a high order, but the book is more attractively written than any previous contribution that Professor Bourne has made. The story, stripped of the many fictions that have long clung to it, moves with a truly dramatic interest. Controverted points are clearly set forth without tedious argument, but with original conclusions. The mythical voyages of Sebastian Cabot are disposed of with scholarly acumen. The summary (p. 103) of the respective merits of Columbus, John and Sebastian Cabot and Amerigo Vespucci is masterly. The latter is beyond doubt cleared of complicity in having his name given to the New World. The chapters which treat of the Spanish system of colonization are a real revelation of the extent to which Spanish culture prevailed in her colonies. The editor points out the importance of this study in Spanish culture, because today larger areas in America are dominated by Latin civilization than by Anglo-Saxon. Moreover, as the author states, more than one-half of the pres-

ent territory of the United States has at one time or another been under Spanish dominion.

President Tyler's volume is not characterized by so keen a scent for the essentials of his subject as the other authors have shown. Tho his work is based upon the sources, he has not seen so deeply into their meaning, but has rather taken their curious phraseology and attractive stories. Tales of Raleigh's gallantry and John Smith's doubtful and insignificant adventures occupy, with many others of their kind, too much space, which should have been devoted to the more serious question of the institutions which were then taking root. There is no new meaning given to the old facts in this fresh interpretation, which is the result of deep and thoughtful scholarship. The old story is told, however, with accuracy and no little attractiveness, and that virtue in itself makes the volume no unworthy member of the series.

Professor Andrews's book is a work showing the most careful and thorough research. Some of the most vexing problems of that period of colonial history are here adequately dealt with for the first time. The navigation acts are studied as they have never been before, and the administration of colonial affairs by the English council is given full exposition, which the subject has long needed. Puzzling questions concerning the early New England charters are made clear, and the conquest of New York from the Dutch is robbed of some perplexing problems. In fact, upon almost every subject that he has touched Professor Andrews has given us new light, which he has gotten from the foreign archives as well as from the published colonial records.

On the whole, if the series continues to be of the same high grade as these first volumes, the complete work will be an object of pride to American scholars. The volumes invite the reader both by their contents and make-up. The size is convenient, the binding attractive, and the maps of such a character as to be really helpful, not merely ornamental. Moreover, they have the right titles under them.

A Belle of the Fifties. Memoirs of Mrs. Clay of Alabama. Edited by Ada Sterling. New York: Doubleday, Page & Co. $2.75.

These memoirs of Mrs. Clay cover social and political life in Washington and the South from 1853 to 1866, and they cover them with the eyes of brilliant Southern society women of that period, which is enough to recommend the book highly; but after all the harrowing fiction we have read of this same period it is delightful to find a *pleasant*, veracious book dealing with it not so much from the partisan, or even the moral, point of view, but personally, and with the charm which lies in a cheerful, spirited character. To be sure, tragedy intrudes, grief, poverty and awful distress are included among her memoirs, but she does not harp on these. She passes with that bright gift women have for noting amusing or pretty trivialities from one grave situation to another. One feels that she has in a sense preserved the "belle's" view of things. And such witty, innocent, engaging view it is! So much that is unpleasant, hideous and deforming has been written of the South during this period that we particularly recommend this book to our Northern readers as being not devoid of prejudice, but as shedding a gentle and kindly effulgence upon a situation which seems really to grow darker as time passes. The book is illustrated with real portraits of many distinguished people.

Susan Clegg and Her Friend Mrs. Lathrop. By Anne Warner. Boston: Little, Brown & Co. $1.00.

It is a great relief to the reader to have Mrs. Warner state succinctly in her brief preface that "Miss Clegg and Her Friend Mrs. Lathrop are wholly imaginary." We shall not have any such distressing and disillusionizing revelations as those of "Mrs. Wiggs's" prototype to fear. Yet the two fictitious heroines of the book are lifelike in their proportions and proclivities. The woman who can talk fluently for hours and the woman who loves to listen are always foreordained friends. Mrs. Lathrop rarely gets beyond two words in her contributions to the very lop-sided conversations between the intimates. "It

is a curious thing," continued Susan, "it's a mighty curious thing, how many folks is give to likin' to hear themselves talk." After a breathless monolog of many pages she cannot understand it—neither can we.

Alfred Tennyson. By Arthur Christopher Benson. New York: E. P. Dutton & Co. $1.00.

Mr. Benson's volume, which forms one of the "Little Biographies," is intended, perhaps, more as a summary than as a contribution to the knowledge and criticism of the poet. As such it answers its purpose admirably. It contains an entertaining anecdotal sketch of Tennyson's life, occupying about one-third of the total number of pages, and followed by a short characterization of the man, a discussion of his thought, "philosophy," and what not, and a general review of his work. This distribution of matter, which may at first sight seem a little awkward, inasmuch as it leads to constant postponement and reference, has the advantage at least of being systematic. The life and character include a good many of the best of the Tennyson *ana*, and the discussions and reviews afford a very good view of critical opinion; so that the volume may be safely recommended to those who wish to get a fair idea of the subject in brief compass.

Literary Notes

Some weeks ago we criticised Miss Hallie Erminie Rives for comparing rain clouds to white horses' tails. Since then we have received a letter informing us that rain clouds do sometimes look like white horses' tails, and are so called by fishermen. We are not able, however, to credit Miss Rives with the use of this striking and, as it now appears, truthful simile, for she herself calls our attention to the fact that in her novel the phrase is used to refer to "Wengen torrents," not clouds.

....Henry Altemus Company, of Philadelphia, publish a neat little illustrated list of books selected for the Christmas season.

...."Pocket editions" of books usually require an overcoat of the largest size to carry them in, but those in Putnam's "Vest Pocket Series" are true to name, and also can be guaranteed not to spoil the fit of a coat. They are neatly bound in red leather at 60 cents, and include such favorite poems as the Rubáiyát, Sonnets from the Portuguese, Locksley Hall, Tam O'Shanter, etc.

Pebbles

Tired Mother (to restless child): "Now you set still! I've druv you ten miles to enjoy this entertainment, and you shall enjoy it if I have to pull every hair out of your head!"—*Life.*

....The New York *Times* recently indulged in some gentle raillery at the poor literary taste of John D. Rockefeller, who had expressed his admiration for the "beautiful little lines" beginning: "There is so much bad in the best of us." "Our own regard for poetry of that sort," said the *Times,* "is not especially high." It now turns out that the lines were written by a man named Robert Louis Stevenson.—*Literary Digest.*

....The *Literary Digest* spells Admiral Rojestvensky's name "Rozhdestvensky." This makes the North Sea incident even more serious than at first thought—*The Pathfinder, Washington.*

....The election of Shoemaker Douglas to be chief executive of Massachusetts seems to verify the prophecy that the last shall be first. —*The Kansas City Star.*

....*Mr. Newed:* "The cat stole some of the meat?" *Mrs. Newed:* "Yes; I think it was some of the purloin."—*Town and Country.*

....James Carley has been arrested at Council Bluffs, Iowa, charged with stealing the rails and ties from several miles of railroad. As he could not show that he was incorporated under the laws of New Jersey, he was thrown into jail.—*Washington Post.*

....The following notice was posted up recently in an art exhibition in Tokio, Japan: "No visitor who is mad or intoxicated is allowed to enter in; if any person found in shall be claimed to retire. No visitor is allowed to carry in with himself any parcel, umbrella, stick, and the like kind, except his purse, and is strictly forbidden to take within himself dog, or the same kind of beasts. Visitor is requested to take care of himself from thievely."—*New York Tribune.*

....What do you think is a funny story? A St. Paul girl laughed so hard she dislocated her jaw, and this is the story that made her laugh: A man was shaving and cut off the end of his nose. He dropped the razor, and cut off the end of a big toe. Grabbing them up, he ran to a doctor, who accidentally transposed them. Now the man has to trim a toe nail at the end of his nose, and take off his shoe to sneeze. Would you dislocate your jaw laughing at that? —*Atchison Globe.*

Editorials

Mr. Lawson and Others

In the charges and assertions of Mr. Thomas W. Lawson there is a curious mixture of truth, exaggeration and misrepresentation. Some of them relate to transactions as to the real character of which it is practically impossible to obtain proof beyond his own statements and the brief denials of a few of the other interested persons. It is extremely difficult, therefore, to give a just weight to such of his assertions as are not corroborated by evidence more or less satisfactory. But it is not difficult to see that a host of people are inclined now to believe the greater part of his story.

From the beginning a certain plausibility was imparted even to his most sensational charges by settled public opinion as to certain men whom he attacked, by the history of the Amalgamated Copper Company, by the connection of prominent financiers with that corporation, and by official disclosures in the case of the Shipyard Trust. We have in mind now not that part of the public which is ready to believe any charge against "Wall Street" and "the Trusts," but persons tolerably familiar with the recent course of corporation finance and able to measure Mr. Lawson's admissions as to his own acts.

This plausibility has been enhanced by the failure of powerful accused men to prosecute Mr. Lawson (a millionaire) for assertions that, if false, are clearly libelous; also by recent corroborative testimony as to the Bay State Gas receivership and the sale of about $22,000,000 worth of Amalgamated shares on the Stock Exchange.

It no longer suffices with intelligent critics to meet Mr. Lawson's charges by asserting that he is a liar or that he is merely a sensational agitator who deserves to be ignored. We would not be understood as expressing a conviction that all his charges are true. Some of them we believe to be highly unjust and absolutely unwarranted. But he is now exerting an influence which the great financial institutions he has attacked cannot afford to overlook. It is the duty of some of them to correct public opinion so far as it has been led astray by Mr. Lawson's virtually unanswered assaults upon their methods and purposes.

Obviously, we cannot take up here in detail all the assertions in a hundred magazine pages of denunciation and attack. Much of what he says relates to financial jugglery and finesse in affairs of minor importance, so far as the American public is concerned, except for the intimate connection with them of great capitalists who are associated with the management of financial and fiduciary institutions of national and even international scope. As a broker and promoter of rare ability and engaging personality (being likewise a speculator) undoubtedly he was employed in many of the transactions of which he speaks. The public is concerned not so much with what he did as with the men who used him and both directed and approved his acts.

Without considering all the interesting questions suggested by his confessions and the testimony that tends to confirm some of them, we may say that one of much importance is this: Are the Stock Exchange and our most eminent institutions of finance involved, and if they are, how and to what extent? We are not dealing now with absurd and sensational assaults upon the greatest of the world's life insurance companies, based upon the fact that these companies have been concerned in the creation and support of subsidiary banking and trust corporations needed for the orderly and safe management of their enormous financial interests, but with certain great operations on the Exchange, with the making and the promotion of the Amalgamated Copper Company and with the intimate relation to that company throughout its history, and to some other undertakings discussed by Mr. Lawson, of men concerned influentially in the management of the greatest corporations in the United States.

What is meant by manipulation and

"wash sales" on the Exchange? A conservative journal, the New York *Evening Post,* answering an inquiry, a few days ago, as to the comparative amounts of sales in New York and London, said:

"The probability is that genuine and *bona-fide* buying and selling is larger on the London Stock Exchange than at New York; but that the enormous amount of 'wash sales,' 'matched orders' and other virtually fictitious transactions bring New York's highest daily total far above what London achieves."

To make "wash sales" is against the rules. An expert operator says in a published letter, corroborating Mr. Lawson's assertion, that he consented to sell for the account of the President of the Amalgamated Company $22,000,000 of the company's stock, at prices ranging from 90 to 96, beginning when "a nominal quotation of 90, with a few fragmentary transactions, represented all the market there was for it." A market appears to have been made, and an inspection of the stock record shows that millions of shares changed hands within the range mentioned and during the rise that immediately followed. The public is not inclined to buy until a stock becomes active, with advancing prices. Sometimes it regrets the purchases made under such conditions. We shall not attempt to analyze this successful distribution of Amalgamated shares, or other memorable and profitable distributions within the last few years. It is a peculiarity of some large movements on the Exchange that it is practically impossible to obtain proof as to the origin and character of them. Owing to the train of losses and suicides attached to Amalgamated, the operator's letter has been read with deep interest throughout the land. Is it strange that some have thought they saw in it evidence of "manipulation"? Do the authorities of the Stock Exchange always frown upon great manipulative movements of distribution, and strive earnestly to enforce the rules?

This operator's letter tends to confirm Mr. Lawson's assertions as to the purchase of the constituent parts of the Amalgamated combination and the capitalization of them at an advance of nearly 100 per cent., followed by sales of shares to the public that yielded an enormous profit. It tends to confirm in public opinion all that he has said about other transactions, whether it be true or false. It does not commend the Stock Exchange to the American people as a mart where the rules of fair play are closely observed. Thus the Exchange, altho not wholly without fault, suffers unjustly in public estimation. As it is a great and useful institution, this is unfortunate, and deserves the thoughtful consideration of the Exchange authorities.

And if it be known that the officers and controlling directors of the Amalgamated Company, responsible for its failure to make reports and for all that has taken place in the history of its management (whether the accepted record be that of Mr. Lawson or that which is furnished by available facts, testimony, or the experience of investors) are among the managers of scores of our leading banks, life insurance companies, railroad companies and other corporations, then it should be manifest that the influence of Mr. Lawson's articles in shaping public sentiment may be something to be deplored. It is this apparent association of what we know to be sound and good with what so many people now believe to be tricky and inequitable that gives to Mr. Lawson's assertions, throughout the country, a mischievous force and a weight that is far beyond their merits.

Elihu Root on the Monroe Doctrine

EX-SECRETARY ROOT'S address last week on the Corollary of the Monroe Doctrine has been echoed around the world, and has been taken either as a threatening or a hopeful utterance, but at any rate as an authoritative utterance, of developing American policy. Whether they like it or not, the nations take it as an expression of American will to accept the corollary as well as the proposition proclaimed by President Monroe.

It was this development of the Monroe Doctrine into its latest corollary of which Mr. Root spoke. The Doctrine of Monroe declares that no European Power shall plant a colony in America; nor shall it control the destiny of any American nation, nor extend its governmental system to this Continent. In 1845 President Polk emphasized the conclusion that we

should not consent that any European colony or dominion should be planted or established on this Continent. This doctrine in this positive form has now become so well established that it is no longer open to question.

Any trouble will not then come by open attack, but indirectly. When an American Government, as Santo Domingo or Venezuela, does an injury to a European Power or its citizens, and fails to make reparation, that European Power is justified in using force, as Great Britain and Germany lately did in Venezuela. It may have to take possession of one or more ports and seize the customs. The result may be tantamount to seizing the country and controlling its government, and so a real violation of the Monroe Doctrine. It may be the just rights of the foreign Powers that are thus in conflict with our self-protective policy of protecting other American nations. We have no business to protect them in injustice, and thus to do wrong to European nations.

The corollary is clear. If we will not allow transatlantic nations to become masters of recalcitrant American nations we must, in such circumstances, be responsible for their behavior; we must see to it that their obligations are paid; we must collect the debts ourselves; where force is necessary we must use it; we must control, if control is necessary; we must be the policeman; we must wield the "big stick"; there is no other alternative. Already we are understanding the obligation as well as the advantage of the Monroe Doctrine. The President has in his last Message accepted it in principle, and now his late Secretary of War has fully expounded it.

Mr. Root states the corollary exactly. He says, in substance, The right of a weaker American nation to be protected is held upon the condition that it performs its own sovereign duties. It must obey the rules of international law. The Central and South American States are not to be relieved of their international obligations. We will not interfere to prevent European nations from enforcing their just demands, unless that redress leads to the occupation of territory; and knowing that sometimes such occupation of territory may be necessary for redress, we will ourselves take that territory and secure the redress. Thus Mr. Root puts it with all distinctness:

"If we are to maintain this Doctrine, which is vital to our national life and safety, at the same time when we say to the other Powers of the world, 'You shall not push your remedies for wrong against these republics to the point of occupying their territory,' we are bound to say that 'whenever the wrong cannot be otherwise redressed, we ourselves will see that it is redressed.'"

This is a statement of great consequence; yet it has not the tremendous and dangerous scope of ex-Secretary Olney's letter at the time of the Venezuela boundary question in 1895, when he said:

"To-day the United States is practically sovereign on this Continent; and its fiat is law upon the subject to which it lends its interposition."

That statement is quite too general. It is only justified with the limitation that the subject is one that involves not only our right of protection, but also our right to see that the protection can be justly claimed. We do not claim such full sovereignty; we will only interfere to do what otherwise the great Powers would be compelled to do. We must not do injustice to these weaker nations of America for our advantage; neither can we allow them to do injustice to the great Powers, depending on our protection. We must see to it that they, too, are just.

Now, this is not a mere academic statement of a principle that is lying asleep. It is a corollary that stares us in the face. It is only a very few years ago that we saw the fleets of Great Britain and Germany threatening the seizure and occupation of Venezuelan ports for years, if we had not intervened and in Venezuela's behalf secured a decision by The Hague Tribunal which required Venezuela to pay certain just claims due to a number of Powers. These Powers are now telling us that Venezuela is failing to pay the award; she carefully avoids doing the justice exacted by the Court of The Hague. We do not speak of our own serious claims on Venezuela, the redress for which may be simpler in theory, and which we might delay; but we must consider the demands presented through us

upon Venezuela by other Powers. If we find the facts to be as stated, we must take the responsibility as the alternative to their taking it, and with less injury to the sovereignty of the peccant nation. The case may be very close upon us. And a similar case is presented in Santo Domingo, where European Powers equally call upon us to perform the obligations that are the corollary of the Doctrine which we have proclaimed ever since the days when John Quincy Adams was Secretary of State.

This is a "big stick," we admit it, but it is wielded more gently than the other big sticks which would be handled by less tender hands if we did not hold and use ours. It is better for Venezuela that we should enforce just demands than that Germany or France should, or even Great Britain, as well as better for us. To avoid assuming the police duty would be no favor to these states south of us; it would be a real injury to them. Our action in behalf of European claims upon them tends to reduce those claims, and also to protect their territory. We are serving them, tho they may not see it, even more than we are serving ourselves. Venezuela is angry now, but she will in the end have further reason to thank us that we have learned the whole meaning of the Monroe Doctrine.

Mind-Cleaning Time

HOUSECLEANING time, when every article of furniture from cellar to garret is handled and dusted, occurs traditionally each spring. An annual purification of the spiritual nature, when we overhaul and furbish up our morals, is set by liturgical churches in Lent and by other churches with similar regularity in the revival season following the Week of Prayer. The systematic cleansing of our bodies is placed on the calendar as a regular order of business at diurnal or at least hebdomadal intervals. But there is no set period for intellectual purification, and, naturally enough in the stress of daily work, this is neglected.

Yet it is quite as important to keep our minds in good condition as our houses, our consciences or our bodies. Error is as contagious as disease. A false belief may make more trouble in the world than a wrong intention. No priest or church has ever exaggerated the importance of a right creed. The only faults of the heresy hunters are in their definition of orthodoxy and the methods they adopt for securing it. A little lying is a dangerous thing, especially if you lie to yourself. Cherish no illusions; they are liable to change into delusions. Have no blind spots in your eye that you can remove.

Now, at the beginning of the new year, it is a good time to overhaul your brain from the frontal lobe to the cerebellum. Review your axioms, revise your postulates, and reconsider the unexpressed minor premises of your habitual forms of logic. All your reasoning, however correct; all yourknowledge,however great, may be vitiated by some fundamental fallacy, carelessly adopted and uncritically retained. Get a lamp and peer into all the dark corners of your mind. No doubt you keep the halls and reception rooms that are exposed in conversation to your friends in fairly decent and creditable order. But how would you like to let them look into your cerebral garret and subliminal cellar, where the toys of childhood and the prejudices you inherited from your ancestors mold and rot?

Hunt out and destroy with great care every old rag of superstition, for these are liable at any time to start that spontaneous combustion of ideas we call fanaticism, against which there is no insurance. The bigger the brain the more dangerous such things are, for they have the more fuel. A little decaying superstition in the mind of a great man has been known to conflagrate a nation.

Errors breed errors. They multiply like microbes, especially through neglect. A single false belief may infect all the sound facts you pile in on top of it. Better an empty room than a rubbish heap. In the words of our American philosopher, Josh Billings, "it is better not to know so many things than to know so many things that are not so."

It may not take so much time for the annual inventory of your ideas as you may think, but in any case it is worth doing. Take down each principle and fundamental theorem from the shelves,

valuate it and see that it is in sound condition, not wormeaten or moth bitten or rusty or out of date. One can never know when he is going to need one of his ideas, but when he does it must be in serviceable condition. Very few of us have so wide a range of intellectual activity that all our ideas are kept bright from frequent use. We have to go around and polish them up occasionally. Don't hesitate to send your antiquated mental machinery to the scrap heap and to put in new. The mind is a thought factory, not a museum of antiquities.

Go systematically through your intellectual equipment and see wherein it is deficient. Add annuals to your mental cyclopedia. Pick up each one of the sciences where you left off at school and bring it down to date. Look over the fields of art and literature to see what you have missed or misconceived. Don't let your sociology get too far behind the age. See that your philosophy and psychology bear the same date as the calendar. Examine your religious creed in the light of modern knowledge to see if it needs revision. Take down the atlas and consider how long it has been since you heard from each country. Visit the planets in turn. Take another view of ancient history through the telescope provided by modern scholarship.

This inspection of one's stock of ideas is necessary because they do not keep as if they were in cold storage. They do not remain unchanged when stored away and neglected. There is a lot of thinking going on in our brains that we do not know anything about. Ideas are apt to sprout or spoil, like potatoes in a cellar. Facts will ferment from yeasty thoughts until they intoxicate the brain. Falsehoods generate ptomaines, poisoning the mind and producing inexplicable disease and death. You cannot be too careful. Clean out your mind at least once a year.

Another Hague Conference

Our Government has done all it could do in taking the preliminary step toward securing a second meeting of The Hague Conference. Secretary Hay has asked the Powers to consider whether they will join in another meeting, and practically all have assented, except Russia, which suggests that the meeting be delayed until after the end of the present war. Japan consents, on condition that the conclusions do not affect the present war, and it is hoped that Russia will assent on the same terms.

The remaining details belong to the permanent administrative council at The Hague. The President properly feels that he has gone as far as is proper for him to go, when he has assured the meeting. Other older Powers may think that our young nation is quite forward enough, and should not also assume the initiative in drawing up the program for the Conference. There is an international bureau at The Hague under the control of the permanent administrative council, and they should carry on the correspondence as to the program, and can do it with no assumption that might provoke jealousy. This will take time; and we hope that when it is finished the war will have come to an end. A multitude of new questions have arisen in this war that need settlement, especially as to the duties of neutrals in giving shelter or aid to the combatants, and as to the rights of neutrals to trade with the nations at war, not to speak of the opportunity for drawing up treaties of arbitration.

It is reported that the Pope has appointed a delegation to visit the Emperor William and try to induce him to support the claim of the Vatican to participate in the coming Hague Conference. It was regarded as a slight to the Pope that he was not allowed to take part in the previous Conference; but it would be difficult to substantiate any claim. The Pope has only spiritual weapons; he has no army and no navy, no territorial jurisdiction; he cannot make war, and should have no part in the rules of war. He can make no treaties of peace. He lives in Italy, and Italy is represented by its King. It would be as if the Sheikh ul-Islam of all Mohammedanism, who lives in Constantinople, should demand to have place at the Conference beside the Sultan. Of course Italy would again object, for the Pope's only right of rep-

resentation rests on his claim of territorial jurisdiction, which Italy denies; so that Italy would again be compelled to protest against his admission to the Conference.

A great meeting that second Conference will be. The first was tentative; this makes it a permanent institution; a federation of the nations for legislation as well as for judicial decisions. It will make laws for the world. Already it is a court for the nations. We do not expect that it will hastily develop into an executive power which will compel obedience to its laws and decisions, for that may not be needed for some time yet; but reckless of the good opinion of the world will be the nation that shall dare to disobey and make itself an outlaw and an enemy to all the world.

Liberty of Moral Experimentation

To the man who does not believe that with human nature as it is the absolute suppression of vice is possible, and who, therefore, cannot be a prohibitionist, the moral question of what experiments in control ought to be supported and what ought to be discountenanced is a peculiarly difficult one. Every bit of fresh and straightforward thinking on this subject is welcome, and many perplexed reformers will be grateful for the judicious discussion of "The Temperance Problem and the Subway Tavern," by Joseph Johnson, Jr., which appears in the January number of the *International Quarterly*.

To the argument that the Subway Tavern and all similar experiments are compromises, which, like the Missouri compromise with slavery, are bound to end in nothing, Mr. Johnson makes the sufficient reply that slaves were not held or sold in abolition States, but that whisky is sold and drunk in all prohibition States. In other words, there are moral issues upon which compromise is neither necessary nor helpful, and there are other moral issues upon which compromise, in the sense of doing what is possible instead of wasting effort upon the demonstratedly impossible, is the only course for practical men.

When, however, we have admitted that in the warfare upon vice our best measures will fail to achieve complete success, we have not by any means argued by implication that it is the duty of well behaved persons to enter into partnership with the vicious in order to control and reform them. Mr. Johnson urges that excess in the consumption of alcohol is attributable, in the main, to the profitableness of the liquor traffic, and he reminds us of the diminishing drunkenness under state sale systems like those of Sweden and Norway, countries that, within a generation, have been converted from the most intemperate to the most temperate in Europe. The Subway Tavern experiment, Mr. Johnson claims, is an effort by voluntary activity to eliminate the element of private profit from the liquor traffic, as effectually as it is eliminated by the Göthenberg system. Let all this be admitted. It does not follow that the non-prohibitionist is under any moral obligation to approve it, or even to approve a state sale system. It is enough if he stands for a certain liberty of moral experimentation.

Accordingly, it is not our purpose here to argue for or against the probable success of any specific plan for diminishing the evils incident to an excessive consumption of alcohol or for diminishing any kind of vice. We wish rather to make the point that, in a complex civilization, it is inevitable that intelligent and honest men should differ as to the right and the wrong, the wisdom or the foolishness of any given plan of moral government. It does not follow from the principle of moral relativity that any one ought to go into partnership with the vicious, if his conscience or his judgment balks at that step; but neither has he, under that principle, any right to condemn those who sincerely think the experiment worth trying. If we are to find solutions of the moral problems presented by our complex civilization, we must maintain the liberty of moral experimentation in all matters upon which the upright, the intelligent and the respectable differ in opinion. Some moral questions, like that of slavery, have been settled. Upon such experiment is closed; but no man of ordinary common sense will maintain that all the moral ques-

tions pertaining to the ways of warfare upon vice have been settled yet.

Within this wide sphere, then, of the issues upon which good men still differ, let us maintain the fullest liberty of moral experimentation. And that fullest liberty means not only freedom from legal restriction, but also freedom from those moral and social penalties which some persons, who are very sure that they are right and that all other men are wrong, are quite too adept in inflicting upon the moral experimenter. Thus let us not condemn utterly those who hope to advance temperance, whether their judgment and their experiments are in the line of the Subway Tavern, the high license system, local option or State prohibition. All these methods will have to pass the criterion of experiment before a conclusion is reached.

Christianity in Fiction

THE *British Weekly* deplores the "quiet atheism" which it thinks is evidenced in the year's fiction. And that is one view to take, of course, but there is another. It is merely the cant that is being left out. The sense of God is unusually strong. Novelists, like other people, are beginning to understand who supplies the conditions and the eternal order of things. And it is a good rather than a bad sign that our fictitious heroes and heroines are learning to stand alone without calling on Providence in every chapter to do for them what Providence does for every man when he is created mentally and physically normal. People are very slow to comprehend this in real life, and the authors of Sabbath school library novels never will understand it. The better literary artists among us portray the Christian ideal in one form or another. They are writers of man-scriptures, however, not of the finished ethics of Heaven; and in this business the best that can be done is to foreshadow those tendencies which are essentially religious, whether we call them the "social compunction" or by some other current term.

"The Common Lot," the best ethical novel of the year in this country, is an illustration of this fact. The author never once appeals to God as the *Deus ex machina,* but the story is really founded upon that interpretation of the beatitude "Blessed are the poor in spirit" found in Professor Briggs's new book, "The Ethical Teachings of Jesus:"

> "He had in mind . . . those who renounce all things for the sake of the Kingdom of God; not those who are poor by circumstance, but those who are voluntarily poor."

And while Herrick has been a little awkward about it, his purpose is to portray such a man in modern life. The young architect renounces his rank, his commercial instinct for wealth and his ambition to rise above the common lot in order that he may work with a quieter mind from the higher motive. It was not a question to pray over, since he was made able from the beginning to reach such a decision and to live up to it. Such books are Christian because they proclaim, dramatize, the principles upon which the Kingdom of Heaven is founded in a man's heart.

Commenting on Anthony Hope's book, "Double Harness," the *British Weekly* goes on to say that altho the characters pass through great tribulations, are guilty of many sins,

> "Christianity never came once into their minds. They never pray, they never think of God, they do not fear God, or love God, or repent before God."

Now, there is an illusion about some forms of sin as entrancing as the highest religious experience. The trouble is the illusion fails. In this book the characters are all involved in such a snare. The author intends to portray a phase of social madness from various points of view, and he does it with singular veracity. But toward the last, where the reaction sets in, where every lost soul among them finds herself in the pit of shame and grief, this conversation takes place between two sinners:

> "If what you say is true, you must pray for yourself sometimes. Pray for me, too, madame."
>
> "Yes, I'll pray for you the prayer I love best: 'Those things which for our unworthiness we dare not and for our blindness we cannot ask'—I will pray for these, for you and me."

A great artist never leaves God out

where He alone is adequate; therefore he can never be an atheist.

The difficulty now is that we have so abused the idea of God in a dramatic way, just as it has been abused in other ways, that there is at this time a profound and healthy revulsion against the exaggerated and sentimental use of it in fiction. But never before has this branch of literature showed more evidences of the practical Christian spirit of the age. A frankly atheistic novel would be revolting, at least on the ground that it would not appeal to the imagination far enough up. It is the artist in fiction, as elsewhere, who suggests the most of joy, harmony and rightness that is the most satisfying by the very law which governs the mind. And we may call the spirit of it what we please—socialism, agnosticism, even atheism—but whatever it is, that same thing is hurrying on Godward in fiction, as in every other expression of art and science, as it never hurried before. We should not make the mistake of supposing otherwise because the hero no longer stands in the dark corner of the church to watch the heroine on a prayer pillow further up the aisle. Really that young scamp was not nearly so Christian as the red-faced, smut-smeared labor agitator who occasionally leads a strike in one of our stories of the anthracite region. He was there to see the girl; and while the agitator may be wrong in his methods (experience will modify these), he has a keener sense of righteousness than the lady-seeker with all his gallant almsgiving to be seen of her, and it is the sense of righteousness which leads to God. We need never fear the spread of atheism in fiction nor anywhere else so long as we have that. We are far from the condition after the English Restoration or the French Revolution, when the people were ready to take the "not" out of the Commandments and put it in the Creed.

The Russian Reforms

An egg was asked, and the gift is a stone; we shall be glad if the fish does not turn out a serpent. The meeting of the zemstvos asked for a constitutional form of government, and the Czar, controlled by the reactionary council, declares that he cannot consent that he hand down to his son anything less than the absolute power which he has himself inherited. He declares that there must be "undeviating maintenance of the immutability of the fundamental laws of the Empire." That means, we take it, that the Czar can give no share in law making to representatives of the people. Every law, every reform, must be by the will of the Czar. The government by limited monarchy or by a republic secured in every other country in Europe is no example to him. He must rule and he only. To be sure he would be a benevolent despot, but a despot he must be. He does not object to "innovations in legislation," but they must be his, and not those of the people. Yet perhaps the people will soon begin to think that if he will not yield they may act. Most Magna Chartas have been secured against the will of kings. But when the Czar comes to enumerate the proposed reforms they are nothing more than proposals or inquiries that may only be methods of delay. Peasant life must be investigated; authorities must do their duty; local institutions, such as zemstvos, should be given wide scope "within legal limits;" the courts should be independent; State insurance of workmen is to be investigated, and exceptional laws should be applied only in times of exceptional danger. It is easy to see that this may mean nothing at all, or it may mean a little. Whatever it means it is not in the least degree liberty. A great chance has been lost, and we shall inevitably have more violence, more assassinations.

Football Rules

Now that the football season is over all the college coaches and athletic pundits are being interviewed as to how to make the game more open. At present the side that has possession of the ball has three chances to gain five yards. The theory upon which the teams seem to be trained is that the man with the ball must buck into the opposing line and then fall his full length ahead—that is, he must gain the necessary five yards in three falls of two yards each. It is found that this battering ram method is much more certain of results than a run around the end, for the runner with the ball can much more easily reach the guarded line in front of him than curve around the end

when his opponents can intercept him by going a shorter distance in a straight line. The theory of this mass play has been pointed out very clearly by Mr. J. W. Middlebrook, who writes:

"For something over fifteen years now the game has been developing along military lines rather than lines of sport. The modern theory is one of pure momentum and nothing else. Momentum is the product of weight multiplied by speed, *e. g.*, a player weighing 200 pounds moving at 10 feet per second represents a momentum of 2,000 at the point of impact. A combination of two, three, or four players of same weight and speed raises this figure to 4,000, 6,000, or 8,000. The theory is to concentrate this momentum upon a point whose powers of resistance must necessarily be less; in other words, the stronger to attack the weaker. The entire variation in the game is due merely to the attempt to find the weaker spot in the opposing line. Plays are directed repeatedly against one player for the express purpose of weakening him, and thereby creating a weaker spot, precisely as a breach is made in a wall by a sustained cannonade directed at a particular spot.

"My contention is that, while that principle is correct and proper enough for warfare, it is violative of the fundamental principle of sport, which is equal opportunity, opportunity for skill rather than brute weight. In fine, the game puts a premium on weight and has but slight regard for skill. This is illustrated by a comparison of the weights of the teams of fifteen years ago with those of to-day. During that time the average weight has increased nearly if not quite twenty pounds. This is a perfectly logical development, for the simple reason that of the two elements composing momentum, it is much easier to obtain increased weight than increased speed.

"Altogether aside from the question of the danger arising from the concentration of this mighty momentum upon one player, against whom the play happened to be directed, serious as that question is, it would seem that the present theory of the game is one opposed to true sportsmanship"

The most practicable remedy for Mr. Middlebrook's objection is to compel the side with the ball to gain ten yards instead of five, as Walter Camp suggests. Then the man's length two-yard gain would be of little avail, and as a result the momentum plays would be minimized. And, moreover, if a touch down counted only four, while a goal from a drop kick counted six, a premium would be put on the kicking game. If these remedies failed it might be well to allow the ball to be passed forward after a snap back, or even to permit the side that punted the ball to get it if possible, whether touched first by the other side or not.

Commissioner Leupp

We welcome the appointment of Mr. Leupp as Commissioner of Indian Affairs; yet recognizing that Mr. Jones has been a capable and honest Commissioner, who has made as few mistakes as could be expected in the conduct of a difficult office, in which he may suffer from the political control of his superiors. Mr. Leupp's purposes will be of the best, and he will have the support of the President in his work. One of the things he must now consider is the development of the reservation schools, for there are too many non-reservation schools now, as Commissioner Jones implies in his last report. We are learning that we have carried too far the policy of taking young children away from their parents and gathering them in far-away schools. Another matter that deserves serious consideration is a policy which threatens to overthrow the settled system of ending Government support of religious schools. The way it is done now is to get the Indians at any agency to vote a request that certain religious schools should be supported from tribal funds held in trust by the Government for their education and civilization. We make no objection to this if the request of the Indians is made after open council as well as by signatures. With Indians the open council first is very important that there be no snap judgment. And when an appropriation of funds is thus made for one religious school the sum assigned should be deducted from what the signers should receive at later distributions, or similar appropriations should be made to all other creeds. We have information that the preliminary council has been omitted in some cases and some Indians have protested against the appropriations thus made

Indian Tribal Funds

Some of our readers interested in the Indians would like to know just how much has been done in the way of

giving the Indian tribal funds to denominational schools. We have obtained the following information: Several years ago a petition came to the Indian Bureau signed by two-thirds of the Menominee Indians, asking that a grant be made from their own collective fund for the support of a Catholic school, but there was a counter petition from one-third of the Indians against it, and it was not granted. Later it was granted, because the Menominee Indians are largely Catholic, and the Government school there happens to be so largely under Protestant direction (other Government schools are equally Catholic) that the non-Catholic Indians were by it sufficiently provided for. A similar grant was made for a school among the Osages, from whom no counter petition was received. The Sioux' request that their funds be applied to a school was made by only a small portion of the Sioux Indians. A petition by Cheyennes at Tongue River, Mont., for help to a school there was also granted, and also represented no large proportion of the tribe. All these grants were for Catholic schools. The fairest way will be, as fast as possible, to have the tribal funds divided, as tribal lands have been. Then each Indian will have his own invested fund, and can use his own, and not his neighbors', for schools as he pleases. A petition for thus dividing the Osage fund is now before Congress. It is hardly proper that funds belonging to all the tribe should be applied to the purposes of only a portion of it, and there should be at least a council held before a petition of even a majority is granted. We want to keep all religious difficulties out of our management of Indian affairs.

The Presbyterian Federation

The meeting of the representatives of the denominations in this country holding the Reformed faith, in Pittsburg, November 29th and 30th, was held within closed doors, but its action is now published. It asks the national bodies to consider a plan of federation which shall have the following features: Each Church shall retain its own individuality, and every present power and right. A "Federal Council" shall be established to prosecute such work as can better be done in common, on a basis of four members for each first 100,000 members, or fraction thereof, up to 300,000, and after that four for every 200,000 members. Its main work shall be evangelistic, for co-operation of the benevolent work of the Churches, and to harmonize differences that may arise. Seventeen sections amplify and narrow the several duties and powers of this Council, but entirely in the way of protecting the integrity of the several Churches federated and their harmonious working. It is a noble idea, and will have its best fruit in leading to mutual acquaintance and consolidation. As this federation provides for uniting all denominations holding the Presbyterian form of government, why may we not expect a similar federation of Churches Congregationally or Episcopally governed? But better still will be the federated Council of all our Protestant Churches, which we hope may be provided for next November.

The University of Virginia

Possibly we might not have noticed as we should the new spirit and enterprise of the University of Virginia if a warning against it had not been proclaimed by that able and watchful South Carolina journal which most fears any movement of what is called the New South. When the University of Virginia called to its presidency a distinguished scholar from Tennessee it simply occurred to us that an excellent choice had been made, and that the old university was likely to move forward. But we are now informed that "this Port Arthur in the educational defenses of the South" seems to have been "captured" by the "Yankees." We had not thought of the president of the Tennessee University as a Yankee, but it seems he has hobnobbed with the men who, led by Mr. Ogden, have been visiting the South on an educational mission, and that makes a dangerous man of him. We are told that if "the special trains loaded with distinguished parties of Southerners and Northerners" "are making a conquest of the South and Southern sentiment, it ought to stir in the white people of the South the spirit of uncompromising re-

sistance," and then it proceeds to specify the evil done by them:

"It was only yesterday, so to speak, that one of 'those splendid leaders' . . . was placed at the head of the University of Virginia, one of the greatest educational establishments in the South, a university with a glorious past, unique in its organization and successful in its mission. 'Southern ignorance of the revolution that is going on in its territory' and the commercial spirit which has been attracted by the hope of large endowments possibly account for the change which has been brought about in the administration of the affairs of this school and in the so-called 'larger life' upon which it is entering.

"It must be confessed that the capture of this ancient citadel of education by the 'splendid leaders' of the new movement is a notable triumph. The holding of conferences here and there in the South, the distribution of a few dollars to pay the railroad fares and hotel bills of teachers attending such conferences, the support of summer schools here and there, and the ready disposition of prominent politicians and office holders to yield to the treatment of outside doctrinaires—all these have excited alarm among those who fear the Greeks bearing gifts."

We are further told that "the proposed endowment of a million dollars will not add anything to its character or increase its true efficiency." It ought to; we believe it will, under its new president. Without the endowment that will allow it to grow its professors will go to Johns Hopkins and its students to Princeton, Yale and Harvard.

A French writer tells us that there are two fortresses that are holding out with extraordinary success against their besiegers—one Port Arthur and the other the Combes Ministry. Every few days we learn that they both must fall speedily. They are almost taken, but yet they hold out. It is to-morrow, and still to-morrow. One fortress is besieged by shot and shell, the other by a war of words, even as Jericho was taken by the blast of trumpets. But the French Ministry has a defense which it did not occur to the people of Jericho to use; they did not oppose bugles to trumpets, or their walls might have stood. Combes and his friends use their bugles, which blow louder than the trumpets on the other side.

That Kingdon Gould had no legal right to carry a pistol in the streets of New York is clear, but it is evident that he needed it, and put it to good use in defending his liberty against a number of equally lawless and more aggressive students, who were trying to capture him and make him the butt of the class above him at their class dinner. The University could do no less than to suspend the principal rowdies. It is the business of the police to put a stop to such outrages as stopped car traffic for half an hour while the boys tried to capture another freshman. The police are quite too gentle with students' pranks.

A movement has been inaugurated to make the immigration stream run uphill. A number of railroad passenger agents and immigration agents met in the rooms of the Department of Commerce and Labor to try to make the immigrants go to a section of the country where hitherto they have been unwilling to go. It occurs to us that the best way would be to make the conditions more attractive. The Government cannot tell immigrants where to go. They will mostly follow their friends who send them passage money.

It is friends of the Prohibition Party that tell us that in Massachusetts alone last year 235,000 men voted "no license," 26,000 more than voted the Prohibition ticket in the whole United States at the late election. If we take the country over there may have been 5,000,000 votes to exclude saloons in cities and counties. What is, then, the lesson? It is that the people believe very largely in prohibition, but very little in a Prohibtion party. They prefer local option to a prohibitory law, and it works better.

If The Hague is the meeting place of nations, Copenhagen is the meeting place of monarchs. It ought to be an important conference which is announced for the spring, when it is expected that the King of England, and the Emperors of Germany, Austria and Russia will be guests of the King of Denmark. Why should it not be a peace conference?

Insurance

National Supervision?

In President Roosevelt's Message to Congress occurs this significant sentence:

> The business of insurance vitally affects the great mass of the people of the United States, and is national, and not local, in its application. It involves a multitude of transactions among the people of the different States and between American companies and foreign Governments. I urge that the Congress carefully consider whether the power of the Bureau of Corporations cannot constitutionally be extended to cover interstate transactions in insurance.

The Independent heartily approves the President's recommendation. It seems to us that a national supervision of some sort would tend to secure better and more uniform results than can possibly be the case with the control vested as at present in various States, in which interpretations of the insurance principle are bound to differ. The national supervision that works so well in the case of banks might well be extended to insurance, with its interstate features that now characterize the business. No insurance company that is conducted on sound principles can reasonably object to the proposed national investigation and publicity.

Insuring Bank Deposits

An agitation which has for its object the insurance of bank deposits has been begun by James C. Hallock, of this city. He argues that it would be possible, through the agency of an insurance scheme, to put deposits in a National Bank that has failed on the same footing as the note issues of such a bank, which are in no wise affected by the bank's failure. A mutual insurance in which all the banks should unite would create a fund similar in character to the redemption and guarantee fund now collected against the notes.

The assessment that would be needful, according to Mr. Hallock, would not exceed one-tenth of one per cent., which is certainly not an excessive amount. One objection to the proposed plan of insurance, of course, lies in the fact that the cost of this insurance, no matter how small it might be, would ultimately fall on the sound banks. It would seem, however, that the advantages of such insurance would outweigh the disadvantages, in spite of the fact that banks have but an infinitesimal control over the operations of each other, which quickly becomes negligible when irregularities are allowed by the officers to creep into the management of a given bank, over which they should exercise guardianship.

President Henry Evans for the Continental Insurance Company of New York City has compiled certain figures showing that company's experience with certain mercantile business. From the investigations of Mr. Evans it appears that in manufacturing risks the causes of fire vary because of different process hazards, but in mercantile risks the general hazard is approximately the same. The principal ones are lighting, heating, care and maintenance and exposure. A number of the unprotected lines of business have been found by the Continental to have inadequate ratings. The specially unprofitable classes are given as follows:

> Cloaks (with or without Manufacturing); Clothing Manufacturing; Clothing Wholesale; Crockery; Country Stores, without dwelling, in Villages (Unprotected); Department Stores; Dry Goods, Retail; Feed Stores; Frame Rows (Unprotected); Glassware and Window Glass; Groceries, Wholesale; Hats, Retail and Wholesale; Laces, Embroideries, etc.; Millinery; Musical Instruments, Pianos, etc.; Notions; Paper; Photographers; Paints and Oils; Picture Stores; Roofing Materials; Seeds; Stoves, Hollow-ware and Castings; Toys; Varnish, and Wall Paper.

The conclusion reached by Mr. Evans is that the remedy for the unprofitable results referred to is to be looked for in a more or less general increase of rates.

....The exhaustive exhibit made by the Prudential Insurance Company at the St. Louis Purchase Exposition attracted much attention. The Prudential exhibit was strictly scientific and was awarded two gold medals and one silver medal.

Financial

Railway Earnings and Accidents

It is shown in the annual report of the Interstate Commerce Commission (important recommendations of which are set forth on another page) that the length of the railroads in this country at the end of the fiscal year 1904 was 209,002 miles. Other statistics for that year, including comparisons with those of 1903, are as follows: Gross earnings, $1,966,633,821 (an increase of nearly $66,000,000); operating expenses, $1,332,382,948 (an increase of $72,000,000); net earnings, $634,250,873 (a decrease of $6,400,000). A statement as to casualties contains the following figures:

	Killed.	Injured.
PASSENGERS.		
1904	420	8,077
1903	321	8,973
1902	303	6,089
EMPLOYEES.		
1904	3,367	43,266
1902	2,516	33,711

The number of passengers killed in ten disastrous accidents during the year (eight of which were collisions) was 23 per cent. of the entire number, altho there were in all more than 6,000 collisions and 4,800 derailments. It is urged with much emphasis that the block signal system should be used on all roads. The adoption of it should be required by Federal law, as the use of automatic couplers and air brakes has been. It was ascertained by inspection, however, that 65,183 (or 31 per cent.) of the cars examined were defective with respect to the requirements of the present law. During the year 278 trainmen were killed and 3,441 injured by coupling accidents. A majority of these casualties were due to defective equipment and would have been avoided if proper attention had been given to the maintenance of safety appliances.

By a decision of the Supreme Court last week in a case to which Mr. Roosevelt had given his personal attention, compliance with the law will be hastened. A brakeman named Johnson, on the Southern Pacific Road, had one of his arms crushed while trying to couple a moving locomotive, which had no automatic coupler, to a dining car, which did have one. He sued for $20,000. The company's defense was that an engine was not a car and therefore was not required to have an automatic coupler; also that the company was not responsible for the handling of a dining car owned by another corporation. The lower courts were against Johnson, but the Supreme Court decided in his favor. Locomotives must have safety couplers and the couplers used must be such as will couple with those of other standard patterns.

*

More than eighty excellent photographs, admirably reproduced, illustrate a little book about the Buffalo & Susquehanna Railway, published by Fisk & Robinson, the well-known bankers. Up to the present time, this independent railway has extended from Addison, N. Y. (on the Erie road), to Sinnemahoning, Pa., with several branches, in all 173 miles. Important additions are in course of construction—an extension to Sykesville, Pa., practically completed, and another extension from Wellsville, N. Y., to Buffalo. Beginning as a road associated with large lumber interests in Northern Central Pennsylvania, this line is now also largely engaged in the coal trade, penetrating, as it does, the famous Clearfield bituminous district. Two subsidiary companies own lands containing 125,000,000 tons of coal, and another—the Buffalo & Susquehanna Iron Company—has erected a fine furnace plant at Buffalo, adjoining the great works of the Lackawanna Steel Company. The railway extension to Buffalo, to be finished in the coming year, will complete an ideal industrial federation, having its commercial center at Buffalo, whose importance in the iron and steel industry and as a terminal point is rapidly increasing.

*

....In a statement accompanying the declaration of the Western Union Telegraph Company's customary quarterly dividend, it is shown that the company's surplus, which was $15,434,862 on September 30th, will be about $15,920,292 on December 31st.

130 FULTON STREET NEW YORK

"Ready to travel"

For the Boy!

FOR HIS FATHER
OR BIG BROTHER

an *Ingersoll* Dollar Watch

The annual Christmas gift puzzle has come 'round again.

In hundreds of thousands of cases it will be solved with an Ingersoll Watch, which in other years has brought to so many the indescribable joy that only his "first watch" ever brings to a boy.

Then it will begin to inculcate the habit of promptness and teach the value of time; invaluable lessons to last through life.

The Ingersoll is a practical watch, just as good for a man as a boy.

1905 MODEL. NEAT, ACCURATE, GUARANTEED.

Sold by dealers everywhere or postpaid for $1.00.
Other Ingersolls, $1.50 and $1.75. Booklet Free.

THE SUN
warms half the world

In winter. Those who live on the other half keep more or less warm in various ways. Some wear heavy clothes to keep out the cold. But the wise ones wear **Wright's Health Underwear** because it keeps them warm the right way—by keeping in the body heat. More important still—it preserves health by allowing the skin to breathe, and by allowing the escape of its waste matter.

WRIGHT'S
Health Underwear

is made of pure wool. Both the outer fabric and the inner surface of loops are composed of tiny interlocking loops that will not mat in the wash, and that ensure air circulation about the pores during the life of the garment. Most ordinary underwear is unhealthful because of its tight weave, and dangerous because it induces chills by failing to absorb perspiration, yet Wright's costs no more.

THE COMFORT OF RIDING IN A

Bailey (Pneumatic) Whalebone Roadwagon

"TAKE EACH MAN'S CENSURE, BUT RESERVE THY JUDGMENT."—Shakespeare.

The Quality of being Comfortable is the first great consideration in riding. This quality the Pneumatic Carriage possesses in a superlative degree. Bear in mind we speak of a mechanically perfect Pneumatic Carriage, the S. R. Bailey.

Air makes the best, lightest, and most convenient cushion within the reach of man, and utilized compressed, as it is in the pneumatic tire, it transmits no road vibration nor noise.

Bailey Suspension Springs absorb what slight, soft, bouncing motion would otherwise remain from certain roadways, and we have a vehicle whose riding qualities are ideally comfortable.

A man might say that he had a Pneumatic Carriage of which he did not like the riding qualities, but it's a thousand chances to one he never had a really correct Pneumatic Carriage; but one with ordinary springs and methods of suspension, to which pneumatic tires had been applied. Such carriages never were a success. Had he used a **Bailey**; that is, a carriage **all** the parts of which were made by Bailey and assembled by Bailey—not a vehicle with merely a Bailey seat or Bailey hangers or Bailey shaft-eyes or Bailey something or other (we own 23 patents covering our carriage and its parts, including 70 auxiliary claims)—his story undoubtedly would have been different.

Manufacturers who through inability and ignorance have built Pneumatic Carriages which failed are abandoning their attempts, and naturally are decrying them. We shall continue to build our perfect one, and will sell twice as many as we did last year.

Write us for literature.
